The trade arrangement, as well as other matters in the Philippine Trade Act of 1946, is now set forth, by the act's provision, in an Executive trade agreement between the two countries.

The trade agreement can be terminated on 5 years' notice for any reason whatsoever. It can also be terminated on 6 months' notice if either party adopts or applies measures or practices which would operate to nullify or impair any right or obligation provided for in the agreement.

There are also provisions to the effect that, if the President of the United States finds that the Philippines is in any manner discriminating against citizens of the United States or any form of United States business enterprise, he may suspend the agreement in whole or in part and, if the discrimination does not cease, he may terminate the agreement.

There are two vital provisions in the trade act that are pertinent to set forth as they affect, both directly and indirectly, the Philippine-American trade and economic relations. They are as follows:

Section 341, part 5, title III (being art. VII of the trade agreement) "The disposition, exploitation, development, and utilization of all agricultural, timber, and mineral lands of the public domain, waters, mineral, coal, petroleum, and other mineral oils, all forces and sources of potential energy, and other natural resources of the Philippines, and the operation of public utilities, shall, if open to any person, be open to citizens of the United States and to all forms of business enterprise owned or controlled, directly or indirectly, by United States citizens."

That provision, in a somewhat modified form which somewhat changed its meaning, was incorporated as a provision of the Philippine Constitution. It was called the "parity law," which caused a division among the voters when it was submitted to a plebiscite. The provision placed Americans on the same basis as Filipinos under it. The writer contended that the word "person" in the clause "if open to any person" referred, not to a Filipino necessarily, but to any person at all, who may be a foreigner. If that contention was correct, then the provision was placed there solely to protect American citizens from discrimination in favor of foreigners. But it was evident that the intent of Congress was to place Americans and Filipinos on an equal or parity basis, and so that interpretation stands, particularly after the modified wording of the provision was made a part of the Philippine Constitution.

The other provision of the trade agreement that has to do with Philippine-American trade and finance follows:

Section 342, part 5, title III (being art. V of the trade agreement) "The value of the Philippine currency in relation to the United States dollar shall not be changed, the convertibility of pesos into dollars shall not be suspended, and no restriction shall be imposed on the transfer of funds from the Philippines to the United States, except by agreement with the President of the United States."

This provision, like other provisions in the act, will be in force until 1974. Thus the dollar-peso ratio of 1 dollar to 2 pesos which was established by Congress in the act of March 2, 1903 will last for 71 years. This arrangement is the only instance where the United States has agreed to tie up its currency with that of a foreign country, for indeed the Philippines became a foreign country on July 4, 1946. That fact gave stability and soundness to the Philippine peso qualities which are possessed by only a few of the currencies of the world.

The provision was modified when on December 9, 1949, with the agreement of the President of the United States as provided therein, a series of orders were issued by the Philippine Central Bank placing restrictions on the transfer of funds from the Philippines to the United States. This action, which did not become known to the public until the day of its promulgation, caused consternation among bankers, businessmen and the general public.

The announced purpose of the restrictions is to conserve in the Philippines the dollar assets, which was reported to be going out of the country faster than the inflow of funds. They complement and complete the control imposed by the Government on articles described as luxuries or nonessentials. The commodity control has the added purpose of encouraging the creation of local industries and the investment of funds in local enterprises.

Both the fund and commodity controls are working hardships on business and persons, but it is contended that they are essentially temporary, although they would not be so if they are continued for too long a time and if they are made more restrictive and complicated. They have already caused business retrenchment and labor unemployment. It is generally hoped that the Government will find its way clear to working back to normalcy after it has achieved to a reasonable degree its purposes in instituting the controls.

It would be useless effort to attract American capital to the Philippines to operate under a regime of controls. It would also make the Philippines less ideal for the inauguration of President Truman's point 4 program of extending financial and technical assistance. The simple reason is that when there were no controls the Philippines was that much different from and carried that much advantage over other countries, where American investments and enterprises are so hemmed in and harassed by restriction orders and controls, such as the Philippines has started to do herself. It is, therefore, of supreme importance, if American investments are desired for the Philippines, to go back to normalcy as soon as practicable. It is expected that if the controls have not gone too far and have not disrupted the country's business too much they will have created more stable conditions in the country.

There is expectation in some quarters that the Philippine Government may devalue the peso. High Government officials have denied that such would be done, but such denials are always subject to withdrawal. The devaluation would take the form of depreciating the peso so that a dollar would be equivalent to 3, 4, or 5 pesos. Under article V of the Philippine-American Trade Agreement, cited above, the dollar-peso ratio can be changed "with the agreement of the President of the United States." If it were known by the public that the President was considering a request from the Philippine Government for him to agree to the peso devaluation he would undoubtedly receive many protests as well as some approvals. It would be sound policy to have the question discussed by the public before the devaluation is effected. It would be unsound policy to put it through otherwise. The matter is too vital to keep the public, upon which it is to be imposed, out of it.

In recapitulation, the main purpose of the fund and commodity controls is to maintain a healthy balance in the international exchange of debits and credits as established by the relative positions of imports and exports of goods and the inflow and outflow of funds. Since the war the Philippines has been buying from the United States and other countries much more than she has been selling them. That is the cause of the imbalance, and that is what the controls are intended to rectify. It is obvious that there is a necessity for the Philippine Government to determine a general median level on which the international debits and credits will be maintained. The present postwar level, maintained as it is artificially by the inflow as well as local availability of monetary windfalls and funds which are not payments for exports, is unnaturally high, and to maintain it would require drastic action that would upset the country's economy. At the same time, the prewar level was too low, for prices of export commodities have since gone up, industries are being rehabilitated, there are more business and the national income has increased several times over. The determination of a reasonably maintainable median line on which to rest the debit-credit international balance is an essential move to rationalize the controls and make them serve their purposes effectively to the benefit of the country. That median level will be somewhere between the prewar low and the postwar high.

Immediately after the war ended contracts were signed between the Philippine Government and the United States Commodity Credit Corporation by which the former obligated itself to give priority in sales and exports of hemp and copra to the United States for the use of industries. The contracts also provided for ceilings on prices. The idea was to assure the demand for those products in the United States.

The prices of the two commodities went up. But the prices of copra went much higher relatively. Besides, there was plenty of copra, for the Philippine coconut plantations hardly suffered from the war. But the hemp plantations were neglected and a great part of them depleted.

Soon the demand for hemp and copra, especially the latter, from foreign countries grew and those countries offered better prices than what the contracts provided as the maxima. It was estimated that those contracts have cost the Philippine copra producers at least ₱100,000,000 for not being able to sell to the highest buyers outside of the United States. Upon the petition of Filipino hemp and copra producers the contracts with the Commodity Credit Corporation were rescinded even before their expiration dates with the consent of the corporation.

Philippine-American trade since the war ended, covering the period from 1946 to the beginning of 1950, deserves separate treatment because of the special and extraordinary elements that entered into it.

The 1945 trade was for its later part only, for after the cessation of the war there was very little overseas activity in exports, although the imports were substantial out of necessity. That trade amounted to ₱50,974,435, of which ₱457,965 represented exports and ₱50,516,470 imports. Most of the im-

ports consisted of relief supplies, food, medicine, and other urgently needed articles.

Philippine-American trade from 1946 to 1949 amounted to ₱4,484,392,556. Of this amount, ₱3,314,735,611 represented exports and ₱1,169,656,000 imports.

The balance against the Philippines during that 4-year period amounted to ₱2,145,079,611.

Before discussing the significance of this unfavorable balance, which is enormous, it is well to break down the import-export figures by years. The 1949 figures are subject to later revision, but they would not register substantial change, so for the purpose of the present discussion the statistical variations will not be material.

The Philippine exports to the United States were as follows: ₱76,870,839 in 1946; ₱306,466,925 in 1947; ₱421,604,939 in 1948; ₱364,700,000 in 1949.

The Philippine imports from the United States were as follows: ₱515,029,797 in 1946; ₱882,150,594 in 1947; ₱941,755,220 in 1948; ₱975,800,000 in 1949.

The totals are given above, and so is the unfavorable balance against the Philippines.

The fundamental question at once arises: Was the Philippines impoverished, on the basis of her normal economic position before the war, by the unfavorable trade balance with the United States of over ₱2,145,000,000 since the termination of the war?

The definitive answer is no. The fact is even after that amount is deducted from the postwar acquired monetary and matériel assets the Philippines would still have between ₱1,000,000,000 and ₱2,000,000,000 more left. Where is that money? It is all over the country in cash, matériel, and more diversified business enterprises. Some of it is deposited, yes, by Filipinos in the United States and elsewhere outside of the Philippines.

The existence of that enhanced wealth is manifested, among other evidence, by the increase of the national production and income from around ₱1,000,000,000 before the war to approximately ₱3,500,000,000 after the war, the bulk of which is extant today.

The point is that the Philippines was not impoverished by the unfavorable balance.

The Philippines was able to import an enormous amount of goods from the United States because of the monetary assets she piled up from receipts of financial assistance from the United States, veterans' benefits, and war-damage payments made by the United States, war surplus given by the United States, and the great expenditures made by members of the American armed forces during and since the war, as well as disbursements during that time by the United States Government outside of the items outlined above.

While the payment was made partially out of exports to the United States, as the statistical tabulations in this paper will show, the bulk of the payment was made out of the "invisible assets" set forth in the foregoing paragraph. And, for the purpose of emphasis, it should be stated that after that payment is made there is a sizable amount more of those assets remaining in the Philippines.

If there are those assets still, why does the Philippine Government have to go out and borrow money from the United States? The answer is that the Filipino people are not yet habituated and trained to lend their money to their Government by buying Philippine Government bonds and certificates. To them 4 percent, or even 10 percent interest a year on investment is far from attractive. They are still in the pawnshop and usury stages insofar as profit and interest on capital are concerned.

The Philippine Government, with its commodity control, and the Philippine central bank, with its fund control, could project themselves into the immediate future and inspire the Filipino people to invest in their Government, which means investing in their country. This is a great and fundamental public relations job for the Government to do. Sooner or later it will have to do it if it is to embark upon its plan of a total economic mobilization program buttressed by a regime of rational austerity.

The Philippines is a rich country in natural resources. There is a great people that will soon number 20,000,000, who are ambitious to achieve greater progress and the modern democratic way of life. Expanding its economy, modernizing its productive apparatus, training technical workers, and putting more people to work—they constitute the challenge to the governmental, intellectual, civic, and economic leadership of the Filipino people.

With its internal economy expanded, modernized, and rationalized, the Philippines will continue its trade with the United States, the best and greatest market in the world. The present trade relations may be extended indefinitely. Those relations, it must be clearly remembered, are only a part of the intimate, vital, and fundamental relationships which the two countries now maintain. Those relationships grew out of their half century of friendship and collaboration—relationships that are today the bulwark of the economic welfare and the international security of the Republic of the Philippines.

Foreign trade of the Philippines: 1899–1946

Year	Total trade (pesos)	Per capita trade (pesos)	Total imports (pesos)	Total exports (pesos)	Imports from the United States (pesos)	Imports from other countries (pesos)	Exports to the United States (pesos)	Exports to other countries (pesos)

South Carolina Highways

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. RIVERS. Mr. Speaker, anybody who has ever traveled the highways of the Nation knows what it means to have modern highways. The wealth of a State does not signify its ability to reflect good highway engineering and progress, nor does the size of the State determine its highway consciousness.

South Carolina, which is comparatively small from a standpoint of wealth, ranks first in the Nation in highway construction. No State in the Union has more miles per capita of farm-to-market highways than does South Carolina. This is no accident. We planned it this way over a quarter of a century ago. That is the reason South Carolina ranks No. 1 in the Nation today in keeping its citizens contented in maintaining a high level of accessibility to every nook and corner of its wonderful and historic past.

The people in South Carolina are contented to live there because the government of South Carolina gives back to the people their proportionate part of taxes in services and more highways. The facts here presented in the RECORD were prepared for me, on this subject, by the Highway Department of South Carolina. Our highway commissioner, the Honorable Claude McMillan, is the brother of our distinguished colleague in Congress, the Honorable JOHN MCMILLAN, who so capably presides over the Committee on the District of Columbia, and who is also member of the Committee on Agriculture. We are proud of our highway commissioner and the magnificent associates he has, both in law enforcement and in highway construction and maintenance.

In traveling over a particular territory by automobile, the enjoyment that one derives is determined mainly by two factors, the scenery and the condition of the roads.

In both of these respects South Carolina ranks among the best in the Nation. Nowhere can there be found more magnificent gardens, beautiful early American architecture, and points of historic interest. Nowhere can be found more abundant and finer scenery than along the highways of South Carolina's low country and in the hills and mountains of the up country.

It is South Carolina's highways, however, that makes enjoyment of this scenery possible. Those of you who have had an opportunity to visit the Palmetto State and ride along the countryside will agree that nowhere in the Nation is there a finer system of highways. Some idea of this development may be had from the many additions and improvements in the highways since 1920, when the South Carolina General Assembly passed an act providing for the State system. At that time there were 3,047 miles of road in the State system, only 26 miles of which were hard-surfaced. As of October 31, 1949, there were 20,569 miles, of which 10,868 miles, or 52 percent, were hard-surfaced. All excepting 375 miles of the State's primary system—totaling 8,411 miles of highways—are hard-surfaced. On our secondary system, composed mostly of feeder routes and consisting of a total of 12,158 miles, a total of 2,831 miles were hard-surfaced as of October 31, 1949.

Progress in the planning and development of the State's system of highways has been relatively steady since the inception of the highway department. However, we can point with real pride to the manner in which we have kept pace with other States in recent years, in many cases excelling.

In 1948, for example, South Carolina stood first in the Southeastern States, and only fourth in the Nation, in the number of miles of road on which construction contracts were awarded. A Bureau of Public Roads compilation for the year—the last for which accurate totals are available—shows that during the 12-month period, contracts on 1,812 miles of South Carolina highways were awarded. This total was included in 324 projects, the largest number in the Southeast, and the ninth greatest number in the Nation. These projects involved an expenditure of $22,300,000, the fourth greatest total in the Southeast, and the eighteenth largest in the Nation—a very important comparison when South Carolina's relative geographical size and per capita wealth is considered. At this writing figures on construction for all of 1949 have not been compiled. However, during the first 6 months of the year, South Carolina awarded contracts on 664 miles of road, putting the State in thirteenth place in this respect for the entire Nation. This work was included in 92 separate projects, costing $6,939,000. These projects, of course, do not include the maintenance work and relatively small projects which the highway department completed with its own forces.

Approximately $242,000,000 have been invested in South Carolina's highway system over a 30-year period.

South Carolina's highway program is financed mainly by a gasoline tax of 5 cents, supplemented by Federal-aid allocations. One cent of the State's 6-cent tax is allocated to counties. Further development of the system is limited only by revenue received. Many needed projects are now under way, others are planned for the immediate future, and still others are included in the department's long-range program extending many years into the future.

How has South Carolina been able to accomplish so much—in fact to take her place with the best in the Nation—with so little? Planning and a good legislative program setting up a sound financial structure, coupled with efficient administration, has furnished the impetus to bring a dream into reality.

Those who have never traversed South Carolina's magnificent highways have in store a real treat.

Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. HARRISON. Mr. Speaker, I had the honor recently to serve as a member of a subcommittee of the Committee on Un-American Activities which conducted hearings in Honolulu with respect to Communist activity in the Territory of Hawaii.

These hearings were held at the invitation of the Territorial legislature. With the memory of the Pearl Harbor catastrophe still vivid, the people of the Territory were disturbed by indications of well-organized and extensive underground Communist plotting.

The proceedings of the subcommittee attracted widespread public attention in the islands, but they were conducted in a spirit of moderation and decorum that made a profound impression—one of enhanced respect for the efforts of the committee as a whole, and, indeed, for the Congress of the United States.

When the hearings had been completed the subcommittee, and the citizens of Hawaii, had a sharply defined picture of the extent to which Communists had infiltrated the labor organizations, the political councils, and even the governing bodies of a Territory that continues to have a key position in our defense scheme.

To my mind, the members of the subcommittee may claim only a small share of such credit as may accrue from this investigation. The largest portion certainly belongs to the distinguished chairman of our committee, the Honorable JOHN S. WOOD, of Georgia.

While he refrained from appointing himself to the subcommittee, our honored colleague directed the careful planning which preceded the hearings. With his abiding abhorrence of sensationalism and his conscientious attention to the responsibilities of his chairmanship, Judge WOOD provided the balanced approach to this inquiry, which proved notably productive.

Under the leadership of the gentleman from Georgia, the committee has been earning its way as a servant of this House. During this Eighty-first Congress, it has placed under investigation a number of matters of the highest importance to the continued security of the United States. In these days of tension and fear the citizens of the Nation must be given sound basis for confidence in the instrumentalities of their Government that are striving to uncover and stamp out subversion. The Committee on Un-American Activities has merited this confidence as guided by Judge WOOD.

I know that many of my colleagues will learn with regret, as I did, that he will not be without opposition for renomination. While his continued tenure in this House is being contested by a gentleman of undoubted sincerity and promise, I have the deepest conviction that to

oppose Judge WOOD at this time is to do a real—if unwitting—disservice to the people of his district and of the Nation.

Now, above all other times, continuity of leadership in such a vital agency as the Committee on Un-American Activities is essential. Judge WOOD has supervised inquiries into dangerous nests of subversion in two areas that are of critical importance to national security. The committee cast a withering spotlight on the foul growth of Communist cells in the vital Pittsburgh industrial area—a major part of the arsenal of democracy that our enemies fear. And, now, it has thrown revealing light on Communist efforts to take over that Pacific bastion—Hawaii.

I hope that some way may be found to acquaint the good people of Judge WOOD's district in Georgia with the breadth and value of his service on the committee and in this House. His colleagues need his counsel, and the Nation cannot spare from among the guardians of its secur. ' one of such integrity and capacity.

Two Hundredth Anniversary of Jewish Community in Charleston, S. C.

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. RIVERS. Mr. Speaker, the Jewish community of Charleston, S. C., is celebrating its two hundredth anniversary. This is no accident. The Jewish community of this fine city is one of which we are all proud. From its very beginning it has become an integral and indispensable segment of our entire community life.

All people of Charleston, Christian and Jew alike, celebrate with them this day for this long and magnificent history, which is signified by the splendid landmarks as a part of what we call America.

I enclose, herewith, an editorial on this great achievement from the oldest daily newspaper in the South, our own local paper, the Charleston News and Courier under date of March 25, 1950.

[From Charleston (S. C.) News and Courier of March 25, 1950]

The two hundredth anniversary of the Jews of Charleston will be a celebration of more than local significance. It will be an event with meaning for more people than the Jews of the United States, for more people than all the Jews in the world. It will carry a message of universal importance, a message of tolerance, of good feeling among men, of mutual respect among peoples with different backgrounds who have lived together in this city for two centuries in peace and amity and esteem.

In a time when race consciousness and discrimination and all the other epithets are hurled by agitators with little understanding and no sympathy, here stands an example of good will. The good will dates back at least two centuries, 16 years before the Declaration of Independence, when Congregation Kahal Kadosh Beth Elohim was founded. And good will lives today, not only in this same congregation, presided over by a descendant of one of those founders, but in other phases of life in this community.

The Jews of Charleston from the beginning have been accepted as individual men and women. They, in turn, have not huddled together as a close-knit group. Among them have been distinguished figures, contributors to the common welfare. Their stories will be told in the coming months leading up to the bicentennial program next fall.

Freedom of religion, freedom from hatred have been the rule, not the exception in the history of the Jews of Charleston. This is the message that will be told to the world in the bicentennial at Charleston.

Maiden Form Brassiere Co.

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. BURNSIDE. Mr. Speaker, because West Virginia will always be grateful to the Maiden Form Brassiere Co. for bringing its industry to our State, I am glad to take this opportunity to extend the congratulations of my constituents on the recent expansion undertaken by this splendid company.

This company started off from a one-room outlay until now, I understand, it is the largest of its kind in the world, with extensive markets in over 50 countries of the world. The establishment of branch factories in the cities of Huntington, Clarksburg, and Princeton during the early forties resulted in increased commerce for each city by placing its factories in West Virginia.

They wisely located close to a raw product—nylon. Nylon, one of the splendid products of West Virginia, has been one of the reasons why this company has been able to develop a world-famous product. This splendid company employs more than 3,000 of our fine citizens.

In a distraught world like we have at this time, it is indeed one of the greatest pleasures that a Member of Congress can express when he states that this company has excellent labor relations, and I do not think they have ever had a labor dispute.

This company is well known for its program of employee, hospital, medical, and surgical benefits as well as social and athletic activities. A startling statement to make at a time when we are discussing surpluses, it is indeed a pleasure to say that this business establishment has never had to lay off any of its employees because of small orders. It has the remarkable record of ever expanding. I understand from the company that its employees have been most cooperative in contributing to their splendid record. I know the employees in Huntington make up an excellent segment of our population.

It is the wish of the people of West Virginia that the Maiden Form Brassiere Co. continue to prosper, expand, and share the bounties of a profitable business.

The Economic Protection of Water Transportation

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. HARRIS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by J. W. Hershey:

THE ECONOMIC PROTECTION OF WATER TRANSPORTATION

(By J. W. Hershey, vice president, Butcher-Arthur Inc., Houston, Tex.)

My pleasure at being honored by an invitation to speak before you is confined only by my hesitancy to presume for myself any competence or qualifications to shed light on my topic for the benefit of an audience of such eminent and distinguished character. My temerity in essaying to do so springs from my firm belief that the importance of the topic itself may extenuate the deficiencies of the speaker.

When Senator MCCLELLAN asked me to speak, he at the same time suggested the title "The Economic Protection of Water Transportation." From his choice of subject, I have assumed that among those present today there is a universal recognition of the fact that cheap water transportation, a right enjoyed with some interruptions since prior to the birth of the Federal Constitution, for which this Nation went to war at least three times, and which has rightly acquired over two centuries a character of inalienability is now being menaced by forces and perils which must be confined. My remarks will be confined primarily to inland waters, not through any deprecatory attitude concerning harbor and coastwise shipping, but because whatever qualifications I have relate primarily to transportation on inland rivers and canals.

To dispel any disposition to regard these perils as more imaginery than real, permit me to recall to mind an era long past during which inland water transportation in this country rose to staggering proportions, and yet within a few decades of the peak of its prosperity declined to almost nothing.

From 1834 to 1849, a period of 15 years, the increase in the number of steamboats in the Mississippi River amounted to almost 400 percent, and in 1849 there were approximately 1,000 steamboats plying the Mississippi-Ohio Rivers having a total tonnage in excess of 250,000 tons. In fact, by 1342, the steamboat tonnage of the Mississippi-Ohio system had grown to exceed the entire merchant fleet tonnage of Great Britain by more than 40,000 tons and was equal to more than half of the registered tonnage in the United States. The years from 1842 to the Civil War represented the halcyon days of the river packet. During this period the steamboat tonnage of the Mississippi Valley, exclusive of New Orleans, was 15,000 tons greater than that of all the Atlantic ports.

The demise of this era was brought about, as everyone knows, by the advent of the great American system of railroads which promptly seized upon the obvious weapon in order to drive steamboats off the river, of a joint, calculated program of forcing river rates below the cost of the not-too-efficient steamboat through the use of disproportional and discriminatory freight reductions along water-paralleling routes. There was no defense against the attack, particularly in view of the fact that the waterway at this period was one which was subject to seasonal interruptions of traffic

owing to the virtual absence of channel improvements, systematized markings, dams, and other aids. There being literally no lower limits to rail-rate reductions, so long as the rail carriers could levy a tax on land-locked shippers through monopolistic high rates, the long-haul river packets were quickly liquidated.

The next renaissance for commercial river traffic of sizable proportion originated somewhat prior to 1880, with the increased coal mining in areas contiguous to the Alleghany and Monongahela Rivers. The towboat and barge began to evolve at this time, and prior to the close of the nineteenth century there are recorded coal tows as large as 67,000 tons. The railroads met this competition again with the establishment of low water paralleling rates so that as a result, at the time of the First World War which made its severe challenge on American economy, the rivers were basically stagnant except for some short-haul operations. This emergency so clearly demonstrated the need for a dependable inland waterway system that in 1920, the Congress authorized Federal Barge Line for the purpose of the development of freight transportation on the rivers and authorized the creation of a system of dams on the Ohio. At the same time that these developments were taking place, a rapidly enlarging requirement for tremendous movements of bulk commodities had to be met, flowing for the most part from the South and the West to the North and the East. Petroleum, ores, sulfur, and coal made up the bulk of this traffic as it does today, accounting in present times for more than 90 percent of the total inland water traffic of the Nation. Technical developments accompanied the surge of bulk commodity movement implemented by the application of the screw propeller and Diesel engine in lieu of the steam-powered side- and stern-wheeler.

This review of the past brings us up to the present situation where a basically healthy inland domestic water economy has become an indispensable factor in the American way of life, contributing to the abundance of goods here equaled nowhere else in the world. The menacing forces which have twice in the past nearly obliterated river traffic are just as real, just as dangerous, and much better disguised today than they have been in the past. These influences take multiple forms, sometimes they are difficult to recognize. Yet, the design of the attack, the tenor of the propaganda, and the speciousness of the arguments stem from one basic source, the railroads, and their protagonists are often misguided and, unfortunately, usually misinformed completely on the subjects of competitive service and cost between rails and water and the mass benefits of cheap water transportation.

The Congress of the United States early recognized the need for moderating and directing the tremendous power which the rails had to favor one shipper at another's expense and to levy a war-fund from interior shippers to destroy water competition. The abusive use of monopolistic power by the rail carriers had not gone unnoticed, and as early as 1887, an act to regulate commerce had been passed to insure just and reasonable rate structures and to prevent discriminatory practices. The Interstate Commerce Commission was established to carry out these objectives. However, a series of unfavorable court decisions left the Commission with little power. Its prerogatives were broadly enhanced, however, by the Hepburn Act of 1906, and the Transportation Acts of 1920 and 1940, which latter act provided specifically for the preservation of the inherent advantages of each type of transportation. Over a period of years, therefore, Congress has given the Interstate Commerce Commission a number of mandates. One of these, and probably the most basic, is that regulation of the different types of transportation shall be done in such a manner so as to preserve the inherent advantage of each.

Another specific mandate is that rates of carriers shall not be less for long hauls than for short hauls. Under these mandates the river carriers have enjoyed some, though inadequate, protection. The deficiency of this protection has largely resulted from an avenue which has been left open through which the purposes of the long-haul, short-haul provision of the law has been, and is now being continuously frustrated. This avenue originates under the so-called fourth section provision granting the Commission the power to suspend certain of the long-haul, short-haul, and other antidiscriminatory provisions when necessary to meet water competition. The net effect of these regulations has been to provide an umpire with conflicting rules of the game. There is no limitation which clearly prevents the railroads from instituting rates which are noncompensatory, and which in many instances, are far below their actual cost. In a recent suspension proceeding involving a rail rate on the movement of a bulk commodity down the Mississippi River, the railroads offered testimony which purported to show that the proposed rate was reasonable because it returned the marginal fuel cost of the additional traffic. Several questions and answers in this proceeding are of interest as elucidating the railroad position.

Question. Let me ask you, as an expert, what is your position in view of your railroad and other railroads appealing to this Commission for general increases that you should be permitted to reduce rates to meet private (water) carriage regardless of the consequences?

Answer. Oh, yes; I testified, and I tried to emphasize, that we will, and we are rather positively assured that if this rate is not going to be permitted to become effective, we are going to lose money. We have got to have traffic to make the revenue.

Question. Regardless of the rate?

Answer. Regardless of the rate.

In other words, we have the railroads testifying that they do not want to lose the traffic even though the rate might be below their actual cost. In this same case, in answer to questions under cross-examination as to whether individual items of cost had been included in determining the rate, the railway witnesses answered in the negative with respect to the following type of costs: Dispatch trains, station employees, weighing, inspection and demurrage bureaus, station supplies and expenses, yard master and yard clerks, telephone and telegraph operations, insurance, legal expense, overhead, and maintenance.

Between January 11 and February 15 of this year alone rail carriers have attempted to reduce 15 different rates, an average of almost 3 a week, allegedly to meet inland water carrier competition. These reductions range from 20 to as much as 50 percent, and in some instances the proposed reduced rate is less than 2.5 mills per ton-mile. These reductions have been requested during periods when the railroads have had general rate increase applications before the Commission. Between June 30, 1946, and December 29, 1948, the rail carriers received seven general increases in freight rates for a cumulative total of more than 51 percent, a large portion of which must have been dissipated in so-called individual competitive rate reductions. During this same period the average inland water rate was reduced by no less than 20 percent, largely through greatly enhanced design of floating equipment and the use of more effective, greater horsepower Diesel engines. Certainly, the comparison suggests that some of the ills of the railroads which they would attribute to unfair water transportation might be cured by a dose of better management.

No quicker or positive death sentence can be imposed on water transportation than to permit rail carriers to haul at less than cost commodities available for water traffic. The inherent advantage of water transportation can in this fashion be utterly destroyed by one Government agency, thereby rendering unproductive the taxpayers' own capital investment of over $2,000,000,000 committed to the Nation's inland marine system. The Government should not for the sake of any one agency of transportation invent and apply to its competitors either regulation or burden on the theory of handicapping all in the race.

In my opinion, and I believe there is a growing sentiment supporting it, some immediate remedial legislation is necessary which will limit the right of the Interstate Commerce Commission to grant so-called fourth-section relief, as well as to permit rates of any carriers, under any circumstances, which do not yield a fair rate on a basis of accounting whereby each unit of traffic bears its proper share of the over-all sum of the total-cost factors. It is not my purpose to discuss a formula but an alternative principle might also be included which would limit the rate so that it could be no lower than a reasonable percentage of the average ton-mile revenue of the carrier allocated to hauls and commodities of similar character. Not to admit such a principle is in effect to deny any relationship between cost of service and justness of the rate. It is my belief that therein lies a necessary course if the domestic water transportation industry is to achieve stability and security to a degree where it will never be found wanting in time of emergency.

It is well for us to direct our attention to some of the charges which have been directed against the water carriers by its competition. Leading the list of the various types of invective constantly thrown at the water carriers is the hue and cry about subsidy. It is to be hoped that the various spokesmen and associations for the water industry will soon publicly take steps to rebut statistically this charge of unfair advantage. The billions of dollars of real-estate value which have been granted to the railroads by Federal and local governments would far outweigh that portion of the Government expenditure on waterways which can properly be allocated to navigation. It is well known that many of the western and southwestern railroads have in past years derived more profit from the return of minerals alone, inherited by the railroads through land grants, than their net income from traffic. Certain tax immunities of the railroads should be studied and the facts brought to the attention of those who are now bombarded by the charges against which water carriers must defend themselves. The mail contracts would be a further fitting subject for research. The amount of actual traffic performed under very advantageous tariffs for the Government itself would be of more than casual interest.

The unfairness and distortions in many of these charges is illustrated by a railroad-sponsored statement which appeared this month in one of the leading business magazines whose circulation is claimed to be primarily among business executives, complaining at the wasteful expenditure of Federal funds for navigation and citing that it cost TVA about 3.45 cents per ton-mile to provide free navigation facilities from 1934 to 1937 while the rail freight rate during that time was about 1 cent per ton-mile. Let us examine this statement. In the first instance, it should be patent to the dullest elementary-school student that money spent to open up a new waterway cannot possibly result in an immediate surge of traffic in the period immediately following its inception as a usable channel. Factories will and are

being built, the flow of commodities is being changed. New terminals are being erected and broad-scale studies of industry are being made which would never have been contemplated were it not for the fact that the inland channel has become a reality. It would be necessary, if the problem were to be approached in this vein, to take a period of at least 25 years following opening of a new waterway in order to count its cost in terms of ton-miles. It is also interesting to observe in this instance that the sharpshooting has been directed at the TVA, a project completely unique and dissimilar to all other waterways since it was created by a specifically appointed regional authority whereas customarily waterway projects are planned, authorized, and constructed project by project by the United States Army engineers and the Congress of the United States. I have been closely connected for many years with projects which I have felt would be of benefit to shippers, communities, and, to be frank, my own business; and it has been just as difficult to obtain appropriations of Government funds for a specific project as to make the necessary showing to finance a private project through bankers and investment companies. Attention to the economics and the rate of amortization of Government investment in water projects on the part of the Army engineers, Bureau of the Budget, and the legislative branches of the Government has been at all times extremely pointed and rigorous.

Another charge which has recently appeared publicly is that there is no justification for expenditure of public funds for improving and maintaining waterways on the basis of national defense because during World War II traffic on the inland waterways proved incapable of expansion at a time when needed. The truth about this situation is that from 1939 to 1944, this latter year being the peak year for war-stimulated traffic, the burden of the Ohio River in ton-miles increased 106 percent, the Mississippi 102 percent, and the Gulf intracoastal waterway 436 percent. This record is all the more remarkable because the increases came at a time when the river transportation industry was operating at a very high-load factor and, unlike the railroads, there was not the opportunity of expanding operations through the introduction into use of a large amount of equipment theretofore idle.

Another claim recurringly directed to the domestic water industry is that the benefits of the system accrue solely to a few large shippers. The rebuttal of this argument need not be labored at great length as it is perfectly apparent that when basic materials such as oil, steel, iron, ore, limestone, and coal move in quantities measured in billions of ton-miles on inland waterways, there is not a man, woman, or child in the confines of the United States who is not benefited by the Nation's inland waterway system through the medium of lower costs for what he or she purchases.

However, to the corollary charge that there are no privately owned barge lines given full common carrier service on the inland waterways, the barge line operators must look long and hard at what their just responsibilities are to the public whom they are charged with serving with the Government a participant in their right-of-ways. It is true that well over 95 percent of all the traffic which moves on the inland waterway system moves in quantities of greater than 500 tons per unit. It is also true that there is a genuine need for the distribution of the benefits of cheap water transportation among the shippers of quantities at least in the carload category. Efforts are being made at this time by certain inland waterway carriers to broaden the scope of their operations as well as their operating authority so as to offer to the public a carload barge service with considerable improvement in technique as compared with the conventional multiple handling, single package methods. It is to be expected that industry will recognize the need for this type of service and that the various regulatory authorities will go to whatever end is necessary to liberalize the granting of sufficiently broad operating authority so that those carriers who are willing and able to undertake to extend their service so as to include thousands of smaller shippers may have the proper assistance in doing so.

It is not to be expected that water carriers would rush headlong into the carload and less-than-carload business with the ever-present menace of noncompensatory rail rate reductions, when these same carriers have as yet no adequate protection as to rate structures on barge-load traffic in which by every dictate of good business judgment they should be secure because of the large difference in the cost of rendering the service.

In summary, then, there is a challenge which must be boldly met. It will not suffice to meet it simply through a greater degree or amount of regulation. True, the loophole in the long- and short-haul provisions must be plugged. Yet this will not in itself assure to the inland water industry health or security. The industry itself must broaden and diversify both the type of cargo carried, and the classes of shippers which it serves. When the citizens begin to consider the great waterways as their own, they can be stirred to defend it. When the small-store owner and jobber and the little manufacturer use it, they will not so easily fall victim to the extravagant publicity of the forces opposing water traffic. It is high time, too, that the shipper from Chicago to Denver be invited to inquire why he should subsidize his neighbor in St. Louis shipping to New Orleans by rail.

With a minimum of enlightened regulation, the continuation of the Corps of Engineers' use of a conservative economic yardstick, and the acceptance of that measure by the legislatures, the privately owned water carriers can extend the copious bounties of the Nation's inland channels to new communities and can distribute their benefits to multitudes still deprived of this great resource.

Secretary Chapman's Address to American Zionist Council Celebration of Israel's Anniversary

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. YATES. Mr. Speaker, on Sunday April 23, 1950, at a gathering sponsored by the American Zionist Council at the Hotel Astor in New York City, a huge throng of people joined together to celebrate the second anniversary of the declaration of independence of the State of Israel. The principal speaker of the evening, Secretary of the Interior Oscar L. Chapman, delivered a most stirring address, one which will do much to make even stronger the firm bonds of friendship between our Nation and the new State.

Hon. Eliahu Elath, Israeli Ambassador to the United States, also participated in the proceedings, and in a moving statement, acknowledged the close and friendly relationship between Israel and the United States.

Mr. Louis Lipsky, president of the American Zionist Council, presided over the occasion and contributed greatly in making the event an outstanding success.

Mr. Speaker, I take pride in presenting the address of Secretary Chapman to the membership of this House:

ADDRESS BY SECRETARY OF THE INTERIOR OSCAR L. CHAPMAN AT THE SECOND ANNIVERSARY CELEBRATION OF THE DECLARATION OF INDEPENDENCE OF THE STATE OF ISRAEL, UNDER THE AUSPICES OF THE AMERICAN ZIONIST COUNCIL, NEW YORK CITY, APRIL 23, 1950

I am happy for the opportunity to be with you on this historic and moving occasion. It is an honor to be your guest at this second anniversary celebration of the declaration of independence of the State of Israel.

A declaration of independence has a rich and revered meaning to the people of America. The story of the founding of a democratic government for free men is one we all understand, and it is a story that never fails to warm our hearts and stir a great pride within us. For we too once established a new Nation, and we have seen the promise of democracy fulfilled.

It is not given to many people or to many generations to see a new nation rise. Israel stands as a new symbol of people's determination to exercise their rights to freedom in a world where attempts to shackle men's spirits through ruthless repression and hardship grow increasingly bolder. Those courageous and high-minded people who created this new democracy during a period of vast social change, have taken the lead in the establishment of a nation wherein the rights of the individual and the dignity of man are supreme goals.

The new nation, Israel, has turned on the light of democracy in the Middle East, and free men and women are growing strong in its rays.

President Truman has followed closely the achievements of Israel in the fulfillment of democracy for its people, and he is deeply interested in its progress. He understands the problems which the founders of the new nation have encountered and I know he feels a great satisfaction for the substantial accomplishments Israel has made during the last 2 years. He regrets that it is impossible for him to bring his greetings to this celebration in person. He has directed me to deliver his cordial good wishes for the continued growth and well-being of this new democracy as it strengthens the cause of brotherhood and peace.

The birth of Israel is a bright chapter in the history of mankind. The war for its independence was not won by superior military might alone. The people of this new nation won their independence by superior moral force. They won because they were fighting for the thing that is dearest to men—freedom. Battling against tremendous odds, they gained the sympathy of the world because they were fighting for a cause that was right in the eyes of the world.

Israel's struggle was for the right to dwell in peace, for the right to live amicably with its neighbors, and for the right to achieve prosperity and security for its people.

The first Jewish state in 2,000 years was fighting for the right to open its doors to those who wanted to come, to put into practice that everlasting Jewish belief that no man in need should be turned away from the door.

The moral forces that supported the labors of those who brought Israel into being are continuing to strengthen the people in their many works of progress as a nation. The doors have indeed been opened wide. Since the birth of Israel on May 14, 1948,

the new state has welcomed a great inpouring of persons from all over the world. These are the children and the men and the women who were homeless, or broken, or in danger. Israel has received them, and is rebuilding their strength and their self-respect. In so doing, it builds its own strength, and its respect among the nations steadily increases.

The American Zionist Council, and the organizations which it comprises, have demonstrated the finest type of vision and leadership in their work to assist the development of Palestine and the creation of Israel. You have given of your knowledge of modern techniques in area development, and you have provided generously capital necessary for economic functioning of communities, agriculture, and industry. You have helped with the education of children, and with the establishment of health facilities.

I am sure that we all acknowledge freely, however, on this second anniversary of Israel's independence, that the highest tribute is rightly rendered to those citizens of Israel who have identified their daily living with the difficult problems of that area which is now their nation. The people of Israel, including those who have migrated to it, have made astonishing contributions. Their initial capital investments have become capital producing enterprises, and their progress in agriculture, industry, health, and sanitation has been highly gratifying.

The people of Israel have applied modern methods of irrigation to unproductive land, and have made it arable. Modern machines and technology have created a diversified industry where no modern industry existed before.

The institutions already established in this new land are the institutions of a democratic people. Because this is true, the citizens of America are attached to Israel with a close bond. Israel has indeed joined the honorable group of nations in which the lives and the security of men and women are the foremost goal. Like those nations, Israel yearns for an unbroken peace as it plans the years of its future. Like our own people, its people seek only an uninterrupted opportunity to develop their land, to insure their well-being for the coming generations.

The bonds that link the people of the United States and the people of Israel are strong also because of similar social and political manifestations at work during the birth-periods of the two nations. The Declaration of America's Independence, and the establishment of our Nation, occurred during an eighteenth century period of social change marked by popular unrest over institutional patterns sprung from a bygone era of lords and monarchs. The people of the United States were the first to proclaim the new liberalism, to fight for their freedom, and to embrace the new democracy. For many decades the other countries watched our progress with considerable misgiving.

Israel is the symbol which has emerged from the vast social unrest which is being felt throughout the world following the upheaval of two great wars. The older patterns of imperialism and national paternalism are being challenged widely in the middle of this fast-moving century of great technical advances, as people sense their ability to provide their own leadership in the development of their society and their economy in the modern world.

It was on this subject of social change and the increasing recognition of human rights that Secretary-General Trygve Lie spoke with such clarity in his address in Washington in March. In referring to the signing of the Charter of the United Nations in 1945, he said: "* * * during that brief span of 5 years the words of the United Nations Charter on human rights and freedoms for individuals and on equal rights and self-determination for nations have been proved by events to reflect more accurately the most fundamental forces actually at work in the world than any of the slogans of the cold war."

He reminded us that, since the signing of the Charter, these countries have gained their independence: the Philippines, India, Pakistan, Burma, Ceylon, Jordan, Israel, Nepal, and the United States of Indonesia. He emphasized his conviction that "the rise of the dependent peoples, and the human rights movement will, in the long run, have far more significance and give rise to greater events in the second half of the twentieth century than will the present ideological struggle."

In facing this challenge of social change, the choice of the people of Israel, their minds still seared by the sufferings of their coreligionists in other nations, has not been the choice of vengeance and tyranny. It will be an everlasting tribute to the nobility of mankind that Israel chose democracy and the equality of men as the way of life for all of its people.

The United States Government was proud to recognize this new democracy on the day of its establishment. The United Nations accepted Israel's membership before a year had passed.

On this second anniversary, it seems to me that, among the problems of the future with which Israel must deal, there are two which overshadow all others.

The first of these relates to Israel's continued internal development in the years ahead. The opening of the doors to those who wanted to come out of oppression and homelessness has moved the emotions of the world. To Israel it has brought vast problems of practical living, problems which that small nation has made amazing progress in solving. Much remains, however, to be done.

The people of America know of Israel's need for housing, for farm equipment and supplies, for the materials of sanitation, for school buildings, and for industrial equipment. We have given some assistance in helping to deal with these needs.

From the late 1880's until the creation of the new nation, 300 farm settlements were begun in the Holy Land. From May 14, 1948, to the beginning of 1950, 174 new settlements have sprung up from Galilee to the Negeb, from Dan through Beersheba south to Elath. Many of these settlements were started with farm machinery bought in the United States through a loan of $100,000,000 from this country.

Israel has demonstrated the practical uses in improving the lives of people to which loans from this Nation have been applied. I should like to see the United States grant another loan to continue the great work of reclaiming Israel's desert, and to make it possible for Israel to receive new immigrants, providing them with homes and jobs and security in the future.

The continuing progress of this new democracy will be largely dependent upon water, and the United States Department of the Interior has accumulated much experience in reclaiming arid lands. The information we have gained in such areas as the Southwest which is climatically similar to Israel and in such developments as the Missouri River Valley and the Central Valley of California will unquestionably be of great service to technicians in Israel. The Department has engaged in discussions with some of these technicians on new advances in our knowledge of reclamation, and the Department's engineers have visited Israel to study the possibilities of river development on the Jordan, some even before the advent of the state.

These discussions have been helpful to the department I represent, and their benefits have been mutual to the two countries. For example, we are studying with interest a process being worked on by a member of the faculty of the Haifa Institute of Technology for more effective utilization of the morning dew in crop production. It is my hope that we shall be able to send more American scientists and technicians to Israel in the coming years.

Our National House of Representatives on March 31 took a step important to our Nation and to the world when it passed a bill to implement the President's point 4 program for assisting underdeveloped world areas. In the President's own words, this program is designed "for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas. * * * It will lend technical assistance from this Nation to the free peoples of the world in their efforts to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens.

This plan for the progressive development of peoples in the way of democracy offers bright promise. Israel has already moved forward in the spirit in which the point 4 program is conceived.

The expansion of production in underdeveloped areas, as in Israel, will go hand-in-hand with the development of new and expanding markets in world commerce, and the creation of these new markets will benefit this Nation. For us, it will mean also new sources of the raw materials on which our economy depends. Further, it will narrow the economic gap which exists between the United States and the rest of the nations of the world, and it will help to eliminate the high degree of economic imbalance which retards the growth of democracy and impedes international harmony.

The people of Israel have found out what kind of technical assistance and capital investment envisioned in the point 4 program can mean in building a stronger democracy, and we in the United States have seen, in Israel, the benefits in the stability of international relations that derive from this kind of cooperative economic effort.

The second great problem for Israel is the overshadowing problem confronting all mankind—the maintenance of peace in the world.

It is given to us to be standing tonight in one of the strongest currents of social change in the world's history. The peoples of the world who yearn for life and security are scrutinizing those political institutions and social patterns which have long been traditional with them. They are inquiring, with increasing comprehension, whether those institutions and patterns can continue to provide stability and peace. They are making decisions which carry tremendous significance for us all.

Israel is an evidence of this new search, even as are Indonesia and India. Some of these decisions made by other nations are applauded by the people of America because they guide men and women toward the way of democracy. Others are hateful to us because they lead people backward to enslavement, cruelty, and hopelessness.

Because of this world-wide social stirring, citizens of the United States themselves are today called upon for decisions more grave than any in our history. As the forces of decency and freedom contend with those who would draw men and women into servitude and degradation, our decisions cannot be postponed.

It will avail us nothing to stand in fear or writhe in confusion as we witness social and political changes, and vacillate in our decisions, for in so doing we mistakenly cause some of the world's peoples to think erroneously that democracy is weak and that its citizens are torn by dissension and conflict. We know that this is not so, but we shall have to decide whether others in the world are going to witness in our Nation the

strength and promise of a united democracy which is vital in the lives of men wherever its roots are allowed to grow.

We have joined in the Council of Nations because we have learned that the causes of war will never be obliterated by nations acting alone, and because we are sickened by the waste of lives and resources that war has required. We have supported strongly the United Nations, and we know that organization has woven a fabric of international order and rightness which will not easily be torn apart. As a people, we have gone further. We have determined that nations ravaged by war shall prosper again, and we have offered gladly of our abundant possessions that they might do so.

But the struggle to ally this Nation with the forces of world decency and order still depends upon the continuing decisions of the people. There are still those among us who would have us remain aloof from the world's problems, or participate in the world's councils only when it would mean immediate profit to ourselves. Lately they have been speaking more loudly and more boldly. Do these men and women not realize that, without world security, there can be no security for our Nation? And that world security will never be achieved unless we help to achieve it?

The people of Israel know that terror and suffering can never be erased from the earth unless nations act in concert to bring such a thing to pass. The American people know it, and the integrity and soundness of their past decision must not be made questionable by men of little faith, or by those who move from motives of ignorance or profit.

It was at the dedication of a cemetery for the dead of the Marine Corps on Iwo Jima that Chaplain Roland Gittlesohn delivered a short and moving sermon that will live forever in the hearts of those who abhor war. This noble speech gave us this warning: "We shall not suppose, as did the last generation of America's fighting men, that the victory on the battlefield will automatically guarantee the triumph of democracy at home * * * when the last battle has been won there will be those at home, as there were last time, who will want us to turn our back in selfish isolation on the rest of organized humanity and thus to sabotage the very peace for which we fight. We promise you who lie here to build the kind of world for which you died."

The prophetic words of Roland Gittlesohn have come true too quickly. Strange as it may seem to thoughtful men, the ravages of total war are easily forgotten, and the terrible fate of men in a war of atom and hydrogen bombs is like some nightmare which we hope never to experience. Once again we hear the voices of protest over the cost of assisting other nations, and the smug conclusion that the world is too big for America to really save. And once again we are urgently cautioned by myopic men, who forget the cost of war and the cost of a huge military machine, that our small help to nations seeking peace and security will bankrupt us all. Do they sincerely believe that we can save ourselves, while the world explodes around us?

Once before in our history we had the opportunity which confronts us now. How tragic it was for the world that an effective League of Nations for which President Wilson crusaded was not established after the First World War. Equally tragic it would be if a second great world war failed to convince the world that the Wilsonian dream of international cooperation is the only route to permanent peace.

To the people of Israel, living in the cradle of civilization, I can give this message. The United States Government congratulates you on your achievements in the cause of democracy. We shall stand firm in our determination to strengthen the pathways of collaboration among nations for the maintenance of a peace that will let you, and other countries, and ourselves, grow and prosper. For Israel and her neighboring nations, there must not be a second round of warfare. The moral forces of this Nation must be directed to the outlawing of such a possible conflict before it starts.

Israel is bringing democracy to the Middle East. For the first time in the history of that area, women go to the polls. Arab women, some of them still veiled, vote for Arab representatives who sit in the Israel Knesset. In that highly democratic body, surrounded by lands in which women have only begun to attain rights, women representatives help to make the laws of the land.

The people of Israel, and the people of America, will not share in the ideas of those who believe that the life of majorities may best be advanced by sacrificing the basic rights of minority groups. Ignorance, fear, hatred, and intolerance are the tools of those who would undermine democracy for the totalitarian state, either of the right or the left and who would establish a philosophy directly contrary to our way of life.

If democracy is to live, its privileges must extend to all citizens. It is from the sharing of these rights that its strength is derived.

We must make democracy shine as a living thing in the eyes of men and women everywhere. We in this Nation shall not allow confusion to slow our footsteps, or momentary political divisiveness to benumb our spirits. Like Israel, we shall go on building the security and well-being of our citizens, and, as we did for the triumph of war, we shall contribute of our minds and bodies for the cause of peace.

It is interesting, as it is timeless and timely, that the day-by-day greeting in Israel is "Shalom." It is a constant reminder of the goal of nations. The moral strength that built Israel is the kind of moral strength that the nations will require to banish war from the face of the earth. Let us stand together in this battle for peace.

Agriculture Conservation Program

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. TRIMBLE. Mr. Speaker, one of the greatest conservation jobs now being carried on is that of crop rotation as practiced by the agriculture conservation program of the Production and Marketing Administration. A fine example of the work being done is a report for 1949 of the Madison County, Ark., group headed by George W. Reeves, ably assisted by James M. Parker, Dewey Harris, Artsil Hunter, Veda Tassey, and Grace Bunch. Under leave to extend my remarks in the RECORD, I wish to insert that report.

ANNUAL REPORT, 1949, PRODUCTION AND MARKETING ADMINISTRATION, MADISON COUNTY, ARK.

INTRODUCTION AND ORGANIZATION OF PWA

The Production and Marketing Administration is a Government conservation program administered on the county level by democratically elected farmers. These farmers are elected in each community each year to work with the county committee, who are elected each year by a delegation of farmers, who are elected by all farmers in the community to serve in this capacity and incidentally all of the delegates in our county are chairmen of the various community committees.

These men (all farmers) are directly responsible for the program and administration of the PMA in Madison County:

COMMUNITY COMMITTEEMEN

Roy Vanhook, Clifty, Ark.; Fred Todd, Clifty, Ark.; Joe Worley, Eureka Springs, Ark.; Frank T. Hudson, Huntsville, Ark.; Baillie Wiggins, Alabam, Ark.; Ted Slavens, Huntsville, Ark.; Frank Dillahunty, Huntsville, Ark.; Paul Flanagan, Fayetteville, Ark.; Paul Stanphill, Hindsville, Ark.; T. T. Counts, Drakes Creek, Ark.; E. B. Shofner, Wesley, Ark.; Alfred Bell, Wesley, Ark.; Jason Jones, Huntsville, Ark.; W. A. Little, Kingston, Ark.; Henry Bryant, Boston, Ark.; Joe Myers, St. Paul, Ark.; L. O. Combs, Combs, Ark.; W. L. Gabbard, Crosses, Ark.; Bruce Rogers, Japton, Ark.; Hugh Stroud, Aurora, Ark.; O. A. Sanders, Witter, Ark.

COUNTY COMMITTEE

James M. Parker, chairman; Dewey Harris, vice chairman; Artsil Hunter, regular member; George W. Reeves, county administrative officer; Veda Tassey, chief clerk; Grace Bunch, clerk.

It took the combined efforts of all persons whose name appears above plus the help of approximately 1,300 other farmers to accomplish the results shown in the remainder of this report.

JAMES M. PARKER,
DEWEY HARRIS,
ARTSIL HUNTER,
Members Madison County PMA Committee.

Name of practice and number of farms carrying out practice	Extent	Practice value
Applying 20 percent superphosphate (964) pounds	2,686,908	$21,495
Applying 50 percent potash (142) pounds	43,253	649
Applying ground limestone (27) tons	640	1,312
Controlling weeds in permanent pasture by mowing (726) acres	9,933	4,966
Establishing permanent pasture by sodding Bermuda grass (69) acres	130	780
Establishing and improving permanent pasture by seeding:		
Kentucky 31 fescue (13) pounds	377	188
Bermuda grass (4) do	37	18
Bluegrass (30) do	1,232	370
Orchard grass (497) do	63,174	12,639
Ryegrass (44) do	5,300	318
Redtop (66) do	2,536	380
Crimson clover (2) do	90	13
Ladino or white clover (28) do	505	252
Lespedeza (annual) (747) do	160,031	12,802
Contour farming intertilled row crops (15) acres	124	67
Summer cover crops (182) pounds	38,920	2,612
Winter cover crops (29) do	3,540	431
Terraces (3) feet	3,280	39
Constructing ponds for stock water (21) yards	27,343	2,187
Developing springs for stock water (10) feet	699	349
Cover of small grains (42) pounds	20,407	409
Cover of ryegrass (6) do	630	38
Harvesting legume or grass seed (30) acres	206	515

21 stock ponds were constructed on farms in Madison County during 1949.
12 springs were developed the county in 1949.

AGRICULTURAL CONSERVATION PROGRAM, 1949

PARTICIPATION

Number of farms in the county	2,865
Number of farms participating in the 1949 ACP	1,321
Percent of participation	46

ACP FUNDS

County allocation	$53,141
Total amount earned	62,820

OBJECTIVES OF THE ACP

The agriculture conservation program is designed to assist farmers in conserving the

soil through grants of certain conservation materials and cash payments for carrying out approved practices on their farms. The reason for these payments by the Government is to assure the public; business people, laborers, and white collar workers, as well as farmers, the standard of living that they may hope to have in this generation and generations to come.

This can only be accomplished by maintaining and improving the fertility of our soil and this is the reason that we feel it is the responsibility of all people in all walks of life to help reach these objectives by lending their moral support with the assistance by the Government, since we all know that our soil is the bases of our economy from the smallest farm to the greatest nation.

We as a committee of farmers believe that the purpose of the ACP is sound and that we are slowly but steadily moving forward in our combined efforts to reach the goal of ACP which is reflected in this report of participation in, and accomplishments of Madison County PMA.

1949 PMA PERSONNEL, COUNTY COMMITTEE

James M. Parker, chairman; Dewey Harris, vice chairman; Artsil Hunter, regular member; Paul Flanagan, first alternate; Ted Slavens, second alternate.

COUNTY OFFICE PERSONNEL

George W. Reeves, county administrative officer; Veda Tassey, chief clerk; Grace Bunch, clerk.

1949 FINANCIAL REPORT OF ADMINISTRATIVE FUNDS

County committee	$1,393.00
Community committee	2,976.50
County office employees	6,747.42
Field officer	30.00
Travel expenses	257.67
Office overhead	570.83
Total expenses	11,975.42

PROGRESS OF PMA AGRICULTURE CONSERVATION IN MADISON COUNTY, 1942–49

Farmers of Madison County have gone a long way in the past 8 years toward getting their farms up to a standard of production, that they should have in order to provide a desirable standard of living, by cooperating with the agriculture conservation program in the county, in developing more and better pastures by seeding adapted pasture grasses and legumes, using phosphate, lime, and other essential minerals recommended by PMA (AAA) where a part of the cost of material and seed was paid by the Government, usually about 25 to 50 percent of cost of the practice. The remainder being paid by the farmer.

The same is also true in the development of meadows by proper fertilization and erosion-control methods, use of better selection of adapted meadow grass seed, a part of which was paid by the Government. For instance, in 1942 farmers sold approximately 4,745,000 pounds of milk, in 1949 they sold approximately 18,250,000 pounds of milk, or an average annual increase of 1,688,125 pounds.

At $3.50 per hundredweight average price paid for whole milk over the past 8 years, would show an average net increase of $59,483.50.

The production and sale of beef cattle has increased in number—40 percent from 1942–49, or from 16,000 head in 1942 tot 22,400 in 1949. By valuing the increase at $100 per head, which is very conservative, would show a net increase per year of $80,000.

Crop production per acre shows a 50-percent increase over the 8-year period 1942–49. However, we also show a decrease of 30 percent of land being planted to row crops over this 8-year period. The decrease in acres planted to row crops is due to the trend of farming practices changing from row crop farming to livestock, and we contribute the per acre increase yield to a better plan of crop rotation and carrying out of soil-conservation practices.

Banks of Madison County show an average increase of deposits by farmers of $125,000 per year.

It is the opinion of different businessmen in the county that at least 35 percent of all increase production and income is directly due to the PMA program in the county through the use of funds appropriated by the Congress to assist farmers in developing the above standard of living and to strengthen the Nation's economy by producing sufficient food and fibers to feed and clothe the people of the world.

All practices carried out on farms reported in Madison County and the assistance paid by the Government through the PMA is shown in this report.

The following table shows the average annual increase in livestock and livestock products over an 8-year period 1942–49 and the cash value of the increase production which is chiefly due to practice payments to cooperating farmers through the PMA.

Increased production 1942–49—assistance by Government—average annual increases, value of increases, and final results

Year	Dairy production	Beef cattle	Hogs	Sheep and lambs	Bank deposits
	Pounds				
1942	4,745,000	16,000	1,500	500	$600,000
1943	6,674,282	16,891	2,000	571	----------
1944	8,603,564	17,782	2,500	642	----------
1945	10,532,846	18,675	3,000	713	----------
1946	12,462,128	19,566	3,500	784	----------
1947	14,391,414	20,457	4,000	855	----------
1948	16,320,696	21,348	4,500	926	----------
1949	18,250,000	22,400	5,000	1,000	1,600,000

Year	Value of increases	Percent of increase due PMA	Value of increase due PMA	Government assistance
1942	----------	----------	----------	$31,433.00
1943	$172,789.28	35	$60,458.75	47,601.00
1944	172,739.28	35	60,458.75	75,806.00
1945	172,739.28	35	60,458.75	46,154.00

Basing-Point Bill, S. 1008, Threat to Independent Truckers—Railroads Propose Rate Slash To Meet Trucking Competition—Trucking Operations in Steel and Cement Increasing Rapidly—S. 1008 Would Again Lash Basic Commodities to Rails—Opposition of American Trucking Associations, Inc., to S. 1008

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. PATMAN. Mr. Speaker, the New York Journal of Commerce for April 19, 1950, carries the headline "Truckers set to fight if rails cut steel rate." If the basing-point bill, S. 1008, is enacted into law, it is my belief that there will be little for the truckers to fight about. Truck and water transportation has come into its own since the outlawing of the basing-point system by the Supreme Court in its decision in the Cement case on April 26, 1948. Since that time, the Federal Trade Commission has brought at least two actions against cement companies for making price differentials for truck delivery from cement mills. Since the Cement decision, the consumer has had a break through enjoyment of lower transportation costs on our heavy, basic commodities by the use of water and truck transportation. Because the artificial basing-point system was not in effect, the savings in water and truck transportation have been to the consumer. The steel and cement trust in particular, because of the Cement decision, have been unable to pocket millions of dollars of phantom freight by charging the all-rail freight to destination when shipments were made by water or truck transportation.

HECTIC TARIFF WAR PREDICTED

The Journal of Commerce article goes on to say: "Highway truckers warned of a rate war 'of tremendous proportions' with eastern railroads today as a railroad spokesman called for tighter Government regulation of trucking operations. The intensity of competition between the two groups showed up at separate hearings before the Interstate Commerce Commission and a subcommittee of the Senate Committee on the Interstate Commerce Commission" (Senate Committee on Interstate and Foreign Commerce).

TRUCKERS WILL BE ELIMINATED IN STEEL HAULAGE IF S. 1008 PASSES

The "rate war threatened" will be meaningless if the basing-point bill is enacted into law. There will be no necessity for railroads to cut rates on iron and steel 25 percent, or any other percentage. There will be no need for the Association of Highway Steel Transporters to worry about an increase in trucking rates, should S. 1008 become law. If S. 1008 does by any means become law, the rail rate from mill to destination would henceforth apply to steel shipments, just as it did prior to the Cement decision in April 1948. Any trucking of steel from the mill which would take place in the future would be for the direct benefit of the steel trust and not for the benefit of either the trucker or the consumer of steel. These facts on the basing-point system would also apply to water transportation. The record shows that in the Tennessee Valley area shipments of steel by water have gone from a mere 1,000 tons annually to more than 50,000 tons, with a direct saving to the consumer of more than $500,000.

TRUCKERS HAVE BEEN AWARE OF THE EFFECTS OF S. 1008 AND THE BASING-POINT SYSTEM

When small-business organizations were unable to secure a hearing on the basing-point bill, the House Small Business Committee held hearings on Small Business Objections to Basing-Point Legislation, particularly S. 1008. These hearings were not extensive and were not as exhaustive as had been planned, because the O'Mahoney bill was brought to the floor of the House, after clearance

with the Rules Committeee, almost immediately after the hearings of the Small Business Committee began. During those hearings, however, the committee heard Edgar S. Idol, general counsel of the American Trucking Associations, Inc., who pointed out in his testimony the fact that cement mills refused to permit delivery by truck and that, even on hauls much to the advantage of the consumer, the cement trust forced shipment by rail.

Is it any wonder that the lobbyists for the railroads, for the Cement Trust, for the Steel Trust, and for many other monopolies in this country are tramping through the Halls of Congress. Pitted against this array of money, small business has been fighting for its very life. Small business has fought a good fight to preserve and strengthen the antitrust laws. Small business has fought for the enforcement of the antitrust laws, and I believe the 300,000 or more independent truckers in the United States represent a type of business which should be protected as well as any other small business.

NOW IS THE TIME FOR THE SMALL, INDEPENDENT TRUCKER TO AGAIN PROTECT HIMSELF BY OPPOSING PASSAGE OF S. 1008

Evidently the trucking industry, as the Journal of Commerce tells us, is in a position to fight a rate war of tremendous proportions. The fact that the trucking industry is willing and ready to fight the money-controlled management group running the eastern railroads is indicative of the value of steel haulage to the trucking industry; but, as pointed out above, it seems to me any fight would have been in vain if all steel shipments are again predicated on rail freight rates. If steel shipments are all based on rail freight rates, would there be any reason why the railroads would desire to cut freight rates to meet truck competition in the handling and hauling of steel? If the rail rate had to apply on all shipments from the mill to destinatien, regardless of method of transportation, what difference would it make to the consumer how the steel was hauled? In fact, under the basing-point system, which S. 1008 will revive, the shipper calls the shots, regardless of the method of transportation.

Strings of barges loaded with many thousands of tons of steel will float down the Ohio and Mississippi Rivers from Pittsburgh and will unload at various vantage points, with all the benefit of water transportation accruing to the steel mill. The consumer will get none of it. The contract water carrier will get no advantage from such shipments. The same is true of heavy movements from the mill by truck under the basing-point system. The rail rate will prevail so that the trucker, if he gets any business at all, will handle shipments at a price the steel trust is willing to pay. It will make little difference to the consumer, in most instances, whether shipments of steel from the mill are by rail or truck, because the consumer will pay the same freight charges, namely, the all-rail rate, in either event.

I sincerely hope that, before it is too late, the 300,000 independent truckers, most of whom are small-business men, will again make their voices heard in opposition to S. 1008, the basing-point bill, the antitrust-law-destroying bill, the bill which emasculates the Federal Trade Commission Act and the Clayton Act as amended by the Robinson-Patman Act. It is well, I believe, to include in this statement the testimony before the Small Business Committee of the representative of the American Trucking Associations—(Pages 102–107, Small Business Objections on Basing-Point Legislation, Particularly S. 1008)—the statement of Edgar S. Idol, general counsel for the American Trucking Associations, Inc., follows:

STATEMENT OF EDGAR S. IDOL, GENERAL COUNSEL, AMERICAN TRUCKING ASSOCIATIONS, INC.

Mr. IDOL. My name is Edgar S. Idol, and I am general counsel for American Trucking Associations, Inc., the national association of the motor-carrier industry. We are a federation of State associations, each of which includes in its membership all types of motor carriers, both private and for hire.

Our industry is made up almost entirely of small operators. There are approximately 300,000 for-hire carriers in the country, most of whom handle business locally within cities or are agricultural operators. There are only 24,000 regulated by the Interstate Commerce Commission. That is a very sizable number to make up the transportation business.

Of that group only about 11 percent have revenues that run as much as $100,000 a year, the basis for the Commission's classification of class I carriers. Even among that relatively small group, only a handful have as many as 500 employees, and I would say all of them would be classified as small business generally.

We have made no general study, Mr. Chairman, of the matter being considered by this committee, the basing point pricing, as a general proposition. We have, however, had our attention directed by a number of complaints from our members to one situation which we want to bring to the attention of the committee. That is the inability of motor carriers generally to obtain any business in the handling of cement. The history of the transportation of cement is well covered in the findings of fact issued by the Federal Trade Commission in the Cement case, its Docket No. 3617. They spend some six of eight pages in covering that subject. I briefed it in my statement to your committee.

Trucking over the highways generally commenced about 1920 in this country, and at that time cement mills generally would sell cement at the mills to any purchaser who wanted it and would allow it to be transported by any means that the purchaser desired.

The purchasers who began using trucking quickly found they had a very substantial advantage in a good many respects. They sometimes found trucking more efficient for hauls say to 25, 50, or 75 miles of the mill. They found they could pick it up at the mill at the mill price and get it to destination at a cost considerably lower than moving it from the mill by railroad to a siding; there unloading it, and making delivery.

Cement mills, however, very soon found out that their basing point pricing structure was being completely disrupted by this practice. It is not difficult to see why that would be so. Quoting from the Federal Trade Commission's Finding No. 11 covering this matter, the Commission said this:

"One development has been the desire of some dealers, contractors, and other purchasers to utilize motortrucks for the transportation of cement from respondents' mills or warehouses to destinations within a reasonable distance. It is obvious that if a purchaser is allowed to take delivery at the mill in trucks owned or controlled by him, the seller loses control of the destination price."

They decided to do something about that. The actual reason why it was done is covered very clearly in a questionnaire transmitted by Professors Clark and Burns in the course of a study which they undertook for the Cement Institute. I have cited in my statement very briefly two of the statements made. They were these. The first complete statement made by the Lehigh Portland Cement Co. was this:

"The manufacturer striving to figure his prices on indeterminate and fluctuating trucking rates, and to meet the equally fluctuating and indeterminate rates from his competitors' plants, quickly found himself engaged in blind, reckless, and destructive competition.

Statements along the same line were made by five other companies quoted to Professors Clark and Burns in the study made for the Cement Institute. That situation did not last too long.

It developed during the 1920's, and early in the 1930's a change was made. The Federal Trade Commission treats that at some length and summarizes the evidence as follows:

"The effect of trucking on prices and distribution was the motivating cause of respondents' action with respect to trucking cement."

Now, the action which those companies took was in two or three forms. Again quoting from the Federal Trade Commission's finding:

"One of the earliest restrictive steps taken, as shown by the record, was the addition of a 15-cent-per-barrel charge to the mill base price for delivery to trucks at the mill."

On July 25, 1929, the sales manager of Penn-Dixie wrote to the then president of that company as follows:

"The plan is being developed to improve the trucking situation, particularly in the Lehigh Valley. I understand this morning that the plan as now contemplated puts in a minimum price f. o. b. destination of $2.44 cloth and a price f. o. b. trucks at all mills in the Lehigh Valley and New Jersey district of $2.40 cloth."

That means, regardless of the freight price at the mill, there would be a differential of only 4 cents a barrel in the price at which the mill would deliver to a truck at its platform and the price at which they would deliver anywhere, paying the rail freight. The conclusion is obvious.

The difference of 4 cents a barrel is not enough to cover any kind of trucking cost, and it operated to completely eliminate the use of trucks, whether they were more efficient, less expensive, or more suitable to the purchaser's demands or for any other reasons.

Two or three pages of the Federal Trade Commission's finding are devoted to the steps taken to put this policy into effect throughout the country. The rules of putting it into effect are summed up by the Commission as follows:

"Of 116 mills"—which were studied by the Commission—"85 reported no trucking permitted."

This again is from the study made by Professors Clark and Burns for the Cement Institute, which was concluded about 1937. To repeat:

"Of 116 mills, 85 reported no trucking permitted whatever; 8 reported trucking permitted at a price penalty; 5 reported trucking permitted at the full rail destination prices."

That is not clear to me, but I assume it means that full rail destination price was charged at the mill.

"One mill reported trucking permitted on the basis of destination price at the mill at times. At other times base price plus 25 cents per barrel penalty. Four mills reported trucking permitted but limited to certain points."

Generally within just a single county, I believe that was.

"Six reported permitted at destination prices less actual freight. Only seven reported permitting trucking on the basis of the mill price without any restriction."

This subject was fully explored by the Federal Trade Commission and those were the results which they found. The order which they made in this case and which has been upheld by the Supreme Court will, in our opinion, when it is fully enforced, make truck service available to those purchasers who desire to use it.

The order specifically provides that cement mills must not refuse or decline to allow purchasers to provide transportation by any means at any cost or to any place they may desire. The enforcement of that order of the Commission is not effective in its entirety.

In a case recently called to our attention the contractor wanted to use motor carrier service for hauling cement from the plant of the Universal Atlas Cement Co. at Hudson, N. Y., to a road project only 29 miles from the mill.

The mill refused to make deliveries to trucks under any conditions. They insisted that the cement be taken from the mill by rail, hauled to a rail siding, and the nearest they could get was 20 or 30 miles rail haul before they would make delivery to the contractor or to his trucks or to anybody else that wanted to get it. From there, the closest rail siding, it still had to be hauled a distance of some 12 miles by road before it could reach the site of the construction project.

The cost of that was bound to be almost double, in my opinion, the cost of handling direct from the mill to the site. It increased the cost of the highway to the taxpayers generally.

Mr. KAUFMAN. The real reason is that on the basing point system, to make it work it has to be a delivered price.

The CHAIRMAN. And a railroad price.

Mr. IDOL. And a railroad price, a fixed, determinable price.

Mr. KAUFMAN. Even though that price is artificial to the extent that it reflects phantom freight or absorption of freight. In other words, it may not represent actual freight but nevertheless they arrive at a price which is a fixed delivered price; is that correct?

Mr. IDOL. That is right, and the cement mill must control that price.

Mr. KAUFMAN. That is right, so that if the purchasers, whether nearby or far away, would call for the cement at the actual selling point, it would destroy the whole system.

Mr. IDOL. Yes.

Mr. KAUFMAN. Because then a mill would have to sell at its actual mill net price.

Mr. IDOL. It actually did destroy the system during the twenties.

Mr. KAUFMAN. Certainly, the delivered-price system under the basing-point system destroys that whole possibility of getting that price as a mill net price; is that not so?

Mr. IDOL. That is correct.

Mr. KAUFMAN. And if your trucks, with a basing-point system operating could actually take the cement at the place where the cement is made, you destroy the whole system, the basing-point system.

Mr. IDOL. That is correct, unless the mill itself can control the price to be charged the purchaser for that truck transportation.

Mr. KAUFMAN. Oh, yes; by adding penalties or what not.

Mr. IDOL. That is right.

Mr. KAUFMAN. So, then, we have here an example, if I understand it, whereby the cement people, to carry out this system of delivered prices, based on artificial phantom freight and absorptions of freight, actually change the economics of the situation so that they insist that deliveries shall not be made by the most economical methods available; is that correct?

Mr. IDOL. That is correct.

Mr. KAUFMAN. And now, of course, under this basing-point system we have other economic disadvantages such as cross-hauling, steel moving one way and then moving back another way, another economic disadvantage, and we have had testimony—I do not know whether the testimony has been developed here yet but it has been shown in many other places—testimony indicating regional underdevelopment whereby one region is favored over another, even though the region might be fully capable of producing cement or producing steel.

Now, I want to ask you this: Would it be fair to rank this discrimination against trucks as an economical method of transportation, with these other discriminations that have been testified to here and may be testified to later on?

Mr. IDOL. Well, we do not think it is. We think it is highly improper.

Mr. KAUFMAN. You think this discrimination is highly improper?

Mr. IDOL. We certainly do. I might say "improper" is not a very good word for that. We think it is uneconomic as a general proposition.

Mr. KAUFMAN. Supposing we shall be able to show in these hearings later on—I know we will, because there is no question about the facts—that water transportation is discriminated against in the same way, that where, in many situations, the cement or even the steel could be transported by water much more cheaply than by any other way, that nevertheless, they want to make the basing-point system work, the basing-point system using only rail rates, and the water transportation is ignored completely and is not used, or even if it is used, the purchasers are charged the same as rail rates; would you regard that as a discrimination alongside discrimination against trucks?

Mr. IDOL. I think there is no question about it being discrimination. As a matter of fact, I believe that point is made in the Federal Trade Commission's finding in this case. There is one portion of it somewhere that refers to the fact that rail transportation was, by agreement, used exclusive of any other form.

Mr. KAUFMAN. That is correct.

Mr. IDOL. I do not find a quotation offhand, but I am sure it is there.

Mr. KAUFMAN. I am quite sure there is a reference to that in your Cement Institute case. The facts are developed very fully in many other forms.

I did not mean to interrupt you.

Mr. IDOL. Well, I have almost covered my ground, Mr. Chairman.

The CHAIRMAN. You were down near the bottom of page 2, I believe.

Mr. IDOL. Yes.

We have this situation now: Inquiries from carriers in Pennsylvania and New Jersey have reached us which indicate that mills in those territories, as well as this one particular mill in New York, are still following the policy of refusing to make truck deliveries.

We have, however, had reports from other territories, particularly Wisconsin that I know of, indicating that since the Cement case decision, mills have changed their practice, and are now routing traffic by either truck or rail in accordance with the purchaser's desires.

I have discussed this matter in behalf of our association with counsel for the Federal Trade Commission. They tell us that they have under consideration the examination of whether or not the small cement companies are complying with the outstanding order in the Cement case. We think that a refusal of the type we find in New York is in all probability a violation of the Federal Trade Commission's outstanding order.

We think that the Federal Trade Commission will be able to eventually enforce compliance with that outstanding order under the law as it now stands. But if the amendment here proposed to the Federal Trade Commission law is adopted, we think it very uncertain whether purchasers will ever be able to demand truck service or any other type of service except rail service.

Whether it is efficient, economical by comparison with rail service or not, I think it is highly questionable whether under the language here proposed any truck line would ever handle any cement.

The language as we understand it says that basing-point prices are all right. The cement company which establishes and has—I assume without any doubt that they will return to regular basing-point pricing practices if the law is passed—any single company then, I do not believe it would require any conspiracy for a company to decide that it could not enforce its own basing-point pricing unless it used rail service exclusively, and I can see no way in which the practice could be attacked.

Baltic Incident

EXTENSION OF REMARKS
OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. DOLLINGER. Mr. Speaker, the Herald Tribune of April 23, 1950, published a letter which deals with the disappearance of the American plane over the Baltic.

I am inserting it in the RECORD, because it so succinctly points out the basic differences between the democratic and communistic way of life.

THE BALTIC INCIDENT

To the New York Herald Tribune:

The Baltic incident brings into focus the essential difference between the American way of life and that of Soviet Russia.

The disappearance of the Privateer plane brought about a great search in which scores of American, Danish, Swedish planes and ships participated. They did so in the hope that some of the airmen might be found alive.

It is significant that not one Russian ship or plane participated in the search. The Soviet Government did not even offer to lend any help in finding the flyers.

We know what would happen if a Soviet plane fell into the sea off the coast of America. Whether it disappeared off Alaska or near Iceland, Newfoundland, Bermuda, or Cuba would make no difference. Within minutes our Coast Guard would be rushing to the scene. The United States Navy and the Air Corps would immediately institute rescue operations. Planes and ships would be directed to the area to search for and pick up any possible survivors.

Herein lieth the basic difference between the democratic and communistic way of life. Americans, true to their religious heritage, are human beings; they have compassion, love, and mercy in their hearts. When a man is down, even though he is an enemy, the American tradition of sportsmanship requires that help be given to the fallen.

But not so with the godless Communists; there is no mercy in their hearts. They seem to be void of the basic elements of humanity. The least that could have been expected of the Soviet Union was an attempt to help find

the missing fliers. But even a gesture in that direction was lacking.

A further revelation of the Soviet mind can be gleaned from the Russian note of protest, which said that a Russian fighter plane fired at the American plane and it disappeared. It is logical to believe that the Soviet Union knows whether the plane was shot down and whether it crashed into the sea, with the loss of all on board.

The Soviet Government could have given a definite statement as to the fate of the airship. This would have saved the families of the missing airmen great mental anguish. It would have saved a fruitless search in which so many planes and ships participated at such great cost. But the Communist mentality is one which delights in giving misleading information. It has no capacity for human understanding, compassion, and love.

The Baltic incident should convince every American of the gulf that divides the American way of life from that of Communist Russia. There should be no doubt as to the superior values of our democracy, our freedom, and the God-given gifts of humanity, love, and brotherhood which have become part of our daily expression of the American way of life.

Rabbi ABBA ABRAMS.

NEW YORK, *April 21, 1950.*

Easy To Understand Why Communists Regard Lattimore as "One of Our Men"

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF PEPRESENTATIVES

Thursday, April 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson, from the Washington Star of April 25, 1950:

It has been suggested that because I have criticized Senator MCCARTHY's approach to Owen Lattimore, I am supporting Mr. Lattimore. Such is not the case.

I think Mr. Lattimore is not a Communist. But the policies he has advocated certainly cannot be described as anti-Communist. His words seem to reveal him as a non-Communist, whose policies fit in almost exactly with Russia's plans for the organization of Asia, and the attitude America should take toward it. If the Communists, therefore, should think him "one of our men," it would not be surprising.

RECOMMENDATIONS MADE

Mr. Lattimore addressed the American Academy of Political and Social Sciences in Philadelphia on April 15. There he made the following recommendations:

(1) Allow the United Nations, without American support, to unseat the Chinese delegation and seat a new one, representing the Communist regime, the United States waiving its veto, but not granting diplomatic recognition.

(2) Return United States policy to the classic definition of favoring the territorial integrity and undivided political sovereignty of China, and show friendliness toward the entire Chinese people, in contrast to Russia who might deal with and favor one political party.

(3) Abandon the anti-Communist government on Formosa, whose bombing of coastal areas is focusing Nationalist feeling in China against the United States. Mr. Lattimore expanded the idea that if the raids on the Chinese mainland were abandoned the Chinese Nationalists would not permit the Russians to construct an air base at Shanghai.

(4) Give aid, of the point 4 kind, via the United Nations.

Hitherto, Mr. Lattimore has advocated (5) abandoning South Korea.

Now, this adds up to recognizing that the only nation of white men with a mission in Asia is Russia. I don't know what more the Soviets could wish us to do.

If (1) we withhold recognition from Red China while permitting it a seat on the UN Security Council, we are inviting Chinese Communist delegations to New York, under diplomatic immunity, without any diplomatic advantages for the United States in China, where some 2,000 Americans are being kicked around with impunity. We are to relinquish our veto for no quid pro quo, Russia continuing to keep several nations out of the UN.

HOW CAN IT BE DONE?

If (2) we stand for the undivided territorial and political integrity of China, regardless of how it is achieved or maintained, we commit ourselves to opposing any Chinese groups or territories which may find means to break away from the Mao-Russia axis.

Just how the United States can show friendliness to the Chinese people except through their government is impossible to envisage.

The abandonment of Formosa (3) means it will be taken by the Mao government regardless of the will of Formosans. And if Formosa is to fall by default, of course, the Communists won't need to build an air base on Shanghai.

(4) and (5) mean we will finance our enemies and betray the South Koreans.

As to an Asia for the Asiatics program, there is a curious inconsistency in Mr. Lattimore's past. This country precipitated the war with Japan by refusing recognition of a special Japanese interest in China, by supporting Chinese resistance, and by opposing Japan's program to organize the Far East through pro-Japanese governments. Logically, Mr. Lattimore should then have been against American intervention. But he wasn't.

Now, why should he apparently think it better for the United States to accept a Russian far-eastern fait accompli than a Japanese hegemony?

Injustice in Federal Retirement Law

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. O'HARA of Illinois. Mr. Speaker, from the Honorable Benjamin P. Epstein, judge of the circuit court of Cook County, I have received a letter which I am sure will be of interest to my colleagues and will prove helpful in eliciting a bipartisan support for S. 2640 when, and if, that measure reaches the House. Judge Epstein has been my close friend for many years. At the time of his election to the circuit bench of Illinois he enjoyed one of the largest Federal practices of any lawyer in the history of Chicago and his standing among the great Federal practitioners of the Nation was firmly established. To accept service on the bench he made a large financial sacrifice.

It speaks the character of Judge Epstein that he has not forgotten the fine public service of an agent of the Interstate Commerce 36 years ago. Judge Epstein has taken the time to interest himself in the case of this former Federal employee, now retired, who with others suffers an injustice under our retirement law. I earnestly urge the thoughtful reading of Judge Epstein's letter, which follows:

CHICAGO, *April 24, 1950.*

Hon. BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Back in the good old days of 1914 when Mike Igoe (Hon. Michael L. Igoe, judge of the United States District Court, who rendered distinguished service in this body as Representative at Large from Illinois) and myself were assistant United States attorneys, we had the occasion to work with one Pearson Marsh, now residing in our district at 4940 East End Avenue, Chicago, and at that time one of the most efficient agents of the Interstate Commerce Commission of the United States.

On June 30, 1948, after 53 years of service with the Interstate Commerce Commission, Marsh retired. I doubt if there are many servants of the Government who have this long period of service. Marsh could have retired in 1945 with his 50 years of service rendered, but because of the urgent need of his services at that time, he agreed to stay over, and did stay for three additional years.

When he retired in 1948 there was available to him, under the retirement laws of the United States, the option to receive a pension for himself during his lifetime only and without survivorship, or an option to designate his wife, Ellen, as survivor, the benefits, in case of his death, to accrue to her, for and during her lifetime.

In 1948, when Marsh made his election as to his choice of retirement pension, he was very ill, having been confined to his bed for many months. Without the advice of counsel and the benefit of discussion with his friends, he designated only a pension for himself, to be payable during his lifetime, without any protection to his present wife, now about the age of 65 years. I believe Marsh, at this time, is about 75 years old.

When he recovered from his illness some 7 months after making his election, and realizing the significance of his action, he tendered back the sum of money that represented the difference between the two pension allowances, and asked that the benefit of the retirement law be made available to his wife in case of his death. By reason of the fact that the then Civil Service Retirement Act (I believe it is 5 U. S. C. A. et seq.) provided that the election of the option for retirement pension must be made at the time of the retirement, the governmental authorities (I believe the Civil Service Commission) rejected his tender and refused to allow him to make a change, for the benefit of his wife Ellen, in the event of his death.

I understand that some short time ago Senator OLIN D. JOHNSTON from South Carolina introduced a bill in the Senate, S. 2640, to amend the Civil Service Retirement Act mentioned, supra, this for the purpose of relieving hardships such as has occurred in the Marsh case. I have been informed that the effects of this bill, if passed, would be to enable a few public servants with the fine and long record of service, such as Marsh, to obtain relief.

I am therefore writing to you in the hope that should this legislation come before your branch of the Congress of the United States, you will see fit to support the legislation proposed by Senator JOHNSTON, so that this

grave injustice to Mr. and Mrs. Marsh will be corrected. I could say more about the unusual and distinguished character of service that Marsh has rendered to the Interstate Commerce Commission during the period of time that I have mentioned, but I am sure you will hear about it from other sources.

I trust that I have outlined to you sufficient of the matter so that you can form an opinion as to the propriety and justice of the legislation proposed.

With my kindest and most cordial regards, I am, as ever,

Sincerely yours,

BENJAMIN P. EPSTEIN.

Fine Words Can't Abate Red Menace

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I include in my remarks an article by Ivan H. Peterman, editorial writer for the Philadelphia Inquirer, which appeared in the April 25, 1950, issue of this paper, as follows:

Secretary of State Acheson's urgent call for national unity and a strengthening of the free nations' front against communism indicates belated awareness from an office which long ago should have set the shining example.

For more than a year, in fact since he succeeded the tired George C. Marshall in that pivotal post, Acheson and his liberal-pink-Red advisers, including such as Alger Hiss and the Far East section of the State Department, have been pursuing anything but the policies he advocated before the American Society of Newspaper Editors. If the United States is today in a bad jam, let the Secretary review the mistakes in policy, judgment, and action which greased the skids under China, weakened the United Nations, and encouraged the Soviets to the verge of undeclared shooting war.

Lest anyone say these be generalities, let us take up the recommendations on critical points by the Secretary:

Preparedness and security: Although Mr. Acheson now calls for "prudent organization of our defenses," the administration has been lax in this respect on many occasions. It has kicked our military, naval, and air leaders around so that until the last few weeks they have been afraid to raise their voices. State Department spokesmen, not qualified military experts, told Congress that Formosa was strategically unimportant, and suggested Mao Tse-tung was a potential ally, so let's not offend him by helping Chiang. And every eager beaver in the State Department has battled fiercely to defend the sabotaging, Red collaboration that has lost China to the Kremlin.

It is also to be remembered that on Acheson's own January advice "not to offend Asiatics" (Press Club speech), our defense forces have been repeatedly humiliated and set upon, unable to strike back.

This cowardly policy on the part of a great power, if you want the brutal truth, Mr. Secretary, was the invitation Moscow needed to send its aviators out to kill 10 unarmed American fliers over the Baltic.

Americans need not worry about such totalitarian thugs, if the directors of national policies would stop handcuffing brave men who are only too willing to protect United States interests.

Political action: The Secretary's call for boldness and imagination in utilizing United Nations, the North Atlantic Treaty, Council of Europe, etc., is also open to cynical response. Why hasn't he shown some?

It so happens the Acheson regime left UN agencies to wither, preferring unilateral action since the Paris Assembly in 1948. Washington has undermined, ignored, deserted, and doubled-crossed its UN friends and even its own UN delegation on several occasions.

Meanwhile, the God-given opportunity to put UN to work without Soviet obstruction has been wasted. Instead of working together during the Soviet walk-out, the United States and its friends sat around Lake Success like diplomatic morons, bewailing Russia's absence.

At the moment Trygve Lie, long Moscow's man in UN, with his assistant, Konstantin Zinchenko, the former chief censor in Stalin's government, are rushing to Russia to try to abate the cold war. Why didn't the free nations act free and intelligent this past winter, and show some of the boldness and imagination when they had the chance? Why didn't Mr. Secretary show up once or twice, and give them a cue in that direction?

East-West relations: Again emphasizing the availability of UN council tables for effecting some methods of getting along with Russia, Mr. Acheson indicates a continuation of the modus operandi supposedly achieved at Paris last June. That was on the Berlin blockade. But what did we gain by that settlement? Only another Berlin stalemate, today threatened by a German Youth drive to take the city—under Red auspices and direction.

In the meantime, we have frustrated and alienated the friendly West German Government at Bonn. Is that showing the political-economic military shrewdness we need? No, Mr. Secretary—fine words make fine sounds. But bold actions and sincere deeds go much further to save this Nation.

If There Is To Be Real Unity in America the Administration Must Change Its Tactics or the People Must Change the Administration

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of April 24, 1950:

WHAT'S WRONG WITH THE SPIRIT OF AMERICA?

"Something has gone wrong with our Nation, or we should not be in our present plight and mood. It is not like us to be on the defensive and to be fearful. That is new in our history. * * * What we lack is a righteous and dynamic faith. * * * There is confusion in men's minds and a corrosion of their souls."

Thus wrote John Foster Dulles in his book published last week entitled "War or Peace."

A review of some of the events beginning with the 1948 Presidential campaign may throw some light on what it is that has gone wrong, that has caused us to be fearful, that has bred confusion of the mind and corrosion of the soul.

In 1948 Gov. Thomas E. Dewey was confident he had the election in the bag. So, instead of calling attention to the shortcomings of the administration he was seeking to succeed, he based his campaign on a plea for unity of the American people in their efforts to solve the problems confronting them and the world. He saw correctly that his tasks would be simplified if he could assume the Presidency unhampered by any dissension of his own making.

But President Truman refused to let the election go by default. Employing the tactics of desperation, he appealed to class interests and prejudices and unexpectedly walked off with the prize.

That campaign was the death blow to the political unity the American people had achieved during the war. The coup de grace was administered by Truman himself when the administration used its vast influence to bring about the defeat of John Foster Dulles, one of the chief architects of the bipartisan foreign policy, in the 1949 New York senatorial election. The debacle in China finally convinced the American people that bipartisanship had existed in name only.

Now it is the Truman administration which is calling for unity, as the world situation becomes more desperate. Dulles and John Sherman Cooper, both Republicans, have been named special advisers to the State Department. Truman has promised to consult with Republican Members of Congress and to solicit their views and to take them into serious account in both the formation and implementation of our foreign policy.

Further than that, Secretary of State Dean Acheson is now calling for unity and bipartisanship on the domestic as well as the foreign front.

"There is no longer any difference between foreign questions and domestic questions," he told the American Society of Newspaper Editors in Washington. "They are all parts of the same question" involving the "great problem of our national security."

These are brave words, but do they mean that all shades of political opinion must accept the Socialist-labor philosophy and program of the Truman administration or be damned for jeopardizing national security?

There can be no real unity in foreign affairs as long as the administration not only refuses to confess its error in its policy toward China, but defends a policy which coincided with the Communist Party line and stubbornly refuses to "turn its back" on those who promoted it.

There can be no real unity in domestic affairs as long as the President advocates give-away programs to attract votes, as long as he supports special privilege for labor leaders and denounces as the seekers of special privilege those who would save their businesses from being destroyed by Government competition or excessive taxation, as long as he lambastes Congress for refusing to enact the socialistic programs he has repeatedly recommended.

There can be no real unity as long as the administration continues to engage in the utterly immoral and unnecessary vice of spending more than it takes in, as long as it continues to give encouragement to the creeping inflation which is robbing everyone of his savings and future security.

Even as the administration talks of unity the President is preparing to depart on a nonpolitical cross-country tour at public expense, the purpose of which is to put the heat on Congress and stir up more disunity.

God knows this country needs to be united. It needs to acquire a righteous and dynamic faith, as Dulles wrote, in its institutions and its way of life. It needs to regain confidence in its spiritual heritage. And it needs to regain confidence in the Government and the men who are running it.

But unity will not be achieved by trying to browbeat the people into accepting socialism under the threat that failure to do

so will mean losing the cold war or getting involved in a shooting war.

If there is to be real unity, the administration must change its tactics or the people must change the administration.

Address of Hon. Don Wheeler

EXTENSION OF REMARKS
OF
HON. JOHN S. WOOD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. DON WHEELER of Georgia:

ADDRESS OF HON. DON WHEELER ON RADIO STATION WSB, ATLANTA, GA.

Ladies and gentlemen of the radio audience, it is a pleasure to be again afforded the opportunity of speaking to you through the facilities of this great radio station. There are a great many subjects which clamor for attention but the shortness of time allowed me will prevent me from developing any one subject thoroughly, therefore, I shall confine myself to a few hurried impressions of the current scene in Washington.

One of the most alarming things about the whole legislative picture in Washington is the inability of our Government to balance the budget. This situation would not be so alarming if we were out of debt, but, in view of the fact that we are in debt to the tune of nearly $260,000,000,000 makes the appropriation of every dollar a matter of extreme importance. This situation has caused me to determine my vote not on the basis of whether a project is worth while but on the basis of whether it is absolutely necessary, and it is my firm belief that voting in this manner is the only way in which our budget will ever be balanced. Hardly a week passes in Congress but that a bill is brought up for passage which provides for some worth-while project—it must have some merit or it would never reach the floor for a vote—but when the vote comes, I am constrained to ask whether the project is absolutely necessary to the welfare and safety of this country. Whether the bill provides for spending $1,000, $1,000,000, or $1,000,000,000, I do not vote for it unless I am convinced that it is necessary.

Too many people in this country seem to feel that all the Federal Government has to do in order to get money is to have someone in the Treasury Department press a button and print the amount of money required. If this were the way wealth is created we could all be rich, but the fact of the matter is that the only way the Federal Government can get money to spend is by either collecting it in the form of taxes or by borrowing it. The American people are now being taxed to the tune of over $40,000,000,000 each year and we have borrowed until we are nearly $260,000,000,000 in debt.

In spite of the fact that we are taxed to the tune of over $40,000,000,000 annually and in spite of the fact that we are nearly $260,000,000,000 in debt, certain pressure groups in this country continue to press upon the Congress legislation which will, if enacted, either increase the tax burden or further increase the debt which our children and grandchildren will have to pay. Nearly every American citizen seems to want the Government to quit spending so much money and they want great numbers of Government employees fired, but when you get down to cases you invariably find that they want us to quit spending money on everyone else except the particular group of which they are a part and they want us to fire all the employees except, "me and my wife, John and his wife—us four, and no more." This is the sort of thinking on the part of the American public which has resulted in the present deplorable fiscal situation. Of course, this sort of thinking is only indicative of the prevalent philosophy which holds that the Government owes everyone a living. Another way of expressing this philosophy is to say that your neighbor owes you a living for it is your neighbor who will pay the taxes to provide the security which you demand of Government.

Pressure groups must have a "horse to ride" or a cause to espouse if they are to maintain their existence. Every time the Congress meets these pressure groups come before it through their spokesmen and present their legislative program and demand that it be enacted. The welfare of the country becomes secondary to the welfare of the particular group these spokesmen represent. When they have presented their programs it is all too often true that the Congress, fearing political reprisal, will pass the legislation espoused by the pressure group. Once the pressure group gets what it wants for one year, they immediately start to work on fresh demands to be made on the Congress the following year, and so we go with no place where politicians can find courage to stop.

To aid and abet the pressure groups in their sometimes unreasonable demands, we have the executive branch of Government headed by the President who tells the people that if the Congress would only furnish him with the money, he would take care of all their desires and that in addition to taking care of all the wishes of the American people, he would care for all the wishes of all the other people in the world.

In speaking of taking care of all the people in the world, it must be realized that we cannot any longer live to ourselves alone in the modern world. Modern communications and transportation have made isolationism foolish but they have not made it true that the American taxpayer must furnish housing, food, clothing, and medical attention to all the people of the world. We cannot finance the whole world and at the same time provide security for ourselves.

If the Federal budget is ever to be balanced, the American people must begin to realize that there is no such thing as something for nothing and the Congress must reflect this thinking in the action it takes on the various projects which call for the spending of the taxpayers' money. We must also begin to realize that for every degree of so-called security that is obtained from Government, a commensurate degree of individual liberty must be given up in exchange. Thank you for listening.

Tax Freedom Day

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. MEYER. Mr. Speaker, tomorrow, April 28, will be a day of liberation for the American taxpayers. In commemoration of this event, I have today introduced the following concurrent resolution:

Whereas postwar spending is continuing at an unprecedented rate so that the national debt now stands at $255,588,544,106; and

Whereas the Federal spending budget for 1951 has been set at an additional $42,439,000,000; and

Whereas this represents a direct obligation on the average American wage earner whether he or she pays in direct or indirect taxes; and

Whereas it requires one-third or 32 cents out of every dollar a man or woman earns to support present profligate expenditures; and

Whereas this means every salary and wage earner actually works for the tax collector for the first 117 days of each year before he or she can call his or her money their own; Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that April 28 be observed and designated as Tax Freedom Day marking the first date from January 1 when a man can call his dollar his own; and be it further

Resolved, That April 28, designated as Tax Freedom Day, be symbolized as a day of relief throughout the land with such demonstrations as may seem appropriate, including a prayer for deliverance.

Mr. Speaker, I am informed a similar resolution is today being introduced in the other body by Senator BRIDGES and Senator TAFT.

The St. Lawrence Seaway Costing Over a Billion Dollars Would Be Unusable for 6 Months Out of Each Year

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. VAN ZANDT. Mr. Speaker, I am inserting herewith an article from the April 23, 1950, issue of the Cleveland Plain Dealer showing that the Great Lakes are at the present time ice-blocked and will not become navigable before May 7 or May 10.

Those who are advocating the construction of this economic monstrosity known as the St. Lawrence seaway are prepared to spend the money of the American taxpayer for a project that can only operate for 6 months each year.

The article referred to is as follows:

[From the Cleveland Plain Dealer, April 23, 1950]

FIGHTS LAKE SUPERIOR ICE FOOT BY FOOT—CUTTER IN TOUGH COLD WAR; ORE SHIPPING ABOVE SOO BY MAY 1 UNLIKELY

ABOARD U. S. S. "MACKINAW", LAKE SUPERIOR, April 22.—Battering the stubborn Lake Superior ice barrier, then backing up to batter it again, this powerful Coast Guard cutter is using all the tricks at her command to blaze a path to the iron-ore docks.

Ice in all the crazy forms nature can devise is making this cold war veteran fight for every foot she gains. Windrows extending from 30 to 40 feet under water and rising 10 feet above it strike back for mile after mile. Solid blue ice 24 inches thick, topped by

heavy-crusted snow, starts where the windrows leave off and provides stanch opposition, too.

The bigger windrows (long rows of jammed ice) bring the icebreaker to a complete stop again and again. Then, if she can, the ship backs up for another attack. Sometimes, however, her bow becomes wedged and she cannot move.

ROCKED OUT OF TRAP

Then the "heeling" system is brought into play. Water in the wing tanks is shifted from one side of the ship to the other at the rate of 400 tons in 3 minutes. This rocks the cutter out of the trap as her six Diesel engines, providing a total of 10,000 shaft horsepower, are turned on full speed.

The bow propeller, 15 feet below the water line, whose main purpose is to suck water from under the ice, got jammed in the giant windrows several times today, cutting out the motor.

All this adds up to bad news for vessel operators, and indicates there will be no early resumption of large-scale iron ore shipping from Lake Superior.

Experienced officers of the *Mackinaw* say that from the present outlook shipping through the Soo locks by May 1 will be impossible. They contend that each vessel which tried to make the passage to the lake head now "would require an individual *Mackinaw*."

FOUR MILES IN TWO HOURS

It may be impossible to open the traffic lanes before May 7 or 10, according to these men, and even then, unless favorable weather intervenes, the war against the ice menace may have to be continued.

Illustrating the fierce battle nature is waging is the fact that for a stretch abreast of Grand Island this morning the best speed the *Mackinaw* could make was 4 miles in 2 hours.

Unexpectedly, Whitefish Bay, which had been reported heavily windrowed, provided little opposition. It was covered with 15-inch blue ice and contained hardly any windrows worth mentioning.

Opposite Whitefish Point a wide expanse of open water stretched a welcoming hand. It was only an insidious gesture, however, for from that point on the going became rugged with deep, stone-wall windrows. Only a few leads (narrow stretches of open water) and wide-open areas have been encountered so far.

The weather does not hold much promise. The temperature dropped to 20° in the night and formed new 1-inch skim ice in places which formerly had been clear.

Instead of going direct to Duluth, as had been planned, the ice breaker is proceeding to Marquette to break out the harbor there.

Pushing slowly through this arcticlike land of nowhere is an eerie experience. The only traces of human activity so far encountered on the lake were the hoof prints of a horse and the track of a cart leading to a 30-foot pole. The pole had been used by herring fishermen in threading a net between two holes in the ice. The fishermen are not happy that the navigation season is near. They have been making large catches.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent I include in the Appendix the third article by Mr. Frank C. Waldrop on the growth of communism in our country:

Some Americans got to know communism in college. Some in the Department of State. A very few, for communism is not a working-class movement, found it in factories and shops.

I met up with communism at a funeral.

A Communist agitator named Steve Katovis was killed in a riot in January 1930, as I was setting out to learn the reporter's trade in New York City. I happened by accident to hear that the Communists intended to make propaganda of Katovis' alleged martyrdom.

I knew as little about Communists or the Communist cause as I did of Katovis himself, an obscure and now utterly forgotten instrument of a conspiracy against civilization.

But the brief word going out ahead of his funeral sounded to a reporter's ears like excitement, action, and drama, in the streets.

So early on the morning of January 27, 1930, as soon as I had finished my work, I headed for Union Square, a dank, drab, dismal place in those days and little better even yet.

Many shops of the neighborhood had foreign signs and newsstands had about as much for sale in other languages as in our own. To a boy from the inland United States of America, it was all exotic, odd, and interesting without being attractive.

One of the seediest and shabbiest buildings on Union Square was, if memory serves accurately, about 5 stories high. It had a rusty, peeling coat of red paint on all the woodwork, doors, and window trim. A sign said that it was the establishment of the New York Daily Worker.

People were streaming in a side door as I arrived, so I just followed the crowd in and up on the elevator.

There in a bare, ugly room, was an open coffin. On the walls were large portraits, in steel engraving of men with bushy beards, bald domes, and out-of-date clothes. I wondered who they were.

At the head of the coffin were two flags, one of the United States of America, and the other, blood and flaming red. Two men stood by the flags and two at the foot of the coffin.

They were in brown uniforms, their peaked brown caps had a red star, dead center. And they stood at attention, looking grimly through and past the slowly circling line of people. Katovis, small and blank of features, lay with his hands folded. He, too, was dressed in a brown, red-tabbed uniform.

After 20 years, this scene is still vivid in my memory. For it was so utterly unexpected, so alien and so shrewdly put together by the experts who knew exactly what they were doing.

I had not any inkling, as I went into that building, of what to expect inside.

But from the moment I had come to Union Square the electric currents that are born in any reporter who likes his work, had begun to come alive.

All the queer faces, the sudden movements of young men motioned to by old men, the switching girls with brassards on their drab clothes and carrying bundles of freshly printed handbills, who were taking up posts along the pavement—all these things signaled that something really big was on, that day.

And then to go inside and be carried through that fantasy, completely out of any world I had ever known, had me on the alert and recording every sensation and event for my life's recollection.

I could not possibly have known then, that the bushiest beard I saw on the wall was that of Karl Marx, a crazy man whose crabbed scribbling in the British museum almost 100 years before that morning had already set off a train of disasters that I, as a reporter, would spend so much of my career trying to understand.

I was soon to learn that those bleak, cold walls and all that shabbiness were not the marks of communism's poverty in America. They were actually careful details of stage management, the disguise of a revolution out to rule the world and as just one element in its strategy, wearing the cloak of a "working class movement."

Outside the Daily Worker building, I felt and saw the people being herded skillfully into place.

Then came the bands and the flags, every time a United States flag paired with a Red one, and the red ones edged with gold fringe, huge and sagging out, carried mostly by girls, sailors in uniform and occasionally by a ragged, hollow-cheeked man without a hat, who all but groaned and rattled chains.

It was magnificent drama. I did not know then, but was not long in finding out, that among these seeming children of the poor were millionaires, doctors, professors, and debutantes.

There were also several Moscow-trained experts in the management of mobs, who had literally gone to a university of revolution. They knew what they were doing.

Should We Change the Way We Elect Our Presidents?

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the Saturday Evening Post of April 29. The Post indicates a clear preference for the Coudert amendment over the Lodge-Gossett amendment.

Under the present system of electing a President of the United States, there is always the possibility that the winner will lack a majority of the popular vote. This has happened, notably in the first election of Woodrow Wilson, when Theodore Roosevelt's third party was in the field, and in the election of Rutherford B. Hayes in 1876. Since the president is elected by States, a President who squeezed in by a whisker in the more populous States, while losing other States by an ample margin, could lack a popular majority, but nevertheless be elected.

This rather remote possibility has always bothered some people; and right now the question has reached a level of interest sufficient to account for the introduction in Congress of the Lodge-Gossett amendment, which attempts to correct the situation by dividing the electoral votes for each State in direct proportion to the popular vote cast.

Blanchard Randall, a Baltimore businessman and distinguished Maryland Republican, has pointed out some of the flaws in the Lodge-Gossett amendment by means of an interesting analysis of the effect of the scheme proposed. Mr. Randall undertakes to show what would have happened if the scheme had been in effect at various times in the past. He declares that if this system had been adopted before 1896, "Mr. Bryan would have been elected President by about four and one quarter electoral votes over President McKinley and several minor candidates, although Bryan was given only 46.7

percent of the popular vote and McKinley received more than 51 percent of all the votes cast. * * * Again, in 1900, history tells us President McKinley was reelected over William Jennings Bryan. McKinley received 7,219,000 votes and 292 electoral votes, against Bryan's 6,358,000 popular and 155 electoral votes. However, had the proposed amendment been at work, Mr. Bryan would actually have been elected again, this time by about one-third of one electoral vote, despite the fact that Bryan carried only 17 of the then 45 States and despite the fact that about 8 voters out of every 15 said they wanted McKinley."

The reason for this, of course, lies in the advantage which the less heavily populated States, particularly in the one-party South, would have over the larger and more closely contested industrial States in the North and East. Mr. Randall poses a hypothetical case: "South Carolina generally votes about 90,000 for the Democrat and around 5,000 for the Republican. Under the new amendment the Democrats would get about seven and a half electoral votes, while the GOP would get about one-half of one electoral vote. Now look at New York, with nearly 6,500,000 votes. Suppose the Republicans carry New York by 85,000 votes, the same margin given the Democrats in South Carolina. The new amendment would give the Republicans about twenty-three and three-quarters electoral votes and the Democrats twenty-three and one-quarter electoral votes, a net margin of only one-half of one electoral vote. * * * In other words, under the Lodge-Gossett system, 1 South Carolina vote is worth about 14 New York votes." Senator TAFT estimates that the GOP would have to poll 53 percent of the popular vote to win a Presidential election.

Another approach to electoral reform is made in the Coudert amendment, which proposes that we go back to one of the original proposals made before the Constitutional Convention of 1787—namely, that Presidential electors in each State be selected in the same way that the State elects its Members of Congress. Thus in all but a few States where Congressmen are elected from the State as a whole, one Presidential elector would be chosen in each congressional district, with two elected "at large" to match the two United States Senators. The effect of this would be to divide the vote for President in each State substantially as it is divided in the congressional elections.

There are certain advantages to this suggestion. For one thing, it would have the effect of confining the power of the machine-dominated cities to a few congressional districts. Thus the radical American Labor Party, which now holds a virtual balance of power in New York State, would hold sway mainly in New York City, where the overwhelming majority of its constituents reside. Furthermore, its ability to influence the policies of the major national parties, because of its balance-of-power position in pivotal New York, would be ended.

The trouble with most discussions of plans to reform the electoral system is that few advocates are interested in whatever principle is involved, but only in how a new arrangement would affect the fortunes of this or that political group. However, the Coudert amendment does have the merit of practicality without the dangers to the Federal structure inherent in the Lodge-Gossett proposal, which is actually a step toward lumping together of the national popular vote. Fortunately, no such system can be adopted, since the smaller States would refuse to ratify the amendment. The Coudert idea might have a chance.

Anyway, no change in the electoral system is so urgent as to justify legislation until the whole matter has been thoroughly studied.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks, I wish to include a statement I made last night in addressing a group of citizens in Washington Highlands on the matter of the pending home-rule legislation. It was a privilege to be on the same program with the gentleman from Utah [Mr. GRANGER]. I am making this available because in my decision to make this statement I am expressing a conviction which, as I indicated, I held for many years prior to coming to Congress and which has been deepened by my personal observation of the situation as it exists here. I do not mean to say that this is a condition prevailing exclusively in the Capital City, but I am reasonably confident that most of my colleagues would agree that it exists to a greater degree here than in practically any other community in this country. I do not have any idea that this expression of opinion is likely to have any real or lasting effect upon the attitude of those who choose to lend themselves to constant attacks on Congress as an institution but, at least, I hope it will stimulate thinking on the part of the reading and listening public both here in Washington and elsewhere.

The point I want to make is a matter of long-standing conviction, even before I became a Member of Congress. I know, as you know, that a group of 435 men and women in the House and 96 men and women in the Senate could not truthfully or accurately be portrayed as a bungling, ignorant, even venal assembly of American citizens. I know and you know that a number of editorial writers, and particularly certain talented cartoonists, newspaper columnists, and radio commentators have established a lucrative living largely based upon continuous public ridicule of Congress as an institution. I know and I believe you know that no greater disservice to our democratic institutions could be done than has been done by much of this. I realize that when we come here as Representatives of our constituents we are fair game for these men and women, and I do not think that most of us are oversensitive about their guerrilla campaigns. Yet, I doubt if any group of 531 men and women in this country are collectively more sincerely devoted to the best interests of this Nation than that group. Certainly there is no harder-working body of American citizens, and I have been associated with a great many sincere and patriotic Americans in one or another organizations to which I have been glad to devote any ability I possessed. Yet you good people here in Washington present your case to our committees, work unceasingly for ultimate victory, and, whether you realize it or not, find yourselves confronted almost every morning with a clear example of this kind of ridicule. I do not know whether you appreciate the handicap this presents to your friends in Congress when they make earnest efforts to prevail upon their associates to join in this effort to bring this problem to a final vote, but I have repeatedly pointed it out to my friends in the District who have your project very close to their hearts. You may have noted that I stressed the word "morning." I have done so advisedly, for I think our greatest offender appears in one of our morning papers. I would not excuse certain columnists among our evening papers, for I think they must bear a fair share of the responsibility.

This all brings me to the suggestion that you who are close to this problem and have devoted so much of your time to its fruition might well devote an increasing amount of your time to the attitude of your outstanding newspapers. I am convinced that if they would be willing to declare temporarily a moratorium on what is, in the minds of most Congressmen, a vicious and unprincipled attack upon Congress as an institution, it would make the task of your friends in Congress in connection with this issue a far easier one and probably one which we could solve. I am not arguing that any individual should not have a full right to express himself or herself as he or she wishes in any editorial, cartoon, column, or radio comment. I have far too high regard for the great majority of these able and responsible people who shape public opinion. But I am saying to you here and tonight that the most effective enemies in connection with fair consideration of this proposal are not those who have been characterized as Dixiecrats or associated Republicans in some kind of an undefined coalition but, rather, these brilliant people who consciously or unconsciously, devote their talents to an unceasing campaign of ridicule and have, in fact, in too many instances prevented fair-minded Members of the House who would otherwise join in our effort to bring this matter to a vote from signing this vital discharge petition. I realize that it may seem funny and is, undoubtedly, profitable to portray every Member of Congress as a pot-bellied, chin-whiskered fool, but I suggest to you that you will not find in the membership of the House and Senate any single person who remotely resembles that conveniently inaccurate picture of American public servants unless you resort to Pravda or some other silly organ behind the iron curtain.

Our Merchant Marine Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. HART. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following address of Hon. HERBERT C. BONNER, of North Carolina:

OUR MERCHANT MARINE PROGRAM

(Address of Representative HERBERT C. BONNER, of North Carolina, member, Committee on Merchant Marine and Fisheries, before the National Rivers and Harbors Congress, March 24, 1950)

It is a real privilege to address the distinguished membership of the National Rivers and Harbors Conference. My keen personal interest in your work is intensified because of its vital bearing on the Atlantic seaboard congressional district which I represent. Also, as a long-time member of the House Committee on Merchant Marine and Fisheries, I know of your great contribution to the American merchant marine. By constantly striving to maintain and improve the terminals and highways of water-borne commerce, to promote public interest in the commerce potential of our ports, and to develop new facilities and modernize old ones to accommodate our ever changing industrial pattern, you render an invaluable service.

It has been suggested that I speak briefly about our merchant marine. The subject is very close to me. I share with all Americans justifiable pride in the wart-time accomplishment of our maritime industry. Its immediate postwar prosperity has been a source of gratification to me. I now contemplate with deep concern its decline from its proper place as an integral part of the commerce which is the lifeblood of Americans.

It is not my intention to disparage the efforts of those now in the forefront of the fight for an American merchant marine second to none. Nor do I minimize the difficulties. The facts are too well known to all of us. For many years before World War II, American-flag ships were carrying only a small part of our products to foreign markets. Eminent in international economics, we had become mediocre in the transportation adjunct to our world trade. Most American tonnage was engaged in domestic trade—a protected trade, free from foreign-flag competition, and economically sound because of higher costs of land transportation. It was a far cry from the days of the clippers, when much of the war-born commerce of the world loaded and unloaded from ships flying the American flag.

Prewar conditions were but a continuation of the decline of the American merchant marine. The causes are clearly recognized. Our maritime industry, operating in international trade routes, meets a front of competition not experienced by other major American industries. Lower foreign wages and living standards, and the apathetic acceptance of them by workers, alone give foreign competitors an advantage. Any reduction of our own standards to meet those has, of course, been summarily rejected. On top of that, national combines and international cartels, extraordinary political controls, subsidies and rebates and the like, and all manner of devices have been contrived to gain foreign mastery of world shipping. Taken all together, these factors have tended to outweigh any superior American production and operation. To combat the stifling effect on American shipping, legislation was enacted in 1916, in 1928, and again in 1936. The dangers were seen, but much was left undone with the advent of World War II.

The outbreak of World War II delivered all our tonnage to the war effort, transferred our domestic trade to land facilities, and created the largest shipbuilding program in the world's history.

At the close of the war we were the leading maritime power simply because we had control of the world's supply of ships. Under the Ship Sales Act of 1946, we set out to rehabilitate our privately-owned merchant marine. Also, we undertook to restore the economy of allied maritime nations by selling them more than a thousand ships. To facilitate the transition from war to peace we chartered as many as 1,500 vessels at a time to American operators. The need for our products abroad promoted an unprecedented boon in American-flag shipping.

There has been a marked leveling from the abnormal era of 1946 through 1948. Prewar maritime nations are returning to the oceans in ships larger, more modern, and swifter than ours. All of the prewar disadvantages face the American merchant marine, and others have been aded. For one example, domestic water-borne commerce has been unable to put on the market an economically sound service because it no longer enjoys its favorable prewar position in respect to land transportation.

Deterioration of domestic tonnage is shown by a simple comparison of figures. In 1939 there were 468 dry cargo bottoms and 304 tankers—a total of 772. In 1947 there were but 98 dry cargo bottoms and 218 tankers. Traffic now moves by rail which could be handled adequately and economically by water carriers. The rail traffic moves at water-compelled rates, often at a loss to the railroads. The water carriers lose the business which might be profitable to them. No carrier gains, all of them lose, and there is a consequent economic loss to the public.

This comparatively new and serious condition in domestic water-borne commerce constitutes a separate part of the overall problem. That commerce gave substantial savings to domestic shippers. Its benefits, extended hundreds of miles inland by joint and combination rail-water rates, were passed on to a large segment of the public. Many great industrial centers depended largely on coastal and intercoastal water commerce. Reduction in that commerce is detrimental to them. Finally, domestic shipping, constituting a large defense reserve for World War II, should be restored for that reason if no other.

I submit this proposition as beyond dispute: That there shall be an American-flag merchant marine adequate to our commercial needs and the national security. President Roosevelt, urging enactment of the Merchant Marine Act of 1936, aptly stated this overruling necessity. The reasons given were short, but conclusive, and are embodied in the law. They are:

1. In time of peace foreign subsidies, shipping combines, and other restrictive or rebative methods prejudice American shippers. Fair competition can be assured only by American-flag tonnage sufficient to carry a reasonable part of our foreign commerce;

2. A neutral America could be seriously crippled, in case of a major war, for lack of bottoms to carry on its peaceful foreign trade; and

3. If the United States is involved in a war, American-flag ships are needed for naval auxiliaries and necessary foreign intercourse.

These reasons are of even greater force and effect today. The need for an adequate merchant marine now is far more pressing, and the impediments more troublesome, than they were in 1936. To accomplish our objectives is a critical and perplexing problem. Each of us has much at stake in the solution. The Congress and the President, maritime industry and labor, and shippers and tradesmen are directly concerned. More important, the public stands to profit from a wise program, or suffer from the lack of one.

It seems to me that certain political and economical factors govern our approach to the problem. All of them must be kept clearly in mind to set a course of action.

First of all, our system of free enterprise is the framework to build upon. It is the foundation of our national strength, the political and economic concept that has brought us to world leadership. The best prospect for a healthy and progressive merchant marine is one privately owned and operated, so far as possible. It should be our ultimate purpose, regardless of any obstacles. I think its attainment is entirely possible, even in these times. That is attested by the successful operation of some of our largest shipping companies, without direct Government aid.

At the same time, progress toward our objectives must go hand in hand with maintenance and improvement of our standards of living. Industry is entitled to a fair remuneration, labor to a fair wage, and the public to a fair share in the resultant benefits. Each should bear its part of the burden, but none should profit unfairly at the expense of any other.

At the outset, also, the relationship of the Government to the merchant marine must be made clear. Whether and to what extent there will be Federal aid to private ownership, or active Federal participation, is dictated by the public interest and none other. No dollar of taxpayers' money may go to line the pockets of individuals or special interests, or groups of them. Nor may public funds be to foster inefficiency and incompetence.

It would be particularly unfair to the Government, the American people, and the shipping industry itself, if the Government were forced to pay exorbitant prices when, by reason of national emergency, it has no alternative but to requisition privately owned ships. This was the intent of the Congress, of course, when the Merchant Marine Act of 1936 was enacted. However, from a review of experience in World War II, it appears evident that even greater and more specific safeguards must be provided in new legislation, to prevent the accumulation of unjust profits flowing solely from the existence of an emergency.

Federal assistance should be only to the extent necessary to bring the merchant marine to the size and quality essential to the national welfare and security and keep it there. This may be done, in accordance with the principles already stated, by three methods: First, by placing our merchant marine on a fair competitive basis in essential foreign trade routes. Second, by protecting it from discriminatory practices in domestic trade; and third, by paying the cost of national defense features not fully useful in commerce. Government ownership should be limited to cases where the national security or the nature of the service preclude private ownership.

Federal regulation should not be so stringent as to unduly hamper legitimate efforts of private enterprise to develop profitable business. There should be all freedom of action, incentive and initiative needed by private industry and consistent with the public interest. This is necessary to build up business in a highly competitive field and by effective private operation, to keep the cost to the taxpayer at a minimum.

To accomplish our several objectives, without sacrificing any, is a tremendous task. But, though perhaps discouraging, it is by no means insurmountable. Careful study, wise judgment, vigorous action, and constant vigilance are needed. A concerted, joint effort of all concerned can bring success. Management, labor, and Government must cooperate fully for maximum results. Antiquated, costly methods must be brought up to date or discarded. New and better methods and techniques must be devised and utilized. Greater efficiency and economy must be developed in the construction and operation of vessels and port facilities, in other shoreside activities, and in all phases of the industry. Training of personnel should be emphasized, with special reference to continuing replacements. Regular, reliable, and reasonable services should be planned and put into operation. We must realize on the superior potential of American industrial genius and the inherent skill and

ingenuity of the American worker. In short, all must put a shoulder to the wheel. Only then can we reach our goal without sacrificing our standards.

The House Merchant Marine and Fisheries Committee is charged with responsibility for maintaining and developing American-flag shipping, and is well aware of the many problems. In the discharge of that responsibility, it is keeping in close contact with all segments of the shipping industry. Exhaustive consideration has been, and is being, given the needs of the American merchant marine. Extensive hearings have been held. Representatives of Government, operators, labor unions, shipbuilding and repair industries, and other interests have discussed the problems at great length before the committee. As a result of these studies, it is the sense of the committee that substantial changes in the law are needed, so that our obligation to the national commerce and security may be fulfilled.

Legislation has been reported, and some is still pending before the Committee, which should go far in meeting current problems, although it may not be a complete remedy. The committee is genuinely interested in developing the means and methods of establishing and maintaining an adequate American merchant marine. It is working constantly, and in close cooperation with the rest of the Government, private, industry and labor, to formulate and have enacted a sound and farsighted program for the maritime industry. The committee realizes that the problem is not a static one and is alert to meet changing conditions. It is mindful of the probable cost, and determined to protect the Government while at the same time helping American shipping where American shipping is unable to go forward. I know that American shipping and allied interests are eager to help solve our problems. As an advocate of a strong American merchant marine, I welcome your support in the determination of a sound policy, and your criticisms and suggestions toward that end.

Resolution of Ancient Order of Hibernians, East St. Louis, Ill.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted by the Ancient Order of Hibernians, Division 1, East St. Louis, Ill., concerning in opposition to the partition of Ireland:

DIVISION 1, ANCIENT ORDER
OF HIBERNIANS IN AMERICA,
East St. Louis, Ill., April 24, 1950.

Hon. MELVIN PRICE,
House Office Building,
Washington, D. C.

DEAR SIR: At a special meeting of the Ancient Order of Hibernians, Division 1, East St. Louis, Ill., the following resolution was drafted and unanimously adopted:

"Whereas the Government of Great Britain, in violation of the rights and contrary to the wishes of all of the people of Ireland and their descendants and friends in the United States, as expressed by their Parliamentary Assembly in Westminster, has taken six of the counties in the Province of Ulster, an inherent part of Ireland, and fraudulently annexed them as a separate state under the flag of Great Britain; and

"Whereas Great Britain, against the expressed wishes and desires of the Irish people and in violation of all of the principles of a free people, continues to dominate and govern these counties: Now, therefore, be it

"*Resolved*, That we, descendants of Irish forefathers, declare ourselves to be unequivocally opposed to the British domination imposed on the free people of these six counties in violation of all of the basic principles of the United Nations and of a true democracy; and

"Whereas England, by this action, has proven herself unworthy to participate in any discussion pertinent to the future of any freedom-loving people; and be it further

"*Resolved*, That we uphold the inherent right of free people to determine their own method of government independent of the dictates of any power-hungry or subsidizing nation."

Very truly yours,

WILLIAM F. KEELEY,
President.
THOMAS P. O'BRIEN,
Vice President.
CORNELIUS O'SULLIVAN,
Recording Secretary.
JOHN MONGAN,
Financial Secretary.
PATRICK SHEAHAN,
Treasurer.

Attacks on Big Business

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star:

GOVERNMENT GROUP SEEKS RUIN OF BIG BUSINESS, FAIRLESS SAYS

HEAD OF UNITED STATES STEEL HITS FEDERAL CRITICS IN BITING PHRASES

Benjamin F. Fairless, president of the United States Steel Corp., made a bitter attack today on "powerful" groups in Government which he said seek to dismember American business.

Declaring that all American industry is on trial "because it has served the public too well—because it has pleased too many customers and has built the greatest industrial Nation on the face of the earth," Mr. Fairless said:

"Successful service to the Nation now strangely seems to be the signal for the political punishment of those who performed it."

He said those people intent on "dismembering business" are "the most dangerous reactionaries of this twentieth century."

Mr. Fairless' views, bitingly phrased, were addressed to a House subcommittee investigating the steel industry.

His statement was one of the strongest to be made before congressional critics of big business and bristled with such phrases as "unsound and dangerous notions" and "jet-propelled flights of fancy."

Mr. Fairless told the committee that United States Steel "is successful, it is profitable, it is efficient, and it is a large enterprise."

"These are the simple facts and I am proud of them."

But he declared there are within the Government "powerful agencies and groups which hold that all this is wrong. They hold that there is something inherently vicious in bigness, and growth and success."

Some of these groups, he said, would break up successful business enterprises "even though the high quality of their service to the public is unquestioned."

Others would put arbitrary limits on business size, he went on. And some would subject business to utility regulation by Government bureaus.

WOULD TURN BACK THE CLOCK

"By dismembering business, they would turn back the clock to the horse-and-buggy days of 50 years or more ago, and would try to squeeze a modern, dynamic, efficient America once more into the puny production patterns of industrial childhood.

"Or, by subjecting American productive enterprise to the deadening hand of political regulation, they would borrow from the old world the dismal economic philosophies that have led most of Europe to desolation and despair.

"They would substitute governmental regulation for competition and political pressures for Government control."

Mr. Fairless said the Nation needs big business as well as small business. They are interdependent, he declared, despite the attempt of statistically minded theorists to create economic class distinctions.

He called a myth the charge that U. S. Steel possesses monopoly powers enabling it to restrict competition.

"The fact is," he told the committee, "that when U. S. Steel was created in 1901, it produced 66 percent of all the steel then made in America—twice as much as all of its competitors put together. Today it produces only 33 percent of the Nation's steel.

"True, U. S. Steel's production has grown greatly during the half century, but its competitors have grown nearly four times as much," he added.

Anniversary of Founding of Nation of Israel

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. CHESNEY. Mr. Speaker, on Monday, April 24, Jewish people throughout the world rejoiced over the celebration of the second anniversary of the founding of the infant nation of Israel. Is this really an infant nation—or is it a rebirth of the nobility of the Jewish race? Is it not also a tribute to the determination and courage of that people to be once again among the brotherhood of nations? To raise its head once more as a free unshackled race? To live once again without the fear of oppression and limitation?

Anything that is worth possessing is worth fighting for, and, certainly, this is borne out by the history of the struggle of this valiant race. It has not been a short struggle and even though the rest of the world believed that there was no longer any hope for the dreams of the Jewish people, there appeared, once more, a spark of life in this seemingly lost cause. Through almost 19 centuries the fight has progressed. If their dreams were a little late in being fulfilled, it cannot be said that this delay

was due to the lack of a desire for freedom on the part of these people. While they were carrying on their own struggle for freedom, they were also helping others to obtain this most precious of human destinies. I do not need to recall to our minds the help given us by Jewish people when we were suffering the birth pangs of our Nation at Valley Forge. When the Congress of our own country had failed to retain faith in our cause, we received encouragement—and more important—the necessary equipment from Jewish patriots who devoted their fortunes to the foundation of our country and enabled us to secure our freedom.

I believe that this second anniversary of the founding of the Jewish nation of Israel should be a source of encouragement to all free people. It is, most surely, an indication and proof that perseverance, faith, and devotion to the cause of freedom can never be defeated.

Rubber Footwear Imports

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks, I wish to present further comment pertinent to the disastrous trade policies being followed by this administration.

New England has long been the "whipping boy" of those who determine Federal policy. Agricultural subsidies have benefited the Midwest to our detriment; public-power policies have aided the South and the West to lure industries from our region. New Englanders are considered to be second-rate citizens of this Nation. Foreign-trade policies have been set by those interested in the free trade of agricultural products—without regard to the effect upon the industrial East. We are now beginning to reap the harvest of unemployment sown by the seeds of free trade.

The architects of so-called reciprocal trade were far more concerned with the export, under favorable conditions, of cotton, tobacco, and allied products, than with the possible importation of slave-labor goods to compete with those manufactured by Americans.

Too long have honest men been cowed by the label of "protectionists" and "isolationists"; therefore unwilling to take up the cudgel for the interests of their fellow Americans.

No amount of subterfuge by the administration can mask the grand design; further cutting of tariffs as concessions to foreign nations. It seems that we always concede at international conferences. Perhaps our people would fare better if Congress refused to appropriate travel expenses for State Department employees. At least no jobs would be threatened by stay-at-home diplomats.

Administration apologists are now attempting to carry water on both shoulders in Connecticut. On the one hand, they promise citizens confronted with the loss of employment that they will give every consideration to the problem of increased unemployment through importation of foreign-made goods, and, on the other hand, these apologists state that no harm is being done by Democratic foreign-trade policies. Statistics are quoted showing a drop in the importation of canvas footwear from Czechoslovakia in the past 2 years. In reality, no one has stated that our difficulties are attributable to this source. The imports of waterproof footwear from the Russian satellite of Czechoslovakia are responsible for production cut-backs in Connecticut factories. Far more serious are the threats posed to this entire industry by proposals to abandon the American selling-price principle, and further tariff cuts which may take place after the September trade-agreement meeting in England.

These apologists seize upon the oft-quoted statement included in every communication received on this subject from either the State Department or the Tariff Commission, to the effect that if increased imports threaten or cause serious injury to domestic industry we may withdraw from the agreement. This is the escape clause which allows the United States to cease being a party to its own funeral after the corpse is embalmed. We do not want American industry saved after it is ruined—but before that time.

The issue is a simple one; are we to continue this foolhardy course of granting concessions to slave labor nations, or are we to help protect the jobs of Americans, and assure an adequate living for their families? If this is protectionism, count me in.

As evidence that many others have grasped the true significance of this problem, I present material showing the increasing concern with irresponsible importation, in the form of a resolution adopted by the Greater Naugatuck Industrial Council, CIO; an editorial from the Catholic Transcript of April 20; and an interesting excerpt from the United States News and World Report of April 28.

RESOLUTION ADOPTED AT APRIL 18, 1950, MEETING OF GREATER NAUGATUCK INDUSTRIAL UNION COUNCIL, CIO, P. J. GALLUCCI, PRESIDENT

Whereas the importation of rubber footwear, tennis shoes, and allied products from Japan and Czechoslovakia is rapidly increasing in volume; and

Whereas this influx of these low-priced products is undermining the rubber-footwear industry in the United States causing extensive layoffs and loss of jobs of our union members, with the resulting loss of income and purchasing power; and

Whereas the present tariffs are inadequate to protect the jobs, incomes, and purchasing power of our American workers and union members: Therefore be it

Resolved, That the Greater Naugatuck Industrial Union Council, representing more than 7,000 employees in Naugatuck, Conn., go on record as being unalterably opposed to any further reduction in tariff on rubber footwear and allied products which would inevitably result in widespread unemployment and great distress amongst the employees in the rubber footwear industry in the United States; and be it further

Resolved, That the Greater Naugatuck Industrial Union Council, CIO, go on record as favoring immediate and firm action by the Government to provide full employment for all of the more than 20,000 people (men and women) in the rubber-footwear industry in the United States including the immediate restitution of the protective tariff laws of 1932–49; and be it further

Resolved, That copies of this resolution be immediately forwarded to the House of Representatives, the United States Senate, and individual copies sent to all Congressmen and Senators from the State of Connecticut, to the Secretary of Labor, the Secretary of Commerce, and the President of the United States.

[From the Catholic Transcript of April 20, 1950]

ABSURD AND INTOLERABLE

On Sunday the New York Herald Tribune publicized a situation which for some time has puzzled and troubled citizens of Connecticut. The metropolitan paper took a look at the city of Danbury, so many of whose people depend for their livelihood on the hat-making business. That business is not flourishing just now, with the result that large numbers of Danbury residents are either wholly unemployed or employed but part time. The effect of this condition is felt by the entire community and indeed has State and national repercussions, so close-knit is our economy.

One of the most frequently cited and strongly stressed causes of the unemployment in Danbury is unfair competition from hats made in Communist-run Czechoslovakia. These are brought into the United States in great quantity and undersell the domestic products. Where Danbury-made hats are priced to New York milliners at $25 to $30 a dozen, hats from Czechoslovakia are available to these milliners at $15 to $20 a dozen. And where hat imports from Czechoslovakia were in the amount of almost $41,000 in 1946, they jumped to the amount of almost $1,200,000 in 1949—an astronomical increase.

It is notorious that, wherever the Communists are in control, slave labor is the rule. This has been proved beyond the possibility of refutation—that slave labor is a fundamental and permanent feature of Communist economy, the very basis of that economy. The hats from Czechoslovakia can be sold for so little because made by captive and exploited labor. It is equally notorious that the warfare to the death which the Kremlin, with mastery over Czechoslovakia, is waging against the West and principally against the United States as the mainstay of the West, is ruthlessly fought with every sort of weapon, the economic no less than the military and the political. It should, then, be just as notorious that the hats dumped into our market by Communist-run Czechoslovakia are a potent weapon for the Kremlin.

How? For one thing, the sharp decline in employment in Danbury means a sharp decline in taxes collected by the Federal Government, for example, income taxes. Taxes, that is, which are urgently required to finance the expensive programs both for national defense and for economic and arms assistance to the European nations on which we depend for containment of the Communist tide. Cudgel our brains though we will, we cannot see the tiniest grain of common sense in taking bread and butter out of the mouths of Americans and drying up a source of much-needed Federal revenue, in order to give dollars to a member of the iron curtain bloc which aims at our defeat and extinction. This strikes us as a roaring absurdity.

For another thing, it is the dearest wish of the Kremlin that there be depression and

discontent in the United States. Some measure of the first can already be seen in Danbury. The second is not yet noticeable on any big scale. But it could easily and quickly develop. Why anything of the sort should be tolerated, when it stems from a readily curable condition of benefit only to the Kremlin, we cannot make out. It is a baffling mystery.

Danbury's troubles may not be exclusively attributable to the importing of hats from a Communist-run country, which is in effect an enemy country in the cold war. But they are unquestionably in part attributable to it. Sanity requires that this condition be righted, and at once.

[From the U. S. News and World Report, April 28, 1950]

Russia is preparing to assume full control over Czechoslovakia's trade. A new trade treaty has been negotiated, ostensibly giving the Czechs what amounts to a $200,000,000 gold credit, but actually making Russia the broker for almost all of Czechoslovakia's export trade. The Russians get power to market Czech products and determine the share of the proceeds the Czechs will receive.

Fair Deal Tough on GM Officials? Not by $8,000,000

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the newspaper Labor of Saturday April 29, 1950:

FAIR DEAL TOUGH ON GM OFFICIALS?—NOT BY $8,000,000—HUGE BONUS EXPLAINS WHY THEY'RE SO ANXIOUS TO CUT TAXES ON RICH—SIXTY-ONE SHARE GIANT MELON—DISCLOSURE MAKES COMPLAINTS HARD TO UNDERSTAND—WHAT DO THEY WANT?

A move to limit income taxes is becoming the rallying cry for all kinds of lobby and propaganda groups in an effort to weld them into a single body bent on upsetting everything that the Fair Deal stands for. Their often-repeated complaint is that Fair Deal spending and socialism are ruining the country.

Some of the loudest complainers, and the heaviest contributors to the propaganda groups, are officials of the giant General Motors Corp. After General Motors reported record profits of $656,000,000 in 1949—the largest ever made by any corporation in a single year—many people began to wonder what they were complaining about, and how much it would take to satisfy them.

WHY THEY WANT TAX CUT

This week it became clear why they are so interested in efforts to put a limit on income taxes. For 61 top officials of the company were disclosed to be sharing a huge bonus melon for 1949 of better than $6,000,000 in cash, plus 24,333 shares of the company's stock, worth nearly $2,000,000 at present prices.

Uncle Sam, of course, will get quite a chunk of that in income taxes, but the company arranged to pay it in five annual installments to help the officials keep out of the upper brackets, so they can keep as much as possible.

The announcement certainly is not going to help their propaganda about the Truman administration making it tough for business to get along.

The bonus action had to be made public under regulations of the Securities and Exchange Commission, which requires that such information be given to stockholders. It was contained in proxy statements mailed to the company's 400,000 stockholders with notice of the annual meeting to be held in Wilmington, Del., May 19.

Charles E. Wilson, president, topped the list, with a total of salary, bonus, and director fees for 1949 of $586,100, which suggests that he has not suffered greatly from the Fair Deal. His salary and fees totaled $201,100, and the bonus was $308,021 in cash and 1,243 shares of stock. The shares were given an award value of $76,979, although at present market prices they would bring more than $100,000.

Next behind him were three executive vice presidents: Albert Bradley, who gets $511,225 all told; Harlow H. Curtice, $496,100, and Marvin E. Coyle, $496,000.

Open House at Kings Point

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial from the Long Island Daily Press, pointing out the need for a strong merchant marine and for continuing without restriction the facilities for training capable merchant marine officers at Kings Point Merchant Marine Academy on Long Island:

KINGS POINT

The United States Merchant Marine Academy at Kings Point in Great Neck is holding open house next Sunday, providing an opportunity for Long Islanders to become better acquainted with this impressive service institution.

Kings Point is as important to the well-being of the Nation as is West Point or Annapolis, yet it has not attained the rating accorded these Academies in the public mind. The reason is probably that Kings Point is many years younger than either the Army's or the Navy's officer-training schools.

If many more Long Islanders realized the importance of the Kings Point institution, and were familiar with what it is accomplishing in training officer personnel for the merchant marine, it is probable it would have far less trouble obtaining the financial backing in Congress which is necessary if it is to continue in existence.

Year after year attempts are made at Washington to pare down the Academy's fund allocations, to reduce the allotments for its students, and otherwise curtail both its activities and its prestige.

Such attempts arise plainly because of a lack of understanding of what the Academy does in training competent officers for the merchant marine in peacetime and building up a reservoir of sea officers for war emergencies.

A strong merchant marine is a key to prosperity in commerce and industry in peacetime. It is indispensable to our fighting forces in wartime. It is as necessary to the safety of the Nation as either West Point or Annapolis.

No rational person would think of curtailing officer training at either of the older service academies, but there seems to be no hesitation to restrict the training at Kings Point.

The Merchant Marine Academy needs public support. It can grow and continue strong, or it can easily be restricted and hampered in its development because of a lack of public knowledge of its importance.

The open house at the Academy will give Long Islanders an opportunity to see for themselves what is being done there.

Where the Menace to Freedom Lies

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bruce W. Knight, from the Readers' Digest:

WHERE THE MENACE TO FREEDOM LIES

(Condensed from Dartmouth Alumni Magazine)

(Bruce W. Knight, professor of economics, Dartmouth College)

The greatest public issue before Americans today is pseudo-liberalism—false liberalism, phony liberalism, the pretended pursuit of liberal ends by means which lead in the opposite direction. In other words, are we to have liberalism or are we to have a wretched counterfeit in the form of state paternalism?

State paternalism is precisely what a large and articulate group of self-styled "liberals" is working might-and-main to wheedle or even force us to accept. In the group are Government officials, administrators, and academicians—particularly social scientists, would-be social scientists, and "cause" preachers making a noise like social scientists. Toward these persons, as persons, I bear no ill will. I suppose they mean well. I sympathize with the esthetic impulse which prompts them to give us something more lovely than the facts of life. Nevertheless, more is needed to qualify them as authorities on the attainment of human welfare. No doubt the stork legend is artistically preferable to the truth about babies, but it is hardly to be recommended as an approach to regulating the supply. It is toward the paternalist, as such, that I am hostile, because I am convinced that he, rather than the avowed Red who knows what he is up to, is the most dangerous foe of personal freedom.

Liberalism is essentially an attempt to solve the greatest of all minority problems, the plight of the individual person in a world organized or disorganized by human institutions. Here a great deal of metaphysical nonsense can be avoided by facing the simple fact that you are you and nobody else, and that you want to be yourself as fully as possible. Society is an excellent thing for certain purposes, but it is also a conspiracy against the real you. Liberalism tries to retain society's useful results while minimizing its infringement on you. The primary postulate of liberalism is freedom of the individual for self-development and self-expression. Hence any attempt by authorities to restrict this freedom unnecessarily, by controlling the individual in either his internal adjustments or his external relations, is to be resisted.

A liberal society is not an organism in which the parts are to be controlled in the interest of the whole. Since its fundamental interest inheres in the parts, the individual persons, its objective is not control at all but voluntary agreement.

American liberalism is mainly a heritage from England. Its chief elements are the politics of democracy and the economics of the free market. More broadly, it is a difficult combination of majority rule and individual rights.

From its essential nature follow these propositions:

Independence: The people cannot exercise real self-government unless they think independently. They must not permit their conceptions of public issues to be determinded by agencies of the state.

Individualism: Majority rule must leave the individual as free as possible from the feeling of official coercion.

Compromise: If voluntary agreement is to prevail over social control, the art of compromise is essential, and to it, in turn, a spirit of tolerance is necessary. No person or group must insist on an exclusive interpretation of what is right or best for the people.

Diffusion: Since, as Lord Acton put it, "power tends to corrupt and absolute power corrupts absolutely," power must be diffused. It must not be concentrated geographically, or in the hands of any one branch of Government, such as the executive.

Conservation and progress: We cannot make progress, enlarge personal freedom, except by conserving what we have and building on it. Liberalism is necessarily conservative in its selection of means. It is undermined by attempts to substitute rapid structural changes for natural growth, since such changes require the people to surrender so much power to the Government that they cannot control the Government, that is, govern themselves.

Economy: Liberalism cannot survive without a reasonably sound free economy, or one having what the people regard as reasonable rights of private property and reasonable stability.

If this is liberalism, as I believe it is, advocates of state paternalism—for which the welfare state is another term—are not liberals. Let us consider briefly certain marks by which they may be identified.

The paternalist is a tireless espouser, notably before groups of women, of raising more and more revenue for expenditure on the underprivileged, particularly if the revenue is supposed to come from State rather than local taxes. He not only aches vocally for social justice but is very intolerant of anything save the welfare state as a means to it. If you happen to believe that a distention of governmental power is not the liberal answer to private abuses of power, he calls you a reactionary. He prefers to overlook the fact that the paternalist in government takes something which is not his and redistributes it among a larger number of voters.

The paternalist typically advocates more centralization of power, not only in the Federal Government but also in the executive branch. For how else, he reasons, can you get a sufficient "rain of laws" to penetrate the parched soil of social injustice? Do not the ends justify the means? It logically follows that the Federal Government must collect and expend larger and larger fractions of the national income to support more and bigger agencies for social control.

He employs the piecemeal technique of Hitler, presenting his program in dramatized bits so that the expansion of expenses, burgeoning of government and contraction of individual freedom will not be noticed till too late.

Nowhere is American liberalism more kicked around, stood upside down, and turned inside out than in the field of economics. Nor should this prove surprising. The economy is a strategic sector at which to launch the assault on individual freedom. Moreover, our economy is peculiarly vulnerable to attack. It will have enough trouble to stand without the persistent efforts of bogus liberals to push it over by misrepresenting its character.

Any available alternative to the free market necessarily involves a tremendous loss of individual freedom. Apart from anarchism, which is obviously unworkable, the only real alternatives are authoritative systems in the form of communism, fascism, or democratic socialism. The first two of these require no discussion here. For democratic socialism, of which the welfare state is one variety, only two possible outcomes are probable enough to be worth talking about. First, if it remained democratic, it would become a colossal racket. With practically all wealth being Government wealth, and practically all income Government income, Government officials would have approximately five times as much as now with which to promote their causes, especially the cause of keeping themselves in power. Second, and largely because of its having become the first, it would cease to be democratic.

The paternalist employs other tricks to misrepresent our economy. He exaggerates the importance of private monopoly, bad though some monopolies are. He overlooks the foremost father of monopolies, the Government itself. He assumes that the evil of monopolies would be reduced by having one huge monopoly, the Government.

Our worst offender against freedom of the market is the Federal Government itself. The tariff alone has probably done more economic damage inside and outside America than all our industrial monopolies combined. Further, government has been the foremost abettor of internal monopoly. It has used import duties, quarantine regulations, currency manipulation, and the like, to keep firms out of the market. It has shut out substitute products by such means as the outrageous tax on colored margarine. It has restricted output directly in its farm program.

Yet the paternalist proposes to cure the evils of monopoly by making the Government a far bigger monopolist than it already is. The chief argument for this course is that monopoly is "inevitable," and must therefore be public rather than private. If half the energy now devoted by the state to promoting monopolies and then trying to control them were given instead to freeing the market and keeping it free, the output of welfare and liberalism would be far larger.

There may be something to be said for the candid espousal of communism or fascism by persons who really believe that liberalism is washed up. But there is no honest justification for the brazen posing of state paternalism as the one and only liberalism. If one honestly believes in socialism, let him say so, and call it that, and explain why. But don't call it liberalism.

Winston Churchill has said: "Of the difference between socialism and communism I said a good many years ago that a strong dose of either socialism or communism would kill Britannia stone dead, and at the inquest the only question for the jury would be: Did she fall or was she pushed?"

Changes Needed in Electoral Plan

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. SIKES. Mr. Speaker, I have noted a meritorious editorial from the pen of Marion Gaines in the Pensacola News-Journal. It gives deserved support to the Gossett amendment for a revision of the electoral college system of electing Presidents. Under leave to extend my remarks in the RECORD, I include the editorial, as follows:

CHANGES NEEDED IN ELECTORAL PLAN

Political dopesters have not been optimistic about the prospect for House approval of the proposed constitutional amendment to revise the electoral college system of electing Presidents. It would automatically divide the electoral vote of each State among Presidential candidates according to the popular vote in the State. Under present customs, each State's votes are cast in a block for the candidate receiving the highest vote. With this change the electoral vote, which actually determines the election of a President, would follow the popular vote State by State, and the system would more nearly approach the election of Presidents by popular vote.

An unfortunate feature in the consideration of the proposal is that argument seems to center on the question of how the change might affect the immediate political fortunes of one party or the other. Naturally this tends to obscure the questions of whether the proposal would be in the interest of the whole people, and of whether the change might be made still better by throwing out the electoral vote system altogether and electing Presidents by direct popular ballot.

If the matter is debated solely on the basis of the national good it is hard to see how any defensible stand can be taken for keeping the present system. The question to be decided then is not whether or not to make a change, but what kind of change should be made.

Un-American Activities Committee

EXTENSION OF REMARKS

OF

HON. JOHN S. WOOD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas there is a need for a rededication to the principles and ideals upon which our Republic was founded; and

Whereas the devotion and allegiance of each citizen and organization to these principles is essential to the perpetuation of our Republic and to the continued growth of freedom and economic opportunity in America; and

Whereas there are individuals and organizations dedicated to the overthrow of our Government by force and violence; and

Whereas the Congress of the United States, through its House Un-American Activities Committee, is engaged in exposing communism and Communists, whereever to be found in the United States; and

Whereas said House Un-American Activities Committee has been engaged in conducting a hearing on Communist activities within the Territory of Hawaii since April 10, 1950; and

Whereas said House Un-American Activities Committee is performing a public service in the cause of patriotism, Americanism, and is performing a further public service in exposing the degree of communistic infiltration present in the Territory of Hawaii, which said exposing of communism and Communists tends to defeat their effectiveness in our community: Now, therefore, be it

Resolved, by Honolulu Post, 1540, of the Veterans of Foreign Wars of the United

States (a veterans' organization chartered by the Congress of the United States), That said House Un-American Activities Committee be commended and congratulated for its excellent work in the community in the cause of Americanism, patriotism, and to the end that the ideals and liberties we cherish so dearly may be perpetuated forever; and be it further

Resolved, That copies of this resolution be sent to the House Un-American Activities Committee, the President of the United States, the Speaker of the House, the President of the Senate, and our Delegate to Congress.

Submitted by Hyman M. Greenstein, national deputy inspector general, VFW, past commander, Department of Hawaii, VFW, past post commander, Honolulu Post 1540, VFW.

Explorer Before Boone Was Not First Briton in Kentucky

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. PERKINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a story written by Mr. Gerald Griffin, staff correspondent of the Louisville Courier-Journal of April 24, 1950, on Dr. Thomas Walker:

EXPLORER BEFORE BOONE WAS NOT FIRST BRITON IN KENTUCKY—BARBOURVILLE TO PAY HOMAGE TO DR. WALKER

(By Gerald Griffin)

BARBOURVILLE, KY., April 23.—The man Barbourville and its environs will honor in its bicentennial celebration the coming week end was no mythical figure, no Paul Bunyon of the Cumberlands, but a real historical character—Dr. Thomas Walker.

Ancestor of many Kentucky and Virginia families, Dr. Walker antedated Daniel Boone into the land beyond the mountains by almost 2 decades. But even at that he found initials carved on trees indicating that other English explorers had preceded him.

NAMED CUMBERLAND RIVER

Two things prevented Dr. Walker's name from being as well known today as that of Boone. First, he turned back when he was within a day or two of reaching the rolling plains of the Bluegrass region. And second, what is now Kentucky still was a forbidden region, claimed by both the English and French, for that important matter had not then been settled by the outcome of the French and Indian War which sputtered along from 1755 to 1763.

But Dr. Walker and the intrepid explorers who accompanied him through Cumberland Gap in 1750 left their imprint by the name "Cumberland," which he gave to the river of that name. And, according to the History of Kentucky written by Judge Charles Kerr, Lexington, who died recently, he named the Levisa Fork of the Big Sandy River.

A surveyor in the romantic heyday of surveyors, and of necessity a fearless explorer, Dr. Walker was born January 15, 1715, in King and Queen County of the colony of Virginia, a loyal subject of the English King.

When he died, November 9, 1794, at Castle Hill, his home in Albemarle County, near Charlottesville, in the State of Virginia, he was a citizen of the lusty young United States of America, and a neighbor of Thomas Jefferson.

RECORDED EXPLORATIONS

While yet in his early thirties, Dr. Walker had gained recognition as a surveyor, as had George Washington, and in 1748 accompanied Col. James Patterson on a tour of inspection into southwestern Virginia. But this party made no attempt to cross the mountain barrier then recognized as the western rim of colonial Virginia.

Dr. Walker kept methodical records of his exploration activities and modern historians have delved into them in looking into early pioneer times.

His knowledge of the western country frequently was utilized by the colonial government which, on several occasions, sent him to conclude treaties with the Indians. And it was not the Indians who gave him trouble on his famous Kentucky journey—they let him strictly alone—but a bear that wounded one of his companions, and a snake that bit one of his horses on the nose.

MADE TREATY WITH IROQUOIS

Dr. Walker's most celebrated Indian treaty was the one at Fort Stanwix, N. Y., in which the English gained title to the lands south of the Ohio River including what is now most of Kentucky. The other party to the treaty was the Iroquois Tribe.

As a prelude to his hazardous invasion of the lands which later became Kentucky County and a long time later, the Commonwealth of Kentucky, Dr. Walker entered into a contract with the Loyal Land Co. on December 12, 1749. The company had title to 800,000 acres west of the Cumberland Mountains and it became Dr. Walker's job to explore it for possibilities of settlement.

With five intrepid companions, all mounted, two pack horses, and a few hunting hounds, Dr. Walker set out from his home near Charlottesville, now home of the University of Virginia, on March 6, 1750. His companions were Ambrose Powell, William Tomlinson, Colby Chew, Henry Lawless, and John Hughes.

TELLS OF HUNTING

Several months later they were back home with a none too glowing report of the western country except for the hunting, a tally of which ends the Walker log:

"We killed in the journey 13 buffaloes, 8 elk, 53 bears, 20 deer, 4 wild geese, about 150 turkeys, besides small game. We might have killed three times as much meat if we had wanted it."

The Walker party, after stopping with a few settlers along the way, passed through what is now known as Cumberland Gap—later publicized by Boone—April 13, 1750, and pierced the mountain chain now known as the Cumberlands. But there is no absolute record that Dr. Walker named either the gap or the chain. In his journal he refers to the Cumberlands merely as the "steep ridge."

But 4 days later he discovered and named the Cumberland River, from which the mountains and the gap probably got their name. He named the river after William Augustus, Duke of Cumberland, son of King George II and Queen Caroline.

Following the Warriors' Path of the Indians, later followed by Boone and the pioneer settlers, he forded the Cumberland just below the present site of Pineville—Cumberland Ford—where the Iroquois are believed by some historians to have thrown back other tribes. That was between 1700 and 1750 in the Iroquoian conquest of the Ohio Valley.

Near the present site of Barbourville the party divided, some of them, with Dr. Walker, continuing southwestward and the others remaining to build a log cabin, 8 by 12 feet, clear a little patch of land, and plant corn and peach stones.

FOUND CARVED TREES

It was on this trip away from the base that Dr. Walker found the initials carved on the trees. Also, from a high point, he could see nothing but thickets of laurel and decided to change direction. He returned to his base, April 28 to find the cabin built near an abandoned village, possibly Cherokee, of several Indian-type cabins grouped around a mound 20 feet high and 60 feet wide at the top.

The exact site of the cabin built by the Walker group is a matter of debate among historians, but they usually agree that it was the first built in Kentucky by English-speaking people. At any rate it was somewhere within a few miles of Barbourville.

Without waiting for their corn to grow, the party pulled out from the base and made their way to the mouth of Station Camp Creek, where it empties into the Kentucky near Irvine. Just a couple of days more on the way west and they could have taken home a more encouraging report—they would have reached the great meadows of the Bluegrass—but here they turned toward the northeast.

CAMP NOW IS SALYERSVILLE

Continuing through the wilderness, the party camped June 3 where the courthouse now stands at Salyersville and named the Louisa River which, according to Judge Kerr, later became known as Levisa Fork. They named it for Louisa, sister of the Duke of Cumberland.

Then they passed over the present site of Paintsville and made their way back to Charlottesville.

That celebrated journey took place 200 years ago, 26 years before the United States was born and Kentucky County of Virginia was created. And it was several years before the rebel and surly Cherokee chief, Dragging Canoe, told Judge Richard Henderson and Boone at Sycamore Shoals:

"You have bought a fair land, but there is a cloud hanging over it; you will find its settlement dark and bloody."

Michigan's Miracle Mile

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. POTTER. Mr. Speaker, the American people are prone to overlook one of the greatest engineering installations in the world which is located at Sault Ste. Marie, Mich. If anything should happen to the locks at Sault Ste. Marie, our national economy would be greatly hampered. It is through these locks that over 80 percent of our iron ore moves from the upper Great Lakes to our great industrial centers.

Our military has designated the Soo Locks as one of our prime defense areas. Time and time again, I have called upon the Secretary of Defense to more adequately protect this vital zone by establishing a permanent military installation at Sault Ste. Marie. It is no military secret that the Army finally plans on stationing an antiaircraft battalion at the Soo but no permanent base has been established. Even though the Fifth Army Corps has constantly recommended to the Pentagon that permanent facilities

be constructed, we have been unsuccessful in securing this vital installation.

I include at this point of my remarks an article written by Norman and Madelyn Carlisle titled "Michigan's Miracle Mile," which appeared in the May 1950 issue of Coronet magazine:

MICHIGAN'S MIRACLE MILE

(By Norman and Madelyn Carlisle)

THE FABULOUS SOO, A MARVEL OF ENGINEERING, IS THE BUSIEST CANAL IN THE WORLD

There is a stretch of water in northern Michigan on the United States-Canadian border, that provides one of the greatest nautical shows on earth. Nature designed it as a spectacular set of violent rapids in the St. Marys River, which connects Lakes Superior and Huron. Human ingenuity turned it into an engineering marvel, the world's busiest canal, through which passes more cargo than goes through the Panama, Suez, and Kiel Canals combined.

Yet Michigan's miracle mile, the fabulous Sault Ste. Marie—generally known simply as "The Soo"—piles up this record in only 8 months annually, while the others are open year-round.

The area occupied by the canal and its famous locks has well been called the most important mile in America. Without the Soo, our economy would be disrupted, factories would be forced to move, great industrial centers like Pittsburgh would shrivel, the price of hundreds of products you buy would soar.

Strangely enough, the Soo is perhaps the least-known of modern engineering achievements. Spectators are astonished at the speed with which vessels are raised and lowered, so that a ship which has been towering far above them has, in a few minutes, dropped so low that they are looking onto its decks.

The Soo is really a set of gigantic water elevators which overcome the 22-foot hurdle presented by the fact that the level of Lake Superior is higher than that of Huron. Ships go through the locks on an average of one every 18 minutes, 24 hours a day—except when Old Man Weather steps in.

The Soo has a long and colorful history. Two years before the Pilgrims landed at Plymouth Rock, a young French explorer, Etienne Brulé, stared in amazement at the falls in the St. Marys River. Father Marquette established a mission there in 1668.

To this isolated 200-year-old town, there came in 1852 Charles Harvey, a determined young man from New England. He had no idea that his visit would help to change the history of America, for his purpose in coming was simply to sell weighing scales for the E. T. Fairbanks Co.

Young Harvey never got a chance to sell scales. Stricken with typhoid, he lay desperately ill for weeks. While he was recovering, he had time to talk to bearded prospectors who had come in from the upper peninsula wilderness with important news.

Copper and iron—huge deposits of it—had been discovered. The metal was desperately needed for America's growing industry. Yet young Harvey sensed that this mineral treasure-trove lay useless, because there was no way to transport it to civilization.

Except for one cruel joke of nature, it could come down the Great Lakes in ships. But Lake Superior was almost 22 feet higher than Huron, and the link between was the violent St. Marys River.

As soon as Harvey was able, he rushed back to his employer, Erastus Fairbanks, and audaciously proposed organizing a company to build a set of locks on the St. Marys River. He himself would direct the building. Young Harvey was so persuasive that he induced the hardheaded New England businessman to organize the St. Mary's Falls Ship Canal Co.

There were vast obstacles in the way of completing such a project in a remote wilderness. Stone for the locks had to come from far down on Lake Erie, wrought iron for the lock gates all the way from Pennsylvania. The nearest telegraph office was 450 miles away, in Detroit; letters to Harvey's financial backers in the East took 6 weeks for delivery.

Yet he wasted no time worrying about problems. Two days after he arrived with 400 men in June 1853, he had shelters built for them and personally turned the first spadeful of earth.

The first winter was a white nightmare. Temperatures stayed at 35 below, day after day. The workmen grew numb with cold, in spite of huge bonfires. At each runway Harvey had a watcher whose job consisted of rubbing snow on any man whose face was turning white with frostbite.

The spring following the second winter a new and treacherous enemy struck. Cholera.

Harvey saw the whole undertaking ending in wretched failure if his men fled the dread epidemic. Calling together his most trusted workmen, he told them that the truth must be concealed from the others. Each morning his lieutenants gathered and carried away the dead for burial deep in the forest. The rest of the crew never learned that 200 men died before the epidemic at last abated. Somehow they kept going, driven by the lean, insatiable Harvey, who was determined that the locks should be completed before the ice broke up on the Lakes. He won his battle. In April 1855 the waters of Lake Superior flowed into Lake Huron through the new canal, and in June the first ship was locked through. The fabulous Soo had become a reality.

Harvey's burning faith that the Soo Canal would mean a new era for America had been vindicated. Today, to handle the more than 100,000,000 tons of cargo that move through it each year, the Soo has three great locks, in addition to the Poe lock, which replaced the original Harvey lock in 1896. Through these great devices passes an endless parade of Great Lakes shipping, the very lifeblood of American commerce.

The colorful pageant includes giant 600-foot ore boats, which may carry as much as 20,000 tons of ore; huge, bulging grain carriers, often loaded with half a million bushels of wheat; sleek, black oil tankers; trim private yachts, and sometimes even rowboats or canoes. Any craft, no matter how large or small, has the privilege of going through the locks without payment of any kind.

Although it is run by the United States Army engineers, there is no sign of military activity at the Soo. The man who bosses this bustling enterprise is a soft-spoken civilian engineer, Clifford Aune. From the administration building, he directs the 325 employees who handle the job of running the locks. The enterprise costs the United States only $1,000,000 a year, a sum so modest that shipping experts describe the Soo as "Uncle Sam's biggest bargain."

Smooth as the operation of the locks may be, the men at the Soo never forget that as long as human beings run the ships there is always a chance of error.

They remember what happened in 1909 at the Canadian locks. Two down-bound ships, the *Crescent City* and the *Assinaboia*, had just entered the locks. Approaching from down river was the *Perry G. Walker*, which the lockmaster ordered to wait. Instead, she kept on coming, straight toward the gates which towered above her, and behind which were millions of gallons of water and two huge ships.

Spectators watched in horror as the distance between the *Walker* and the gates narrowed. There were shouts from the men on her own decks, and a frantic clanging of bells in the engine room. Still the ship kept coming on. With a rending crash her prow smashed into the gates, ripping them from their hinges. With a roar, a wild torrent of water rushed out, carrying with it the two ships which had been in the lock.

There was a melee of ships and water, from which all three craft emerged badly battered. Fortunately, no one was killed, but so great was the force of the water that both upper and lower gates of the lock were carried away.

To the 10,000 Great Lakes seamen, the Soo means news from home, books to read, a mid-voyage contact with land in a swift 7-day round trip that takes them from Duluth to Cleveland and back.

Here at the Soo is the unique canal post office that stays open 24 hours a day. When a ship enters the locks, her skipper, mate, or a seaman scrambles ashore and rushes to a gray stone building that houses the post office. Here he will find a fat packet of mail awaiting him, the clerks having been informed hours in advance that this ship was coming in.

It is one of the curiosities of the Soo that the man who climbs down the ladder of a Huron-bound ship will also climb down to get back aboard. During the comparatively short time the sailor has been ashore, the ship has been lowered until it is below the ground level.

The Soo becomes a knot of tension in the long line of navigation late in November, when the ships are making their last runs, their skippers praying for a few more hours of good weather and open water. They are racing with winter, and they do not always win. Sometimes the ice closes in on scores of ships above and below the locks.

Wind, too, can be a stern enemy of ships and men. One fall afternoon in 1948, it was howling at close to 60 miles an hour with all the makings of big trouble. It came, soon enough. Through the flying spray, men at the lock level saw two ships headed straight for the same lock at an angle that indicated a disastrous crash.

From his knowledge of incoming craft, the lockmaster high in his tower knew there shouldn't be two ships there at all. Trying to pierce the black wall of flying water, he made out that what the man on the runways had seen was really just one ship, swung in across the lock.

Still, the situation was desperate. The ship, now discerned to be the *Ralph Watson*, was unable to overcome the force of the wind and get swung straight into the lock. Obviously she would need tugs.

For six tense hours the great ship lay there straining, until enough tugs could come upriver and be locked through to join her in the titanic battle with the wind. Eventually they freed her and she steamed through with no damage to ship or locks.

The sturdy men of the Soo had won another victory over the elements. Once again the long ships were free to pass through the busiest water mile in America.

Water, Our Most Precious Natural Resource

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. THOMPSON. Mr. Speaker, the Nation is becoming increasingly aware of the absolute necessity of water conservation and the insuring of an abundant supply of fresh water for ourselves and our posterity.

Important light on the problem was shed by the Honorable Guy C. Jackson, Jr., president of the Texas Water Conservation Association, in an address before the recent meeting of the National Rivers and Harbors Congress. For the information of the Members of Congress and others interested, I take pleasure in placing in the RECORD a copy of Judge Jackson's address:

WATER—OUR MOST PRECIOUS NATURAL RESOURCE

There is no more important basic problem confronting the people of Texas today than the problem of developing, conserving, and beneficially utilizing, its limited, but replenishable water resources, in the interest of further agricultural, municipal, and industrial expansion and the economic welfare of our citizens.

According to the United States Geological Survey, the water demands in Texas increased over 7,000 percent between 1890 and 1940, while the population of the State increased only 287 percent. Within the past 10 years, industrial plants costing more than $1,000,000,000 have been erected in Texas. Synthetic rubber, magnesium, nylon, paper, steel, furniture, food products, airplanes, various chemicals, and many other products are now being produced in quantity. Also, within the past 10 years, more than 1,000,000 acres of land in Texas have been provided with irrigation water for the first time, thereby expanding Texas' irrigated acreage to more than 2,884,000 acres in 1949, about 54 percent of which is irrigated from wells. With this increased development the daily water demands are exceeding the unregulated flow of Texas' rivers. Withdrawals of ground water are beginning to lower the water table at an excessive rate in some areas. It is estimated by the Texas board of water engineers that there is being used in Texas an average of about one and a half billion gallons of ground water per day for irrigation, industrial, and municipal use.

To give an example of the increased use of underground water for irrigation on the high plains alone, I quote from figures given by the United States Geological Survey as follows: "In 1937 there were 1,150 wells on the high plains irrigating 160,000 acres of land. In 1947, 10 years later, there were 7,375 wells irrigating 950,000 acres of land, and I am informed by the same source that more than a million acres are now under irrigation in that area.

During the past 2 years many of our cities and towns were forced to ration water and many of them passed ordinances prohibiting the watering of lawns and the washing of cars. Some had to haul water for domestic purposes in railroad tank cars. To give you one example, the city of Coleman, in west Texas, had water shipped in for a period of 20 months.

During this same period there were shortages of water for irrigation purposes and several irrigation districts and canal companies had to refuse water for lands that otherwise would have been irrigated.

Within the broad expanse of Texas, with 10 major river systems, the average annual rainfall ranges from less than 9 inches at El Paso to 55 inches near the Louisiana line. Thus, there is in Texas, between humid east Texas and arid west Texas, all the water problems that can confront any people. In 1917 the people adopted the "conservation amendment" to the Texas constitution, section 59 a, b and c of article 16, declaring "The conservation and development of all of the natural resources of this State, including the control, storing, preservation and distribution of its storm and flood waters, the waters of its rivers and streams, for irrigation of its arid, semiarid, and other lands needing irrigation, the reclamation and drainage of its overflowed lands, and other lands needing drainage, the conservation and development of its forests, water and hydroelectric power, the navigation of its inland and coastal waters, and the preservation and conservation of all such natural resources of the State" to be "public rights and duties", and commanding the legislature to "pass all such laws as may be appropriate thereto". Following the adoption of this amendment, the Texas Legislature passed enabling legislation providing for the creation of local conservation and reclamation districts, water control and improvement districts, etc., for constructing works for irrigation, municipal and industrial water supplies, most of which were for direct diversion from unregulated streams, and very few dams were constructed for storing storm and flood waters.

By the early 1930's it had become increasingly apparent that if Texas was to continue to expand industrially and agriculturally, and if its cities and towns were to grow in population, steps would have to be taken to store the storm and floodwaters wasting into the Gulf of Mexico from Texas streams, which is estimated to be 80 percent of the average annual run-off. In compliance with the mandate contained in the conservation amendment to the constitution, the Texas Legislature created, by special acts, 31 conservation and reclamation districts and river authorities, embracing practically all of the several watersheds in the State, and having for their purpose the control, development, conservation, and utilization of the waters of the rivers and streams within their respective boundaries for irrigation, industrial, municipal, hydroelectric power development, navigation, and all other useful purposes and for flood control.

I will mention a few of these to show what is being done in Texas to develop our water resources.

The Lower Colorado River Authority, embracing the 10 lowermost counties in the Colorado River, Tex., watershed, has four dams and reservoirs in operation with a combined capacity of 3,000,000 acre-feet of water and has two more under construction, the cost of which is being paid from the sale of revenue bonds and no funds will be requested from the State or Federal Governments.

The Brazos River Conservation and Reclamation District has one dam and reservoir in operation with a storage capacity of 724,700 acre-feet. The district is planning to start construction within the next few weeks on three other dams and reservoirs to be paid for from the proceeds of revenue bonds with no aid from the State or Federal Governments.

The Lower Neches Valley Authority is the largest distributor of water in the Southwest. During the rice irrigating season, the authority sells and distributes 500,000,000 gallons of water daily for irrigation, municipal, and industrial purposes. The Corps of Engineers propose to construct four dams and reservoirs on the Neches River and tributaries, one of which will be completed this year. The authority is contributing $5,000,000 toward the construction of two of the dams and in return will receive waters stored in them.

The Central Colorado River Authority has constructed more than 1,000 small dams on tributaries of the Colorado River in Coleman County. The Corps of Engineers has completed a flood control and water conservation dam on Hords Creek, a tributary of the Colorado River. The city of Coleman, which hauled water for 20 months, contributed $100,000 toward the construction for the purpose of having approximately 6,000 acre-feet of water stored for its use.

The Upper Colorado River Authority has agreed to purchase the conservation storage in the Corps of Engineers' North Concho River flood-control project near San Angelo, Tex.

In addition to the above-mentioned dams, the Corps of Engineers now have under construction four dams on the upper reaches of the Trinity River watershed near Dallas and Fort Worth; two on the Brazos River watershed and one on the Sulphur River near Texarkana. The city of Dallas has purchased the conservation storage in the Garza-Little Elm Dam and Reservoir, in the Trinity watershed for $5,000,000. The Park Cities, adjoining Dallas, have also purchased conservation storage in Grapevine and Garza-Little Elm Reservoirs.

Several cities and towns have voted bonds for the construction of dams and reservoirs for supplemental water supplies.

Private capital has constructed two dams in Texas, one near Longview in east Texas, and one near Colorado City in west Texas.

All this recent development was brought about through the coordinated efforts of all interests working together toward a common goal, by and through the Texas Water Conservation Association, a State-wide organization representing the five major classifications of water use: Irrigation, municipal, industrial, navigation, and river authorities. The classfication "river authorities" includes all those districts and authorities created by special acts of the Texas Legislature.

The government of the association is vested in a board of directors consisting of 35 members, 7 each, from the 5 classifications of water use represented. The members of the board are selected by representatives of the several classifications of water use.

The association has as its primary purposes the promotion of the continued improvement and development of the State's rivers, harbors, lakes, and water and land resources, and the investigations and approval of practical and economically feasible projects throughout the State. It actively supports and advocates the orderly development and conservation of our soil and water resources for purposes of flood control, navigation, irrigation, and all beneficial uses.

It provides a forum for the discussion of all problems relating to land and water development, conservation and use, serves as a clearing house for coordinating the activities of local agencies, groups, and organizations, and affords a means of securing united action by all the interests concerned with the various phases of land and water conservation and utilization.

The association maintains permanent headquarters in Austin under the direction of a full-time general manager. From its offices, by regional meetings of its executive board, through its news bulletins, the daily press, and its officers and directors, the association keeps constantly before Congress, the Texas Legislature, State and Federal officials, bureaus and departments, and the public the need for water and land development, conservation, and utilization for the public benefit.

In adopting the conservation amendment to the Texas Constitution in 1917, the people of Texas commanded the legislature to recognize the State's responsibility in developing and conserving our water resources and to do something about it. The legislature has done something about it in a limited way, but there remains much to be done.

There are many conflicting and ambiguous provisions in the present Texas Water Code which must be clarified and unified in order that the water users, the board of water engineers, and the courts may know the intent of the law. In other words, our water code must be revised and brought up to date, based on present-day experiences. The regular session of the fifty-first legislature created a water-code committee to study this subject and make its recommendations to the fifty-second legislature.

At the last regular session of the Texas Legislature there was introduced Senate Joint Resolution No. 3, proposing an amendment to article III of the Texas Constitution by adding a new section to be known as

section 49c, creating a Texas Water Conservation Project Board and providing for the issuance by said board of not to exceed $200,000,000 in bonds as an obligation of the State of Texas for the purpose of creating a fund to be known as the Texas Water Conservation Projects Revolving Fund, which bonds were to be sold from time to time to make funds available for such projects as might be specifically authorized by the legislature after official reports had been submitted by the Texas Water Conservation Projects Board and the Texas Board of Water Engineers, showing such projects to be self-liquidating.

Texas and the other States of this Union are going to have to accept their responsibilities in the development, conservation, and utilization of their water resources or surrender their rights to the Federal Government. There is no substitute for water and the people are demanding that the waters now flowing to waste without any beneficial use be conserved and made available to meet their ever-increasing demands. If the existing State and Federal agencies don't do it, the people will finally surrender to a Federal valley authority.

There is now pending before the Congress of the United States several bills for the creation of Federal valley authorities or administrations such as the Columbia Valley Administration, the Missouri Valley Administration, and others including an omnibus bill to create some nine Federal conservation authorities blanketing the entire United States and placing all Texas rivers and streams under the Arkansas Valley Authority extending from the Missouri River Basin to the Rio Grande.

The pending bills are not basically different. However, under the omnibus bill, H. R. 894, by Representative RANKIN, of Mississippi, the President would appoint an administrator for each authority, thus placing nine men in control of the people and resources of the Nation, whereas under the Columbia and Missouri Valley Authority bills he would appoint three directors for each authority, giving 27 men complete control of the resources and economy of the Nation.

These authority bills provide for the complete regimentation of the people, resources, and industry of the country. They are socialist to the core and can lead to nothing less than dictatorship. Under the Columbia Valley bill, the Administration, the three-man board of directors, would establish the maximum size of farm units within each project for the reclamation of lands—but no farm unit shall contain more than 160 acres or less than 10 acres of irrigable land. No benefits from such projects could be made available to owners of lands whose individual holdings exceed the maximum area unless the owners agreed to sell the acreage in excess of the maximum at an appraised value approved by the Administration.

The Texas Water Conservation Association has consistently opposed the creation of Federal valley authorities on the following grounds:

1. They are undemocratic in denying the people affected an effective voice in the formulation and development of programs for the utilization of their resources.

2. They create confusion and chaos in the development and operation of programs which can be made to function in a satisfactory manner.

3. They will jeopardize every established water right within their reach and initiate interminable litigaton.

4. They will tend to upset and unduly hamper and restrict the traditional freedom of the social, cultural, commercial and industrial life of our citizens.

5. They will remove direction and governmental control over local matters from the communities where such matters arise, and will render more difficult the solution of our problems whether by authorities or by the courts.

6. They will destroy the sovereignty of the States in matters vital to the preservation of our form of government and in complete negation of the principles upon which it was founded. The exercise of such powers of control by a central government will make effective a program of planned economy and a definite change in the American system to an experiment in state socialism.

Potato Marketing Agreement for the New England States

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I received this morning advising me of the recent decision of 85 potato growers in Hampden, Hampshire, and Franklin Counties in Massachusetts not to participate in the potato marketing agreement for the New England States and listing the reasons for that decision.

I believe this decision and the reasons given will be of very real interest to all of my colleagues who are concerned about the development of a program for agriculture which will meet with general approval.

The letter follows:

NORTHAMPTON, MASS., *April 25, 1950.*
Congressman HESELTON,
Washington, D. C.

DEAR CONGRESSMAN: Last week 85 Hampden, Hampshire, and Franklin County potato growers went on record as opposing potato marketing agreement for the New England States, excluding Maine. Listed below are reasons why they opposed the order.

A. Expense of administration, inspection, and policing the area, which would be levied on the growers.

B. Lack of expensive sizing equipment which is necessary under such an agreement when size restrictions are imposed as in Maine.

1. Under such a proposed program small farmers would be forced to sell their crops to dealers who have these expensive grading facilities.

2. In this area the standard practice has been for growers to grade and sell their own crops.

C. Lack of definite information in proposed agreement as to how much an order would affect the grower.

1. Too many decisions are left to an area committee and the Secretary of Agriculture to make after the agreement is in effect.

D. Growers feel that excessive Government regimentation and intervention in business is against the principles America was built on.

We have sent a similar letter to Congressman FURCOLO. We hope that by contacting you, you will have a better understanding how Massachusettes potato growers feel toward the proposed marketing agreement.

Very truly yours,
STANLEY N. JASKOLKA,
Chairman.
EARLE M. PARSONS, JR.,
Secretary.

Bill To Stabilize Duties on Imports

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. MULTER. Mr. Speaker, I am introducing a bill today providing that any change in import duties previously determined by customs authorities shall apply only to future imports and not be made retroactive to items which have already been imported or in process of importation.

By amending the United States Tariff Act of 1930 by this bill, manufacturers and businessmen in this country will be encouraged to increase their imports from foreign countries thereby improving our trade relations with those countries and bolstering their economy at this crucial period in world affairs.

By the way of example, let me cite to you the case of an American firm which imported 2,600 wooden cases from Canada in the latter months of 1949 at a stipulated import duty approved by United States customs officials. In December 1949 the importer was informed that the cases had been reclassified, the import duty was increased to a point which no longer made importation profitable, and the increase was made retroactive on the 2,600 cases previously imported.

In my bill I aim to establish as a legal fact that when once a classification has been made by the proper United States authorities at a customs port of entry, that decision should be final and the importer should not be subject to retroactive increased duties imposed by subsequent reclassifications. When a business firm or manufacturer figures out what it can import with Government sanction, that trade relationship should not be disrupted suddenly and without forewarning. We are trying to build up our imports from abroad and not to disrupt them completely.

In connection with the problem of world trade and the question of imports from abroad without hurting American producers, I desire to call the attention of my colleagues to the following article which appears in the United States News and World Report, April 28, 1950, which is of great timeliness:

WANTED: TRADE STIMULANT TO FOLLOW MARSHALL PLAN

(Worries over the end of the Marshall plan already are bobbing up in Washington. Problem is to help Europeans sell more and buy less on the American market without hurting United States producers. Tariff cuts, sales campaign, etc., are under study. But they won't be enough to guarantee that Europeans can pay their way without more United States aid.)

How to ease the shock from ending of the Marshall plan in 1952 already is giving the United States a new crop of problems. That shock, if it comes, will result from a drastic cut in our exports and a possible rise in our imports.

The problems are of several kinds. Some businessmen and farmers selling in the domestic market are worried because a new

round of tariff cuts is soon to be undertaken. Other businessmen and farmers whose products go into export are afraid of losing business when Europe no longer has Marshall plan dollars with which to buy. And Government officials are concerned over what will happen if Europe cannot obtain essential goods from this country.

Both Senator ARTHUR H. VANDENBERG (Republican), of Michigan, and Senator CLINTON P. ANDERSON (Democrat), of New Mexico, are urging that a special commission be set up to deal with the problem on a bipartisan basis. President Truman is giving attention to it also. He has named Gordon Gray, former Secretary of the Army, as a special assistant to define the problem and recommend a further course.

Tariff cuts to be offered by the United States in talks with 17 countries at Torquay, England, beginning in September, will have a bearing on the problem, but probably not in a major way. These reductions, by themselves, are not expected to bring in enough more imports to come anywhere near balancing United States foreign trade.

The list of 2,500 products on which cuts will be discussed includes pottery, passenger autos, chemicals, textiles, toys, whisky, wines, chinaware, watches, clocks, cutlery, lead, zinc, nickel, oil, cattle, sheep, wool, fruits, filberts, certain kinds of cheese, and many other articles.

Business and farm groups affected are strongly objecting. Manufacturers of watches, pottery and textiles, nut growers, and coal and oil companies were among the first to protest.

Actually, the concessions that are granted to other countries are likely to be less sweeping than those made in the two earlier rounds since 1945, when Congress authorized tariff reductions of as much as 50 percent. On the average, the rates have been reduced only 22 percent and theoretically could go down another 28 percent, under the law. In many instances, however, the full reduction that is considered practical, from a political and economic standpoint, already has been placed in effect.

A search for other ways to meet the "dollar gap" problem, therefore, is being made. Europe now spends around $4,000,000,000 more a year than she earns. That's roughly equal to the amount of the Marshall-plan aid. Even when that aid ends, Europe's dollar shortage will still be from one and a half to two and a half billions, unless a solution can be found.

Paul G. Hoffman, head of the Economic Cooperation Administration, says that, to earn the dollars she needs, Europe will have to sell $400,000,000 more of competitive goods in this country.

Such an import flow cannot easily be brought about. As an example of what might happen, the case of textiles is used by officials. Suppose that, as part of the $400,000,000, textile imports are increased by $75,000,000 a year. The question is asked: What would be the effect on the United States textile industry—on the workers it employs, on the capital invested in it, and on the communities dependent on it?

In the studies soon to be initiated by Mr. Gray and others, the probable effect on various United States industries of bringing in competitive imports is to be surveyed. These studies also will explore ways of encouraging European countries to sell in the United States more goods of types that will not be upsetting to industry in this country.

Alternative courses of action for the United States, in the event that imports cannot be increased to the extent urged by Mr. Hoffman, are to be weighed.

Stopping Marshall plan aid to Europe in 1952 and putting nothing in its place could bring a decline of two or three billion dollars a year in United States exports, officials say, with especially severe blows to producers that are dependent on the export market. Growers of cotton, wheat, and tobacco and manufacturers of such articles as machine tools, motor trucks, tractors, farm machinery, and office appliances would be hurt. At the other end, European countries suddenly deprived of essential goods from the United States also would be hard hit.

To avoid a drastic decline in exports, new ways of getting dollars into the hands of foreign countries, so that they can continue to buy United States goods, are being studied.

In some circles, the military aid program is looked upon as a successor to the Marshall plan. That program, however, while helping to maintain employment in the United States, does not provide Europe with dollars that can be spent in this country for ordinary commercial goods.

The only answer for the United States that can dodge painful adjustments, of the type that would be forced by greatly expanded exports or sharply reduced imports, appears to lie in big-scale foreign investment. This can take the form of public or private loans, possibly geared in with the Government's point 4 program of technical aid for development abroad.

Any dollars sent to Latin America or southeast Asia, the exports explain, are likely to find their way to Europe before returning to the United States. Those dollars can help to bridge Europe's dollar gap, bolster United States exports, and lessen the pressure for a sudden increase in United States imports. The net result can be an expanded total of world trade, in which many nations will share.

Some such long-range program of investment, therefore, seems certain to engage the attention of any bipartisan commission that Congress or President Truman may set up.

Let Us Support the United Jewish Appeal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of my colleagues to the following editorial which appeared in the New York Journal-American and other papers throughout the country:

LET US SUPPORT THE UNITED JEWISH APPEAL

(By Harry H. Schlacht)

Our toast to Israel—
Shalom Uvracha!
Peace and blessings!

We salute the second anniversary of the State of Israel. We hail the historic event with resolution and hallelujah.

Two years of glorious achievement. Two years of glorious fulfillment.

Let us celebrate this happy occasion with a solemn pledge of continued support to the United Jewish Appeal.

This is the hour of destiny and opportunity that will stand out boldly in Jewish history.

No true Jew, no true Christian, no true American can stand apart from the campaign of the UJA.

To feed the hungry, to clothe the naked, to provide hope for the downtrodden and dispossessed, represent the highest ideals of Christianity, of Judaism, and of Americanism.

Hashomer ahi anohi? "Am I my brother's keeper?"

Americans of all faiths are solidly behind the UJA in the building of a new democracy, in the rescuing of Jews from inhumanities.

Without the UJA, European Jewry might not have survived the horrifying destruction under Hitler. Without the UJA, the 2,000-year-old dream of the Jewish state might not have been realized.

The UJA presents the greatest reconstruction program in the history of world Jewry.

It seeks to rebuild and readjust the lives of the victims of persecution. It seeks to bring the blessings of brotherhood to those on whom the tortures of war inflicted the most dreadful toll.

Through the UJA, thousands of uprooted persons are leaving the isolated existence of DP camps, ghettos, and way stations throughout the world.

They are finding their roots again and live as men.

This has been accomplished by the UJA.

The people of America must support this Godly enterprise. The UJA efforts are primary in the program for Jewish survival.

There are still thousands of sick, helpless Jews in Europe.

They remain precariously suspended between life and death. They face the terror of starvation and ignominy.

The problem of saving the last remnants of European Jewry is one of the most important questions facing the architects of the new world.

The decision rests with us.

By our devotion, by our selflessness, by our generosity, we can make 1950 a year of opportunity for oppressed Jewry.

Let us all support the UJA. Let us all support this humane cause.

Let us demonstrate the greatness of the American heart. Let us give for the sake of our immortal soul.

Our deeds determine us as much as we determine our deeds.

God bless UJA.
God bless Israel.
Shalom.

A Celebration Tomorrow

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Washington Times-Herald in an editorial today calls attention to a fact that all our people should understand, and especially all Members of the Congress. It points out that the average salary and wage earner in this country works 117 days a year to pay the tax collector. Tomorrow is the one hundred and seventeenth day and it should be a day of rejoicing; a day to celebrate. As part of my remarks I shall include the editorial at this point:

TOMORROW'S THE DAY

Since January 1, the average salary and wage earner in this country has worked 117 days and every cent he's earned must be paid the tax collector. So, tomorrow for the first time this year he can call his salary his own.

We think such an occasion should be marked by a special observance in the hope of stopping the flood of Government spending which might increase the number of days we'll have to work for taxes next year to 120 or 140 days.

TAXPAYERS NEED HELP

The national debt today has reached $255,588,544,106.81. The administration plans to spend $42,439,000,000 in 1951. Such a budget will increase the debt by another four or five billions.

In order to meet this huge expense you must pay direct and indirect taxes such as 8 cents on a quart of milk, 18 cents on a can of baby powder, $2 on your telephone, $3,000 on a new house, 70 cents on a shovel, and $3 on a pair of shoes.

Congress could make it a real celebration tomorrow. For a starter it could cut down the 1951 budget until it balanced and then wipe out the excise taxes put on the American public as wartime emergencies. How about it?

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by George H. Pauley, of Buffalo, N. Y.:

THERE IS AN ANSWER

(By George H. Pauley)

What is the answer to the greatest and most important question confronting our legislators, economists, and statisticians today? That question which also has the labor leaders, the bankers, the great industrial tycoons in a quandary. The question of what to do about our aged citizens.

The article entitled "Don't Kid Yourself About Pensions" written by Nat. S. Finney and appearing in Look magazine under date of March 28, 1950, is the most dour, pessimistic picture of the subject that anyone could conjure up.

Mr. Finney goes to great length to minutely describe the most obvious and simple facts known to anyone who has given the matter the most casual consideration. But, he has failed to offer anything of a constructive nature; nothing that has a slight semblance of a solution to this important problem. The concluding paragraph of Mr. Finney's article states: "The country is still a long way short of finding a way to divide production in a way that will honor the fair claims of the old folks."

To that I would say: Only so far short as a self-seeking group in our legislature deliberately keeps it for political purposes. But I am in full accord with the writer in his choice of the last six words in that paragraph: "Fair Claims of the Old Folks."

The millions of words written by hundreds of writers, some famous, some just mediocre, all simmer down to the same basic facts. Our great American medical and industrial scientists have produced a Nation of high industrial productivity as well as great longevity. This of course is a very desirable condition, insofar as every industrialist and every worker is desirous of producing more and earning more in order to procure more of the world's goods for himself; and likewise, whether prince or pauper, a long life is a very desirable ambition. The only thing wrong with this picture is the fact that modern, mechanized industry cannot use all available manpower; leaving about 11,000,000 oldsters without means of earning the necessaries of life.

Some of our legislators and economists have not kept abreast of the times; too many of them are still thinking in terms of 1880. Secure in their smug offices with salaries of fifteen to twenty-five thousand dollars a year, they have no idea how the average American taxpayer lives.

Plain evidence of this fact is found in the present so-called social security law, with its $10 minimum; not enough to buy a half ton of coal and help pay John Lewis' salary and pension.

Various writers quote the billions of dollars in savings held by the savings banks; but no one has broken down the figures to find out how much of this money belongs to the worker with family in the $3,000-a-year and downward class. Perhaps we would find that to be a nonexistent sum.

Regardless of how many words may be spoken or writen on this subject, pro or con, these facts remain, we still have 11,000,000 citizens past 65 years of age, wholly or partly dependent upon others for support; owing to facts beyond their control, among which being 30 years of heavy income-tax payments which have siphoned off their potential life savings.

Also, industry-paid "free" pensions are obviously impractical.

The present Social Security Act is immature, inadequate, and impractical. Pensions paid out of current Government revenue are highly impractical and unsecured, insofar as any hostile Congress could refuse to appropriate the necessary funds.

But there is an answer, just as America has always found an answer to any question: First. Abolish all income tax on wages or salaries under $3,000 per annum. Second. Spread the cost of pensions equally between employer and employee. Third. Pay pensions of $100 per month to all workers at age 65, $150 to husband and wife when wife reaches age 60. Fourth. Abolish title 1 of present Social Security Act, placing all on an equal basis. Fifth. Stop fooling around with 1 percent or 1½ percent of pay roll as a tax base, and make all contributions uniform. For example: Tax all employees $2 a week, all employers paying $2 per week per person, thus placing all employees on an equal tax basis as well as on an equal benefit basis. Sixth. Begin paying to the present crop of oldsters at once, thus placing the system on a pay-as-you-go-basis. And last, but not least, abolish the pension question as negotiable between labor unions and employers. Place the responsibility where it rightfully belongs, with the Federal Government.

APRIL 18, 1950.

Electricity and the Valley's Future

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, there is now pending both in the Senate and the House a bill proposing the inclusion of the Cumberland River Valley in the TVA. I ask unanimous consent to have printed in the Appendix an address by Gordon R. Clapp, Chairman of the Board of the Tennessee Valley Authority, delivered at the fourth annual meeting of the Tennessee Valley Public Power Association on April 20. In this address Mr. Clapp does not specifically mention the matter of including the Cumberland in the TVA, but his speech sets forth in very definite terms the necessity of finding additional hydroelectric power if this important section of the country is to continue its economic development.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ELECTRICITY AND THE VALLEY'S FUTURE

(Address by Gordon R. Clapp, Chairman of the Board, Tennessee Valley Authority, fourth annual meeting of the Tennessee Valley Public Power Association, Nashville, Tenn., April 20, 1950)

On March 20 an important and significant event took place at Wilson Dam, Ala. The eighteenth generator, recently installed in the Wilson Dam powerhouse, started to produce electricity as a part of the TVA system. This unit—No. 18—completes the original and presently planned installations at this place, bringing the total capacity of the Wilson Dam to 436,000 kilowatts.

In 1925, when Wilson Dam was completed as a belated World War I project, it was viewed by many as a "white elephant," by others as a coveted prize—if bought for a dime on the dollar. In 1928, and again in 1930, Congress (Republican at both times) passed bills to establish something like the TVA to start where Wilson Dam left off and turn the whole Tennessee River system to public benefit. Both times the enactments were vetoed. In 1933, when TVA was established by the Congress and the President, Wilson Dam was turned over to the TVA. The powerhouse contained eight units with a total capacity of 184,000 kilowatts. Beyond these eight units stretched the long unfilled floor of the powerhouse—room for 10 more units. Today the full complement of 18 units—436,000 kilowatts is at work.

Unit No. 18 at Wilson Dam, changing the power of falling water into electric energy for farms, homes, and factories, is today a symbol of the development of a whole region, adding the growing strength of its rich natural resources to the betterment of the American standard of living.

Those who said, and honestly believed, the Tennessee Valley did not need or could not use more electricity were men with too little faith.

Those who once labeled Wilson Dam as a "white elephant" should now have red faces.

Behind this recent event at Wilson Dam is a story familiar in its general features to most of us here in the Tennessee Valley and to many outside the valley who understand and applaud and support the course of development the Tennessee Valley has pioneered in the past 17 years. You, the distributors of TVA power, in partnership with your consumers and the TVA, have made Wilson Dam and the whole Tennessee River system an asset of great value.

Let me recite some of the facts of which unit 18 at Wilson Dam is an appropriate and dramatic example.

These facts are an old story to all of us here but the passage of time and the pressing problems of today's responsibilities sometimes dim our perspective. It is good to look back occasionally along the road we have come to give us energy and direction for what can be done in the future.

Before 1933, Wilson Dam produced, in an average year, less than one third of a billion kilowatt-hours; in the single fiscal year of 1949 alone more than 2,000,000,000 kilowatt-hours were produced. This increase could not and would not have happened except for two things:

1. Dams built upstream and on the tributaries steadied the flow of the river, thereby providing more water the year round to operate more turbines more of the time; the minimum stream flow at Wilson Dam before TVA was less than 5,000 cubic feet per second. With the present system of TVA dams, this minimum stream flow is more than five

times greater. Before TVA primary power at Wilson Dam was about 39,000 kilowatts; with upstream storage and additional units it is now 159,000 kilowatts.

2. The region has demonstrated what the founders of the TVA believed—produce more electricity, distribute it at low rates, people will use more electricity, efficiency of the power investment will increase, and the area served will be able to grow and develop. A more efficient river for flood control, navigation, and power would have been a luxury if the people of the Tennessee Valley had been slow to use the electricity this development made possible. You and the consumers you serve and the Nation's requirements of war and defense have kept the TVA busy keeping up with the growing demand for electricity. And that electricity has helped to transform the life, living, and strength of a region vital in the Nation's economy.

In the field of electric energy the moral of Wilson Dam should be clear—put a white elephant to work, feed him well, and he will more than earn his keep. Today, Wilson Dam as part of a whole system devoted to flood control, navigation, and power is helping to earn the 4-percent return the TVA power system has averaged since 1933.

Let's review for a moment the growth of the TVA power system and the area served by the distributors of TVA power.

In 1933 the area now served by the TVA used 1,500,000,000 kilowatt-hours of electricity. In 1949 the TVA system supplied more than 17,000,000,000 kilowatt-hours.

In 1933 most of the electricity distribution agencies you represent did not exist. By 1945, the last year of the war, your municipal and rural electric cooperative systems distributed three and one-third billion kilowatt-hours to your consumers; by last year that had almost doubled to about 6,500,000,000 kilowatt-hours. Our forecasts of your requirements based upon a conservative projection of your past and present rate of growth estimate your loads will almost double again by 1954 to 11,000,000,000 kilowatt-hours.

In 1933 the area now served by the TVA had less than 300,000 consumers of electricity. The number now exceeds 1,000,000.

In 1933, 15,000 farms, or about 3 percent of the region's total, had electric service; now more than 300,000 farms, or 77 percent of the total, have electricity.

During 1949 rural lines were extended to as many farms every 60 days as the total number reached in all the years prior to 1933. The rural electric cooperatives, the REA, and the municipal distribution systems have all contributed to this achievement.

The rural cooperatives and the municipal distribution systems put $56,000,000 into new rural and urban lines and substations last year.

Your consumers bought more than $100,000,000 worth of electric appliances in 1949.

The average residential use in the TVA area is now 70 percent higher than the average for the United States.

And so I could go on. But you know the story; it is the cumulative total of what is happening in individual areas served by the 145 locally owned, business-managed, tax-paying municipal and rural electric cooperative distributors of TVA electricity.

There is one more set of figures I must include. They dramatize the responsibility of your systems and the TVA and our joint opportunity to serve the continued growth of this great region.

From Wilson Dam in 1933 to Watauga Dam in 1949 new records of power production and use have been set only to be surpassed. Last June (1949) the TVA power system, including Alcoa's dams and Dale Hollow, the first of the Army engineer projects on the Cumberland, registered an installed capacity of 2,747,092 kilowatts. By June of this year it will reach 2,997,610 kilowatts. Additions now under way, to be completed between June 1950 and January 1954, will add 1,297,400 kilowatts. This includes the first four units of the Johnsonville steam plant, the Army engineers' Center Hill and Wolf Creek Dams on the Cumberland. It also includes the new TVA steam plant begun this month at Widow's Creek in Alabama, to add some of the power required for the expanding atomic-energy program at Oak Ridge, Tenn.

These additions will bring the total TVA system to 4,295,000 kilowatts by 1954.

But even that will not meet normal and emergency requirements forecast for that time. Pending now in the appropriation bill for 1951, as reported favorably by the House Committee on Appropriations, is a program that would begin two more dams, the Boone and Fort Henry projects on the Holston River in east Tennessee, and also provide an additional unit at Fontana Dam in North Carolina, and two more units at the Johnsonville steam plant in west Tennessee. This pending program would add 395,500 kilowatts to bring the total system to 4,690,510 by January 1954.

In 1933 opponents of the TVA and men of little faith said 1,500,000,000 kilowatt-hours of electricity was enough; TVA would just add more idle white elephants to the much-debated Wilson Dam. Today, the 17,000,000,000 kilowatt-hours available in this region are not enough, though it is far beyond the highest level of power production TVA met during World War II.

By 1954 the TVA system will be capable of producing more than 25,000,000,000 kilowatt-hours. But even then the system will not have reached the end of its growth. The supply of electricity must grow so the region can grow. More power from the tributaries of the Tennessee, more generating units in the remaining empty stalls of our powerhouses, and every bit of power the Cumberland can develop will be necessary. More steam units will be needed. Our goal is to accommodate normal growth and to be prepared for whatever emergency the future may bring.

You and the TVA are in a great public business enterprise, to be sure. The success of our stewardship is measured by the standards of prudent investment, efficiency of operation, and our achievement of low costs in supplying an essential public service. But we could succeed on that score alone and still fail in our assignment. The success of our joint effort will and should be measured by the effect more electricity has upon the growth of this region, the energies and vision of its people in making electricity more useful in a soil-conserving agriculture, more livable communities, more economic opportunities. Our success in these things will affect profoundly the contributions this region makes to the Nation and the world. On the basis of these measures of success we can look back upon the first 17 years without embarrassment.

We can do even better in the years ahead. We cannot relax in our task while nearly one-fourth of the farms of the area do not yet have electric service. Plans and construction programs of the 145 distributors of TVA power will soon add most of those not now served. Achievement of this goal is one of our most pressing obligations.

We cannot relax in our joint determination and pledge to reduce rates to the domestic and rural consumers to the lowest practicable level. Investment in construction of new distribution facilities is making heavy demands upon the earnings of many distributors and that is delaying rate reductions in some instances. But we should not lose the vision and faith we jointly demonstrated when money was borrowed to get electric service into the hands of the consumers through their cooperatives and local governments. The faith that achieved the service we now represent has been confirmed and more. Consumers of today have a right and good reason to look forward to lower retail rates as old indebtedness is paid and earnings grow. In many instances you are prudently financing system expansion by new bond issues, thereby equating present consumer obligations with the present benefits that come from low rates.

Among the 145 distributors, 33 now apply resale rate schedules below the original low schedule introduced in the 1930's when our present partnership with many of you began. Continuation of the trend toward lower retail rates in the Tennessee Valley is one of our most important and prudent objectives in the years ahead. TVA is trying to do its part in this by holding to its wholesale rate costs, despite the increased costs of heavy construction, and the development of additional sources of hydro power in multipurpose projects that cannot match the unusual economy of the basic hydro system thus far installed.

The margin between the TVA wholesale rate and the retail schedules of the distributors offers opportunity for retail reductions in many instances as loads and earnings grow.

The success of our effort in these respects will demonstrate, as it has thus far, the wisdom of the Congress and the President in directing the TVA in its sales of power to "give preference to States, counties, municipalities, and cooperative organizations of citizens and farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members."

Our joint responsibility to meet and service the power requirements for this region's full development is not yet satisfied, nor will it be in our lifetime. We are pledged to continue to demonstrate what this valley has proved so conclusively—energy, mobile energy in greater abundance, used more efficiently, and available to all in the area who want and can use it, is a minimum requirement for a strong region; it is an essential ingredient for an ever-increasing, self-supporting standard of living.

Proposed Regulation of Motion-Picture Industry

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me congratulating the motion-picture industry on the suspension of hearings on the licensing bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CONGRATULATIONS TO MOTION-PICTURE INDUSTRY ON SUSPENSION OF HEARINGS ON LICENSING BILL

I read with delight the news that the hearings scheduled for May 15 relative to the proposal to license motion-picture actors and actresses have been called off. I congratulate the distinguished chairman of the Senate Interstate Commerce Committee, Mr. JOHNSON, for having conferred with the outstanding leaders of the motion-picture industry and with Mr. Eric Johnston, of the Motion Picture Association of America, relative to a voluntary solution of this problem.

I am sure that the executives of the cinema who conferred with Senator JOHNSON will be adequate to the challenge which now faces them to implement the voluntary Motion Picture Code so as to prevent the recurrence of certain types of objectionable practices relating to the exploitation of immoral conduct.

I think that it is a wonderful thing that these leaders of the cinema mentioned by Senator JOHNSON in his statement of yesterday afternoon (as printed in the RECORD on p. 5882) should have come to Washington in order to help find a solution to this problem, thus helping the Senate avoid the alternative of what I felt to be unnecessary hearings on unconstitutional legislation.

I think that the able Senator from Colorado displayed splendid judgment and good sense in his decision of yesterday. I think, too, that he is to be applauded for his noble moral standards which prompted him to begin activity on this issue. The fact that I disagreed with him on the specific proposal which he made because of what I felt to be its illegality does not for one moment alter my tremendous admiration of the profound depth of Senator JOHNSON'S spiritual convictions. We certainly need more of that type of righteous, moral belief.

To me, the decision to cancel out these hearings, at least temporarily, is a triumph for the American system of voluntary consultation and agreement as contrasted with the alien idea of compulsion. I think that this voluntary principle will indeed be tested as the industry gets down to the problem of actually improving its code. Some of the very small firms in the industry have in particular, according to all accounts, been guilty of breeches of good taste and this situation must be corrected insofar as they are concerned or for that matter, insofar as any large company is concerned.

Correction of those breeches will probably not be easy; a meeting of the minds in a democratic Republic such as ours may as a matter of fact, be very difficult at times. But that does not alter the necessity for our faith in democratic consultation around the conference table.

Right now, the industry is still plagued by the 20-percent admissions tax on which relief seems to be only slowly coming through lengthy tax-revising procedure in the House. Moreover, there are other serious problems facing this important industry. Most important, however, a milestone in industry freedom has been reached thanks to patience, tact, and understanding all the way around.

Throughout my efforts on this matter, beginning with my statement in opposition to the licensing proposal, which may be found in the Appendix of the CONGRESSIONAL RECORD, page A1916 and as recorded in the Appendix of the CONGRESSIONAL RECORD, pages A2833 and A2981, respectively, it was my sincerest hope that a voluntary solution would be found, and at long last real progress has been made. Congratulations are therefore indeed in order to the American system of discussion and voluntary agreement.

National Association of Wheat Growers

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a copy of a speech which I made at Kansas City, Mo., on Friday, April 21, on the occasion of the organization of the National Association of Wheat Growers:

I am happy to be here today on the occasion of the organization of the National Association of Wheat Growers. I regard this as a most important meeting. Ours is the greatest wheat-producing Nation on the globe, and wheat production is a better than $2,000,000,000 industry. It is one of the most important of our crops. It is the world's greatest food grain, in many ways the most important of all food products. In recent years American wheat has meant more than that. It has saved uncounted millions from starvation, it has served as an important instrument of our foreign policy and has been our most effective weapon in the cold war. The westward progress of communism was stopped in its tracks—not by airplanes or battleships or bayonets, not by negotiations and diplomacy—but by wheat grown on the farms of America. This is typical of the story of wheat throughout the ages. It has won and lost wars; it has made and unmade empires; and world trade in wheat has always been the most important of all international transactions. This Nation is indeed fortunate in including within its boundaries the greatest area of good wheat land ever possessed by any nation. Whatever the occasion when people talk about wheat, they are discussing no mean subject.

Here in this country at the request of the Department of Agriculture and as a part of our war effort, American farmers increased the production of wheat from an average of about 750,000,000 bushels per year before the war to an average of approximately 1,200,000,000 bushels per year for the 6 years ending in 1949. During this same period, when the whole world needed and demanded more food, our Nation was the only one which was able to substantially increase its wheat production. The rest of the world either stood still or made very slight contributions to the increased need for food. Every bushel of wheat from these better than billion-bushel crops which we have produced during the last 6 years has been needed, and although we hear much talk of wheat surpluses now, our carry-over on next July 1 will not be large when world conditions are considered. We must remember that there are over 200,000,000 more people in the world today than there were before the war. There are that many more mouths to feed, although, sad to say, even with our increased production there will not be enough to feed these hungry mouths, even if there existed sufficient buying power and an effective means of distribution.

For it is a fact that in spite of the increase in world population and greater international need, trade in wheat is falling off and may perhaps fall off more. The decrease in the present marketing year as compared with the previous year is about 10 percent, and certainly we can expect further drops when the ECA expires and we no longer are financing food exports to the Marshall-plan countries. Along with this, we are faced with the fact that Germany has been admitted to the International Wheat Agreement and in the future will secure its supplies through that source rather than through the United States Army, which means that to some extent we will have to share this market with other countries in the International Wheat Agreement. Although not yet admitted, Japan has applied for admission to the International Wheat Agreement, and presumably, if she is admitted, this will reduce the quantity of wheat which we send to that country. Up until the present our per capita consumption of wheat for human food has been declining, and with large stocks of feed grains available and with wheat-support prices considerably above feed prices, there appears to be no immediate opportunity to increase the consumption of wheat for livestock feed.

In my opinion this meeting is long past due. I cannot at this time recall any group of producers in this country as important as the producers of wheat, who are still unorganized. I do not care in what field you may go, you will find that in this country producers, processors, and distributors of all important and many unimportant commodities are thoroughly organized. If you will take a look at the telephone directory in the city of Washington, you will find listed there the names of several hundred commodity groups having Washington offices. This is to say nothing of those who have their headquarters in other parts of the country. In the field of wheat, we find that distributors and processors are thoroughly organized. The grain trade is organized through the National Grain Trade Council. The millers have the Millers National Federation. The bakers are thoroughly organized nationally with two groups, one representing the wholesale bakers and the other the retail bakers. And yet the most important group of all in connection with wheat has been up to this moment entirely unorganized on a national basis.

Confining ourselves to the field of agriculture, let me point out that the producers of almost every other agricultural commodity are organized on a national scale. Take the field of livestock. Almost every State has one or more State-wide general livestock organizations, to say nothing of all the State and National breed organizations. On a regional scale, livestock producers are organized into groups like the American National Livestock Association, representing the Great Plains and Rocky Mountain areas, or the Texas and Southwestern Cattlemen's Association, covering the southwest part of the country. In the Corn Belt, the livestock feeders have their organizations. In the field of dairying there is a great national organization known as the National Milk Producers Federation, and there are dairy organizations in many States, such as the Dairymen's League in New York and the Land O' Lakes Creameries in Minnesota and adjacent States.

There is the California Fruit Growers Exchange, representing the citrus industry of that State. The Florida citrus producers have a similar organization. There are organizations of the deciduous fruit growers and of the various types of nut producers. There is the National Wool Growers Association, with many State wool associations. The baby chick hatcheries have a national organization known as the International Baby Chick Association, the headquarters of which are here in Kansas City. The sugar-beet producers are organized. There is the American Soybean Association, representing the producers of that commodity. There are the hop producers and the raisin growers and hundreds of other organizations representing agricultural producers from the local to the national level. Every one of them, I am sure is rendering a service to those whom they represent, and in most cases rendering a service to the public as well. It is strange that wheat producers, who are ahead of most agricultural groups in keeping up to date on production methods, have failed up to this time to see the advantages of a national organization.

There are some, perhaps, who feel that the general farm organizations are in a position to speak for wheat producers, but these organizations are no more able to speak for wheat producers as such than they are to speak for livestock producers or soybean producers or any other commodity group. Evidently the members of other organized commodity groups feel that it is of value to them and have their own organizations. I would not for a moment minimize the value of the great national farm organizations. They perform a real service to agriculture.

but their field must necessarily be broader than that of any commodity group, and in any situation where there may be a conflict of interests between commodities, they of course cannot take a position. The general farm organizations have their field, and it is an important one, but in my opinion there will always be a need for commodity organizations.

I represent a great wheat-producing district in Congress, and during my service there the fact that wheat producers have had no organization to speak for them has frequently been brought to my attention. As an instance, I might mention the difficulty which the Committee on Agriculture had last year in securing an expression of opinion from wheat producers when it had under consideration changes affecting acreage allotments and marketing quotas on all of the basic commodities. I was asked by the chairman of the committee in charge of the hearings to see that wheat producers were represented. Of course, the general farm organizations were invited and appeared, representing all farmers, but I had a real problem when it came to securing witnesses representing wheat producers at those hearings. It was easy in the Pacific Northwest, where there are State organizations. It was possible to secure representatives from western Kansas through the Western Kansas Development Association, but from there on out it appeared that wheat producers as such were completely unorganized, even on a State or local basis. I made every possible effort to have representative wheat farmers come to Washington. I wrote letters to individual producers, whom I thought might be interested. Through the press the committee invited all wheat producers to come to Washington and testify, but, of course, all who came pursuant to these general invitations could speak only for themselves. They did not have behind them the collective wisdom, judgment, and experience that they would have had if they had been representing State or national wheat-growers organizations. The result was that the committee got many diverse and varying individual opinions, many of them in conflict with each other, and when the hearing was ended, with the exception of the presentations made by the small number of State groups I have already mentioned, the committee simply had before it a number of suggestions, many of them no doubt good, but no real information as to the general opinion of wheat producers throughout the country on the problems in question. How much more helpful it would have been to the committee and to the Congress generally if there had been a great national organization representing the wheat growers of this country and authorized to speak for them on important problems affecting their industry.

But, of course, specific legislative questions are only one of the important matters of interest to wheat producers which may come up in Washington. There are many phases of our international policies which directly or indirectly affect the production and marketing of wheat, especially in these times when so much international trading is under Government control. I recall that last year, when the International Wheat Agreement was under consideration, representatives of the general farm organizations, the grain trade, the millers, and a number of Members of Congress were called into consultation with the Secretary of Agriculture and members of the group which were to represent this country at the conference which was to work out the agreement. I am sure that the interests of wheat producers were represented there indirectly, but it is a fact that there was no one present directly representing this great $2,000,000,000 industry.

Right now an important question is pending which involves wheat and international policies. It arises out of the fact that an American milling company is building flour mills in Cuba with the understanding that the tariff on wheat will be repealed. At first thought, that might not sound like such a bad proposition as far as American wheat producers are concerned, but the rub is that under our present preferential treaty with Cuba, American wheat is entitled to a preferential tariff rate and can therefore successfully compete with wheat from Canada and other countries. The purpose of the preferential treaty was to give our producers access to Cuban markets and to give Cuban producers a preference in our markets. Cuba still has this preference in the markets of this country, particularly important, in the case of sugar, but I am told that if the tariff on wheat is repealed, it will mean that Canadian wheat will displace American wheat and flour in that country. I think that question is one to which this organization might give some immediate concern.

In view of the fact that such a large proportion of our wheat exports at present are being made under the ECA program, the policies of that organization are very important to wheat producers. Last year the ECA made available $175,000,000 to the United Kingdom with which to purchase Canadian wheat. Otherwise those dollars would have been spent for wheat or other products in this country. I am not raising the question of the wisdom or folly of the action taken. There are two sides to it, but I am simply pointing out that it was something which was of great importance to the wheat producers of this country and one in which a national wheat organization would naturally be interested.

Whether we like it or not, the future of the wheat growers of this country will depend in a large degree upon Government policies. That is true of every industry. For many years there have been farm programs relating to wheat, and whether or not these particular programs are continued, there will always be many ways in which the Government will touch the business and productive operations of wheat producers. The question of what kind of a farm program we are going to have, as applied to wheat, is of course of paramount importance. With the rising opposition to farm programs generally, it behooves the producers of wheat to give consideration to a program which will be self-supporting, and which will enable us to compete in the export markets. Aside from legislation there will constantly be questions arising which relate to details of programs and policies. Right now there is under consideration in the Department of Agriculture the matter of changing the rate of storage allowances on wheat under the price-support program. The grading of grain is a regulatory activity of the Government, and any changes which may be made in that program are, of course, of intense interest to wheat producers. Freight rates are another matter in which the Government exercises regulation and control. One could go on and enumerate many other Government functions which are of vital interest to wheat producers, and in the solution of which producers should have a voice to present their viewpoint and interests.

In the next few years, there will be hundreds of decisions made by the Government affecting wheat growers and their business. Who is going to decide these questions? How do we know they will be decided right? Are they going to be decided by Congress, very few Members of which have personal knowledge of the problem, or the time to study it? Are they going to be decided by men in Government agencies, who may have an entirely different viewpoint from that of farmers, and who may be quite unfamiliar with the problems involved? Many important decisions vitally affecting farmers may be made quite incidentally in connection with the consideration of questions which only incidentally relate to agriculture. For instance, our foreign-trade policies may have almost as much effect upon the welfare of wheat producers in the next few years as anything which might be done directly under Government programs.

Let me make it clear that I do not believe this organization should be what is commonly known as a pressure group. It should be the voice of the wheat growers of the country; yes. It should be in a position to speak for them in matters which affect their welfare and the general welfare of the country, as it is affected by wheat production and marketing. It will be a voice which, in my opinion, can be very helpful by keeping legislative bodies and Government agencies informed and advised as to the problems of wheat producers and the relationship between those problems and the economic and social problems of the Nation. I know it is only in that spirit and from that standpoint that the wheat growers of this territory want to be represented by such an organization as this in the determination of governmental policies.

But governmental policies are only one of many fields in which an organization of this kind can work. When I think of the potential good which can come from this organization, my mind turns at once to the field of research. I do not for a moment discount the great achievements of agricultural research in recent years, and yet, as a matter of fact, compared with its potentialities and compared with industrial research, very little has been done. I think it should be made clear that taking into consideration the funds which have been available, marvelous results have been secured. But when it comes to research, industry spends a hundred dollars where agriculture spends one dollar. Industry spends these tremenodus sums of money for research because it knows that research pays. We know that research pays in agriculture also. The difficulty is that whereas large industrial concerns and organizations have the funds with which to carry on research, 6,000,000 farmers over the country have no way of carrying out research projects as individuals, and no way to carry them out at all without organization. In the past practically all of our agricultural research has been done by Government agencies, in the main through the Department of Agriculture and the land-grant colleges. Under the Research and Marketing Act, provision is made whereby the Government might cooperate in research with private organizations. The Far East Grain Mission, which I am sure is familiar to most of you, is an example of a cooperative effort under the Research and Marketing Act, between the Department of Agriculture and a State organization of wheat producers. There can very well be other cooperative efforts along this line, and if the organization and the funds are available, there will no doubt be much additional research carried on, both independently and in connection with our land-grant colleges and other Government agencies.

The need for such research is evident everywhere, both in the field of production and marketing. We all have in mind, I am sure, that there is much which can be done in production research along the line of better varieties. Much has been accomplished in recent years on this, but all of us know that more can and will be done if funds are available. In a large part of the wheat-growing area of the country, there is much need for research on alternate crops to stabilize and balance agriculture in those areas. There is so much yet to be learned about plant diseases. Last year the mosaic disease was a factor in reducing wheat yields in large areas. We have accomplished much in breeding disease-resistant plants and in methods of attacking disease, but every scientist will tell you that the work along these lines has only begun. We need more

study also in the field of eradicating weeds and other plant pests.

The present infestation of green bugs over a large part of the Southwestern Wheat Belt brings to our mind the need for more work along the line of eradicating insect pests. There are questions of land use and the control of wind and water erosion in which there is still much to be done in the field of research.

We need continued and expanded research in storage and transportation problems. Weevil control is an instance. We need to study and develop information with reference to the grading of wheat and other grains, and our jerry-built system of transportation rates is a subject upon which much research can be expended.

Nowhere is research more important than in the field of marketing. In spite of the world's shortage of food, in spite of undernourishment, even among people who are supposedly well fed, wheat producers are faced now with the problem of reducing their production unless new outlets can be found. We are all familiar with the fact that there has been a steady decline in per capita wheat consumption in this country for the past 40 years. If per capita consumption today equaled that of 40 years ago, we would consume in the United States for human food this year 750,000,000 bushels of wheat, instead of approximately 500,000,000. There are a number of reasons for this decline, but certainly one important reason is the failure of those who produce, distribute, and process wheat to properly advertise the value of their product, and to market it in such a form as to get an adequate response from the buying public. The splendid reception which has recently been given in Kansas and some other States to the new type of bread containing 16 percent more wheat illustrates the fact that the public will respond to a tasty and improved product. It is yet too soon to see how far-reaching the results of this development may be, but it is an illustration of the fact that there are possibilities until recently unexplored for expanding consumption. If any project of this kind is to succeed on a national scale, it must, in my opinion, have the backing of a great national organization, such as is being set up here.

We know what the meat industry has done in expanding consumption of its products through judicious and skillful advertising. We know what has been done by the citrus producers and others in expanding their market outlets. These groups have been able to accomplish much, because they were organized. What they have done wheat producers can do. But the expansion of wheat consumption as human food is only one field in which we should be working. Certainly there can be some increase in consumption for livestock feed. There should be research in the utilization of varieties of wheat which are good from the standpoint of the producer, but which are not satisfactory to the milling and baking industry. We must explore all the possibilities in the way of industrial uses.

But the field which has the greatest immediate possibilities in enabling us to avoid drastic production cuts is the field of exports. We are not doing so badly now when the ECA program is in effect, and under which our taxpayers are financing exports to the Marshall plan countries and to other nations within the scope of our foreign-assistance programs, including Japan, Korea, and what remains of Nationalist China. The world needs, and will continue to need, every bushel of wheat we can produce in this country, but if we are going to dispose of it after our foreign-aid programs end, as end they must, we are going to have to meet competition from other wheat-exporting countries, in all of which wheat prices are lower than in this country, and we are going to have to find some way by which the importing countries can pay for the wheat which we send them. This gets us into the field of foreign-trade policy and international financing.

Much more might be said, but this is enough, I am sure, to indicate the great field which exists for research in expanding our outlets for wheat and its products. It indicates also the necessity for organized effort. I do not mean to imply that a national organization would necessarily want to cover the entire field of research. Much can and will be done by organized State and local groups working with the land-grant colleges and other governmental agencies. But all of the matters which I have mentioned can be accomplished only through organization, either at the local, State, or National level, and the inspiration and push for work of this kind must be furnished by a national organization.

This organization represents an effort on the part of farmers to help themselves as distinguished from too much dependence on government. I believe it will be of assistance to the wheat producers of this country. I believe it will be helpful to those who in this country and throughout the world are engaged in the distribution and processing of this, the most important of all food products. But my interest in the matter would be far less did I not also believe that the National Association of Wheat Growers can make a real contribution to human welfare here and abroad. I say this because it is my firm conviction that out of this organization will eventually come more efficient production and wider distribution of the world's most essential commodity, the result of which will be to expand the consumption of a nutritious food, diminish hunger, promote the well-being of millions of distressed people, increase international friendship, and advance world peace and prosperity.

The Republican Party and the McCarthy Investigation

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an excellent and penetrating article by Miss Doris Fleeson, commenting on the political and moral significance for the Republican Party of the current investigation into the State Department.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPLOITED BY EXTREMISTS—BATTLE FOR SOUL OF GOP IN MAKING WITH GROWING INFLUENCE OF MCCARTHY

(By Doris Fleeson)

A real battle for the soul of the Republican Party is in the making.

In the face of statements by Senator MCCARTHY that "Wait 6 months and you'll see the results of what I'm doing," thoughtful Republicans are saying that the show-down between the differing GOP factions cannot be long delayed. This group includes governors and private citizens as well as ringside observers of the gravitational pull which Senator MCCARTHY is exerting upon the GOP.

What Senator MCCARTHY is talking about is no riddle. He thinks that his charges are going to be the great Republican campaign issue this fall. He is cocksure that they will elect Republicans and return control of Congress to them. Then the party will be grateful to him and he will have that national stature, that leadership for which he so ardently longs.

BOUNDLESS AMBITION

Wisconsin editors broke the news last week to their fellows that Senator MCCARTHY's boundless ambition includes the Presidency. He has often said at home, they related, that he will be the Nation's first Catholic President.

Republicans who believe that the means used by Senator MCCARTHY are in direct conflict with the party's basic Americanism foresee a bitter struggle for control, perhaps a deep and permanent schism. Some are still hoping that time will diminish the pressures; others think the pressures are already mounting to the point of inevitable conflict.

One of the party's major figures paid a little-noticed visit to the Capital recently. He strongly condemned Senator MCCARTHY's tactics which he feels gravely injure the country but admitted that not all his associates took that view. Republicans, he went on, had never had the fight they must have to determine where they stand. He said that so far they had always at the last moment glossed over their difficulties but they could not get away with it again and should not, even if they could.

This Republican can command national attention when he chooses to speak out. He also has a pretty fair idea now, he thinks, of who will be on his side.

LINE-UP AFTER PRIMARIES

The Republican line-up will begin to be more evident to the public after the primaries are over. If Senator MCCARTHY can keep his charges alive—as he clearly intends to do and probably can—the Democrats expect to make it impossible for a Republican candidate to evade taking a stand.

The irony of this is that it is hardest on those Republicans whom Democrats most admire. The GOP extremists, having nothing to lose, can exploit the MCCARTHY charges to the utmost. Others must risk alienating any MCCARTHY admirers while gaining a me-too label. Meanwhile, they point out, independent voters are likely to play safe and run off to the Democrats.

This problem of the Progressive Republican is capsuled here by one wit in the query: Are Republicans really necessary? Many liberals feel that the anti-MCCARTHY kind are and desire to help them.

Actually the usual iron law applies—they must help themselves. It is theirs to decide when to rebel against the growing MCCARTHY influence. The Senator from Wisconsin clearly will not help them by subsiding quietly.

Tribute to Hon. Paul H. Douglas, of Illinois, by Walter Locke

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a column written by Walter Locke, editor of the Dayton Daily News, which describes the personality

and problems of our colleague the Senator from Illinois [Mr. DOUGLAS] as he carries on his noble effort to be a conscientious Member of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRENDS OF THE TIMES

(By Walter Locke)

A "JUNIORITY" SENATOR—THE UPSET HE CREATES

WASHINGTON, D. C.—The good farmer never lets his livestock breed run down. The prices the livestock growers will pay for the exceptional animal needed to build up their flocks and herds forever make us stare.

New blood, better blood to build more milk or beef or mutton or eggs—this is a farmer's must.

Congress distributes its powers by seniority. Where the baseball manager sends his sore-armed pitchers to the minors, Congress promotes its ancients to ever-increasing authority. The younger Members are ordered to the rear. The ancients occupy the committee thrones.

The cynical call it the system of senility.

Congress, overburdened with increasing work, has lost favor with the people. They voted in 1948 against the Eightieth Congress. They are as likely this 1950 to vote against the Eighty-first. Do they grow weary of the ancients dominating there? Congress, like the farmers' herds, needs new blood.

PAUL LOWARD DOUGLAS was born in Salem, Mass. (old witch-hunting town), in 1892. That makes him now 58. He graduated from Bowdoin College, in Maine. He studied at Columbia and at Harvard to make the highbrow that was to be.

He became a teacher of economics—Reed, Illinois, Washington, Amherst, Chicago U.

Highbrow? The world round was also a book to read. Behold him a Chicago alderman. Came the late war. He enlisted in the marines, rising to a captaincy and emerging alive but with a crippled arm.

The books rolled from his pen, books showing immersion in modern economic problems—wages, apprenticeship, the worker in the modern age, controlling depressions and on and on and on.

In the Senate the other day the pork barrel was rolling prosperously along.

The pork barrel is a revered institution among the Congressmen. The statesmen gather round with their appeals to Santa Claus. The process is simple: You vote the money for my locality and I'll vote for yours. It is called logrolling.

The pork barrel is the piled-up spendings which the process makes.

Many of the appropriations are justified. To get the good ones through, it is necessary to include many not so good.

This latest pork barrel was rolling gaily along when a tall back-seat Senator with a shaggy mane stood up. "Halt," he cried.

The consternation was like that when Oliver, in Dickens' story, asked for more. Only here was someone asking less.

By some strange chance this Chicago alderman, this highbrow scholar who had written books and fought as a captain of marines had wormed his way into the Senate of the United States.

It was one of the amazements of the amazing 1948 election year: the Illinois that had sent to Washington Senator Curly Brooks had given a blazing majority to PAUL DOUGLAS for Senator. (Strange, the divagations of our States in the choosing of Senators. The Nebraska that gave George Norris to his country presents KENNETH WHERRY now. The North Carolina of the ineffable "Fish Eggs" Reynolds blesses us with FRANK GRAHAM now. And Wisconsin. It was "Fighting Bob" La Follette 30 years ago; it is "Jumping JOE" MCCARTHY now.)

There stood the stranger Senator from Illinois calling halt to the rolling barrel.

New blood, clearly, had descended upon the seniority-ruled Senate of the United States.

How do you stay in the United States Senate long enough to grow powerful by grace of seniority? There are various ways.

Some Senators have so succeeded by the sheer greatness of their minds and hearts.

Such greatness is sadly rare. More have succeeded by two particular devices. First, talk economy, then pack the pork barrel well with public money for the local elements. (Santa Claus did not begin with WPA. He had radiated the pork barrel for decades before social security.) This combination of waste and economy is often unbeatable.

The freshman Senator from Illinois, calling a halt on the rolling pork barrel, was striking at the very thrones of many a seniority Senator.

Did he succeed? Of course not. The barrel rolled right on over him, 50 Senators to 16. But on it, as it rolled, there were blood spots that would not out—the new blood that had found its way into the Senate from, of all States, hard-boiled, big-bossed Illinois.

There came another Senate day. It wasn't the barrel rolling now, but a steam roller on its way. Mighty hands, well backed by seniority, were pushing the Kerr bill, the gas bill, through.

Down the Senate aisles came this same tall Senator with the greying, bushy hair, with a trail of charts following him. He set his charts where all the world, not only the Senate, could see. They showed what the Senator held the bill would cost the people of America.

For hours he fought there. Did he win?

The machine rolled right on over him.

Again the blood spots—the new blood the people of Illinois supplied. The country saw. The President vetoed the bill. The shocking economist from Illinois went on to his war on the basing point, instrument, he says, of monopoly.

A radical? This new blood is conservative as a farmer on his paid-for farm. He is for competition in industry. Coal? He is stumped. Competition there has seemed to fail; but he wants no more government control of prices than cannot be escaped. The farmers cannot be left to fail, but that problem is yet to solve.

No socialist here, this easy old shoe of a Senator, but just a Democrat (little d). No better new blood, the press galleries say—and who has more chance to know?—has impinged on the seniority Senate in many years.

Why Have a Loyalty Program?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, in this land of liberty and freedom why should it be necessary for the President to establish loyalty boards to inquire into the patriotism of some Government workers? That is the theme in an article today by George Sokolsky appearing in the Times-Herald. I commend it to the attention of every Member and I include it at this point in the RECORD:

THESE DAYS

(By George Sokolsky)

In recent months, we have been moving into a pair of hysterias. One is the war hysteria, which is very bad indeed. This started when it was discovered that Klaus Fuchs had been stealing our atomic secrets since 1942 and we did not know it.

The other is the hysteria of distrust arising out of the Hiss trials. While we should ferret out every traitor and spy, there is no need to get hysterical about it. Actually it should be an ordinary police job.

About all this, the question arises: Why should there be a loyalty program? Why should there be a need for a loyalty program? Why should there even be a suspicion that American officials might be disloyal? Is it not shocking that this country should feel called upon to appoint a loyalty board to investigate its own employees?

In the mesh of accusation and defense, is that not really the question that should be asked? For what has happened to us, to our children, that loyalty is not taken for granted, and correctly taken for granted?

President Truman made a speech on the loyalty program which he instituted 3 years ago. Then he repeated, 3 years ago. When he instituted that program, did he ask himself or his advisers: What corrupting virus has eaten into the hearts of our people that their government needs to worry about the loyalty of those employed in the government? His institution of that program was a tacit admission of its need.

The President appealed to the people to notify the FBI or the Department of Justice if they have evidence of disloyalty.

Well, Whittaker Chambers in 1939 brought his case to the office of the President of the United States when he spoke to Marvin McIntyre, who relayed him to Adolf A. Berle Jr. From 1939 to 1948, that story lay dormant.

Then the House committee on un-American activities revived it. Were it not for Congressman NIXON, of California, nothing would have come of the Whittaker Chambers charges against Alger Hiss. NIXON pushed that one and deserves the credit for it.

The President himself called the Hiss case a "red herring." Chambers was violently abused. NIXON persisted. Finally, when the pumpkin papers came on the scene, the Department of Justice prosecuted Hiss and won a verdict.

But it took nearly 10 years after the first charges for the case to be brought.

Similarly the Amerasia case has been dormant from 1945 to today when it is being reopened by a congressional committee.

The spying thief, Arthur Adams, ran about this country, trailed by the FBI and newspaper reporters. He was almost an open spy, so many persons were trailing him and trailing his trailers.

But Arthur Adams got away.

I can mention other cases, but you must be as weary of the repetition as I am. What I ask is a fundamental question that must some day be answered: How did it happen?

Until that question is fully answered, the people will remain suspicious. The President, in his speech, made the point that some of the loyalty charges are political in nature, aimed at the 1950 and 1952 elections. I suppose there is truth in that, just as his defense was obviously of a political nature. Unfortunately, politics gets into everything.

But that is really not significant. It dodges the central issue, which is: what has happened in our land that any persons, even 10, even 3, even 1, can serve in vital agencies of Government and be disloyal to the United States?

The President also made the point, in effect, that all disloyal persons in Government employ have been found and have been dismissed. The President cannot know

that to be true nor can anyone else. Would not anyone have said, at any time before all the fuss was made, that there were no disloyal persons in our Government?

And how do we define loyalty? Let us try a simple definition:

Any American whose relations, connections, partisanships, or associations impels him, whether out of conviction or for base reasons, to serve the interests of another country, ought not to be regarded as loyal to the United States for purposes of holding public office.

That yardstick could, with safety, be universally applied.

Report on Program for Flood Control and Related Work

EXTENSION OF REMARKS
OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, recently our distinguished Chief of the Corps of Army Engineers, Maj. Gen. Lewis A. Pick, delivered an able report on the program for flood control and related work of the Federal Government at the annual meeting of the National Rivers and Harbors Congress. I ask unanimous consent that the report be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REMARKS BY MAJ. GEN. LEWIS A. PICK, CHIEF OF ENGINEERS, BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MARCH 24, 1950

One year ago I had the privilege of addressing you. The occasion was one of my first public appearances after becoming Chief of Engineers. In the 12 months that have elapsed since that date, my duties have called for appearances and addresses before many groups in many different cities.

On all these occasions, I have stressed the same basic theme: land and water. Where properly developed, conserved, and used, these essential resources form the basis for continuing and prosperous civilizations. Where neglected, they lead inevitably to disaster. And if the neglect is persisted in, to inevitable extinction. Such has been the history of past civilizations.

Today, my theme is the same; for the state of our national development and the times in which we live, make our land and water and their conservation and maximum utilization of far-reaching importance.

They are important in the maintenance and progressive development of our economy. And they are important in assuring that our economy will be able to perform its vital share in the carrying out of America's policy of seeking a lasting and untroubled world peace.

This is a goal which the National Rivers and Harbors Congress has long advocated. It is a goal which I am pleased to know you are continuing to foster with undiminished vigor. It is a goal worthy of the best efforts of all of us.

Before amplifying further on this favorite theme of mine—and yours—I should like to make just a few brief observations on the current operations of the Corps of Engineers. They are, of course, an integral part of the over-all land and water program of the Nation.

It is gratifying that the postwar resumption of Federal river and harbor improvements and flood-control work has been expanded year by year. The program is now the largest single Federal public works activity.

Current appropriations for this program are the highest in our history. Congress voted $635,500,000 for civil works of the Corps of Engineers in fiscal year 1950. The larger share is for flood control. River and harbor improvements receive $198,000,000.

As you will recall, there was considerable discussion in Congress last year concerning unobligated balances. I should like to report that we now have worked out a realistic program for fiscal year 1950—a program that will require the obligation of all available funds by the end of this fiscal year.

Eighty-one percent of the total 1950 appropriation is being devoted to construction work. These construction funds are for 258 projects, located in a majority of the States, the District of Columbia, and Alaska.

The objectives we seek require investment of sizable public funds. Consequently a considerable part of our work is devoted to the preparation and furnishing of studies necessary under the procedure which leads to the appropriation of public funds. The appropriations are not regarded as ends within themselves, however, but as necessary means to achieve the desired end results. Our function is to translate these annual appropriations into completed, functioning projects, providing their benefits for the Nation.

In this effort we are making progress. The river and harbor program—which was begun by Congress under the Corps of Engineers in 1824—has gradually expanded, until today there are more than 27,000 miles of improved channels, 400 locks and dams, and more than 200 harbors completed and actively maintained. These completed projects exceed similar improvements anywhere else in the world. They are an important segment of the national transportation system. They have helped to make possible the current all-time high marks being recorded in the Nation's water-borne commerce. They are an essential element in American security.

Flood control is a more recent activity of the Federal Government. But here also we are making great progress. No major flood has blighted the lower Mississippi River Valley since the initiation in 1928 of the Federal project there. This project, now about 60 percent complete, has already yielded benefits aggregating nearly $5,000,000,000—or about eight times the project's cost to date.

In the general flood-control program, initiated in 1936, the Corps of Engineers has placed in operation approximately 200 local protection projects and more than 60 reservoir projects. In the short time these projects have been completed, they have prevented flood damages far exceeding their total cost. And they will continue for many years to provide protection to property and prevent loss of human life.

In accordance with national policy, Corps of Engineer dams and reservoirs are, wherever feasible, designed and constructed as multiple-purpose projects. At many of them hydroelectric power is being developed. In the current fiscal year power production has been initiated at the Allatoona project, Georgia, and existing facilities have been expanded at the Norfork project, on the Arkansas-Missouri line, and at the Denison project, on the Texas-Oklahoma line. Power production will be initiated shortly at the Narrows project, in Arkansas. These facilities, together with others scheduled to come into production, will help in meeting the Nation's pressing need of more electric power.

Our reservoirs also provide other benefits which, although incidental, are none the less real. The American people are making increasing use of our completed reservoirs for recreational purposes. Water also is being stored at many of them for municipal and industrial purposes, to supplement existing inadequate normal supplies. Where feasible our reservoirs are storing water for use in irrigation projects. Fish and wildlife facilities are being promoted. Pollution abatement is being helped.

Yes, these projects serve a wide range of beneficial purposes. They are steadily being supplemented by other projects, and there will be a much greater contribution to the national welfare when the presently authorized program is completed.

Of course, work of this type can never be completed fully, as long as America continues to grow. To meet the continuing needs, we are constantly conducting investigations of proposed new improvements, and sending our recommendation to Congress. At the present time, the House has passed, and the Senate has before it, a new omnibus bill. This bill—in its present form—authorizes new flood-control and river and harbor projects which, in our studied opinion, are needed under any comprehensive program.

Other Federal agencies have extensive studies and plans that are a part of the over-all Federal program to develop, conserve and effectively use the Nation's land and water resources. Together with the program of the Corps of Engineers, they represent a splendid start in our efforts to use America's land and water resources to the very best advantage.

But it is only a start.

For this is an industrial Nation. It is a Nation in which we deal in big things. We haul increasingly large cargoes, and to meet the demand for increased transportation facilities, we have had to go back to the rivers. We have gone back to the waterways, and their development to permit use of larger and larger tows which, under modern engineering methods, have made significant changes in the whole economic structure of the country. There are many channels today reaching far into the country upon which deep-draft carriers move to ports where industrial processing of the cargoes takes place. In fact, with more and more development of our navigational structure we will approach the most economical balance between all forms of transportation, and hence the most economical business structure possible.

In the early history of our country the harbors along our coast were adequate to meet the needs of the day. But our Nation progressed; and we progressed as a people, our demands and needs for improved equipment increased. Fortunately, the American people had vision. Fortunately, there were people who—as have you—had the vision to see a future that was possible through basic improvements of the country's natural resources. They had the vision to appreciate the importance of a sound plan of major harbor improvements, and they had the sound business sense to know that the development of these harbors was a national responsibility. Consequently, for a century and a quarter the Corps of Engineers has been charged with the responsibility of providing this country with a system of harbors adequate to the needs which spring from the progress of a growing nation.

Today, the United States—and civic-minded leaders such as your active group—can take justified pride in our harbors—more than 200 of the finest harbors in the world.

Our system of harbors is, in my opinion, among the greatest assets that the people of the United States possess. And these harbors are here to stay. Yet, they are necessarily going through a continuous change. For example, when I was assigned to the New Orleans district in 1925, the average draft of the oceangoing vessels at that time was 25 feet. Yet, in the relatively short period

of time since then, the average draft of ships that come into our harbors has increased to 28 feet. Think of the enormous amount of tonnage added to our shipping by the deeper draft.

Today, we are improving channels at strategic points throughout our coastline. Today, we are talking in terms of 36, or 40, or 45 feet as required by traffic demands. In the future, I might predict, we will be required to provide up to 50 feet. The thing to do—and the thing we are doing—is to make our navigation channels deep enough and wide enough, and to have them ready when we need them most.

The United States has become known the world over as a great building nation. Yet we know that only the framework has been laid to date for the real building of America. This great country of ours, the greatest agricultural and industrial country in the world, is only on the verge of the greatest building era ever known. But we must build solidly. We must build on two basic potentials—water and soil. With these two potentials protected, controlled, developed, and put to work for the benefit of all the people—and for the benefit of making—we have a solid foundation for uninterrupted national growth.

If properly taken care of, our soil and water will never be used up. There are areas in the world today where people have begn farming land for more than a thousand years, and that land is still good because they have taken proper care of it. Yet there are other areas in this world—vast areas—where the people once developed great nations and a great culture. But they forgot the soil and the water. And in these areas today there is nothing but sand and waste.

Unfortunately, all of these areas are not in distant lands. For there are today areas in the United States that have already been changed from agricultural areas into waste lands. Areas where the land once was fertile and good, but was badly treated. It gullied: it washed away; and once land washes away it is a difficult and costly job—and sometimes an impossible one—to restore it. We must stop this needless, heedless waste.

The other great natural resource on which we must build is water.

Our water in the United States is limited. It is becoming daily more evident that in some areas there is too little. In other sections, water has become a great destructive force because we have built our cities on the rivers, and our great farming industry is in the fertile valleys of our streams.

An example in the great Missouri River basin which Thomas Jefferson, as President of the United States, had purchased for $15,000,000. Today along the Missouri River there is more than a billion dollars' worth of industrial development scattered from St. Charles in Missouri through Kansas, Nebraska, Iowa, the Dakotas, and on into Montana. And this billion-dollar development is right on the banks of the river because the river afforded the early settlers and the later industrialists essential transportation and water power.

To conserve our water resources and to safeguard great industrial developments, the Congress of the United States in 1936 passed the first National Flood Control Act. This legislation can, in my opinion, go down in history as one of the most progressive steps in the building of this country. This act, together with subsequent legislation, provided sufficient authority for us to do everything necessary to control, to conserve, and to put our water resources to work for the American people. Today, as I have said, flood hazards are being eliminated and water is being put to its multiple uses in almost every river basin in the United States.

Simultaneous with controlling floods, we are today increasing and making more efficient the American network of inland waterways. No group knows better than do you that these waterways are essential to our transportation system and to our industrial and agricultural way of life.

We must transport raw products, minerals, and other materials to the great processing centers which lie inland from the coast. And we must transport the finished products of these great industrial centers to our own markets and to the seacoast for transportation to markets of the world. We urgently need all the transportation facilities possible to obtain. We need the railroads, the highways, the air lanes. And we urgently need, too, the slower-moving water-transportation routes which carry great bulk shipments at low cost.

We also must have the proper facilities in this country to distribute our agricultural produce—as well as our industrial products—so that the people can maintain the highest possible standard of living. I have seen famine in India because there was no means of distributing food. I have seen people die in India by the thousands from starvation, while in the adjoining provinces there was plenty of food. But it couldn't be transported.

But here I should like to remind you of the additional benefits which can be—and are being—achieved through well-planned navigation and flood control work. In controlling water, we impound it in the areas where it can be economically captured and stored in great reservoirs—and put it to work.

Our modern society requires a tremendous amount of water. There has been an amazing increase in our per capita consumption. The new uses required by new industries take enormous amounts of water. Personally, I was amazed at how much water it takes to run an air-conditioning machine—and we have just begun to develop and use air-cooling devices.

I am often asked, "What is the outlook for this country?", and I always reply that the outlook for this country is just what we make it. If we have foresight; if we conserve and protect the land; if we develop and utilize our water resources, this Nation can go forward to a high destiny that I doubt any of us here today can envision.

However, there will come a time when certain minerals necessary to our industrial progress will be depleted and we will be forced to bring them in from other sources in the world. So long as we have our harbors; so long as we have our inland waterways for low-cost bulk transportation we can do this without detriment. But if the time ever comes when this Nation is called upon to import not only the raw materials for manufacture, but also the food to supply our expanding population, then we will have become a decadent nation.

Let us continue to build for the future—let us continue to build solidly and soundly by conserving and developing, and by the proper and wise utilization of our two greatest potentials—soil and water.

Whitewash Incorporated?

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Indianapolis Star on Thursday, April 27, 1950. It is entitled "Whitewash Incorporated?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITEWASH INCORPORATED?

[From the Indianapolis Star of April 27, 1950]

Two reporters who covered the Alger Hiss case have written a factual history of the affair entitled "Seeds of Treason." It gives a graphic account of the tribulations of Whittaker Chambers, the accuser. Chambers first was ignored, then reviled and virtually subjected to trial himself before truth was established.

The same sort of thing is going on now as Senator JOSEPH MCCARTHY seeks to prove his charges of Communist influences in the State Department. He has been refused any sort of cooperation from the administration. He has been personally abused by the President in terms rarely used by Presidents. He has become the target of every Communist, pro-Communist, and parlor pink in America. He has been hamstrung at every turn by the very committee which is supposed to be investigating his charges.

A new low was reached Tuesday when the Senate committee barred Mr. MCCARTHY from hearing his own witness, Louis F. Budenz, testify in secret. What's going on here anyhow? JOE MCCARTHY is a United States Senator, isn't he? His charges are supposedly being checked by fellow United States Senators, aren't they? Why then should he be subjected to such high-handed treatment as this?

Such tactics lend support to the fiery charges of Senator WILLIAM E. JENNER, of Indiana, that the Red probe is being directed by "Whitewash Incorporated" and that Mr. MCCARTHY is being forced to do the job the committee should be doing.

JOE MCCARTHY has made some seemingly wild-swinging charges. They should be easy to disprove—if they are untrue. But the Truman administration is not going to prove anything by pulling every dirty trick in the book to prevent the truth from emerging. That's the way they tried to shut up Whittaker Chambers.

Spiritual Aspects of Our Democratic Faith—Easter Message

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I wish to bring to the attention of my colleagues the commentary of an illustrious radio commentator, Mr. Charles Collingwood of Columbia Broadcasting System. His Easter message served to inspire and challenge me. It set forth in clear and unequivocal terms the problem that faces our Nation. The emphasis upon the spiritual aspects of our democratic faith should evoke a renewed declaration of our firm determination to maintain at all costs the principles of liberty and the dignity of man.

I ask unanimous consent to have my remarks and the commentary of Mr. Collingwood printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

(By Charles Collingwood, Columbia Broadcating System commentator, April 9, 1950)

Today is Easter, a day held by learned theologians to be the principal festival of the Christian year. The holiday of Easter goes back a long way. Its English name is a survival from dim Teutonic mythology. Its French name, Paques, comes from the Hebrew word for Passover, and, indeed, the Christian festival is a continuation of the more ancient Jewish Passover, the celebration of the liberation of the Jews from the Egyptians; and that, if one cared to, could be traced still further back, for, as long as man has been able to distinguish the seasons, he has devoted special attention to the coming of spring and he has clothed that event with happy symbolism. When the winter has gone and the time of the singing of birds is come and the voice of the turtle is abroad in our land, men have always looked at the world with new eyes. Easter is a time when things are getting better. The earth gives visible evidence of that. It's a time of hope. It's a perpetually renewed assurance that things will get better.

The world has never stood more in need of that assurance than it does this Easter, or so it seems to us. The world is old, and there must have been many other Easters when it seemed that man was sore beset, and the wisest could not be sure how it would all end. But to any generation it usually appears that its own time is the climatic one, where all the forces of history have converged to enforce a special peril. Still, we who are living through this present period have unprecedented reasons for the conviction that we face a more deadly challenge than those who came before us. We have perfected what the scientists tell us is an instrumentality quite capable of destroying humanity. Man, as a form of life, possesses the means of his own suicide. This has never been true before. It would have been a long, messy business to kill ourselves, all of us, by the means we used to command and men would soon have sickened of the attempt. But the thing about the atom bomb is its neatness and dispatch, with no particular trouble we could apparently turn the whole world into one great, relatively efficient gas chamber. And the frightening thing is that now we have this instrument of suicide, we are not at all sure that we are fit to be trusted with it. There is just a chance that we may be foolish enough or ignorant enough or rash enough to use it. That is the measure of the danger that faces us this Easter, and why we may be pardoned for thinking that our contemporary predicament is more fearsome than any the world has ever faced.

And so the old, old Easter message of hope, the promise that things will get better, has a special poignancy for us this year. But where is the hope, and how are things to get better. This Easter season I have been hearing and reading what the men of God have to say on this, for Easter is important to them, and they have meditated much on its meaning. They have said much, and much is well said. Cardinal Spellman broadcast a message to the people who live behind the iron curtain. He told them that the message of America is the same as the message of Easter: "With its triumph of life over death, equity over injustice, glory over shame—the spirit of Easter, with its promise of renewed hope, renewed faith, and renewed life." The presiding bishop of the Protestant Episcopal Church, Bishop Sherrill, said "remembering the heroism and self-sacrifice of Calvary, Christians will view our distraught and fearful world with open eyes, and then strive to do something about it." The columnist, Marquis Childs, has quoted a sermon by Bishop Angus Dun in Washington Cathedral. Bishop Dun said, "We shall pray that America may be strong, strong in arm and strong in courage. Let us still more pray that America may enter into the blessedness of the peacemakers. That," said Bishop Dun, "can only be if we are delivered from our infantile egotisms, our delusions of superiority, from the love of ease and softness. We live in a dark time," he said, "but not as men without hope. 'Earth might be fair,' yes, even now, it might be fair."

I have quoted at such length from these three churchmen, because it seemed to me that they were all saying much the same thing, making a point that may well bear repeating this Easter day. And that is this: that dark as are these times, the message of Easter is still valid. There is hope. Things can get better, but not through an easy miracle. The hope of better things, say the churchmen, depends on us. We must view our distraught and fearful world with open eyes, says Bishop Sherrill, and then strive to do something about it. It is not going to be easy, says Bishop Dun, we must be delivered from our infantile egotisms, from the love of ease and softness.

It is up to us, it seems to me, these men of God are saying. There is hope today, as there has always been, but it depends on us whether that hope is to be realized, and it will take work and sacrifice and patience and understanding to realize it.

It would have been easy for these religious leaders to have taken a different line and to have said: "Don't worry, it's all going to come out all right; the hope of peace that is so much a part of Easter will be realized. All will be well." But they didn't. What they said, in effect, is that there will only be peace if we deserve it, and the peace we get is the peace we deserve.

This, in a way, is the same message our secular leaders have been hammering home of late. Secretary of State Acheson has been trying to get his voice heard above the clamor of advice and denunciation to say that the end of the cold war isn't just going to happen—it will have to be worked for, and it won't be easy. That's never a popular thing to say, and maybe the churchmen have a better chance of getting heard than the politicians. People would always rather hear that there is some simple, cheap, and immediate solution to our problems. They would like to hear that we have nothing to worry about because we have the biggest and best atomic bombs to protect us, or that we'll always come out on top because we are so much more inventive, ingenious, and industrious than other people, or that everything will be solved if we get the Communists and fellow travelers out of the Government, or it would all fixed up if Harry Truman and Joe Stalin would only sit down together, or that Joe Stalin is getting old, and if we can get by until he dies then Russia will be so absorbed in the resultant struggle for power she won't bother us any more, or any number of other comforting propositions, people would rather hear, would rather hear than the grim and challenging doctrine that there aren't going to be any miracles, or any simple solutions, and that if we get ourselves out of this mess it will only be by stripping away our delusions and working as hard as we can to bring about the kind of world that's safe to live in.

But there are voices raised this Easter for a return to that toughness of spirit and that militant and positive affirmation of our spiritual beliefs that have always been a part of the Easter message. I say spiritual beliefs, I don't mean religious doctrine. I mean the belief in the triumph of life over death, equity over injustice, glory over shame, of which Cardinal Spellman spoke. Those are spiritual beliefs. They are the spiritual content of the way of life we are seeking to defend. They are the reason we want to win the cold war. Ultimately they are the reason we don't think we could possibly live under the system we are fighting.

Now we live in a time when the old values seem less certain than they did. We live in a time in which the dominant note is anxiety. The stakes are so much higher than they have ever been, the dangers so much greater, and we ourselves are so much less sure of ourselves and of the things we live by. Out of our uncertainty and fear has come distrust of each other. This McCarthy business, which I wasn't going to talk about, is not an isolated nor an accidental phenomenon. It is a symptom of our distrust of each other. It is something else, too. It is a symptom of our instinctive desire to find an easy way. If we could only blame all our troubles on the Communists, then how simple the solution—just get rid of the Communists.

But, as Easter comes again, and the earth gets green with the promise that things will get better, and the birds sing and the churches fill, and the Federal Reserve Board statistics show that people bought as many new clothes as they did last Easter (which may also be taken as a sign of faith). There are voices raised in the churches as they have been raised outside to say that it still depends on us, as it always has. That we will not be delivered from our troubles by miracles, but by our own efforts. That there isn't any easy way, and no point in kidding ourselves that there is. As Bishop Sherrill said, we must view our distraught and fearful world with open eyes, and strive to do something about it. And we must renew our belief—not in any particular religion—but in the broad, underlying principles which sustain our way of life. As John Stuart Mill once said: "One person with a belief is a power equal to 99 others who have only interests." Easter, with all the layers of meaning with which we have invested it, is as good a time as any to take a look and see whether we are really approaching our problems in this spirit.

France—A Case Study in Marshall-Plan Recovery

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. HAYS of Arkansas. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following splendid address of Barry Bingham at the recent meeting of the American Society of Newspaper Editors:

FRANCE—A CASE STUDY IN MARSHALL-PLAN RECOVERY

(Address of Barry Bingham, Chief ECA Special Mission to France, before the American Society of Newspaper Editors, Washington, D. C., April 22, 1950)

The Marshall plan has been operating in Europe for 2 years. I want to give you some indication of the progress made in that period and the problems we now face. I am going to talk mostly about France for two reasons: it is the country whose record I know best after nearly a year as head of the ECA mission there; and it is easier, I believe, to report this tremendous story in terms of one nation. Practically everything I say about France can be applied in a general sense to the 16 other Marshall-plan countries. They vary tremen-

dously, but they suffered from a common illness after the war's end and they have responded heartingly to one major form of treatment.

To measure success, it is necessary to identify the exact purpose of our effort. Just what are we trying to accomplish in France? Many people give a simple answer: We are trying to stop communism. That answer to me is much too limited and much too negative. General Marshall, in his celebrated Harvard address in 1947, did not call for a crusade against communism. What he proposed was this, in his own words: "It is logical that the United States should do whatever it is able to do to assist in the return of normal economic health in the world, without which there can be no political stability and no assured peace. Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation and chaos."

This is the way I see our goal: to help make France once more a stable, prosperous, independent nation. This is no negative or limited objective. We are not aiding France's recovery simply because we Americans want to limit the power of communism. We are helping French people to make their own country strong again, a campaign in which every loyal Frenchman can share. Of course, as everybody knows, a country where people have food and work and hope for the future is a country where communism loses its power. That is the inevitable result of French recovery. But the primary purpose is to make France strong. If we succeed, we will thereby make communism weaker, but the job of helping France get back on her feet would be well worth doing if communism did not exist or if Soviet Russia were a friendly state.

After World War I, America willingly spent money to feed Belgian children, as an act of simple charity. The job we have tackled after World War II starts from that point and spreads out to far wider horizons. We fed people in western Europe in the first year of the Marshall plan, because they had to eat and gain strength for their giant effort of recovery. But that stage is long past in the rapid drive in France. Now the ECA dollars are used to revive the agriculture and industry of the nation, so that Frenchmen can earn their own way once more in the world.

Here is what we have spent in France: Nearly a billion dollars the first year of ECA; nearly seven hundred million the second year; for the third year we have asked Congress to appropriate five hundred millions for France. Look at the downward rate of those figures: a billion, seven hundred million, five hundred million. That tells the story of progress under the program in France. Each year the nation gains more strength and more ability to cover its own dollar needs. For the last Marshall-plan year we will probably ask about three hundred and fifty millions for France.

Every dollar that America has given to France has been matched by the French people with an equivalent sum in francs. All these francs have been placed in the bank in a separate fund called the counterpart fund. That money can only be spent by the joint agreement of ECA and the French Government.

Here we have two big piles of money, then, to expend for French recovery, a dollar pile and a franc pile. How have we spent them? Well, we did not go into France with a plan designed in America which might not have applied at all to French conditions. The French had a basic program for reconstruction and investment, designed by Frenchmen for the needs of their own country. The Monnet plan was devised back in 1946 by some of France's ablest financial brains, as the most effective and economical way to buy recovery. It is the plan the French adopted and started to carry out after the war. They strained their resources to the utmost. They liquidated some $2,000,000,000 in foreign assets. The plan looked good, but the money began to run out. By the winter of 1947 French industry was gasping for raw materials, unemployment was spreading, misery and hopelessness gripped the nation. In such a situation liberty and free institutions are always marked for the first victims.

Then the Marshall plan started in April 1948. American technicians began a searching study of France's economy in all its aspects, and that study continues every day as the program develops. Money was pumped into the economic bloodstream of France, just as plasma is pumped into the veins of a desperately ill patient. Pretty soon health and vigor began to return. The patient is now on his feet and working hard for his own recovery. We are not going to send France a bill for the cure. We are donating our services, which no other nation in the world could have given. Our reward will be a strong and stable ally on the democratic side of the world.

The dollar cure has been administered in this way: At first, large sums were spent for wheat, fats, and other food products, to restore the energies of the French people. During the past year, however, almost all the dollar funds have gone for these purchases: Machinery for French industry, to modernize production and lower costs; equipment for French agriculture, to mechanize the farms, to increase the crop yields and enable the nation to feed itself; raw materials, notably cotton, petroleum, and nonferrous metals, along with hundreds of other needed items. It is interesting to note that of all these Marshall-plan dollars spent, 75 percent have been spent directly in the United States and another 12 percent in Canada and other countries of North and South America. All the dollars spent under the Marshall plan flow back eventually to the United States. Any country which receives payment for its products in dollars turns around and spends those dollars here in the United States, for every nation in the world has dollar needs beyond its dollar resources.

Along with the dollar cure has gone the franc cure, the careful use of the counterpart fund to buy a permanent recovery. The largest share of counterpart has gone to the production of electrical energy. Shortage of electric power had long been a serious bottleneck in French industry. Many plants closed down for portions of each year when power was short, throwing thousands of people out of work. The use of counterpart funds under the Marshall plan gave France an opportunity to tackle this problem on a really big scale. Giant dams on France's waterways and thermal plants at the mouths of coal mines have already increased the nation's supply of electrical energy by 50 percent. By 1952 it will show an increase of more than 100 percent over the prewar level. Think what that means. When you more than double the electric power a nation has at its disposal, you add great new wealth for the whole future.

A lot of counterpart has been used to restore the railroad system of France. Some very skillful pilots of our Eighth and Ninth Air Forces had made that system a primary target in the last year of the war. They did a thorough job. Practically every important station, marshalling yard, junction point, and railway trestle in France was knocked down by either the Germans in 1940 or by ourselves and the British in 1943 and 1944. A modern country without a working system of communications cannot survive. The French have built nearly all of theirs back. In the process of bombing which France took in turn from both sides in the war, 1 building in every 22 was totally demolished. That job of restoration is slower, but the French are spending the franc equivalent of $350,000,000 on housing this year, 22 percent of their investment budget.

The coal mines have been restored and modernized by counterpart. This year French coal production beat every previous year except 1929.

A nation's financial affairs are not usually dramatic. There is real drama, however, in what has happened to the French franc in the last 2 years. The franc was desperately weak at the begining of the Marshall-plan period, and it continued to sink through the time of the Communist-dictated coal strikes in the fall of 1948. There was a time when the black-market rate on dollars in Paris was 70 percent above the legal rate. Then the franc began to strengthen. Today the currency black marketeers are out of a job, for they cannot offer a rate that beats the official exchange.

Only people who have lived in Europe can know the danger of a runaway inflation. They have seen currencies debased to the point where it takes a wheelbarrowload of money to buy a loaf of bread. Such a ruinous inflation threatened France at the start of ECA. Each year since the end of the war, wholesale prices have jumped 50 percent or more over the preceding year. Then the Marshall plan took hold. In 1949, wholesale prices in France rose only 1 percent over 1948. You should see that one on a graph. The line shoots upward as though it were going through the roof. Then suddenly, about December 1948, it levels off and does no more climbing.

As conditions grew stable again in France, it was possible to end all rationing. The last ration tickets were torn up at the end of 1949. I was interested to note that the 2,000 people who were dismissed from the ration board offices as they closed their doors were transferred to the tax-collection system, to improve the collection record.

I hate to use a lot of figures in a speech. They have a kind of soporific effect on audiences, the same effect lettuce leaves are said to have on rabbits. I'll risk only a very few more figures, and I'll cut those off when I see people nodding in the back row. But here is one I must give you: Industrial production in France is now running 30 percent ahead of 1938. In agriculture, the French are almost back to prewar production, which means that they are very nearly self-sustaining on food products. They increased their exports to other countries by 40 percent in the year 1949. In the same year they sold more to every trading area in the world than they bought, with the great exception of the dollar area.

None of these accomplishments could have been achieved without the aid of America through ECA. But it takes more than dollars to produce such a result, just as it takes more than medicine to cure a sick patient. We could have poured 10 times as much money as we have poured into France without buying an ounce of genuine recovery. The French could have used it to make temporary improvements in the standard of living, which would have been politically popular with a lot of French people, but 1952 would have come and the bubble would have burst. Instead, the French have persisted in using their ECA resources to make permanent gains in the productive capacity of the Nation. No; this job has not been done the easy way. Recovery has been bought for the full value of every dollar and franc. ECA has insisted on that kind of expenditure, but the French themselves have never deviated from such a purpose.

Many Americans who come over to France ask me if the French are really working to help themselves. They see Paris night clubs, some expensive restaurants and hotels, and a way of life that entails a certain amount of sitting in the sun at sidewalk-cafe tables. That is about all I had ever seen of France

until I went to work there last June. I had a good many notions shared by most American tourists, and I have had to go through the painful process of divesting myself of some easy prejudices about France. The French Nation simply cannot be judged from the Ritz Bar in Paris. I find that French people do say "Ou-la-la," as they always do in American novels and movies. But they also, as a Nation, pay rather heavy taxes, which comes as a shock and surprise to most Americans. The French put up 30 percent of their national income in taxes this year, as against 23 percent in the United States. I still think their tax structure is unjust because it falls too heavily on certain groups of people and too lightly on others, including farmers and small shopkeepers. But I can only argue now for a more equitable distribution of the tax load and better collections in France—not for higher over-all taxes.

Getting back to tourists, my advice to them is always to get out in the country and see what the French are doing for themselves. Almost every town and village is alive with activity, even the ones like St. Lo which were knocked flat during the war. About 120,000 tractors are at work in French fields, where only 25,000 could be found in 1945. The ports of France are dramatic exhibits of recovery. Harbor installations were 70 percent destroyed during World War II. Today the French ports are completely restored and handling 10 percent more traffic than they could take care of in 1938. That job has been done by the French with French francs. The dollar aid has amounted to less than half a million, all for some port equipment at Marseilles.

I have painted an optimistic picture of France. I can't paint it any other way when I know what I do of the results achieved in 2 years. However, there are some very dark spots on the canvas. One of the most serious is a continued political instability. No French Government these days has the solid support of the nation. Every Government move must be made cautiously, as an acrobat slides along a tightrope, when what is needed is bold and sweeping action. The fiscal policies of France need a major adjustment. French industry requires an entirely new approach, not an abandonment of self-interest, which is impossible, but a realization that enlightened self-interest demands these two basic changes: giving the workers a better share of profits, and exposing French industry to the healthy fresh air of competition.

These problems I have mentioned will be terribly hard to solve. There will only be a chance of working them out in a climate of national confidence. We wrestled with fear in the first year of the Marshall plan in France, and we still know that fear is our strongest adversary—fear of another war, fear of unemployment and starvation, fear of American withdrawal from the ramparts of western Europe, where the fires of the Kremlin camp can always be seen burning.

So terribly much depends on us here in America. We have done a generous and a highly intelligent job in financing an unprecedented program of aid such as the Marshall plan. We can count many solid and satisfying results. Of course, we will never know exactly what evil events we avoided by making this effort. It is practically certain, however, that we forestalled a Communist political victory in Italy and France. Think what that would have meant. Without the loss of a single Soviet soldier, without a declaration of war or the dropping of a bomb, Moscow would have spread its control to the Atlantic Ocean. Our military forces in Germany and Austria would have been totally surrounded. What a cheap victory that would have been for the Soviets. And what a costly one for us. In such an event, I am certain that we would now be spending far more billions of dollars for additional military preparation than we are spending today for the constructive purpose of recovery in Europe.

Now, however, we must look to the period beyond 1952, when ECA comes to an end. Once again we are faced with a set of momentous decisions, affecting the future welfare of our country and the peace of the world. I will speak only of the economic decisions today. They center around the tough problem of Europe's continuing dollar needs.

The Marshall plan has given the nations of western Europe a unique opportunity to set their houses in order. They are making good use of that chance. But the very success of the program, the upsurge of production in industry and agriculture, has brought us suddenly face to face with a larger and deeper-rooted dilemma. The Economist, of London expressed the problem very effectively, as follows: "The change in the relationship between the old industrial nations and the new industrial giant in the New World has been on the way for the last 30 years. The wars have accentuated but not caused the trend. It has been masked since the end of the conflict, in part by American generosity, in part by the world's desire to buy anything it could at any price. Now the underlying maladjustment between Europe and America is emerging like a reef hidden for a time under a spring tide."

That reef may wreck the ship of recovery, and its next victim may be the ship of peace. What is the nature of this jagged obstruction? The easiest way to explain it is to look at the import and export figures of the United States. We are exporting this year about $6,000,000,000 more goods than we are importing. That trend has been going on for years. Since 1914 this country has sold to the rest of the world about $105,000,000,000 more than it has bought. And who has paid for those gigantic sales? To a large extent, it is we ourselves, the taxpayers of the United States. We have covered more than $80,000,000,000 of that $100,000,000,000 excess by loans and free gifts to foreign nations.

For a long time we have boasted of what we have called our favorable balance of trade, whereby we sold more than we bought. It is no boasting matter now. It is high time we came to realize that the United States is no longer a debtor nation, struggling to establish its export markets. We are the overwhelming creditor nation of the world today. We dominate the markets of the earth. Every nation has an insistent demand for American goods. There is only one limit to our sales—the dollars these countries have with which to buy our products. For years we have followed a course of passing the dollars along to foreign nations from the pockets of our own taxpayers, so that those nations can finance their purchases from us. Do we want to go on doing that? Or isn't it time to take a good, hard look at the situation and chart a new course?

Again I will take France as an example, to illustrate a much more widespread condition. We have exhorted the French without ceasing to increase their dollar earnings, so that they can pay for their dollar needs after 1952. There are two major ways for them to earn dollars—by selling us their exports, or by earning dollars from tourists. We are pushing the French toward a maximum effort by 1952. The plans call for doubling the amount they made from dollar tourists in 1949, and almost doubling their dollar sales of exports. Both goals require a tremendous effort, but I personally think the French can achieve them. Yet even with that sort of effort, France will still have a dollar gap of about $150,000,000 in 1952, to the best of our calculations. In other words, France will spend every dollar she can earn to buy American products, but she will still run short of her dollar requirements by $150,000,000.

How shall we Americans deal with that situation? We have three alternatives as I see them. We can keep on supplying France with the needed dollars from the pockets of our own taxpayers. Nobody likes that alternative. We Americans don't want to keep on giving away money, and the French don't want to go on receiving it as a gift. They would much prefer to earn it.

The second alternative is for us to sit tight and let France go without her $150,000,000 of dollar needs. That policy would have two immediate effects. American producers of machinery, cotton, petroleum, copper, and hundreds of other products would lose a substantial market. France at the same time would suffer a crippling blow to the economy we have worked so hard to help rebuild. For example, the textile industry is the biggest employer of labor in France. The cotton textile factories of France have operated with 70 percent of their raw cotton paid for by Marshall-plan dollars. Reduce that supply to any large extent and the textile mills would begin to shut down, thousands of Frenchmen would be thrown out of work, and the cycle of recovery would begin to reverse itself. Who would stand to gain? Only the Communists.

The third alternative for the years beyond 1952 is for us to let France earn her dollar needs by our buying more French export products. That is not an easy solution. Nothing as important as that is easy in the world we live in today.

Many of France's leading exports do not compete directly with anything produced in America, yet we handicap them with high tariff rates. It is true, of course, that we have reduced the general level of our American tariffs in recent years. However, let's take a look at our present tariff rates on some of the leading items which France exports to us. Nobody in the United States is producing hand-made lace. Yet the United States tariff on lace runs from 30 percent up to 75 percent of the original value. The high-quality kid gloves of France, which again are not produced in America, pay a minimum of 40-percent duty. Women's evening bags of the special types American women like to buy in Paris must hurdle a tariff of 30 to 60 percent to get into the American market. Just who are we protecting in the United States by these particular high tariff rates, and why?

Some French products would compete directly with American goods if we lowered our tariffs and let them in. Yet how small that competition would actually be. If we allowed France to earn the additional $150,000,000 she needs from increased exports after 1952, the amount would represent only about one-tenth of 1 percent of the wholesale value of America's own production, which is running at about $150,000,000,000 a year. That is a very small drop in a very big bucket. An increase in our foreign purchases by about $1,500,000,000 a year would close the dollar gap for all of western Europe.

I cannot help but see this problem in terms of France and of my own native Kentucky. The tobacco growers of my State have long had a prosperous export market in France. The sale of that tobacco is important to every business enterprise in Kentucky, including the Louisville Courier-Journal and Times. The French have a strong preference for American tobacco. Their purchases of American tobacco are limited by only one factor: the limit on the dollars they have to spend. Right now the French are trying to cut down on their buying of American tobacco, much against their will, and are seeking to substitute Turkish and Egyptian tobaccos, which French smokers do not like nearly so well. This change is regarded as

a grim necessity in view of that dollar gap of $150,000,000 that is looming up in 1952.

The whole situation seems to me to point an obvious moral. It would be so sensible for Kentucky people to buy more French products, so that the French will have dollars to buy more Kentucky tobacco. It is a simple equation. It sums up, in my mind, the whole point of western Europe's need and America's best interest.

These are the three alternatives for 1952: We can support the French with American tax money; or we can abandon the French, risking a Communist victory and loss of an important market for our farms and factories; or we can lower our tariff barriers to a reasonable degree and buy from France, so that she in turn can buy what she wants and desperately needs from us. When I say France, I might just as well say western Europe. That is the shape and size of the problem.

I have been very happy to see the concern which this great and difficult problem is beginning to arouse in America. President Truman, as you all know, recently appointed Gordon Gray to study the vast imbalance of America's imports and exports. Mr. Gray will come up with a report which may well become a historic document. He will give it all the force of his high reputation and prestige. If he and his associates get into a detailed study of our tariff structure, I am convinced they will find many strange anomalies. They will discover that in many instances we are protecting industries that no longer need or desire protection, and even industries that no longer operate in this country today.

But how much consideration will the Gray report and the problem it attacks receive from the great American public? The answer to that question will depend very largely on you people in this room today. The average citizen does not like to wrestle with material that contains such foggy phrases as balance of payments and that sort of thing. Yet this dilemma which faces America and the world affects every one of our citizens, and it can be explained to the great majority of Americans if it is broken down into simple terms. We should not wait for the Gray report. The time to start this vital campaign of information and understanding is now.

That is a job for American journalists. I believe a great many of you will agree that our country has a thorny decision to make, and not much time to make it. We all know that Congress can never make such a hard choice on its own. Action in Congress can only come when the American public understands the problem and dictates its choice.

We are always proud to talk at these meetings of our freedom of the press in America. This organization has never balked at the idea that freedom entails responsibility in journalism. It seems to me that our free press has a powerful responsibility to bring the facts of life about foreign trade to their readers, with all the simplicity and force we are able to command.

If we ignore this problem or try to shove it under the rug, I foresee a dangerously bad period in international relations in 1952. The nations of western Europe will be forced to discard the Marshall plan crutch without yet being able to walk by themselves. Their people will suffer a sudden return of discouragement. Since human nature works as we all know it does, the people of western Europe will feel let down by the United States. Gratitude may quickly turn to resentment as hope dissolves in despair. What a glorious opportunity for the Communists!

At the same time, we must foresee a violent reaction on the part of the American people if they are not fully informed of this 1952 crisis and given a chance to deal with it in advance. We, too, will feel a surge of resentment. The American public, tragically lacking a full understanding of the situation, will complain that the Marshall-plan countries have spent billions of our dollars without managing to achieve recovery. Recriminations will fly on both sides. Such a situation would divide the democratic world. We must not and cannot risk such a division in the face of a united enemy.

I firmly believe that the long-term recovery of western Europe depends on the decision the American public will make on the issue of foreign trade. Recovery spells a real chance for peace. Failure to recover spells misery, chaos, and the triumph of communism in Europe. Who can fail to see that the next step might well be war, and a war which the United States would not be certain to win?

The free press of America can give the American people the vital knowledge necessary for them to make a free choice on this vital subject. Whether you agree with my conclusions or not, I plead with you to give your readers the basic facts and let them make an informed decision.

Veto of Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the April 24 issue of Trainman News, the official publication of the Brotherhood of Railway Trainmen. This editorial commends President Truman for his recent veto of the Kerr bill to amend the Natural Gas Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THANKS, MR. PRESIDENT

President Truman came through admirably for the people when he vetoed the Kerr bill to exempt independent natural-gas producers from Federal regulation.

Although the gas interests protested wildly that the measure would not increase the bill to consumers, we felt they did "protest too much." Too much money was spent for its passage and too much lobby pressure was exerted for it to be a matter of principle only. Somewhere down the line the gas interests expected to strike pay dirt. That somewhere was probably a rate hike after the congressional elections, so that the "wrong" votes on the Kerr bill could not hurt the Congressmen's getting back into office.

The newspapers are now saying that labor dictated to the President and that he followed its wishes for political reasons. The fact is Mr. Truman followed the wishes of a majority of Americans (including countless mayors, many governors, and thousands of public-spirited people in no way connected with labor) who didn't want to be bilked by the gas producers. If this is playing politics, it's the brand that we approve of, for its protecting the interests of all.

If the gas companies planned no rate rise, then they're not out a sou—and the public is safe from an unwarranted gouging.

We say, thanks, Mr. President. We predicted you would not forget the people—and you didn't.

Valedictory Address of Eugene F. McGarvey

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD and include an address, I am very glad to call to the attention of my colleagues a really extraordinarily able valedictory address given by Eugene F. McGarvey.

Mr. McGarvey is graduating from the Stevens Institute of Technology in New Jersey in the class of 1950 and it is most refreshing to learn his point of view toward the great questions of the day. He is warning his fellow graduates to break away from the idea of expecting their Government's aid during their lives and urges his classmates not to think too much of economic security but to strike out on their own with faith in the future and determination to take a chance in the world.

His address is full of good advice and I hope it will be widely read.

(Valedictory address by Eugene F. McGarvey, Stevens Institute of Technology, Hoboken, N. J.)

A recent article in a well-known magazine has a point of interest which should be read by every college graduate this year. It is based on an account taken from Governor Bradford's history of the Plymouth Bay Colony.

When the Pilgrim Fathers landed in Massachusetts, it seems they first established a collective system of production and distribution. The common produce of the settlement was pooled in one storehouse and then later rationed to the individual settlers.

From the very start, this system proved to be a complete failure. The Pilgrims' collective effort, far from providing security for all, produced no more than a starvation diet for any individual. Soon faced with a bitter famine which threatened to follow a continuation of this plan, Governor Bradford was forced to take a new tack. As he relates in his history, he decreed "that they should set corne, every man for his own perticular, and in that regard trust to themselves. • • • And so assigned to every family a parcell of land."

The results, of course, were highly gratifying. Now that each one had to provide for himself, the entire settlement took an added incentive to its work, and shortly thereafter Governor Bradford was able to write, "the effect of their perticuler planting was well seene, for all had one way and other pretty well to bring the year aboute, and some of the abler sorte and more industrious had to spare and sell to others, so as any generall wante or famine hath not been amongst them since to this day."

The moral of this story would seem to need no elaboration.

This year the colleges throughout the country are graduating a class of 1950, which, together with its predecessor of last June, has been stigmatized probably as none other before. The class of 1950 is the group that wants security with a broad, bold, capital S. Several prominent magazines have printed surveys proclaiming this fact to its readers; personnel directors have already taken the fact as granted. And these people base their

claims both on personal observation and on the statistical results of college campus polls.

"Gone," they will tell you, "is that classic seeking of a chance to take a chance." The youth of 1950 has turned his back on the free enterpriser and on what at one time was considered the great American dream. As one manufacturer put it, "I never saw a bunch that so wanted to make the free enterprise system work, but they are interested in the system rather than the individual enterprise. They will be technicians—not owners."

Now there are several obvious reasons why this charge is being made against the 1950 group. The college senior of today still averages 2 or 3 years older than his prewar counterpart. Close to 70 percent of the graduates are veterans, many of whom feel they have had sufficient adventure for any one life. There are 30 percent married, who of necessity must limit their risks.

The 1950 graduates as a Nation-wide group are also said to be overspecialized and hence not equipped to take a chance. And mixed in as a leaven is the current fad for an ever-and-ever-increasing amount of public security.

Whatever the reasons, the truth is that the current graduate is none too anxious to strike out on his own eventually, but is looking for a snug job that will pay dividends in safety and lifelong tenure. He will be perfectly content to work for someone else—preferably a very large concern. He desires a vast amount of training, but not as a jumping-off point to his own enterprise. In short, he lacks faith in the future and wants, above all things, economic security.

This is the picture painted of us on the eve of graduation. Whether for the most part the members of the class of '50 will actually live their lives along these lines remains to be seen. It is not too late, though, to sound a note of warning against this indicated trend.

When the businessman claims that the new generation does not care to take a chance, he is thinking in terms of economic risk-taking solely. The danger, however, strikes much deeper than that. This security mentality—that feeling that "Well, I don't have to do it myself; it will be done for me"—can, if given the chance to grow, pervert our entire approach to life.

No, it is not only that the class of '50 may not take risks in the realm of business—but that in our everyday lives, in our engineering work, and in the social life of our community, we may become sterile of all originality. The real threat is not just the passing of enterprise from the economic field—it is the possible loss of incentive in our whole field of living.

Economic security is surely a strong drive in a person's life. But if we are to allow a fear of the future to completely order our lives, to limit the growth of our personalities, and rob our every opportunity, then security on these terms is indeed a hollow triumph. For in the end we shall have secured nothing of lasting value and lost much that is worth while in life.

First of all, complete security is an illusion. In this respect it might be likened to the idea of perpetual motion. Both of these concepts would be wonderful, if they worked. But in practice neither does.

More often than not as a result of his Maginot-line mentality, the most insecure person is the one who is forever playing safe. An unfailingly increased security is purchased only at the loss of some basic human freedom—which is too high a price to pay for a mirage.

Second, a generation that is security-conscious is in some serious degree refusing to make the act of faith without which effective living is impossible. In its members there can be little of that lust for life and experience of the joy of living, little of a sense of wide horizons or worlds to conquer.

And, finally, a generation that has been raised on security is in a poor psychological position to survive the inevitable shocks of life, no matter what is done to insure everybody against all conceivable contingencies. A crutch is well-suited to a lame person, but if he persists in its use once he is healed, he remains in a sense always lame. Security is just such a crutch.

In the final analysis, the only safe guide to security—security of integrity—lies in the determination to pursue what seems to be a right course of action, regardless of the hazards involved, being fully aware that you may fail, but that the only real failure is the refusal to venture.

At the other extreme it would be very foolish to think that we can all hop into a snug spot aboard the free-enterprise caravan and just free-wheel to security. Like any vehicle, the American system needs a motive force—and we are all, everyone of us, counted on for the drive to make it go. The Pilgrims found out before it was too late. Will we?

Germany: Time Bomb of Europe

EXTENSION OF REMARKS
OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the leading article in the May issue of the American Mercury, "Germany: Time Bomb of Europe," by Henry C. Wolfe. Mr. Wolfe, author of The German Octopus, Human Dynamite, and The Imperial Soviets, got his first close-up of the U. S. S. R. in 1922 as a member of the Hoover Commission. He has made several notable forecasts. In the American Mercury for July 1939, he predicted flatly that Hitler was going to war, and told why. In other magazine articles, he forecast the Nazi-Soviet deal and the German attack on Russia.

This article should awaken the American people to the frightening possibility that Stalin's time bomb in Germany may go off, resulting in a new unholy alliance between the Soviets and the Germans. As Mr. Wolfe points out in the opening of his article, "We have been losing the battle for Germany."

I feel the time has come for the Congress to establish a bipartisan commission of inquiry to go to Germany and ascertain the true facts about the situation. A resolution calling for such a commission was presented in the Senate on April 17 by the Senator from Iowa [Mr. GILLETTE], several other Senators, and myself.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANY: TIME BOMB OF EUROPE

(By Henry C. Wolfe)

I

We have been losing the battle for Germany. If we lose Germany to the Kremlin it will be a defeat even more catastrophic than the loss of China. The situation in Germany today, in relation to the East-West struggle, is about where the situation was in China in 1947. Time is running out on us and running out fast.

If we lose Germany we stand to lose Europe, the Middle East, and Africa. We shall be forced back on the Western Hemisphere with the global balance of power heavily weighted against us. We shall find by that time that we have few allies left who can give us political and material support. Having lost the cold war, we shall then be locked into a defensive position that will be inordinately expensive, yet can give us no security.

Few Americans realize what is at stake in Germany, but the men in the Kremlin, masters of "Realpolitik" do. Since they seized power in 1917, the Soviet leaders have understood the important role that Germany plays in their drive for world domination. They have looked hungrily at German industry, especially in the Ruhr. They have realized that if they had use of the Reich's advanced technology, central strategic position, and organizing genius, they could quickly dominate Europe and strike out at other continents. Moreover, the Russians fear German military power, unless it is teamed up with their own. These were some of Stalin's reasons for making a deal with Hitler in 1939.

As for the Germans, there has been strong pro-Russian sentiment in certain circles since the days of Bismarck. It is sentiment based on stark self-interest—based, in other words, on the premise that when Germans and Russians work together, the Germans prosper and wax powerful. According to pro-Russian Germans, when the Germans have fought the Russians catastrophe has been the payoff, and they have two World Wars to prove it. They point to the first Rapallo Treaty (1922), when the pariah Germans and Russians, meeting on the outskirts of the Allied Conference in Genoa, circumvented Allied diplomacy by making a deal between themselves. This move was immensely popular in both Germany and Russia.

After the Nazis came to power, the eastern orientation was interrupted. But there were still powerful influences at work in Germany, especially in the Reichswehr hierarchy, to promote close relations with the U. S. S. R. Dr. Karl Haushofer, the geopolitical expert, and his followers constantly advocated a policy of alliance with the Soviets. Even among the Nazi leaders there were enthusiasts for the eastern orientation. Such an enthusiast was Erich Koch, gauleiter of East Prussia. In Koenigsberg 14 years ago, he explained to me his reasons for advocating a Russo-German alliance:

"The Reich and the Soviet complement each other. A combination of Russian manpower, land mass, and raw materials, with German industry, technological skill, and organizing ability, would constitute the world's greatest power center. The rulers of this combination could dominate the world. It would be economically advantageous for both partners. From the military angle, the alliance could bring overwhelming force to bear at any point on its long periphery. No other coalition could cope with such military-economic dynamism."

Hitler's stupid attack on the Soviets wrecked the pact of 1939, but left the motivations for the pact intact. Throughout the Reich-Soviet war Stalin carefully concentrated his propaganda offensive against the Nazi leadership. He took pains to point out that he believed Germany should endure. He did not associate himself with the West's extreme plans for the permanent destruction of German power. In outwitting the West at Tehran, Yalta, and Potsdam it was his aim to cut Germany in two, the better to get control of the whole. With reference to Europe, his aim was to separate the industrial west from the food and raw materials of the east. The over-all strategy was formulated to make the west's economic recovery extremely difficult, if not impossible.

Since the end of the war, Stalin has continued his courtship of the German people.

He has cast himself in the role of champion of German unity, protector of the Germans against rapacious western imperialism. Constantly stressing the tradition of Russo-German friendship and common interests, he has told the citizens of the eastern and western zones that Germans and Russians together have "the largest potentialities in Europe to complete great actions of world significance." A Russo-German alliance—a third Rapallo—would certainly be an act of world significance. Consequently, every postwar Russian policy in Germany has been part of the plan to win that nation as an ally, either as a Communist satellite or as a nationalist state. The Kremlin's maneuvers have sometimes wavered between the creation of one or the other form of government, but the original goal has never changed.

II

The West, on the other hand, has lacked a German policy. The three western partners—Britain, France, the United States of America—have not only failed to pull together, but have opposed one another on various issues relating to Germany. But their greatest stumbling block has been complete failure to understand the German problem. As for the American attitude toward Germany, it has shifted from the early treat-'em-rough tactics to the current theory that if we shovel enough dollars into Germany everything will come out all right. Paired with this pleasant delusion is the assumption that the Germans hate the Russians; therefore, they are our allies and will, if need be, fight for us. A corollary to this wishful thinking is the argument that we should build up a new German army.

Washington's failure to formulate a long-range policy has been a heavy drag on the men trying to govern our zone in Germany. Not only that, but, with some notable exceptions, we have been handicapped by poor administrators, by the bad conduct of American personnel, and by the black-market activities of the personnel and their dependents. Above all, Americans in Germany have been notorious for their indifference toward German history, culture, economics, and politics. Many Germans regard us as cultural inferiors. None of this has helped American prestige. And the prestige counts heavily in the east-west struggle.

In contrast to America's bungling, the Russians have skillfully made use of two main forces: the German Communist Party and certain extreme right-wing circles. Either of these forces may win Germany for the Kremlin; at any rate, they complement each other. Since World II, the Soviets have worked to build a strong Communist Party in Germany. At present, they control the government of the eastern zone, and have organized a Communist-controlled German militia and a regular Communist Party. Although a Communist fifth column is always a convenient instrument for the Kremlin, there are at least two reasons why the extreme left may not be Stalin's most effective instrument in Germany. One is the limited appeal that communism has among Germans. The other is the potential danger of Titoism in German communism.

The German extreme right may therefore serve the Kremlin's plans more effectively than does the extreme left. The reactionary rightist group is made up of big industrialists, militarists, neo-Nazis, journalists, and refugees. These men see Germany once more a world power, as Russia's ally. They are the political heirs of Bismarck, von Seeckt and Haushofer. Most of them work behind the scenes, but two of them—Count Rudolph von Nadolny and Dr. Andreas Hermes—are playing a more open part in the campaign for a third Rapallo.

Von Nadolny, an aristocrat, a professional diplomat who was once ambassador to Moscow, has spent much of his life working for a Russo-German coalition. Although he is undoubtedly personally opposed to communism, he believes that Germans and Russians, regardless of their politics, should cooperate. Like the late Dr. Haushofer, he believes that Russia is the great heartland essential to world empire. The Germans and Russians, he believes, are the "dynamic peoples" destined to destroy the effete western nations and rule the world. His supporters in Germany have various backgrounds, but all of them—the jobless professors, the refugee junkers from East Prussia, the former Nazi SS officers and Ruhr industrialists—are dazzled by the grandiose prospects inherent in a Russo-German coalition.

Von Nadolny's home in Berlin is the center of this movement. He commutes back and forth between the Soviet and western zones, meeting with small groups, usually in private homes, and promoting the idea of a Russian alliance that will gain world power for Germany. One of Nadolny's agencies in the western zones is the notorious Nauheim circle. More and more of the Nazis and nationalists are coming over to the movement. Von Nadolny and his collaborators are working to discredit the moderate Adenauer administration, to stir up hostility against the western nations, and to prepare for der tag.

A factor that contributes to the success of the von Nadolny movement is the economic compulsion in the western zones. It is true that there has been considerable recovery during the past 5 years. But the housing situation is very bad, there are some 2,000,000 unemployed, and the western zones are unable to cope with the 8,000,000 to 10,000,000 German refugees from Eastern Germany, Poland, Czechoslovakia and other countries. Many of these unfortunate people live in misery. Their bitterness against the Russians who drove them out of their homes is matched only by their bitterness against the Western Powers. As with most other Germans, the refugees' fear of the Russians has not made them like the Western Nations. Moreover, they are deeply stirred by Soviet propaganda to the effect that a Russo-German alliance, with its promise of territorial changes, will give them back their homes. The leaders of the von Nadolny movement now view the millions of refugees as a vast reservoir for recruits.

In dealing with the Germans Stalin holds two aces. One is the potential restoration of the Reich's lost provinces, i. e., all of East Prussia and Upper Silesia, most of Lower Silesia and Pomerania, and a big part of Brandenburg. Germans of all classes, except the most fanatical Communists, are determined to regain these eastern lands. In this matter, the Western Powers can do little to help them. But Stalin can—whenever it suits his purpose. The installation of Marshal Rakossovsky as the real ruler of Poland looks like a move to keep the Poles in line when the Kremlin wants to shift frontiers again. True, the Poles and Czechs would resent a move to restore land to the Germans. But neither the Poles nor Czechs could now offer any effective resistance. In any case, Stalin would sell them out for the grand prize of Germany.

The Saar question, too, is grist for the Soviet propaganda mill. The Kremlin exploits it to poison relations between the French and the Germans. Neues Deutschland, the Soviet-zone Red newspaper, tells the Germans that friendship with the U. S. S. R. is "the only way to regain the Saar."

Stalin's other ace is the mirage of prosperity. Through his German allies in both rightist and leftist camps, he is promising the Germans a great economic boom if they will sign up with him. He holds out the bait of enormous markets for manufactured goods in the satellite states, in the Soviet Union itself, and now in Red China. The Germans are told that there is an unlimited market for their heavy machinery, chemicals, artificial rubber, railway equipment, and electrical goods in the East, but no markets at all in the West.

In this connection the Kremlin harps on that most sensitive of themes, the Western policy of dismantling. This Allied program, the Soviets charge, illustrates the West's vindictiveness, indicates its intention to keep Germany from competing in world markets, proves its determination to destroy the German people. Such propaganda finds ready ears among the refugees, unemployed workmen, the middle class—in fact, among Germans in all walks of life. The West is offering little to counteract it.

III

Another high card in the Soviet hand is the cause of a unified Germany. Here again the appeal sweeps right across the political arena from extreme left to extreme right. Pastor Niemoeller probably spoke for a good many Germans last December when he declared that his compatriots would rather take the risk of living under a Communist dictatorship than continue to have their nation cut in two by the East-West war. From the beginning the Kremlin has carefully fostered the legend that the U. S. S. R. alone champions a unified Germany. To give the legend substance, the Kremlin has set up in its zone a stooge regime, the German democratic government. This outfit, with a so-called foreign minister, professes to speak for all Germany.

In the same breath with the question of unity comes the problem of Berlin. To most Germans, after all, this city is the capital of their fatherland. No other city begins to have Berlin's sentimental hold as the center of government. Thanks to western naïveté, the former German capital lies deep in the Soviet zone. The 2,250,000 Germans in the three western sectors of the city are cut off from the western zones, but their resistance to Soviet pressure has been admirable. Led by their fearless mayor, Ernst Reuter, they have consistently stood by the west against the east. In the city elections of December 1948, they voted anti-Communist by almost 87 percent. Moreover, their German officials have had to contend with kidnapings by the Soviet-controlled east zone police and with constant threats to their own safety. Standing on the boundary of the western sectors, Gerhart Eisler recently warned them: "We are keeping a diary that contains notes on everything you are doing over there."

For our part, to be sure, we carried out the heroic and expensive airlift to keep Berlin's western sectors supplied despite the Soviet blockade. Western prestige zoomed in Germany and throughout Europe. But since the blockade we have been making what appears to be at least a partial withdrawal. Many American officials and their families have left Berlin for the western zones. In the western sectors of the former capital, unemployment is growing at an alarming rate. As Soviet pressure and threats of violence are stepped up, many Berliners wonder if the west is preparing to pull out entirely. If we stay, we do so under increasingly difficult conditions. If we leave Berlin, Germans will consider it a signal that we are beginning a wholesale retreat from Germany and Europe. The consequences would certainly be disastrous.

When the situation in China was speeding toward a crisis, we sat back and waited for the dust to settle. If we wait much longer in Germany, the dust will settle on a Soviet empire extending from the Rhine to Hong Kong. As Drew Middleton wrote in the New York Times: "If the Russians get Germany—and with her the Ruhr—the United States can forget about the Atlantic Pact and military aid and look to the radar defenses of Detroit, New York, and Pittsburgh."

At this late hour what can we do? The minimum is a threefold program that should get under way at once: (1)

Strengthen the middle parties in Germany; (2) launch an efficient propaganda offensive to enlighten the Germans about American democracy and Soviet imperialism; (3) start the job of integrating Germany's western zones into western Europe. That is a large order, which cannot be filled just by appropriating a few billion dollars and appointing a few new committees and administrators. It calls for the best brains we have and for the wholehearted support of Congress and American public opinion. Nothing less can save a rapidly deteriorating situation.

The first of these projects got off to a start last December at the London meeting which organized the International Confederation of Free Trade Unions. American labor leaders participated. The ICFTU could be an effective arm of the west in supporting the German middle parties against the extremes of right and left. Furthermore, the British, French, and American Governments could strengthen the German moderates by making it clear that the west is determined to stay in Germany until the whole problem is solved. Let it be known that there is no future in western Germany for those who are ready to jump on what they think is a totalitarian bandwagon. Make it plain that we are going to stand by our friends in Germany against any power that tries to enslave them. That line would help stiffen the spines of the moderates.

A far stronger propaganda offensive is indispensable to counteract the steady stream of Soviet falsehood against the west, especially against the United States. We must drive it home that the Soviets are not going to raise the German standard of living higher than the low Russian standard. We should expose the Soviet looting of their own zone. We have to show that democracy has dynamism, that the west is a realm of opportunity. Contrast the declining scale of living in the Soviet satellite states with that of the western world. Play up democracy by means of billboards, moving pictures, trade fairs, and pageants. In other words, dramatize our story effectively.

Unless western Europe draws together, it is doomed. Unless a united western Europe integrates Western Germany into its system, the German problem can never be solved. The answer probably rests mainly with Britain, for if Britain stands aloof from European integration, France will naturally fear that Germany would dominate any western European federation. All western statesmen can at least be sure of one thing: if Germany is not brought into the western fold, she will be drawn into the eastern empire. For the states of western Europe there is only one choice—integrate, or go down one by one, like the nations of eastern Europe.

We lost China, but we do not need to lose Germany and Europe. No effective course of action will be cheap or safe. But lack of action will inevitably bring about the collapse of our entire European defense perimeter. Are we to sit back and let Stalin's time bomb in Germany go off?

Bureaucracy, the Overshadowing Menace

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Mr. Charles W. Noonan, of Schenectady, N. Y., entitled, "Bureaucracy, the Overshadowing Menace":

BUREAUCRACY, THE OVERSHADOWING MENACE
(By Charles W. Noonan)

If the conduct of the human race, since the earliest recordings of it, has been anything near like the historians have pictured, the civilizations of the past, each in their turn, decayed and collapsed solely because of their building up of bureaucracies—tax financed job holders—who held for themselves the power to tax, and taxed and increased taxes till their peoples found it did not pay them to produce or own anything, and acted accordingly.

The aftermath of those collapses has always been a period of barbarism: with mankind obliged to begin his upward struggle all over again from scratch. Those periods of barbarism are generally known as "the dark ages."

Both the capitalist and the Communist civilizations—the two predominating civilizations of our time—are, and for sometime past have been, building up bureaucracies at a tremendous speed. If those civilizations are permitted to continue in this regard, the outcome, if history is any criterion to go by, is bound to be their eventual downfall, followed by the usual age of darkness with its many and varying discomforts of succorless infantile growth.

To educate the people to heed this situation—to recognize the danger it is ever laden with—is not as easy a matter as one might suspect, especially in view of their feeling that they may at any time be exposed to the other great forces of destruction that are now being built so rapidly all around them. With things as they are today, the unleashing of those other great forces—the atom bomb, and the hydrogen bomb (if that bomb is perfected)—the possible reduction of the race and the lessening of its ability to move forward and upward as a consequence, should not, by any means be minimized. The unleashing of those bombs, however, like the unleasing of poisonous gas, is a restrainable matter: their use can, and by mutual agreement will, sooner or later, be outlawed as weapons of war. The people's fear and horror of retaliation will force such an agreement and keep it in force. Even the TNT bombing of noncombatants, cities and other properties outside of the fields of battle, is not an unforeseeable content of such an agreement.

The restraining, prevention, or reversion of the trend to bureaucracy is, on the other hand, not so easily accomplished. Bureaucrats, as a class, have never yet been known to voluntarily or involuntarily give up their easy mode of life and retire to the less inviting but natural means of making their living by production of life's necessities. Associating, as a rule, with their own kind, and never heeding the admonitions of others, they pursue their usurped prerogatives without any sympathy or solicitude. They insist that the safety and welfare of the people require more and still more tax financed activities; they see to it that those activities are realized; they hold for themselves the power to tax, which, says an old proverb, is "the power to destroy"; they increase their own salaries and accommodations to higher and still higher levels as time goes on; they keep continuously adding to their personnel for the power it gives them to do so; they add to the tax load year after year to meet their ever growing expenditures, without any qualms or abatement, regardless of how it destroys the people's incentive to work and harvest and own; they see nor hear nor recognize no signals of danger to their civilization as a result of their existence, their power, and their covetousness; they just stick to their fort till their fort and the civilization they live in collapses.

Is there anything that can be done to prevent this impending catastrophe? There is But there are obstacles in the path which are not easily surmounted. There are no great undertakings, however, that do not have obstacles of some kind to surmount. In this case the first and probably the most difficult one will be the educating of the masses of the people to see the existing deadly danger to the security of their offspring; also to see the power that is theirs to eliminate this danger. To accomplish this would seem to be the task of the press, the radio, the writers and distributors of pamphlets, and the masses themselves as they become awakened to the situation. This, obviously, would not be an easy task; but, when considering the greatness of the ultimate aim to be realized, as well as the danger to the security of future generations including the offspring of the controllers of those forces of education themselves, the task, sooner or later, will be undertaken and judged by those forces as worthy of great effort, and, if necessary, no little sacrifice.

Once awakened and the masses will rise to the situation: They will see to it that all the local, State, and National tax-financed nonessential public activities are eliminated; they will see to it that the power to tax will be taken out of the hands of the bureaucrats and placed in the hands of independent local, State, and National tax assessors, collectors and budget assigners whom they—the masses themselves—shall make provision for; they will see to it that the essential public activities are not overcrowded, or padded with friends and wheelhorses of politicians and legislators; they will see to it that the bureaucrats are confined to administrative functions only; and all to the end that civilization and the security of their offspring shall be saved and that there shall be "government of the people, by the people, for the people."

Right Way To Oust the Disloyal

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of April 25, 1950:

RIGHT WAY TO OUST THE DISLOYAL

There is, as President Truman told the Federal Bar Association, a great deal of ignorance and misunderstanding about the Nation's loyalty program. Nothing else could explain the confusion and dissension that has trailed Senator MCCARTHY'S campaign against the State Department.

The President told, in detail, about the loyalty program and how it operates to clear Communists out of Government without headlines or hysteria and within the framework of the democratic liberties we cherish.

If Americans will note the President's words, they will understand how unnecessary, how unfair, and how out of line with American principle is the kind of campaign that MCCARTHY has conducted.

The loyalty program was set up 3 years ago. It is carried out by three groups, the Federal Bureau of Investigation, loyalty boards in each governmental agency, and the over-all nonpartisan Loyalty Review Board.

Each Federal employee must pass the scrutiny of the loyalty boards. Every applicant for Federal employment is checked. There

is constant screening and checking. If an individual changes jobs, advances to a higher position, is seen in company of questionable outsiders, is charged with suspicious behavior, the machinery of investigation goes into motion again. A Federal employee, particularly in such a department as that of the Secretary of State, is under constant (and necessary) surveillance today such as few free Americans would tolerate.

President Truman said the loyalty program has been an outstanding success and no one has yet offered evidence to the contrary. He said there does not remain in Government employ today one person adjudged to be disloyal. He admitted it was possible that there could be individuals who have escaped the net, in an operation as large as that of the Federal Government. He urged citizens, if they know of a single Communist or other disloyal person in any Federal job, to notify the FBI or the Attorney General immediately, so that the charge may be properly investigated.

It would seem to us that the American people, with their fierce devotion to justice and fair play, would agree with Mr. Truman, members of the loyalty boards, and the Members of Congress who approved the loyalty program, that this kind of careful and objective approach is the right one for this Nation. It is one that eliminates the disloyal and, at the time, protects the loyal Government employee from false, malicious or ill-founded accusations. It is the democratic way to deal with subversion, rather than the Russian way.

As President Truman said, in words that should be applauded by the American people:

"We are not going to turn the United States into a right-wing totalitarian country in order to deal with a left-wing totalitarian threat."

Awarding Posthumous Decorations to Crew of United States Navy Privateer

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. GOODWIN. Mr. Speaker, I cannot lay aside the opportunity to follow the distinguished chairman of the Armed Services Committee, Mr. VINSON, in seconding the resolution presented by him authorizing appropriate posthumous decoration of the officers and crew of the American plane deliberately destroyed on April 8, 1950, by the Soviet Union. His remarks in presenting the resolution eloquently and feelingly reflect the sentiments of every Member of Congress in extending to the families of these 10 splendid young Americans the condolence of the people of the United States.

It is a shock to the sensibilities of all peace-loving people to realize that such an outrage could be perpetrated. Perhaps it is, after all, a part of the inscrutible plan of the God of Nations to cause the hearts of this people to be saddened by such a dastardly event and allow these young heroes to be sacrificed in order that the incident may become a turning point in the relations between the United States and the Soviet Union.

We have known for a long time that in this cold war we are dealing with a nation which recognizes only one language, and that is the language of force.

These young men of the United States Navy privateer gave their lives in the performance of duty over the waters of the Baltic. In recognition thereof, let us gravely recollect that we too have a duty to perform.

I shall vote to pass the Vinson resolution in the hope that it will cause us all to face the uncertain future with an even firmer determination that there is no higher purpose challenging us today than to make sure that whatever we do we keep America strong.

Honorable Americans

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an editorial from the Washington Times-Herald as of this date:

HONORABLE AMERICANS: II

As we noted on Wednesday, Secretary Acheson's vituperation of Senator MCCARTHY because of the Senator's efforts to expose Communist influence in the State Department deserves inspection in the framework of his actions in the Hiss case.

The Secretary calls his flock honorable, loyal, and clean living. He and a host of other New Dealers and internationalists said all this, and more, in behalf of Alger Hiss, now under sentence of 5 years.

The procession of New Dealers in the Hiss affair got under way on August 3, 1948, when Whittaker Chambers told the House Committee on Un-American Activities that Hiss was part of a Communist cell in the administration and had stolen Government documents for Soviet spies.

In the same cell Chambers listed Lee Pressman, who had gone on from the New Deal to become general counsel of the CIO; Nathan Witt, former Secretary of the National Labor Relations Board; John Abt, a former attorney for the Labor Department; Henry Collins, a State Department official, and Harry Dexter White, Assistant Secretary of the Treasury, the supposed author of the Morgenthau plan for a harsh peace in Germany and architect of the Bretton Woods world bank and monetary fund.

NEW DEAL PARADE

When brought before the House committee, all but White refused to answer questions on the ground that they might incriminate themselves. White denied he had ever worked with the Communists, then went home and was found dead 3 days later, reportedly of a self-administered dose of a heart stimulant.

Later, at the second Hiss trial, Chambers testified that White had been a source of information for the Soviet espionage ring and identified one paper in evidence as having been received by him from White.

After Hiss' conviction last January, Representative RICHARD M. NIXON of the House committee stated that he had had in his possession since December 1948, numerous papers in White's handwriting which Chambers had received from White. These, incontrovertibly, betrayed official secrets.

While Hiss and other New Dealers squirmed to evade the accusations that they had served Russia, one former State Department officer came forward at both of the Hiss trials and blandly confessed from the witness stand that he had stolen documents for Soviet espionage.

This was Henry Julian Wadleigh, educated at Oxford, the University of London, and the University of Chicago. The statute of limitations had run on any charge of espionage; so he could not be prosecuted.

Still another New Deal figure, after being drawn into the inquiry, made an even more mysterious exit than White. Laurence Duggan, who had gone from the State Department to the post of director of the Institute of International Education, a Carnegie agency, had been listed by Whittaker Chambers in 1939 to Assistant Secretary of State A. A. Berle as in a special category of the Communist apparatus—not a party member but maintaining a special liaison with the Communist underground through Mrs. Hede Massing, ex-wife of Gerhard Eisler, former No. 1 Communist agent in the United States.

In December 1948, shortly after being sought out by the FBI, Duggan was found dead beneath the window of his sixteenth floor New York office.

At the first trial of Hiss, two Justices of the Supreme Court, Felix Frankfurter and Stanley Reed, appeared in the role, unprecedented for men in their positions, of character witnesses for Hiss.

The trial judge, Samuel H. Kaufman, who had been elevated to the bench after participating in the Pearl Harbor whitewash as cocounsel of the investigating committee, sprang down from the bench and welcomed them to the stand with a fervent handclasp.

Among other character witnesses for Hiss were Philip Jessup, a ranking adviser to Secretary Acheson, named by Senator MCCARTHY as having a peculiar affinity for Communist fronts; the Governor of Illinois, Adlai Stevenson; Judge Charles E. Wyzanski, of Federal district court, Boston; Judge Calvert Magruder, of the circuit court of appeals, Boston, and Francis B. Sayre, former Assistant Secretary of State and Commissioner to the Philippines.

BACKERS FOR HISS

Others from the State department who rallied around as character witnesses were Dr. Stanley K. Hornbeck, G. Howland Shaw, Dr. Harry C. Hawkins, Frank E. Duvall, Joseph C. Green, and Charles F. Darlington. John W. Davis, Wall street lawyer and Democratic nominee for President in 1924; Charles Fahy, former New Deal solicitor general; Dr. James T. Shotwell, Hiss' successor as president of the Carnegie Endowment for International Peace and an indefatigable promoter of the internationalist cause for more than 30 years; Clark M. Eichelberger, director of the American Association for the United Nations, and Gerard Swope Jr., counsel for International General Electric Co., testified to Hiss' character at one or both trials.

Mrs. Roosevelt put in at least two courtroom appearances during the first trial and published accounts clearly intended to sway sympathy toward Hiss, whom she had already characterized in print as one of the "good people."

John Foster Dulles, Governor Dewey's adviser on foreign affairs, who had been permitted to sit in since 1944 as a Republican observer in the workings of the "bipartisan" foreign policy, was a witness at both Hiss trials.

He was one of the trustees of the Carnegie endowment who had decided Hiss was just the man for the president of that internationalist outfit and plucked him out of the State department in 1947.

Assisting Dulles in the selection as members of the executive committee of the Carnegie organization were Arthur A. Ballantine, Wall Street lawyer; Francis P. Gaines, president of Washington and Lee University; Earl G. Harrison, Philadelphia lawyer; David Rockefeller; Eliot Wadsworth, Boston capitalist; and W. W. Waymack, Des Moines editor and former member of the Atomic Energy Commission.

The late Nicholas Murray Butler, former president of Columbia University and of the Carnegie endowment, also had a hand in picking Hiss.

In his own recital, Hiss, in effect, summoned as character witnesses Mr. Roosevelt, Harry Hopkins, General Marshall, Admiral Leahy, Senator Vandenberg, the lead elephant in the GOP bipartisan foreign-policy procession, and Harold Stassen, the always-available candidate for the Republican Presidential nomination.

Hiss, in fact, could have got just as good a character from just as many people as any of Mr. Acheson's honorable, loyal, and clean-living State Department stable of the moment. The New Dealers never peach on a pal, nor, to use Mr. Acheson's phrase, turn their backs on him even after he has been sentenced for betraying his country.

Wards of the Government

EXTENSION OF REMARKS
OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I wish to include an article entitled "Wards of the Government" delivered by Dean Russell, of Billings, Mont., on January 20, 1950:

WARDS OF THE GOVERNMENT

The constitutions of former American slave states generally specified that the masters must provide their slaves with adequate housing, food, medical care, and old-age benefits. The Mississippi Constitution contained this additional sentence:

"The legislature shall have no power to pass laws for the emancipation of slaves * * * [except] where the slave shall have rendered the State some distinguished service."

The highest honor that Mississippi could offer a man for distinguished service to his country was personal responsibility for his own welfare His reward was freedom to find his own job and to have his own earnings, freedom to be responsible for his own housing, freedom to arrange for his own medical care, freedom to save for his own old age. In short, his reward was the individual opportunities—and the personal responsibilities—that have always distinguished a free man from a dependent.

What higher honor can any government offer?

THE RIGHTS OF A SLAVE

But many present-day Americans are trying to avoid this personal responsibility that is freedom. They are voting for men who promise to install a system of compulsory, government-guaranteed security—a partial return to the old slave laws of Georgia that guaranteed to all slaves the right to food and raiment, to kind atention when sick, to maintenance in old age. * * * And the arguments used to defend this present-day trend toward the bondage of a welfare state are essentially the same arguments that were formerly used to defend the bondage of outright slavery.

For example, many of the slave holders claimed that they knew what was best for the slaves. After all, hadn't the masters rescued the slaves from a life of savagery? The advocates of government-guaranteed security also claim that they know what is best for the people. Many of them argue in this fashion: "After all, haven't the American people conclusively shown that they are incapable of handling the responsibility for their own welfare?"

Many of the slave holders sincerely believed that the dumb, ignorant slaves would starve to death unless their welfare was guaranteed by the masters. And the advocates of compulsory security frequently say: "Are you in favor of letting people starve?"

MOST PRECIOUS OF ALL

But as proof of the fact that personal responsibility for one's own welfare brings increased material well-being, consider the emancipated slaves. Among them, there were old and crippled and sick people. They had no homes, no jobs, and little education. But—most precious of all—the former slaves were responsible for their own welfare. They were free. They had the privilege of finding their own security.

Now compare the remarkable progress of those former slaves to the lack of progress of the American Indians who were made wards of the Government; who were given state-guaranteed "security" instead of freedom with responsibility. In 1862, most American Negroes were slaves. Today they are about as self-supporting and responsible as other American citizens. Meanwhile the Indians as a group have become less self-supporting and more dependent on Government aid. It has been claimed that many thousands of Indians will actually die of starvation unless the Government feeds them. If this is true, why is it so?

CARETAKERS

There seems to be no scientific basis for calling the Indians an innately inferior race. As has been proved by the success of many individual Indians, they have just as much capacity for understanding and advancement as the Negroes and the so-called Nordics. But today there are more than 12,000 Federal employees directly "taking care" of the 233,000 reservation Indians who are still classified as wards of the Government. The number of Government caretakers for the Indians has been steadily increasing over the years. As a result, the reservation Indian is becoming less self-sufficient and more dependent upon what he calls the great white father in Washington.

Instead of freedom, the Indian has Government-guaranteed security. Instead of individual responsibility, he has a Government bureau to handle his personal affairs. There are special laws governing his right to own land and to spend tribal money. Under that system of bondage it should surprise no one to find that many thousands of Indians have remained uneducated, hungry, diseased, and mismanaged.

THE ONLY SOLUTION

The only lasting solution is for the Indians themselves to handle their own affairs on the basis of individual freedom and personal responsibility. If this is not true, then the blessings of freedom would appear to be fanciful myths. But for some queer reason, we Americans seem to believe that just because our pioneer fathers once subjugated the Indians, we in turn are obligated to keep them in the bondage of Government security. As a result, the Indian has the status of a ward instead of a citizen. Instead of being a responsible person, he is a dependent.

And in a like manner, if we free Americans continue to turn to government for our security, we too will surely become dependent wards instead of responsible citizens. There will be a Commissioner to control our personal affairs and our individual responsibilities. Instead of calico and blankets, we may be promised a hundred dollars every month. But since the principle is the same in both cases, the results will also eventually be the same.

A RETURN TO BONDAGE

The advocates of this compulsory security honestly seem to believe that most Americans—including the Indians—are too ignorant, or lazy, or worthless to be trusted with their own destiny; that they will literally starve in the streets unless their welfare is guaranteed by a benevolent government. However good their intentions may be, these disciples of a relief state are demanding that they be given the power to force mankind to follow their plans. In the name of liberty they advocate bondage.

This is true because the persons who receive support from the state are thereby led to expect—and then to demand—more support from the state. They become dependents. Thus they enter into a form of bondage. They lose their individual freedom of choice to whatever extent the state assumes responsibility for their personal welfare. In time, as is now the case in the welfare state of Russia, the people become completely subservient to the state. In effect, they become slaves of the benevolent government that has promised to solve all of their personal problems for them.

Admittedly, this is not the intent of the planners. Apparently, most of the advocates of Government paternalism really believe that they are able to know and to do what is best for all of the people. Most of them may honestly desire to help the people. But their efforts always result in some form of bondage. For example, the leaders of the Labor government in Britain probably never even dreamed of bringing compulsory labor to its supporters. Yet that is what they did. In England today the democratically elected leaders can—and do—force persons to work where the government decrees they are most needed. And if the person objects to his government's decision, force is used to make him conform.

THE ROAD TO HELL

In Russia we find another example of the fact that good intentions are no guaranty of freedom. For instance, in the beginning Lenin and Stalin probably had no desire whatever to bring slavery to Russia. Their announced plan was to free the Russian people from the slavery of an all-powerful government. But look what happened.

We Americans of today are following this same path toward the bondage of a welfare or slave state. Just as the law once guaranteed adequate medical care for American slaves, so a law to guarantee adequate medical care for all Americans is being demanded today. And who will determine what is adequate medical care for a person? Not the person, but the Government official who has the authority.

And jobs? Of course the Government can guarantee every man a job—just as every slave was guaranteed a job; just as every Russian is guaranteed a job. But it is impossible, of course, for the Government to guarantee everyone a job of his own choosing. Some persons must be guaranteed the scavenger jobs. They may not like it, but dependents have little choice.

THE ONLY HOPE

It is true that many citizens in this country are old and crippled and sick and homeless. Possibly some of them are jobless through no fault of their own. The same conditions existed during our Revolutionary War. But our ancestors knew that their only hope for permanent security lay in their own individual efforts. They knew that the main purpose of Government should be to

protect whatever security the people were able to attain individually or in voluntary cooperation. They knew that electing or appointing a man to public office cannot endow him with wisdom; it can endow him only with power. Thus they took no chances on this power of Government being used to encroach upon their individual liberties and their personal responsibilities. In advance, they put positive restrictions on all officeholders. And as a final guaranty of freedom, they specified that any powers not expressly given to the Federal officials were to remain with the individual citizens and their local governments.

THE USE OF FORCE

The American Constitution naturally did not list virtues—such as compassion, charity, and respect for one's fellow man—as functions of Government. The statesmen who founded our Government knew that all virtues are purely personal and voluntary. It is utter nonsense to imagine that a person can be forced to be good. Government can and should use force to punish a person who commits a crime. But this same force cannot be used to create kindness and compassion within the mind and heart of any person.

Thus the authors of our Constitution left compassion and charity—aid to the unfortunate—on a strictly voluntary basis. They designed a form of government based on individual freedom, personal responsibility, and equality before the law for all citizens. Wisely, they made no attempt whatever to separate freedom of choice from the resulting reward or punishment, success or failure. Since they recognized the absurdity of passing laws to protect a person from himself, they left all citizens free to make their own decisions concerning their own personal welfare. From all viewpoints, including that of material security for the so-called common man, those decisions concerning the proper functions of government proved to be the most effective that the world has ever known in this field.

BREAD AND CIRCUS

If this state-guaranteed security idea were new, it might help explain why so many people insist on trying it. But it is not new. It was written into the code of Hammurabi over 4,000 years ago. In one form or another, it has been tried time and again throughout history—always with the same result. In the Roman Empire it was called bread and circus. More recently, Karl Marx called it socialism. He believed that the state should take from each according to his abilities and give to each according to his needs.

Marx said that it was the duty of government to provide all people with adequate housing, medical care, jobs, and social security. Word for word, the advocates of Government security in this country are saying the same thing today.

And just as the Russians are enslaved to a welfare state, so this country is being carried into bondage by accepting the same false principle. Just as force is used in Russia to make the people conform to the security laws designed for their own good, so we also are now forced to submit to American security laws designed for our own good. And just as the Russian state punishes any objector, so the American state will now imprison us if we refuse to conform.

ENEMY OF THE STATE

If you doubt that compulsory socialism has gone to the extreme in this country, just test it, for instance, by refusing to pay the social-security tax that is taken from your salary. The Government will do the same thing to you that it did to the owner of a small battery shop in Pennsylvania who balked at the idea of compulsory social security. First, the state confiscated his property. Still he refused to obey. Then the state preferred criminal charges against him. And in January of 1943, the Government gave him the choice of conforming or going to prison as a criminal—an enemy of the state because he refused to pay social security. He paid. And his 6 months prison sentence was suspended.

Next may come total Government housing—for our own good, of course. Then the state will assign us so many square feet of adequate living space. This is true because, under complete state ownership of housing, there is no other way that Government can do it. We may ask for more space, a different location, better service, or a choice of neighbors. But we already know the Government's answer. Even today, a person has no real choice when he lives in Government housing.

Next may come full employment with Government-guaranteed jobs for everyone. A person will say, "I don't want this job.' And as happened under England's program of government-guaranteed full employment, the American welfare state will also answer: "We will put you in jail as a criminal unless you work at your assigned task."

Along about then, the advocates of Government-guaranteed security may begin to understand the inevitable results of their ideas. They may realize that it is power that makes a dictator, and not what he's called or how he's elected. When that fact has become obvious to everyone, the advocates of compulsory security will then exclaim: "But we didn't mean this!" It will be too late to turn back at that point. Just as the night follows the day, so government aid to the individual is followed by government control of the individual, which necessarily means government force against the individual.

NO EASY WAY

Fortunately, it is not yet too late for America to turn away from the evil that is a welfare state; a slave state. But, unfortunately, there is no simple or easy way to do it. Both major political parties—along with the smaller ones—seem to be trying to outbid each other by promising more Government housing, more social security, more free medical care, more Government welfare projects, and more special privileges to various groups and interests.

Most of our movies, magazines, newspapers, and radio programs generally endorse—directly or indirectly—the idea of some form of Government-guaranteed security. Even the few objections seem to be aimed mostly at poor administration instead of a recognition that the theory is wrong in principle.

And, whether we like it or not, many of the instructors in our schools and colleges are teaching the desirability of the relief state, the planned economy, and Government ownership in general.

GOLDEN RULE REJECTED

Finally, even some of our church leaders are teaching that the force of government should be used to make people charitable and good. Some of these Christian leaders seem to have forgotten that the principles of the Good Samaritan and each individual doing unto others as he would have others do unto him are voluntary principles. In many cases, these principles have now been discarded for this evil slogan: "It is the duty of government to care for the sick, to feed the hungry, to aid the unfortunate, and to build houses for those who need them." Probably one of the main reasons for the declining influence of the church is that the church is defaulting on many of its own responsibilities by turning them over to government. Many of our church leaders are rendering unto Caesar that which does not belong to Caesar.

But the politicians, periodicals, schools, and churches generally reflect the opinions of the persons who support them. Thus the final decision rests on the attitude of each individual American. If enough of us accept the degrading idea of a welfare state—a relief state, a slave state—the process will soon be completed. But if enough individual Americans desire to return to the personal responsibility that is freedom, we can have that too.

THE CHOICE IS OURS

Before choosing, however, consider this: When one chooses freedom—that is, personal responsibility—he should understand that his decision will not meet with popular approval. It is almost certain that he will be called vile names when he tries to explain that compulsory government security—jobs, medicine, housing, and all the rest—is bad in principle and in its total effect; it saps character and strength by encouraging greed and weakness; it destroys the individual's God-given responsibility for self-help, respect, compassion, and charity; in some degree, it automatically turns all who accept it into wards of the government; it will eventually turn a proud and responsible people into cringing dependence upon the whims of an all-powerful state; it is the primrose path to serfdom.

No, the choice is not an easy one. But then, the choice of freedom never has been easy. It never will be easy. Since this capacity for personal responsibility—freedom—is God's most precious gift to mankind, it requires the highest form of understanding and courage.

Surrendering Our State Sovereignty

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. SHAFER. Mr. Speaker, just how the American people are surrendering the sovereignty of the States through the medium of international agreements having the force and effect of treaties, was well illustrated last Tuesday by a decision in the Federal district court of appeals in Los Angeles.

The issue of sovereignty was raised in a case under California's alien land law in which a lower court had ruled that a Japanese could not keep property purchased more than 40 years ago, because he was ineligible for citizenship under the laws of California. The court of appeals held that the United Nations Charter is a treaty between the United States and other United Nations members.

Now, the Constitution of the United States, article VI, provides:

This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby; anything in the Constitution or laws of any State to the contrary notwithstanding.

The decision of the Court of Appeals of California said, in part:

The (United Nations) Charter guarantees universal respect for human rights and fundamental freedoms for all, without regard for race, color, or religion. Because the alien

land law discriminates against Japanese concerning ownership of land, its restrictions are untenable and indefensible.

This decision should be a warning to the people of the United States that not only State but Federal sovereignty may be surrendered if our Government joins in the many international organizations now being set up under the United Nations, or to be taken into relationship with the United Nations under article 57 of the Charter.

This California decision should warn the American people and their legislative representatives to look well before they leap into any new schemes for world-wide control of trade and similar proposals. Our sovereignty is too sacred to be lightly tossed away for a mess of international pottage.

Charles Hamilton Houston

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on April 22 a great American, Charles Hamilton Houston, died at the age of 54 years. Mr. Houston, a prominent attorney in the District of Columbia, was one of the strongest champions of civil rights in America. A native of Washington, he was a graduate of Amherst College and of the Harvard Law School. He was the first Negro to be an editor of the Harvard Law Review and the first Negro to be awarded the degree of doctor of juridical science by the Harvard Law School.

Mr. Houston, as a public servant and as an outstanding representative of his people and of all Americans, achieved his greatest distinction as an advocate of equal rights for all Americans regardless of their race, color, or creed. From 1929 until 1935 he was vice dean of the School of Law at Howard University. He was special counsel for the National Association for the Advancement of Colored People, a vice president of the American Council on Race Relations, and in 1944 he was appointed by President Roosevelt as a member of the President's Committee on Fair Employment Practices.

Mr. Houston was a distinguished son of a distinguished father who himself has had a notable career in the law and as a servant and a leader of his people.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post for Tuesday, April 25, 1950, paying tribute to Mr. Houston and his career.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHARLES H. HOUSTON

Within the professional lifetime of Charles H. Houston, a profound and significant change took place in the emancipation of American Negroes. He was one of the principal architects of this change. His great gifts as a lawyer were devoted from the beginning of his career to an unremitting battle to win for Negroes genuine equality before the law. Formidable statutory barriers of discrimination on grounds of race crumbled under the skill and stubbornness of his onslaught. It is a tragedy that he could not have lived to see the final victory of the cause he championed and did so much to win.

An outstanding student at the Harvard Law School—he was the first Negro editor of the Harvard Law Review—and later vice dean of the School of Law at Howard University, he served as special counsel for the National Association for the Advancement of Colored People. He led the successful appeal to the courts in the restrictive covenants cases culminating in a decision by the Supreme Court 2 years ago that such covenants are unenforceable by either State or Federal courts. And he was in the forefront of the effort to secure equal educational opportunities for Negroes in State universities. Whites no less than Negroes must mourn the death of this crusader for a principle that lies at the heart of American democracy.

Visitation From Filipino Veterans of World War II

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. O'HARA of Illinois. Mr. Speaker, from a letter received from Terry Magtangol Adevoso, national commander of the Philippine Veterans' Legion, I learn that during the present session of the Congress a delegation of the Filipino veterans of World War II is to come from the islands to visit with us here in the Capital at Washington. I bespeak for them the most cordial of welcomes. For these veterans who stood loyally and valiantly in perilous and uncertain days side by side with Americans from many States of the Union there ever will be deep in our hearts a warm affection.

For many years prior to World War II I was closely associated with the fine young men and women who constituted the Philippine colony in the city of Chicago. There at that time were some 5,000 in the group, and I felt that from their association with us in the routine of the daily living of our lives together in a democratic atmosphere would come a bond of closer understanding which would serve the common interest of both the Filipinos and the people of the United States when troubles in the Orient should involve us. I need not say that no one was more thrilled and gratified than was I by the manner in which the Filipinos did prove their understanding of and their friendship for us when trouble did come and Pearl Harbor had left us with our backs to the wall.

I might add, Mr. Speaker, that when a boy of 16, returning from the siege of Santiago in Cuba, I was prevented from reenlisting for service in the Philippines by an illness which seized me in the fever-plagued camp in Cuba after the surrender and from which the remnant of the American invasion army was saved only by the famous "round robin" of "Teddy" Roosevelt and in which Col. James Hamilton Lewis, later to serve with such brilliance as a United States Senator from Illinois, joined at risk of military discipline and court martial. But my tentmate and buddy, another boy of 16, did go to the Philippines and shortly thereafter fell in action. For more than half a century his body has reposed in Philippine soil. My lifelong interest in the people of the islands I have wished to be something in the nature of a small memorial to this boy soldier of America with whom I served in the storming of Santiago.

With my colleagues who served in World War I and World War II, I shall give warm welcome to the veterans from the islands when they come to Washington.

The letter of Commander Adevoso follows:

PHILIPPINE VETERANS' LEGION,
Manila, Philippines, March 9, 1950.
Hon. BARRATT O'HARA,
House of Representatives,
Washington, D. C.

SIR: The Philippine Veterans' Legion, a national organization of Filipino veterans of World War II is, with the blessings of our people, sending in the very near future a mission to Washington, D. C., to seek the passage of the Kearney bill.

The Kearney bill, as we have been informed, provides for educational benefits and mustering-out pay to Filipino veterans and burial expenses to war widows and dependent parents of Filipino deceased soldiers. The passage of the Kearney bill would be a great relief to Filipino ex-servicemen, war widows, orphans, and indigent parents.

We Filipino veterans feel that we can count on your support, knowing as we do that you are also a veteran.

Perhaps, it is needless to say, deeming it to be a common knowledge that on this side of the Pacific we are very much left out. Our men, during the fighting, were promised equal postwar treatment with their American brother in the same foxhole, only for them to find out after the war was over that they are out as far as readjustment benefits are concerned. We all feel, therefore, that we should let you know that as fellow defenders of the ideals of democracy and the democratic way of life who fought under an American commander, on American soil, for the American flag, and against a common enemy, we have not been treated justly. We also feel that the enjoyment of benefits that the Kearney bill would make possible for us in a certain measure, would be only an act of justice on the part of the American people and Government. We believe that we are not fighting for anything unreasonable, but that which is rightly due our veteran.

We trust, that not only do you see the justness of our claim, but that you sufficiently appreciate it to want to help us.

We hope that the members of the mission after their arrival at Washington, D. C., will benefit from whatever help you may be able to extend to them.

Allow us to extend to you the warmest regards and best wishes of 330,186 Usaffes and recognized guerrillas and 106,502 war widows and indigent parents.

Very sincerely yours,
TERRY "MAGTANGOL" ADEVOSO,
National Commander.

Donaldson Order a Fraud

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SHAFER. Mr. Speaker, Many Congressmen are in agreement that the spectacular order of Postmaster General Jesse Donaldson to fire thousands of postal workers and to lay off other thousands in an apparent economy move was nothing but a cleverly-designed political tactic to make it seem that the administration is trying to promote efficiency in Government.

The order proves just the opposite. If Mr. Donaldson and the Trumanites want to promote efficiency in the Post Office Department—a highly worthy purpose, most every one agrees—they should follow the careful recommendations of the Hoover Commission. Instead, Mr. Donaldson and his advisers have sniffed disdainfully at the Hoover reforms and steadfastly have refused even to endorse them.

It is a matter of cold fact, provable by figures, that the Post Office could save from one-fourth to one-half billion dollars by putting the Hoover reforms into effect. Instead, Mr. Donaldson hastily pulls some reforms out of his own hat and wants citizens to believe that these reforms are to promote efficiency.

The Donaldson order will promote inefficiency. It will promote a more disgruntled postal service. It will promote a more disgruntled citizenry. It will save very little, compared to what could be saved. The postal workers have fought and won increases in pay, fairly and legitimately. Now, many of them will be robbed of any pay, through Mr. Donaldson's shenanigans.

Voice of America

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. JAVITS. Mr. Speaker, May 1 marks the first anniversary of the use by the Voice of America of Martin Block's international make-believe ballroom program. The use of this program by the Voice of America was in response to numerous requests from overseas listeners for broadcasts featuring popular American music. The anniversary will be signalized on the Voice of America by a special 1-hour program. There is appended a statement obtained from the Department of State describing this program:

Mr. Block volunteers his services, recordings, and facilities for the International Make-Believe Ballroom, which is beamed by short-wave to Europe, Latin America, and the Far East, and is sent in the form of transcriptions to numerous USIS outposts for use by local radio stations in those areas.

The program is designed to popularize not only America's music, but also the American way of life and the freedom with which American singers, composers, and artists live and work. It is also designed to complement and balance the talks, commentaries, analyses, features, and news with which the Voice of America schedule is weighted.

The International Make-Believe Ballroom has been a popular one from the start and has attracted thousands of letters from all parts of the world, including some from behind the iron curtain.

It has become one of the most popular English language programs broadcast by the Voice of America. The program is 30 minutes weekly, and is divided into two parts. In the first, Mr. Block plays the latest music releases and, in the second, he plays requests from overseas listeners, mentioning their names. The format of the show is similar to the domestic version of "Make-Believe Ballroom," except that more attention is given to background material about the music, composers, and musicians.

Since the International Make-Believe Ballroom started, Mr. Block has never failed to produce the weekly show, despite illnesses and the pressure of his own career.

The first anniversary will be characterized on the Voice of America by a special 1-hour program, which will include congratulations and greetings from some of America's leading performers.

What Alaska Needs

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. WHITE of Idaho. Mr. Speaker, many years ago, I read a report of the Department of Agriculture that Alaska was capable of supporting a population comparable with the combined population of the Scandinavian countries of Sweden, Norway, and Finland. I believe that was before gold was discovered in the Klondike and at Nome.

Since then, Alaska has come in for considerable attention by the Federal departments with the result that little in the way of real development has been accomplished.

Gold miners never do much in developing any country. Their motive, in the past, has been to get into a country, get the gold, and get out.

One of Alaska's most valuable resources is its timber. Withdrawing Alaskan timberlands from settlement to put them in forest reserves has greatly retarded the development of the Territory. If there is any resource that has sustained the settlers that went up on the public land in this country and built up the communities of our Nation, it was our stands of timber on public land. If there is anything that sustains the Finnish people today, it is the utilization of Finland's timber resources.

Alaska needs transportation. It needs roads and settlers. It needs a liberal policy by the Federal Government in assisting the settlers to go upon and own their lands and homes, and encouragement to use Alaska's natural resources, including Alaska's stands of timber.

Let us remove the blocks holding Alaska back and let the great commonwealth roll forward in its development as the forty-ninth State in the Union.

There is inserted herewith for the consideration of my colleagues an appeal to the President by the people of Hot Springs, Alaska, for the continuation and protection of their indispensable air transportation by the so-called bush pilots:

MR. PRESIDENT, WE ARE LOSING FAITH

For decades, we who live in Alaska have been doing our best to develop the resources of our great Territory and to expand the economy of our northland. We have been doing all in our power to build a good American civilization up here in these northern latitudes.

WE WERE INSPIRED

We were tremendously inspired when you sent special messages to Congress urging a great program of development in Alaska. We were very happy when you pointed out the opportunities for permanent settlement in the Territory. We knew we had a friend in the White House when you urged immediate statehood for Alaska—equal rights under the American flag for us living up here. We knew that you had an accurate picture of Alaska's strategic importance when you championed an impregnable over-the-top defense.

With your sponsorship, we had high hopes for the rapid growth of our Territory. But one agency of our Federal Government is completely nullifying your program for Alaska. This agency is hamstringing, stifling, and thwarting progress and growth in the Territory.

This agency is the Civil Aeronautics Board. As far as Alaska is concerned, the CAB is doing exactly the opposite of what was intended in the act of 1938 under which the CAB was sworn.

THE CAB DESTROYS

In Alaska, the CAB is killing off the bush flyer so vital to the economy of our hinterland.

In Alaska, the CAB is doing a miserable job of dealing with the problems of the intra-Alaskan air carriers.

The CAB has publicly announced that it is determined that the nonscheduled, low-cost air carriers between the States and Alaska—upon whom we depend for more than two-thirds of our food, supplies, and merchandise—shall be wiped from the skies.

Though we have been trying, for years, to get more scheduled air lines between the States and Alaska, the CAB says, in substance, that this is not necessary, that additional service would not be in the public interest.

It is this type of unrealistic thinking on the part of the CAB that clearly shows the Board's lack of understanding of the problems of the Territory. Is it any wonder, Mr. President, that we in the Territory call the CAB "the low man on the totem pole"?

The Alaska Territorial Legislature sent a memorial to the CAB stating that this agency was working 100 percent against the best interests of Alaska. Where did it get us? Nowhere.

Chambers of commerce from one end of Alaska to the other have expressed their disapproval of CAB policies. The Alaska Development Board, merchants' associations, community clubs, government agencies, the clergy, countless individuals, the persecuted pilots themselves and even native tribes have all protested to the CAB—but without avail.

In our own case, Mr. President, in our own village of Hot Springs, Alaska, the CAB arbitrarily, and without adequate hearing, denied our local air line the right to carry

United States mail. The CAB gave the certificate to a large company which had never served our town. It meant nothing to the CAB that Lon Brennan and Bob Byers had served us faithfully and honestly for more than 10 years, that they had helped us build up our hinterland economy so that all of us were making a pretty good living. It meant nothing to the CAB that this bush company would not be able to survive the competition of an air line guaranteed a profit and receiving a subsidy from the United States Treasury.

Never had a member of the CAB, while in office, ever come to Alaska to find out first hand, our needs in air transportation. Never had even an Alaskan employee of the Board been to our area to see how much we depended on Lon Brennan and Bob Byers for our basic economic needs. Yet the CAB, sitting in Washington, handed down a decision which, if allowed to stand, will kill the economy of our area.

We have lost all confidence in the CAB, Mr. President. Our last hope was dashed last November when a member of the Board made a swift 10-day trip to three cities of the Territory. We had high hopes that he would make an effort to understand our air needs. But he came to tell us, and not to listen. He refused to talk with two-thirds of the persons who asked to talk with him. From our standpoint, his trip was a dismal failure.

FACT-FINDING COMMISSION

Mr. President, we Alaskans petition you to appoint a Presidential fact-finding commission of at least five impartial and unbiased minds. We ask that this commission come to Alaska to hold hearings on the air needs of Alaska, to talk formally and informally with our citizens on what kind of air policy will best serve the needs of a growing country, what kind of policy will help—not hinder—the over-the-top defense program.

This fact-finding commission should represent the Federal Government and the public in the broadest sense. The commission members should have a hearty sympathy for the problems of the frontier. They should be willing to listen to the little man—the American pioneer in Alaska who stakes his bank roll on a chance to pull himself up by his bootstraps.

Mr. President, we want a fair deal in Alaska. We want a fair deal for Lon Brennan and Bob Byers in our own backyard. We want a fair deal for all other bush pilots in the Territory. We want a fair deal for the nonscheduled air carriers between the States and Alaska. We want a fair deal for the intra-Alaskan carriers. And we believe we are entitled to more scheduled service between Alaska and all parts of the States.

Mr. President, the citizens of Alaska ask your cooperation. Give us, for the economy of the Territory, an air industry free from the paralysis of the CAB, and we shall forever be grateful.

CITIZENS OF HOT SPRINGS, ALASKA.

Invocation at Jackson-Jefferson Day Banquet

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Friday, April 28 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the invocation delivered at the Jackson-Jefferson Day banquet at Denver, Colo., by the Rt. Rev. Msgr. John R. Mulroy on April 20, 1950. Many who heard it rejoiced in its excellence. Therefore, I wish to give others the opportunity of profiting from it.

There being no objection, the invocation was ordered to be printed in the RECORD, as follows:

INVOCATION

O God, Our Father, behold this assembly of Thy children who invoke Thy Name and ask for Thy blessing. Tonight they deign to begin this rally by calling on Thee, in adoration, love, and thanksgiving. You have bestowed many blessings upon them in the years just passed. They have been instruments in the sharing of those blessings by many citizens and many nations. Therefore, they say with the psalmist, "Non nobis, Domine, non nobis sed nomins tuo da gloriam"? "Not to us, O Lord, not to us, but to Thy Name give glory."

Tonight we thank Thee for Thy many gifts, that we may be worthy of their continuation in the future. We ask Thy benediction for all here assembled, not only upon the food they eat, but upon all the thoughts, desires, and resolves that they here make.

We are aware of our shortcomings. We know that as with some of Columbus' men, false lights appeared on a shadowy shore, as gleaming cities of the mirage allure the weary travelers with visions that cannot endure, so the false philosophy of heaven on earth has led some of us astray. Disillusion them tonight, O good God, by words of wisdom from their leaders, bring them the blessings of harmony in speech and honesty in action. May the sense of accountability to Thee, O kind, but just God, return to those who have forgotten it. May all of us realize that success and honor bring duties and responsibilities and that in our fair land, stewardship is weighed in the balance of our fellow citizens. Ultimately, honesty and unselfishness tip the scales.

Bless in particular, tonight, our honored speaker and his distinguished confreres in national and State affairs. May they have courage, confidence, and good health to continue their good deeds so many of which go unrecognized and unrewarded. May they keep our ship of state as a true vessel of Thy election, O good God, to bring justice, mercy, and charity to all mankind. Be with us now and always that we may not lose the keys of Thy kingdom on earth and in Heaven. Amen!

Time for Defense

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include a radio interview on the Time for Defense program between Gen. J. Lawton Collins, Chief of Staff, United States Army, and Mr. Lyle C. Wilson, chief of the Washington Bureau, United Press, on April 25. In this interview, General Collins deals with national defense from the Army viewpoint; and his timely and very informative remarks follow:

General COLLINS. It is a pleasure to be back on the Time for Defense program, which is performing a great service in giving the American people facts about their national defense. It is even more of a pleasure to introduce our guests for this evening, Mr. Lyle Wilson, chief of the United Press Washington Bureau for the past 16 years and a keen student of our many and complex problems of security. We are happy to have you with us tonight, Lyle.

Mr. WILSON. Thank you, General Collins. I have some questions, the first of which concerns the state of readiness of our armed forces, and about which there has been much discussion recently in the press. Could you tell us, just how ready is the Army today?

General COLLINS. Mr. Wilson, we have a small Army but a good one. During the war, we had 90 combat divisions, all but one of which saw action. Today, we have only 10 divisions at reduced strength. Our units are equipped principally with World War II equipment, most of which is about 7 years old. However, we do have some units—the Eighty-second Airborne Division at Fort Bragg, N. C., for example—which are ready right now to move to any spot in the world in case of emergency. For the entire Army, however, I can summarize by saying that with due consideration for strength restrictions add certain deficiencies in equipment, our units, if attacked, would give an excellent account of themselves.

Mr. WILSON. Well, thank you, you answered up on that one. Now, let me ask you this question. What, in your opinion, have been the Army's most noteworthy postwar weapon developments?

General COLLINS. Some of our most noteworthy postwar weapon developments have been in the field of defense against air attack. Because new developments in aircraft are rapidly making our conventional antiaircraft guns obsolete, our problem has been to develop new weapons to combat the high-flying, fast bombers that may be used to attack the United States. I am happy to tell you that the Army is making genuine progress in this field. Naturally, the details of these weapons will have to remain secret, but I think that the American people ought to know as much as possible about what they can expect from the Army as far as protection from air attack is concerned. For example, the Army has in the advanced stages of development new antiaircraft rockets, which will be relatively inexpensive, and which we are confident will be able to destroy planes at altitudes above 60,000 feet.

Mr. WILSON. Pretty high.

General COLLINS. Yes, indeed. That's far in excess of the capabilities of present-day bombers.

We also have an antiaircraft guided missile which gives promise of destroying attacking planes at even greater ranges and with even greater accuracy.

Another problem which plagued us during the war, and which has been intensified since, is how to defeat potential aggressor armies that have vast numbers of tanks. We now feel that we are well on the way toward producing a weapon of radical design that can fill this need, and which may, in fact, change the whole concept of tank warfare.

Of course, the principal limitation in the development of all of these new weapons is the availability of funds, because we can never get as much money as we feel we need. But I can assure you that the Army is getting the utmost out of every dollar it spends for research and development. In its efforts to provide these new weapons, the Army has engaged outstanding civilian

scientists and industrialists who are doing a splendid job in helping us.

Mr. WILSON. That's encouraging. Now I would like to discuss with you one of the basic concepts of the Army system. The other day I read a fine compliment to your organization, in Mr. Alfred P. Sloan's autobiography, in which he stated that when he became President of General Motors he developed a General Staff similar to the one used in the Army, organized, you know, on a functional basis. That is certainly a tribute to the Army when you consider that management efficiency and economy have always been vital to American business. General Collins, just what is the Army's General Staff Corps? Is it composed entirely of generals, for instance? Is it an elite corps? Just what is it?

General COLLINS. No, Lyle. It's not composed, fortunately, just of generals. The General Staff is not an elite corps. Officers serve on the General Staff for several years and then leave it to go back to duty with troops. We have them do this because we feel that our officers must have broad experience in both staff and command duties. As a matter of fact, command of troops, in my mind, gives more real satisfaction to officers than any staff duty would. But to get back to your question, however, the Army General Staff had its origin in the Army's own unification controversy about 50 years ago. In the early nineteen hundreds there was a tremendous amount of duplication and conflict in the Army, all at the expense of the taxpayer. This was caused by independent and separate acts of various chiefs of Army bureaus who were frequently in opposition to one another. Mr. Elihu Root, the then Secretary of War, decided that we had to put a stop to it. So he established a General Staff in 1903. It was to be a group of men serving the Secretary of the Army and having general cognizance of and coordination responsibility over, broad fields of Army activity. The members of the General Staff do not make decisions or exercise command; they merely recommend to the Secretary and assist him to perform his many complicated duties.

Mr. WILSON. Well, that's what they do, all right. But where is it, and does this General Staff exist only in Washington?

General COLLINS. No. This system begins in the Army, as a matter of fact, down in our battalions, and as you know, the battalion is the basic combat unit of the Army. The battalion commander has a small staff, consisting of a personnel officer, the S–1, who assists in all personnel matters; an intelligence officer, the S–2, who correlates all the information about the enemy that is coming in from various sources; the S–3, who assists the battalion commander in issuing tactical orders, and in planning and training; and, finally, he has an S–4, who coordinates all logistical matters, such as supply, transportation, and evacuation of the wounded. This small battalion staff is really a miniature version of the General Staff.

Mr. WILSON. May I interrupt, General? Are you using the word "general" as a generic term or as a military term?

General COLLINS. Well, if I remember what generic means——

Mr. WILSON. I'm not sure I do. It's a wonderful word.

General COLLINS. Well, as I understand it, the term means truly general in character. In other words, the simplest meaning of the word "general." It has no particular significance in relationship to generals of the Army.

Mr. WILSON. No stars?

General COLLINS. No stars involved in it at all. It really applies, then, to a staff which has general fields—broad fields—of activity. For example, a step above the battalion commander is the regimental commander, who has a broader responsibility since he commands three battalions. The regimental commander needs a staff with the same basic functions as the battalion staff. Similarly, the larger units—divisions, corps, and armies—need considerable staffs. And, finally, when you get to the Department of the Army here in Washington, you find exactly the same system which we have paralleled in our units in the field. However, above the regiment, the staff officers are no longer called S–1, 2, 3, and 4, but rather G–1, 2, 3, and 4, although they have similar duties.

Mr. WILSON. What about these sensational charges, General, that we have seen made from time to time against the Army General Staff and how it was going to take over the country?

General COLLINS. Frankly, we don't think anybody is greatly concerned about such a charge. Actually such charges are ridiculous. The General Staff does not have any power of its own, even inside the Army, let alone in any other organization of Government. It can only make recommendations to the Secretary of the Army or the subordinate commanders in the field. It never has had any command function and never should have. The Army has always been—and we in the Army feel it always should be—definitely subordinate to civilian authority.

Mr. WILSON. It seems that this similarity existing betwen the staffs of your smaller and larger units would have outstanding advantages both in peace and war.

General COLLINS. Well, it definitely has Lyle. It is a perfectly magnificent system, productive of great economy of effort, minimum duplication, and maximum of efficiency. The fact that we have it as a uniform system throughout our Army permits our young officers to gain experience in using it as they move along in the chain of command. So when they move from the battalion to the regiment, they do not have to learn a new staff system. It is the same one they are already familiar with. It's uniform throughout the Army. It is valuable also when units pass back and forth between various commands in time of war. When a new division joins a corps, for example, the corps commander does not need to explain what his system is to the division commander. During the war, for example, I had 22 divisions pass through my seventh corps. They went in and out without causing a ripple. We all talked the same language, we all followed the same system. This uniformity of procedure is tremendously important in peace, and is even more important in war.

Mr. WILSON. Sounds good, so let me ask you this, General: Once selected, do officers always stay on the General Staff?

General COLLINS. No, Lyle, they do exactly the opposite. Because we feel that they should spend most of their time out in the field, broadening their experience by gaining first-hand knowledge of troop problems, we detail them for a tour of only 3 years on the General Staff, and then send them back to the field to some other type of duty. In this way, we get well-rounded officers with balanced staff and field experience. This practice is a part of Army career planning for officers.

Mr. WILSON. Well, General, I must say that your explanation has certainly cleared up a lot of things. Now I hope we have time for this one last question: I have often heard it said that one of the first Communist objectives in case of war would be the industries of western Europe. If this were true, how would it affect the character of a war that we might have to fight?

General COLLINS. Well, I certainly agree that western Europe is one of the great industrial areas of the world. And, undoubtedly, it would be a great prize for any aggressor and would be a very important consideration in the plans for defense that we are formulating with our friends in western Europe. The campaigns that might have to be fought to defend this area are certain to be greatly influenced by the geography of the area and the capabilities of potential aggressors. We know that the police states have the greatest land armies in the world and are extremely strong in armored divisions, which are capable of fast, offensive thrusts across the land. Undoubtedly any campaign that they would launch would result in a great land and air battle in northern Europe. In my judgment it would require land forces—armies—supported by tactical air forces to stop them.

It is our fervent hope, of course, that with our Marshall plan, the North Atlantic Treaty, and the military-assistance program—backed up by our own military preparedness—we can prevent this battle from ever taking place.

Notable Radio Broadcast by Rear Admiral Swanson, Surgeon General of the Navy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. O'HARA of Illinois. Mr. Speaker, as supplementing the informative, illuminating, and valuable remarks of the gentleman from New Jersey [Mr. WOLVERTON] in this Chamber on Wednesday, April 26, 1950, and appearing on pages 5818–5819 of the CONGRESSIONAL RECORD of that day, I wish to call to the attention of the House and of the country the outstanding contribution of the National Naval Medical Center at Bethesda, Md., to the health of the members of the armed services and their families, and also, to an extent not generally known, through extensive and fruitful research, to the health of the entire country.

In this connection I am inserting by leave unanimously granted the full text of a radio broadcast prepared for Quorum Call, the weekly radio program of the Illinois Congressman, which is broadcast over WCFL in Chicago and other stations in the Middle West. I am sure that the Membership of the House will find most interesting the remarks of Rear Adm. Clifford A. Swanson, Medical Corps, United States Navy, the great Surgeon General of the Navy. The text of the broadcast follows:

Representative O'HARA. Admiral Swanson, visiting at the National Naval Medical Center at Bethesda, Md., I have been greatly impressed by the high-level efficiency of Navy hospital management. I appreciate that civilian hospitals have many problems and that as a whole they are doing a magnificent job. However, I am informed that sometimes the cost of hospitalization is greater than the average American family can afford, without serious inroads into savings. For this reason many patients may not be hospitalized, and many others may go to the hospital tardily and leave before it is quite prudent. I would say that it is a subject in which all the American people, including certainly the doctors, are keenly interested. We all are concerned with insuring adequate medical services and with

advancing the health and welfare of the people. Of course, there are differences of opinion on matters of procedure to achieve these worthy objectives. I would like to get from you, and I know our listeners would be tremendously interested, a general idea of how the naval medical and hospital service works. That, it seems to me, would be an intimate, close-to-home contribution to the modern concept of the progress of health administration and improved welfare through the miracles of modern medicine. In a way, Admiral Swanson, what we have in the armed services, and have enjoyed since the earliest days of the Republic, is a highly organized, efficient practice of medicine. There has always been the warmest cooperation between the civilian physicians and the Medical Corps of the armed services with mutual benefits. Indeed, I have heard it said that the one clear victory we won in World War II, and that was a victory in which all the world shared, was the victory over disease. That is, that medical science, both preventative and curative, under the spurs of the necessities and emergencies of the great war, and under the direction of men like yourself who had devoted your lives to the field of military medicine, and with the unselfish and invaluable cooperation of the civilian medical profession, made in a space of 4 or 5 years a progress never before in all the history of the world even approached in its extent and magnitude. I wonder, Admiral Swanson, if you would care to comment on that accomplishment? Is it true that because of this constructive progress of medical science during the trial and stress of a devastating war the life expectancy of human beings the world over, human beings born after the war was over, will be materially extended?

Admiral SWANSON. Yes, Congressman O'HARA, war is always a stimulus to advances in the field of medicine and surgery. Military surgeons achieved results in World War II never before equaled in military or civilian medicine. For example, out of every 100 men wounded, 97 survived, a mortality rate of 3 percent as compared with a mortality rate of 11.1 percent in World War I. Although in previous wars deaths from disease always outnumbered deaths from enemy action, in World War II, for the first time in history, that ratio was reversed. In the First World War, one out of three patients with meningitis died, while in the late war only one out of 22 died. The mortality rate for lobar pneumonia in World War I was 12 percent, while in World War II less than 1 percent died; deaths from measles were reduced from 8 per 1,000 to five-tenths per 1,000, and deaths from erysipelas were reduced from 20 per 1,000 to seven-tenths per 1,000. In all wars previous to World War I typhoid and typhus killed thousands, but during the entire period of the late war there were only 3 deaths from typhoid fever and 19 from typhus fever among the 5,000,000 men in the Navy and Marine Corps.

I remember this statement by Sir Thomas Albutt of England made in the past century: "I would remind you again how large and various was the experience of the battlefield and how fertile the blood of warriors in rearing good doctors."

Of course, our World War II record was not achieved by military doctors alone, but by the combined efforts of the regular members of the Medical Department, along with thousands of civilians in uniform, hospital corpsmen, nurses and dentists, and civilians not in uniform.

Both the combatant and medical units of the Navy wage war against enemies. However, the enemies against which the medical profession wages war are ever present in the form of the host of diseases as well as the many pitfalls and hazards which are ever increasing as the result of civilization's progress. The combatant units march under the banner of Mars and must have as their cardinal mission the dubious glory of slaying human beings. The medical forces march under the banner of Aesculapius and have as their cardinal mission the solemn duty of salvaging and saving.

War does indeed promote medical progress, but of course this is not an argument in favor of war as a means of solving the problems of medicine, such as finding the cure for heart disease or cancer or the other diseases we do not now understand.

Representative O'HARA. Thank you, Admiral Swanson, for that heartening contribution. I think this is something that our American people should know a little better than they do. While the primary benefits of the medical services and hospitals of the armed services go to service personnel and their dependents, indirectly all of us everywhere benefit to the extent of having materially increased our life expectancy. Before we leave that phase it might help our listeners to a better understanding of how this work in the interest of all of us is still a vital part of the medical program of the armed services by telling them something about the National Naval Medical Center and the activities of Rear Adm. M. D. Willcutts, his administrative assistant, Lt. Comdr. C. L. Crawford, and the other members of the staff.

Admiral SWANSON. The National Naval Medical Center at Bethesda is one of the greatest institutions of its kind in the world. Commissioned and dedicated in 1942 by President Roosevelt, it has grown into a powerful institution devoted to care and treatment of naval personnel, their dependents, Members of Congress, veterans, and others. It includes a naval hospital; a medical school and a dental school for postgraduate training of Medical Department personnel; a school of hospital administration for training of officers and corpsmen; and a medical research institute.

We are proud of the prestige attached to the Bethesda professional staff in all its specialized aspects. We are proud of the advanced training in atomic medicine we are giving here to Regular and Reserve officers. We are particularly emphasizing our research program under the counsel of a distinguished civilian scientist, Dr. Kenneth Cole. The professional competence of our physicians and dentists will increase as research adds to our professional knowledge. At the same time we are keeping abreast of the medical aspects of warfare in order to give the maximum support to naval combatant units in case of another emergency.

Representative O'HARA. Now, this leads, of course, to another subject. You mentioned it the other day when we were chatting, and it made a deep impression on me that one as busy as yourself as the Surgeon General of the Navy, the executive and responsible head of a great system of medical services, studies, and research and of some of the best hospitals in the world nevertheless found time to participate actively in world discussions of the subject of the effect of population concentrations. That is not exactly a related subject in a strictly medical sense, but certainly there is a cause-and-effect relationship. That is, as your profession of medicine more and more solves its problem of combating disease the greater and greater becomes the problem of the economist—population concentration. Sometimes we hear it said that in this complex civilization of ours there is too much planning, that we ought to go back to the simple primitive formula of just letting things work themselves out. That's what the Indians in North America did—let things work themselves out—with the result that when a hard winter came they weren't prepared and died off so rapidly that there certainly wasn't any population concentration problem among them. So unless we had planning now and coordination among the keen brains in all activities we would only get rid of one headache by taking on another. That's why I think it is so illuminating to stress your interest in the problem of population concentrations. What you are doing, with civilian doctors and scientists in the service of the people, is to increase the population of the world by removing the causes of plagues and finding new cures for diseases. I suppose, Admiral Swanson, that while your work primarily is in the field of physical ailments you feel that you do have an interest, and a related interest, in the field of economic ailments, inasmuch as you do not wish to see your work in increasing population undone by a growing spread of malnutrition and starvation. I know our listeners, Admiral Swanson, would appreciate hearing from you your views on this problem of population concentrations and how you as Surgeon General of the Navy have accepted it as your duty to the American people to participate in its study.

Admiral SWANSON. Congressman O'HARA, you have raised a question of great interest to me. I believe that doctors must collaborate with economists, political scientists, diplomats, psychologists, and religious leaders in solving world problems and domestic problems.

I believe that by making additional areas of the world available for settlement by use of medical science and industrial technology we can help solve political problems which are too difficult for diplomacy alone. Some of the conflicts and discontent in Europe, the Middle East, and Asia can be resolved if a part of the population migrates to new frontiers where century-old prejudices and conflicts can be forgotten. We can use science to solve at least some political problems by providing the means to make new areas livable.

There are now sparsely settled areas in South America, Africa, Australia, Siberia, Indonesia, Arabia, and Canada. To make them livable science must help supply the technical know-how for irrigation, sanitary engineering, scientific agriculture, and protection against certain diseases, along with general medical knowledge. We can contribute especially in the field of tropical medicine to make some torrid zone areas available for utilization. I visualize considerable movements of population from politically contentious and relatively overpopulated areas to presently underdeveloped parts of the world, with the help of science and particularly of medical science. The latter scientific aid can be given under both private and governmental auspices.

We do not need to be concerned now with increased populations and the increased power of some nations which will result from medicine's reduction of mortality rates. Politically we shall create hosts of friends for the United States by sharing our medical knowledge. The balance of power will remain on our side. We shall of course also advance our own interests in health by reducing disease abroad. In an air age we shall become able to travel with relative health safety everywhere, and make less likely the spread of communicable disease to our own people.

Moreover, we shall improve the economic status of other people by increasing their capacity to produce and thus enhance their ability to buy the products of American industry.

As to your specific question regarding population concentrations—Thomas Malthus wrote early in the last century that population increases geometrically while food supply increases only arithmetically. He therefore predicted eventual starvation for millions. His predictions have not materialized as yet. However, if we look to the future, his fears as to an inadequate food supply and insufficient living space would appear to be genuinely warranted. Medical

science has indeed contributed to the great increase of population; but it can also contribute indirectly to increasing the food supply to care for a larger population. The world now tills about 3,500,000 square miles. Agricultural economists say this can be at least doubled to feed more people who live longer. But a great effort by engineers and doctors will be needed. Increased world productivity, especially in the sparsely settled areas, depends on improving the agricultural methods and the health of people who are to produce what is needed. In this connection I might note that the Navy distributed vaccines in the Middle East to stop the cholera epidemic there several years ago, and thus helped the population back to some degree of stability and economic progress.

It has been said that when the British took up the white man's burden and built their empire they brought the native colonial peoples trousers and Bibles. If the United States should contemplate a free United Nations empire, it might instead bring to the imperial citizens inoculations, vaccines, and medical books. Certainly these gifts will be better received than the OCPU's and the Communist loyalty forms which the Kremlin is trying to distribute in Prague, Warsaw, and elsewhere. An American abroad as a governmental or private doctor will not be received as an imperialist. The Navy Medical Department sees any local medical emergency abroad, where naval ships may happen to visit, as an opportunity to offer such medical aid to the population as is feasible and thereby immeasurable good will may be inculcated.

The record of American medicine under General MacArthur's administration in Japan is impressively illustrative of the tremendous benefits which can accrue from the employment of basic health measures. During the first year of American occupation, that is in 1945 and 1946, there occurred in the Japanese Empire 21,000 cases of smallpox. Under the direction of the Surgeon General of the Army, General Bliss, the most colossal mass vaccination of a people ever undertaken was consummated when 78,000,000 Japanese were vaccinated against smallpox in a single year. Following this vaccination the incidence of smallpox in 1 year dropped from 21,000 cases to 20 cases.

Under the public-health program implemented by the United States Army in Japan, diarrheal diseases have been reduced from 450 per thousand to 40 per thousand. Typhus fever and other communicable diseases have been correspondingly reduced and as a result of our conquest of disease there, during the past few years the average life expectancy among the Japanese has been increased from 37 to 39 years. Thus does it appear obvious that Japan is on its way to a realization of a higher state of health than it has ever known.

Another illustration of the effectiveness of the know-how of American medicine was that demonstrated in Egypt several years ago in connecton with the epidemic of cholera which broke out there. Hospital Corpsmen of the United States Navy went into the cholera infested areas and by spraying DDT and killing myriads of flies, a major vector in the transmission of cholera was eradicated. The American contingent in Arabia connected with ARAMCO, or the American Arabian Oil Co., has carried inestimable good will to Arabia by providing medical coverage for natives and Americans alike in the areas occupied by that company.

Representative O'HARA. Admiral Swanson, I think from what you have said our listeners will get the impression which I have so strongly of the broad scope of what we are accomplishing in the field of public health medicine which we have in the United States, on a limited scale, in the Medical Corps of the armed services. The doctors are medical career men. I have seen them at the hospital at Bethesda, which wouldn't have its reputation as one of the best hospitals in the world unless the surgeons and physicians were, as everyone recognizes, men who would command the most lucrative practices in civilian life in any community. Compared with what they could earn in civilian practice their salaries are meager even to the point of being niggardly. Yet I have never seen in any of them, or heard of, any complaint. To the contrary, there is a definite professional dignity and pride, a rare enthusiasm as though relief from the necessity of keeping books running an office and the administrative chores of the commercial end of private practice, which served to concentrate their interests in the field of pure medicine. Now, this is interesting to me because I have never believed that man needed the spur of monetary reward to do his best work provided he did have opportunity for professional growth and a reasonable degree of individual and family security. It may be an old-fashioned idea, but I am sure it is sound and that you in the Medical Corps of the armed services prove its soundness in a modern world, that in the professions a practitioner may do excellent work and achieve professional contentment even without a monetary incentive. What from your position of preeminence in this field is your view, Admiral Swanson? How many surgeons, physicians, dentists, and other professionals do you have under your jurisdiction, and in this time of doctor shortage do you have any difficulty in providing replacements?

Admiral SWANSON. I agree, Congressman O'HARA, that the major attraction to any good doctor is the privilege of practicing his profession. I believe especially that military medical practice, which involves the saving of life while others are endeavoring to destroy it, is the noblest profession of man. Of course, we need to stimulate many of the professions, not merely the medical, toward achievement by supplying rewards over and beyond the monetary ones. As for our Navy doctors, they are soundly motivated by professional pride and the opportunity for public service, as well as their military pay, retirement benefits, and security of family. The majority of civilian doctors, I am sure, are equally motivated by nonmaterial rewards.

We now have in the Medical Department 3,081 medical officers, 971 dental officers, 618 Medical Service Corps officers, 2,009 nurses, 194 warrant officers, and 17,239 hospital corpsmen. The Navy Medical Department also includes thousands of civilians without whose loyal and invaluable support the Department could not function. They are, in fact, working for their own Navy the same as we are working for their and our Navy.

We have had difficulties in securing enough doctors to meet our needs, incident no doubt to a natural antipathy for the armed services which follows all wars but today our situation is relatively satisfactory. The increasing rate of application for appointment to the Medical Corps of the Navy is definitely encouraging. We believe we are today offering opportunities to young doctors in Navy medicine that are unsurpassed.

Representative O'HARA. As a midwesterner, Admiral Swanson, I hope I'll be excused for a bit of sectional pride in the fact that you, the Surgeon General of the Navy, come from Michigan, Rear Admiral Willcutts, the commanding officer of the National Naval Medical Center, comes from Indiana, and Rear Adm. F. C. Greaves, the commanding officer of the United States Naval Hospital at Bethesda, until promoted and transferred, comes from Iowa. But I guess Rear Admiral Willcutts, veteran of a hundred historic sea combats, expressed it for all of us, no matter what State we come from, for the Army, Navy, the marines, and all of us when looking out of the window here at the Stars and Stripes floating on the flagpole in front of the National Naval Medical Center said with the rapture of one seeing it for the first time: "It's the most beautiful sight in the world, our Stars and Stripes." And in the spirit of unity symbolized in that flag the country may be sure the Army, the Navy, the marines, and the Air Force will continue to go on as a great team devoted to the sacred task of securing from all its enemies these United States of America and the way of life of a free people. Admiral Swanson, how are the postwar programs of the medical corps of the armed services progressing?

Admiral SWANSON. The Navy has collaborated, coordinated, and consolidated in a significant measure with the Army and Air Force. However, in accordance with both the letter and intent of the National Security Act, we have retained the identity and integrity of the individual services.

The Navy has a director of medical services in the Office of the Secretary of Defense who is charged with general policy, direction, and coordination of medical services for the three military departments.

We are developing experience with joint Army, Navy, and Air Force staffing in a number of medical institutions. At the Tripler (Army) hospital in Hawaii there are Army, Navy, and Air Force doctors, nurses, and corpsmen, or other technicians, and patients of all three services. We have joint staffing of military hospitals at St. Albans, Norfolk, and Panama. At present we have 426 Navy patients in Army hospitals and 617 Army patients in Navy hospitals.

I should like to point out that the three services were founded on different concepts and have divergent specialized missions. We must, for example, give specialized medical support to submarine and amphibious warfare, many aspects of which have no counterpart in our sister services. We cannot logically merge the three medical services unless, as is unlikely, the operating forces of the three services are combined.

We should like to have a uniform promotion system so that when we conduct joint hospitalization, our Navy medical officers will have the same or equal promotional opportunities as the Army and Air Force officers who serve with them.

I believe the Navy has one peacetime mission which the Army, except when it assumes the role of an occupying force, does not particularly share; this is to sell democracy to the rest of the world. It is essential for those engaged as agents of their government in foreign countries and in the ports of those countries, to know the foreign policy of their home government. The mission of acting as ambassadors of goodwill and purveyors of democracy to the rest of the world, is an especially compelling reason for the maintenance of a peacetime Navy. The medical forces of the Navy can disseminate more goodwill in the form of the dispensation of health aids to needy nations abroad than can ever be realized from all the shot and shell that was ever manufactured.

The people, the lawmakers, and shapers of our destiny, should not lose sight of the fact that the Nation's Army, Navy, and Air Force, in peace as well as in war, have important missions to fulfill; and that the dictates of logic and clear reasoning bespeak the indication for their individuality in time of peace as clearly as for their unity in time of war.

Representative O'HARA. Admiral Swanson, there is one more service the Medical Corps of the armed services is rendering the Nation which I think has never been fully understood by the American people. There are over 500 Members of the Congress, the great majority being in the House of Representatives, where if a vacancy occurs there must be a primary and a general election to fill

the vacant seat, which takes considerable time, and meanwhile the people of that district have no representation. It is, therefore, not primarily for the personal advantage of the Members of the Congress, but to assure equal representation in the Congress, as intended by our Constitution, and to prevent long absences from illness or vacancies because of deaths, that the armed services are providing certain health services and hospital facilities to the Members of Congress. As it is, the average number of deaths at each Congress is slightly over 13, an unusually high rate of mortality due to the fact that during the sessions the demands in time and strength upon the average Member are back-breaking and the temptation is, of course, to overwork excessively. I am told, Admiral Swanson, by those in position to know that the number of congressional deaths would certainly have been doubled and serious prolonged illnesses many times multiplied but for the magnificent work of a preventive nature and of medical consultation done by the Surgeon General of the Navy through Admiral Calver, for 20 years the physician to the Congress. Admiral Calver and the Navy deserve the thanks of the Nation for keeping the Members of the Congress on their feet under tremendous strain and thus effecting great savings to the American taxpayers in the way of the large expenditures which would be necessary for special primary and general elections as well as protecting our constitutional concept of equal representation by keeping all Members on their best feet physically and at the maximum of their strength. When Members of the Congress require hospital treatment, usually for very brief periods, they are sent to naval or Army hospitals, but the point I would wish to get over is that for this service the Members of Congress pay from their own pockets.

What Price Safe Harbors?

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland (Maine) Press Herald:

WHAT PRICE SAFE HARBORS?

Maine people who can boast about Portland's admittedly superior harbor have cause to be concerned about a little side show being staged in Washington over $4,100,000, a small amount these days. It's money the Coast Guard wants, and we find ourselves partial to their argument.

In mobilization plans the Coast Guard, which in wartime becomes an administrative part of the Navy, is charged with internal-port security. It's the Navy's job to decide who should get in, the Army's to keep out undesirables, and the Coast Guard's to see that what goes inside a vital wartime harbor is not contrary to war aims.

The Coast Guard leaves that kind of work up to its Reserve, and right now the Reserve consists of a lot of papers in Washington with names written on them in neat columns. That's where the $4,100,000 comes in. The Coast Guard wants to make a stab at training the Reserve it may sometime need to send to Portland and other harbors to insure the kind of security we're talking about.

The Army, Navy, Air Force, and Marines have stout Reserve programs. And there is the National Guard. After that, in a very vital service, there is that stack of papers in Washington. The Secretary of Defense wants it; the Secretary of the Navy wants it; so does the Secretary of the Treasury, who is the peacetime Coast Guard boss.

The appropriation was knocked out earlier by a House subcommittee action. Reason given: economy. There's a good chance an amendment to replace it will be offered this week.

This is to suggest Congressmen consider what kind of economy they'll get if a pile of papers is turned loose to establish port security.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the RECORD the fourth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Secretary of State Acheson talks a ferocious war against communism, these days, now that any fool can see what goes on, both abroad and in Washington, D. C.

Suddenly, now, it is popular with all his kind to rip and roar against Stalin with exactly the same language and ineptitude the same exact gang used against Hitler.

A long time ago, W. Shakespeare noted the weakness of giddy minds for foreign quarrels which serve so well to divert attention from ills at home.

Acheson and friends are full of furious objection to the spectacle of communism in Czechoslovakia, China, Rumania, and other such far-away places.

But what have they ever done to understand and put logs in the way of communism here?

Americans who have done their homework on the case of communism can understand, for example, the difference between testimony sworn under oath to the Senate committee by Louis F. Budenz, and testimony by Dr. Bella Dodd or Earl Browder.

Budenz is a former managing editor of the New York Daily Worker, the leading newspaper of the conspiracy against civilization on these shores.

To have held such a position, Budenz had to be an important figure in the Communist cause.

But today Budenz is a church-going citizen and professor at Fordham University, one of the most sedate and dignified of all American schools.

Fordham does not hire ex-Communists on speculation, in the mere hope of their reform.

More than that, Budenz has been the chief witness of the United States Government in its most important court actions against communism.

Such are the things to consider in judging how much to believe him as a witness.

On the other hand, Dr. Bella Dodd is an exmember of the national committee of the Communist organization who did not resign or repent, but was fired by her superiors.

Why? She says she is the victim of character assassins. Who? Well, certainly anybody who has done his homework knows that means character assassins from within communism, not from without.

The Communists regard the rest of all the world as enemies with whom they are at war and who must be conquered.

They do not listen to the outside world for advice or usage of their own membership.

So Dr. Dodd is not one who has quit communism. She is complaining because communism quit her. She has not renounced the Communist doctrine, to conquer by any means, legal or illegal, but to conquer.

In her class falls also Earl Browder, once secretary and spokesman of the Communist conspiracy in this country. A switch in Kremlin tactics in 1945 resulted in his downfall. Has Browder repented?

This writer once asked Browder point-blank how he would like to be a Communist again.

He answered:

"I am a Communist."

That, after he had been ridiculed, denounced, and expelled from the conspiracy, and all Communists who had a good word to say for him, expelled along with him.

Remember, Communists hold our laws do not bind them in any way. What good is the word of a Communist, therefore, or the word of one who thinks himself a Communist?

As indicated earlier in these articles, this reporter began to learn about that 20 years ago, as an eyewitness to a massave Communist propaganda exercise in New York.

The incident was the funeral of a Communist killed in a street riot. The commanders of the propaganda exercise were then whipping up excitement in the streets because:

1. They believed then, as they do today, that human behavior can be predicted with scientific accuracy, through understanding of what they call scientific Marxism.

2. Their analysis of the times in 1930 was that the hour for open revolution in the Western World had struck.

So they were building up a series of shock stages to bring down authority and literally seize the people and property of the United States of America, by force.

Thus, in New York City 20 years ago, I saw how ruthless are the mind and will of communism, just as the years following showed evidence that the Communist mind is ignorant of good judgment.

The incredible but very real parallel is the misjudgment of communism by people like Secretary Acheson. Or is it that?

To evaluate, you have to look somewhat into the political seduction of our age, called scientific Marxism.

Resolution Calls for Report on Pine Ridge Land Taking

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. CASE of South Dakota. Mr. Speaker, I have long been interested in the activities of a group which called itself the Pine Ridge Bombing Area Group. It was composed of former Indian owners of land condemned by the War Department for use as an aerial gunnery range in time of war. The area condemned comprised a good part of the Pine Ridge Indian Reservation in South Dakota.

Here was a group of Indians, wards of the Government, who had their lands taken from them without benefit of an

opportunity to show their actual losses occasioned by such taking. In some cases, the owners were told that they had to remove in 30 days because the Japs were coming. In other cases, threats directed to those who might resist caused a hurried massed exodus in which many personal effects were left behind.

In cases where the owners had received old-age assistance, "old-age liens" came in and took the low price paid for the land, without the owner ever seeing the money, as repayment for previously given old-age assistance.

All of this looked to me like another "forced patent" situation. In the Seventy-eighth Congress I was successful in getting passed legislation which would reimburse ward Indians for State taxes paid on land which had been patented without their consent.

In this case it seemed to me the Government again caused the sale of this land without the consent of the individual owners and the subsequent confiscation of the sale price for previously given old-age assistance amounting to "forced patents" in every sense of those words. The same idea applied to the other cases in which no opportunity was afforded to show losses and damages over and above the bare appraised price which no Indian was given the right to contest.

Accordingly, I introduced H. R. 6664 to correct these injustices. A subsequent hearing on the bill resulted in the drafting of a formal resolution by the Subcommittee on Public Lands requesting the Secretary of the Interior to look into the matter and report back to Congress. The resolution follows:

Whereas during the years 1941, 1942, and 1943 the War Department found necessity for taking and took certain lands belonging to the Pine Ridge Sioux Tribe of Indians of South Dakota or to certain individual members thereof; and

Whereas it is questionable whether all legal, equitable, and cutomary rights were given to the owners in the taking of such lands by the United States Government; and

Whereas the proceeds received for the taking of such lands caused the removal of many such owners from the rolls of old-age assistance, which assistance they were otherwise entitled to by virtue of existing State and Federal laws; and

Whereas the proceeds received by many such owners were made subject to old-age assistance liens, thereby depriving them of their property through no fault of their own: Now, therefore, be it

Resolved, That the Public Lands Committee of the House of Representative of the United States of America request the Secretary of the Interior of the United States to make such investigations, surveys, and studies as he deems necessary to enable him to make a full and complete report, with recommendations based thereon, to this committee in regard to the following:

(1) The facts and circumstances surrounding the taking by the War Department of certain lands belonging to the Pine Ridge Sioux Tribe of Indians or to certain individual members thereof during the war years of 1941, 1942, and 1943.

(2) The procedure used by the United States Government in the taking of such lands including information as to the following:

(a) Legal rights given to such owners by the United States Government in the taking of such lands.

(b) Basis and method of appraisal followed in determining value of such lands.

(c) Opportunity given each allottee for a court determination of value of land taken, and opportunity given each individual allottee to be heard directly on the evaluation of his tract.

(d) Consideration given in the appraisal of improvements on lands taken.

(e) Consideration given in the appraisal of lands taken to such assets as water, water rights, timber, minerals, etc.

(f) Variance between value paid for Indian-owned land and white-owned land taken by the Government.

(g) Variance between value paid to owners, white or Indian, who contested condemnation proceedings in court and those who accepted Government appraisal.

(h) Reservation of mineral rights on State school lands as compared with nonreservation of such rights on Indian-owned land.

(i) Duty of the Secretary of the Interior to protect and reserve mineral rights on Indian lands taken by the Government.

(j) Consideration given to relocation and resettlement of allottees whose lands were taken.

(k) Use of unfair or unethical methods in obtaining consent of owners to appraised value and resulting possession of land by the Government.

(l) Consideration given to tribal property rights and their reestablishment.

(3) The effect of the State social-security law upon proceeds received by such owners, including information on the following:

(a) Results of such owners' receipt of proceeds from sale of such lands with respect to benefits under State and Federal social-security laws.

(b) Old-age-assistance liens that attached to proceeds received from sale of such lands.

(4) That, if such owners did not receive just and adequate compensation for lands taken; that measure of damages which would adequately compensate them for the lands taken, including costs in removal to another location, and complete assimilation.

(5) Comparison of present status of both tribe and allottees with status before lands were taken by the Government; be it further

Resolved, That the said report and recommendation, together with the supporting data on which the same is based, be made available to the Public Lands Committee of the House of Representatives as soon as practical, but not later than the opening day of the first session of the Eighty-second Congress.

The American Way—How May We Improve It?

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. POLK. Mr. Speaker, the American Legion, Department of Ohio, sponsors annually an Ohio high-school essay contest on some subject of public interest. This year the subject was the American Way—How May We Improve It. Approximately 75,000 essays were submitted. Out of this number 12 were selected as winners and the 12 high-school students who wrote them were awarded a trip to Washington.

Last Monday it was my privilege to have luncheon with the prize-winning Ohio essayists. To meet these young people, to see their bright faces and listen to their keen, intelligent comments on the state of our Nation, was to feel that the future of America is in good hands. To read their essays gave positive proof of that feeling.

One of the winners this year is Mr. Daniel Bercik, a student at St. Mary's High Schcol of Portsmouth, Ohio. To be able to write a prize-winning essay in this State-wide contest is an indication of outstanding ability and excellent teaching. Daniel Bercik's essay would be a credit to any American. For a ninth-grade student, a high-school freshman, it is doubly remarkable.

I wish to congratulate Mr. Bercik and his teachers at St. Mary's High School upon his success in this contest. I believe his essay is worthy of the consideration of the Members of the House.

It is as follows:

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

"I Am an American." Can any one of us grasp the full meaning of these few words? Whether uttered here or in any of the far corners of the earth, they claim the person making the statement as being a member of our democracy.

This country had its origin in greatness. It was founded by men—great men, whose inborn instinct of freedom was insuppressible. It continued to thrive on the energy and thought of hardy pioneers whose love of freedom was unvanquished. These men of vision wanted the right to worship as they pleased and the right to speak and act without having to fear the consequences. To obtain these freedoms they were willing to go to any length, even to death if necessary. As enthusiasts for a new way of life, they were bound together by indissoluble bonds and united in one cause, that of liberty—liberty not only for themselves but also for the coming generations who would be the freemen of tomorrow.

To maintain this noble heritage, it behooves each of us to strengthen our forces in a common cause. We must be willing to sacrifice; we must be willing to fight even as our forefathers fought to keep the American way free from the onslaught of prejudice, bigotry, and racial differences that are constantly threatening to engulf it. This is the sacred duty of every loyal and progressive American.

To overcome the trials that lie before us, all must follow in the footsteps of our worthy predecessors. Our enemy today is not the enemy which our sires fought. It is not the oppressions of a cruel mother country nor the tyrannical impositions of evil lords, but it is, instead, the infiltration into our Government of aliens bent in belief and activity on the destruction of our democracy. Communism, socialism, and all the other isms generate ruin to the easy flow of democratic living, unless watched and checked with the precision of the stalwart fathers of our country.

We, the children of today, will be the Americans of tomorrow. Every generation has had its great problems to contend with. Because today's problems are especially great and vital, it is our pride and duty as American youths to provide ourselves with an education that will be our strength against aggressive forces. The basic battle plan of our present enemies is to utilize ignorance; they prey first on the stupid people of the world who have not the common sense to oppose them. Working for a foreign power or for personal gain, they first aim to dupe the common people by telling them of the Utopia that will supposedly be theirs if they merely join them. If this strategy fails they go underground and there with a surprisingly small force do unprecedented harm.

There they dig at the very root of democracy to undermine it.

A menace like this cannot be allowed to gather strength. Its very beginning must be stamped out. As Americans, we demand united action against a common enemy. First we must arouse a conscious realization of our present well-being and security under the American way of life. Then, inspired by the strength of it, we will triumph even as those before us triumphed. We will allow no evil to threaten the heritage we have received. With our enemy grounded, we will build a bigger and better future for the American way.

Reserve Officers

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include the brilliant address made by Gen. J. Lawton Collins, Chief of Staff, United States Army, at the Louisiana State convention of the Reserve Officers Association of America, held at Shreveport, La., on April 21, 1950. The address follows:

Deeply ingrained in our national philosophy is the concept that it is the responsibility of all citizens to defend this Nation in time of danger. It had its origins in the resoluteness of the minutemen of Lexington and Concord who first displayed the courage that has been the inspiration for our preparedness ever since. The threats to their security were so immediate and so real that they found it necessary for all to integrate into their peacetime pursuits an individual defensive posture. Our problems today are not too different from theirs—with one exception—the dangers to our way of life are more complex.

The minuteman concept is, of course, a defensive philosophy, and that is as it should be. The small Army that we have always maintained in peacetime could not possibly be considered a force for aggression. And our civilian components—our Organized Reserve Corps and our National Guard—are patently defensive forces. Our Army, composed of these three components, is—and always has been—nothing more than an organization to defend our homes against the initial onslaught of an aggressor, to provide a continuous examination and research into new techniques and weapons of war, and to form the nucleus for rapid expansion in time of emergency—and thereby to act as a deterrent to aggression—a force for the prevention of war.

I recently heard the charge that the Regular Army wanted to do away with the Reserves. Any clear-thinking American—whatever his profession—could not seriously believe such a charge.

For we have always considered ourselves in the United States as having one Army, made up of several components. Each component complements and strengthens the others and all are vital to our national security. An officer recently described this relationship as eloquently as I have ever heard it. He said that there are in the American community today three groups of our citizens who are deeply interested, and who participate actively in our Army programs: First, those who devote full time to active military service—the professional soldiers who constitute the Regular Army.

There is another group of men who do not devote their entire time, and who do not make a full-time career of the Army, but who can devote a large part of their time to national defense. These are the members of the National Guard.

Then there is still another group of persons in civil life who do not have the time that guardsmen have to give, but who still want to take an active part in national defense. Our Organized Reserve Corps offers these men a means by which they can contribute to national preparedness.

Whatever their degree of participation, all three of the components constitute one Army. That is the reason why, in our recent presentation of the Army organization bill to congressional committees, we have asked that there be only one term to designate our Army, and to do away with any differentiation between the terms "United States Army" and "Army of the United States."

The rapport between our three components must be of the highest order, and we must keep it that way. That is the reason why I have taken such an active interest in our new Organized Reserve program, and why I have personally presented it to the Secretary of Defense, to Congress, and to the President.

So many of you here today fought in World War II, and have kept up with international affairs, that it seems redundant for me to tell you what has happened since 1945. But to place what I have to say about our new Reserve program in proper perspective, I propose to go back to the end of the war.

At that time, as you know, things were confused—both nationally and internationally—as far as military policy was concerned.

We all thought we were entering upon a period of world peace, and so we did a very natural thing: We demobilized the finest Army, Navy, and Air Force that the world had ever seen. We did not have unification as we have now, and the Joint Chiefs of Staff had not agreed upon any firm unified defense plan for use in the event of an emergency.

It was in that atmosphere that the section V committee, consisting of regulars, guardsmen, and reservists, reviewed the Reserve and National Guard program with a view to coming up with a new postwar program.

In the confused international atmosphere that I have just described, these men were working in the dark, and yet they had to devise a plan under which we could operate until world conditions crystallized. They did recommend a plan which was later adopted, and under which we have been operating for the past 3 years. The plan they formulated in 1945 contemplated about 1,000,000 men in ORC units, plus an undetermined number of individual reservists who would be needed in the event of an emergency in all components of the Army. The plan they proposed was based upon a concept of a mobilization force that would require a great many divisions in the first year of war. It also assumed the availability of ample funds and a constant flow of trained manpower from the operation of the universal military-training program. Although the plan met certain obstacles, I feel that it made reasonably satisfactory progress. Some 11,000 units, company size or smaller, and 3,000 trainng units were organized, and approximately 120,000 officers and 90,000 enlisted men were actively participating in the Reserve program.

The major difficulties we encountered in the implementation of the plan were the magnitude of the program and the lack of facilities. The very scope of the program inhibited adequate planning and supervision of training. This was further complicated by the inability to provide adequate armory space which in turn limited the amount of equipment that could be placed in the hands of units. Naturally, those limitations adversely affected the recruitment of enlisted personnel.

Also, events caught up with that program. We gained a better understanding of the international situation; we adopted unification; we obtained definite strategic plans approved by the Joint Chiefs of Staff, and Congress saw fit not to pass a universal military training bill.

In light of these new developments, it became obvious that our initial postwar Reserve and National Guard programs had to be revised and brought into consonance with the strategic requirements established by the Joint Chiefs of Staff.

The matter of funds is a factor I cannot emphasize too much. We must realize that a fine balance must be struck between military requirements and the needs of our domestic economy. That is our real dilemma—how to maintain a reasonable military posture and yet not spend ourselves into economic collapse. Our Nation is not at war—but neither are we really at peace, for we must prepare for a war that may be thrust upon us—and yet we are doing this while trying to conduct business as usual in the sincere hope that war will not come.

While we are in a period of twilight—this quasi-peace, the police states of the world are in a period of quasi-war in which they are feverishly increasing their strength economically, politically and militarily. They have been increasing their advantage in land forces, while at the same time rapidly developing their air and sea forces.

Meanwhile, within our own armed forces, we have had to make radical adjustments. With prices and development costs of new equipment rising, we have found it difficult to conform to the real limitations that our national economy imposes. However, I feel that real progress has been made, and is still being made, toward providing effective defense within our means. Every proposed defense activity must be evaluated on the basis of its relative importance and its estimated minimum cost, because we cannot hope to provide absolute security within the means available to us. Therefore, economy was a very real consideration in the preparation of the new Organized Reserve program.

In the preparation of the program, the current plans of the Joint Chiefs of Staff were the controlling factor. The concept of our requirements for the first year of war has been materially modified since 1945, and includes Regular Army and National Guard divisions which depend upon the Organized Reserve Corps to provide many of the auxiliary combat support units, the great bulk of service support units, and individuals required for early mobilization.

Modification of the over-all strategic requirements has also affected the peacetime objective of the Organized Reserve Corps program. In order to provide a program that would conform more realistically to known requirements, to estimated manpower potential, and to current and projected budgetary capabilities, a complete restudy of the Organized Reserve Corps program was initiated in July of 1949, and completed during November of the same year.

The organization established under the new program includes the Active Reserve, the Inactive Reserve, and the Honorary Reserve. The Active Reserve has two parts, the Organized Reserve and the Volunteer Reserve. The Organized Reserve consists of personnel in units, plus those individuals needed upon mobilization in the units and staff agencies of the Regular Army. The Volunteer Reserve consists of individual officer and enlisted fillers for the Army; the terms "Inactive Reserve" and "Honorary Reserve" are self-explanatory.

The first step in the reframing of the ORC program was to insure that in peacetime,

only those units absolutely necessary for early mobilization were maintained. In general, the restudy indicated that our former goals were substantially correct as a long-term requirement for the first 2 years of war and would approximate 1,000,000 officers and men in units.

The restudy also indicated that a desirable peacetime Organized Reserve would approximate 625,000 individuals and a minimum Organized Reserve of approximately 367,000 officers and men. This last figure would necessitate maintaining all ORC units at 100 percent officer strength with enlisted personnel at cadre strength. The Regular Army reinforcements would be maintained at 100 percent officer and enlisted strength and the 25 cadre divisions at cadre strength. This organization includes some 9,000 units.

In addition to the requirements for personnel in units of the organized portion of the Active Reserve, there must be available on M-day some 130,000 officers and 200,000 enlisted men to reinforce units in being. These individuals constitute the Volunteer Reserve, and are of necessity in the last priority for pay purposes.

In this connection, I might add that the President's budget message in 1951 contemplates no pay for individuals presently in training units. In the present program, such individuals correspond to personnel in the Volunteer Reserve and, if the provisions of the 1951 budget directive are maintained in subsequent years, will be on a non-pay status.

As far as the organization of units is concerned in the new program, it is proposed that there be but one required type unit, the cadre type, with provision for advancement to fully organized status if funds permit of all units except the 25 cadre divisions. This change simplifies the program, and meets our minimum mobilization requirement for ORC unit organization.

One important feature of the new program in regard to units is the carefully considered requirement that they attain a prescribed strength within a definite period of time. Failure to do so would necessitate relocation of the unit in question to a more favorable locality. We feel that this requirement is a good one, for not only will it encourage Reserve commanders to keep their units above certain minimum strengths, but it will also insure realistic effective units in localities that can support them on a volunteer basis.

Certainly any sound program for the ORC must provide for the progressive, professionally efficient training of individual Reservists. For this purpose, the new program proposes to establish ORC schools on a nation-wide scale, in geographical areas as accessible as possible to Reservists. These schools will utilize instructional materials of the Regular Army service schools, and provide training which is designed to prepare the reservist for his duty in the event of war, retain his interest, and give the Government greater returns for every dollar invested in the program. These schools will utilize existing governmental installations as far as possible. It is estimated that 334 such schools will be required. We have presently available 275 installations suitable for this purpose.

One of the most difficult problems we have had to face in the Organized Reserve Corps since the end of World War II has been the promotion of reservists. As you know, the terminal promotions that were made at the conclusion of the war produced a top-heavy grade structure. Also, the establishing of retirement privileges has materially reduced the rate of volunteer attrition. The combination of these two factors has slowed down promotions.

Under the new program, this situation will be considerably improved by establishing a stable organization in the Organized Reserve, and a firm strength requirement in the Volunteer Reserve. With these factors established, the Department of the Army is able to formulate an equitable promotion system which provides for advancement and reasonable attrition. Of course, implementation of the system will be so phased as to protect, as far as possible, the interests of the individual, and the full effects will not be evident for several years.

As I mentioned earlier, the major obstacle to rapid growth of the Organized Reserve Corps has been the lack of adequate unit facilities. I believe that this difficulty has been considerably alleviated by the new program. The reduction in the number of units and increased construction of semipermanent type armories will provide the necessary facilities.

Another problem we had to consider in our new ORC program was equipment. Experience has shown that although equipment is available for issue to Reserve units, the unit commanders have, in many instances, been reluctant to accept it because they lacked adequate storage facilities. The provisions of adequate facilities should overcome this problem.

In general, we have sufficient equipment on hand to meet our minimum training requirements, although in certain specific categories, there have been—and still are today—troublesome shortages. Of course, these shortages are not unique to the Reserve program, but are common throughout the entire Army. I have been devoting considerable time lately to the study of Army equipment problems, and hope that as time goes by we will be able to solve them.

The cost of the new program is greater than that of either fiscal year 1949 or 1950. And although we have established several plans for the implementation of the new program—a 3-year, a 5-year, and a 7-year program—the attainment of the objectives outlined in each of them is dependent upon the availability of funds.

Because it is closely allied to our Organized Reserve Corps program, I would like to say a word about the Reserve Officers' training program. At present, our ROTC program is geared to produce 22,000 reserve officers a year. These are not solely for the Reserve Corps however. We need Reserve officers on active duty in the Regular Army, and we need this source of new officers for the Regular Army itself. We count upon getting roughly 25 percent of our Regular officers from the ROTC, both from honor graduates, and from competitive tours of active duty. In this way, the ROTC program is a very important part of our plan for broadening the base of the Officer Corps of the Regular Army, as well as producing officers for the Organized Reserve Corps and the National Guard.

In closing, I would like to summarize the advantages of the new ORC program. With simplified organizational structure and forced progression of units, we expect to have more units actually in being than we had under the old program. With simplified reporting procedures, we will be kept fully aware of the forces available in the Organized Reserve Corps, and of their state of proficiency. Given that information, we will have a sound basis for estimating and supporting fiscal and equipment requirements, and for planning realistic training that will stimulate the interest of those who participate.

This is a program which I am confident will ensure that the ORC will continue to furnish the reserve strength that has long been one of the bulwarks of our national security.

Inherent in our way of life is the potential to survive in a world threatened by a predatory philosophy backed up by unprecedented military forces—forces that we could not match for long without curtailing the very freedoms we seek to preserve. It is a unique quality of democracy that it inspires its citizens spontaneously and voluntarily to integrate into their peacetime pursuits, the development, of the leadership and technical skills that we can draw upon in time of danger. The complexity of modern war precludes our doing this in the simple manner of the Minute Men of 175 years ago, but our present-day civilian components programs provide the opportunity for their modern counterparts to develop—in the manner of their own choosing, and to the extent of their time and ability—the forces we would need if another terrible conflict should occur.

The Most Dangerous Ism in the World, "Because"

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Richard S. Kaplan, historian and service officer of the Gary Memorial Post, No. 17, American Legion, as reprinted from the Hoosier Legionnaire, March issue, by the Labor Beacon of Michigan City.

We shall all do well to take cognizance of this veterans' philosophy so admirably displayed in Because.

The article follows:

BECAUSE

Day by day, my heart has been growing heavier and heavier, and inside of me I've been getting sicker and sicker. Reading the audacious boasts and pledges of the leaders of the Communist Party in the United States, most of whom are now on trial before Judge Medina, that in the event of a war between the United States and Russia, they will support and aid Russia, simply nauseates me.

How in the name of heaven can men possessing the brain of an ant live in these United States and support the ideologies of communistic Russia? As a democracy, why should we continue to harbor, protect, and tolerate these disloyal creatures?

Why do I feel so bitter about these men and all of their ilk? Because I love America, love these United States with all my heart and with all my soul. Why do I love my country as I do?

Because my father (God rest his soul) came here from Russia as a young man, fleeing from persecution and Czarism. He had nothing but his hands, his mind, and a will to learn and work. He found both here.

Attending night school (at no cost to him) he learned the English language and the history of this country. He was given the chance to earn his living without let or hindrance, the whole world before him handicapped by nothing and no one other than his own will and ability.

Because, given the chance, my father was able to own his own little business, practice his religion in his own temple, and raise four children to manhood and womanhood.

Because those four children were given a free education, a chance to obtain college educations, a chance to travel and know this country.

Because all through our lives we went to bed at night safe and secure in the knowledge that police were in the streets, not to knock at our doors, not to search our homes or to grab any of us and throw us, willy-nilly, into a dungeon—but to protect us against evildoers. Asleep or awake, each of us knew

that the power of our town, our country, State, and Nation was behind us, watching over us, protecting us like a loving mother ready to spring at the throat of any who would harm us and to avenge an injury to us through its police and courts.

Because in spite of my religion (or because of it), I was able to achieve an honored profession and, like my parents, bring my daughter and grandchild into this world blessed and protected by the same country.

Because, when my father—an orthodox Jew—died in Allston, Mass., he was carried to his grave by 10 pallbearers—police officer friends of his in life—all Roman Catholics, came to say their last farewells to their friend.

Because I was given an opportunity to serve my country in time of peace and in the armed forces in time of war, not because I was forced to do so, but because I wanted to do so.

Because none of the events and conditions above presented could have occurred in Communist Russia, where the individual is but a grain of sand to be blown hither and yon by the faintest breath of the Politburo and its stooges, where the state is god and all, and where the individual is but a servant of the state. Because communism is the drug that destroys the very soul of man, dwarfs the mind of man, and leaves him a pliable tool.

Because, having known freedom all my life, I treasure it; and freedom is an unknown thing in communistic Russia, or any country dominated by communism. Anything or anyone who would take away my freedom—freedom of thought, freedom of worship, freedom of expression, freedom to live my life as I wish to live it, so long as I do not hurt my fellow man—I repeat, anything that would destroy that freedom, I hate with all the hatred in my heart.

Because communism, evil thing that it is, will, if allowed to spread and grow in this country, destroy the breath of life as we Americans know it. And though the stooge leaders of communism in this country don't realize it, they, too, will be destroyed, for they will outlive their usefulness to the communistic state, and communism has always preached that that which is not useful to the state must be destroyed.

If my father were alive today, he would say, as he said 100 times over in his life, "There is no greater or better country in all the world than the United States. I know. You who were born here don't appreciate a good country. I've seen the sleet and the storm and the rain. I can appreciate the sunshine—represented by the United States."

Let us all say amen to his words.

To those who prate of their love for communism, all I can say is, "I pity you. May I, however, suggest that we in the United States can spare your presence here. Go join the country you love so much; practice your communistic ideology there. We want no part of it here."

I love my country.

I hate and fear communism, because it has brought fear where only love existed before.

Air Age in Agriculture

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 28, 1950

Mr. TEAGUE. Mr. Speaker, in the first session of this Congress, I introduced House Resolution 363 which called for an expression of interest on the part of the Congress in the development of an aircraft suitable for agricultural purposes. Such an undertaking is being conducted by the A. & M. College of Texas with the help of the Civil Aeronautics Administration and the Department of Agriculture at College Station, Tex.

Under leave to extend my remarks in the RECORD, I wish to include the following article entitled "Air Age in Agriculture" which appeared in the magazine section of the Houston Chronicle of Sunday, April 23, 1950:

AIR AGE IN AGRICULTURE

(By John Furneaux)

Another Eli Whitney of the cotton industry or Cyrus Hall McCormick of the grain fields may be in the making at Texas A. and M. this year.

There a dozen specialists are working night and day in an effort to perfect an airplane which may revolutionize dusting, spraying, fertilizing, and seeding from the air.

Whitney's gin actually made the cotton farmer of the South. McCormick, with his improved reaper, pointed the way toward prosperity for the grain farmer.

And to the farmers of the Nation, and Texas in particular, such a plane as the A. and M. men are now designing may mean dollars in the bank, T-bone steaks on the table, and Cadillacs in the garage.

Fred E. Weick, aeronautical engineer in charge of the project, admits that the airplane's use in agricultural projects isn't new.

But it is Weick's intention to perfect a plane which will do what none other before it has accomplished—a plane embodying the characteristics of the slow-flying crafts of years ago as well as some of those of super-speed jets which streak above the earth at unbelievable rates.

When the experimental plane is finished and perfected manufacturers will then be able to produce the craft for vital agricultural work.

Helping Weick with his task, besides the A. and M. experts, are representatives of the Civil Aeronautics Administration, the United States Department of Agriculture, and the National Flying Farmers Association.

To do what the researchers at Aggieland are hoping for, the plane must have adequate maneuverability, good visibility, excellent rate of climb, correct distribution by hopper placements, safety, and must be easy to repair.

"Some of the planes now in use have these qualities to a degree, but not to the extent we seek," Mr. Weick says. "And, it takes all of them in their proper balance to attain the field distribution we are shooting at."

"It's a big order," admits Weick, a genial 6-footer who practicaly grew up in an airplane. "And it must be understood that we are purely researchers. We are not promising anything. We are merely hoping to accomplish what we have set out to do."

That Weick knows his business can hardly be contested when one looks at some of his previous accomplishments. He designed and developed America's first two-control plane, the Ercoupe; he is credited with the design and engineering development of the low-drag cowling for radial air-cooled engines and the design of the first "spinproof" airplane.

He is a member of many national committees in the field of aviation. Included are the aerodynamics committee, the industry consulting committee and the propeller subcommittee of the National Advisory Committee for Aeronautics; the Guggenheim Medal Board of Award, Collier Trophy Board of Award, chairman of the contest board of the National Aeronautics Association, the nonscheduled flying advisory committee of the Civil Aeronautics Administration.

He is a fellow of the Institute of Aeronautical Sciences and in 1945 received the Sylvanus A. Reed award presented by the institute. The following year he was the recipient of the Fawcett aviation award.

Actual work on the undertaking started last August. Since then, the preliminary design of the "workhorse" airplane has been completed and construction started.

A "mockup" of the center portion of the fuselage, including the pilot's compartment, hopper and wing center portion, has also been constructed. By doing this, the men are better able to visualize the design layout for this vital part of the assembly.

Weick candidly admits that the plane will not be a thing of beauty. Rather will it be an "ugly duckling," as he expresses it, with utility the paramount objective.

The low wing of the monoplane will be very thick to provide adequate hopper space, and will spread some 40 feet to obtain a low operational speed and quick take-off. The plane will carry a 200 horsepower engine which is expected to provide for a cross-country cruising speed of 90 to 100 miles an hour.

More important, however, than its cruising speed is accomplishment of the actual work at hand—dusting or spraying, seeding or fertilizing more efficiently—and to do this, a plane must be able to fly at comparatively slow speeds.

"We are shooting at a speed of only 45 miles per hour with a normal load," Mr. Weick says, "This will be invaluable, we feel, in getting more efficient distribution. Agricultural experts will have a lot of work to do after the plane is in operation, however, measuring just how efficient it is."

Planes flying as low as 3 or 4 feet above ground obviously constitute a hazard for the 3,000 to 5,000 fliers who are today dusting, spraying, and doing other agricultural jobs. And it was to many of these pilots, their companies and other experts that the A. and M. men went before work was started at College Station.

From the hundreds of comments they made, the complaints they registered about present-day equipment, and their ideas about the plane they "would like to have" came the plans which Weick and his associates are attempting to put into effect.

"A wide view forward and down is important in low altitude dusting and spraying, for example," says Mr. Weick. "The pilot has to clear fences and trees as well as make turns at low altitude at each end of the swath. A good view in the direction of the turn, therefore, is imperative.

"Just as necessary for efficiency is a clear view to the rear in order that he may note the effectiveness of his work. It was mainly for these reasons that we selected a low-wing monoplane."

Hopper location in the new plane may be in the wings, or in the plane's center section, and both locations are to be tried. Every pass over a field must count, and proper distribution is a must if the airplane is to do its work successfully.

Two things had to be considered besides this, however, in determining the hopper placement. Many dusts are highly corrosive and can damage metal plane parts, so hopper surfaces are to be treated with special corrosion-resisting compounds.

If you mix engine exhaust fire with some of the highly flammable dusting compounds, trouble is not only sure, but quick. Plans for the new plane include placement of the exhaust over the low wing. As the distribution system is underneath, Weick feels the fire hazard may be surmounted.

For vision's sake, the plane's cockpit normally would be placed as far forward as possible. But, for safety's sake, it should be as close to the tail as feasible.

To accomplish both factors, Weick and his associates plan on placing the cockpit high

in the center of the fuselage, above the trailing edge of the wing and behind all loads, which should absorb much of the shock in the event of a crash.

From the super-fast jet planes of the stratosphere Weick borrowed the seat for his experimental plane. This seat is so arranged that it may be moved up or down by a control lever. This will be particularly advantageous to the pilot when he is actually working at his task, for in the up position visibility is greatly increased.

From the fighter plane, he borrowed a shoulder harness which allows freedom of movement for the pilot, but has an inertia reel that locks in the event of a crash. The pilot's body is then held rigidly in position. The new plane also will have its instrument panel farther forward than is customary, to prevent the pilot from striking his head on it in the event of a crash.

A rigid pilot's headrest will provide a protective turnover structure, and guards will be placed in front of the open cockpit to deflect wires and branches over the pilot's head.

If the landing gear of the plane should come in contact with wire fences or telephones wires, a special, sharpened leading edge of the supports will cut the wires rather than allow the plane to become entangled.

A. and M., with its 39 agricultural experiment stations, was a logical choice for the plane experiment, for after the task of developing it is completed it must be field-tested and the results tabulated.

Engineers and funds for the plane are being provided by the CAA, while the United State Department of Agriculture is providing its research facilities and the advice of its plant and insect experts.

"The end of the year may see the plane in the air for the first experimental flights," Mr. Weick says. "But it may be some time after those initial flights before we are ready to get to work on the second phase of our project, that of actually plotting results in the field."

Meanwhile, Weick is getting in some personal flying time daily.

Every morning he climbs into his silver monoplane at the small airport at his home and flies the 2½ air miles to A. and M.'s Easterwood airport where the project is being conducted.

Morning mail for the Weick family is delivered by the engineer at lunchtime via the same plane. Back to work after lunch and home again each night in the plane is standard routine for Weick.

"It's monkey business, I guess," the 6-footer says. "But, after all, I have to practice what I preach, don't I?"

REFRESHING WORDS IN CONGRESS

In these times, when the people are being soaked for burdensomely heavy taxes to finance a Washington orgy of waste, it is refreshing to hear a Member of Congress speak as Representative A. L. GOODWIN, of Massachusetts did on the floor of the House one day this week.

It is regrettable that more Members of Congress are not speaking in the same fashion about the opportunity and need for reducing the cost of the Federal Government.

"We all know," Mr. GOODWIN told his colleagues, "that there are many duplications and overlappings in the administration of government, and we all know that waste and extravagance is ever present.

"We also know that practically every governmental department and agency is overstaffed * * *.

"I know of no way to economize except to economize. I know of no way to cut expenses except to cut. I feel that the temper of my own people is such that they will not be satisfied with my representation of them in Congress if I preach economy and fail to practice it * * *.

"I propose to be consistent and vote for every reasonable saving which can be made.

"I know of no other way in which I can demonstrate that I have been sincere when I have warned my people back home that we are headed for national financial disaster unless we can call a halt in reckless Government spending and do it now."

There must have been those among Congressman GOODWIN's colleagues who squirmed guiltily at the sound and shock of his words. For what he said (whether so intended or not) has the quality of a sharp dressing-down for the element on Capitol Hill which never gets any closer to economy than lip service brings it.

At no other time in the history of this country has there been greater need for sound economy in Federal Government. Yet in spite of this fact, the cause of economy is being treated with more lip service on Capitol Hill in Washington today than ever before.

The Nation's taxpayers, unjustly burdened to foot the bill of Washington's spendthrift didoes, see a great deal of congressional shilly-shally about economy. In far too many instances, a declaration of interest in reducing waste is followed up by votes to hand out money for bureaucrats to waste.

In short, too many in Congress are giving economy the lip-service treatment—declaring themselves in favor of economy but failing to stand up for economy when the showdown arrives.

Refreshing Words in Congress

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. GOODWIN. Mr. Speaker, many of us acknowledge to a profound sense of futility in attempting to have put into practice what so many of us have been so diligently preaching, namely, the critical necessity for reducing Government expenses. I have been pleased to note that the Mobile (Ala.) Press-Register has editorialized along this line and I include herewith that editorial under leave to extend my remarks:

Centenary College, Shreveport, La.

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. BROOKS. Mr. Speaker, down in Louisiana, in the Fourth Congressional District, which it is my privilege to represent in Congress, today the people are celebrating the one hundred and twenty-fifth anniversary of the founding of a great institution—Centenary College of Louisiana. This college was established at Jackson, La., and through the years it has developed and grown and continued to function as a great beacon light of higher learning in the United States. It is one of the oldest institutions in the country; and it is the oldest in the State of Louisiana, in point of service.

As a proud citizen of Louisiana and of the Fourth Congressional District, I extend my sincerest congratulations to the trustees, president, and faculty of Centenary College of Louisiana upon reaching this notable milestone in the long tour of active educational leadership in service to the people of the United States. Through the years, benefactors, leaders, and teachers of Centenary have shown brilliant moral leadership and service to the Nation. Throughout these years they have exemplified the admonition taken from the Scriptures, "Go ye therefore and teach all nations."

The history of the college—the oldest west of the Mississippi River—has been a unique one. Beginning and operating as a State-supported school for 20 years, then as a college under the sponsorship of the Methodist Church, the institution has survived the vicissitudes of the years, including three great war catastrophes. Through the devotion and fortitude of dauntless and sacrificing friends, the college survived the poverty and difficulties resulting from the War Between the States. Of the Centenary students who joined the Confederate Army, it is said that every member of the senior class gave his life for the southern cause. In these formative years, Centenary College was builded by hard-working, earnest American leaders, who entertained the belief that education should be broad and refining and tolerant.

In the early part of the century, the college was moved to Shreveport, La.—an honor and distinction to this city which its citizens fully appreciate. We of Louisiana, and the Fourth Congressional District, are proud of the sons of Centenary who have filled the highest positions in our State with credit and distinction. Centenary's contribution, however, rests not only on the achievements of her sons and daughters. The people of Shreveport realize the importance of Centenary College to the community, and are justly proud of the enriching contribution it has made both to the State of Louisiana and the Nation. We are grateful for men like Dr. George S. Sexton, who steered the college through some of its most trying times. His hope and dream of seeing a financially strong Centenary College is now being realized.

On this one hundred and twenty-fifth anniversary, Centenary College has many things to make it proud. Both its faculty and students have won recognition in scholastic attainments, responsible citizenship, and Christian leadership. Centenary has a faculty whose ability and educational leadership is not surpassed by that of any school of its size. Graduates of this great school have been recognized by the institutions of the country for their preeminent ability and influence.

Centenary College's first 125 years have been filled with the sorrows of three shattering wars as well as the joys of peace. Today she stands as a living symbol of American ideals. She faces a

richer future than her founders ever dreamed of—a future of leading our young people along the paths of truth; of impressing them with honesty and integrity in their lives as well as in their thinking; and of inspiring in them confidence, fortitude, and patience in order that they—tomorrow's leaders—may measure up to the responsibilities of our increasingly complex civilization. This beacon light of learning on the banks of Red River in Louisiana has made a real contribution to our society throughout its history—an even greater future is within her grasp.

The Power To Destroy

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Hearst papers from coast to coast on April 4, 1950:

THE 1950 CAMPAIGN

III—THE POWER TO DESTROY

It was John Marshall who cemented into our jurisprudence the admonitory maxim—"The power to tax involves the power to destroy."

In the case before him, the great Chief Justice was concerned with a State tax levied upon a Federal institution.

Wisely he held that a State could not be permitted to tax a national institution out of existence.

What would John Marshall say today of the disquieting fact that State and local government are in the course of being extinguished by Federal taxation and Federal bribes?

Originally, and, of course, before there was a socialistic confiscatory income tax, the United States Government financed itself sufficiently out of customs duties and a few excises.

Virtually all other tax sources belonged to the States and their political subdivisions.

The unlimited income tax introduced the evils of unlimited Federal spending.

And to feed the increasingly ravenous Treasury, the Federal Government began to invade—in effect, to confiscate—tax revenues that were necessary for State and local government.

Moreover, to make the thievery palatable, or better said to buy the unsuspecting people's assent, the Federal Government adopted the trick of sending back to the States, and in some instances the communities, part of the money which the Federal tax collectors had taken away from them—itself reserving the rest for its own support and purposes.

This reallotment was called Federal aid, and a little of it was justifiable.

But it has grown into an enormous racket which, unless checked, will surely enslave the States and make this country a total bureaucracy.

According to Representative FREDERIC R. COUDERT, Jr., of New York, the Federal Government takes in billions of dollars from the States and sends only a portion of it back—to do things that the States could do "better and more economically" for themselves.

For along with the Federal rebates goes Federal control, steadily diminishing the areas of State and local self-government.

And the political wastage is tremendous—approximately $5,000,000,000 a year simply disappears in bureaucratic legerdemain.

In its noteworthy statement of principles the congressional leadership of the Republican Party proposed the only remedy for the dangerous condition.

It proposed a nonpartisan commission to survey the whole field of taxation, and to recommend a sensible redistribution of governmental functions and sources of revenue among Federal, State, and local governments, so as to secure the sovereignty of the several States with as much decentralization as is compatible with the national welfare.

As one of the party leaders, Representative COUDERT has introduced legislation, giving this Democratic Congress an opportunity to act.

Unless the Congress does act, the question should be made a prime issue in the 1950 campaign.

The Republican slogan is Liberty Against Socialism.

And—

"The surest way to socialism," Representative COUDERT warns, "is excessive expenditure and destructive taxation."

Farmers on the Auction Block

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Batavia Herald, of Batavia, Ill., which appeared in its issue of April 21, 1950:

FARMERS ON THE AUCTION BLOCK

Further evidence that our approach to difficult problems these days is from the auction-block standpoint was given Monday evening by Allan B. Kline, president of the American Farm Bureau Federation, addressing the annual farmers' dinner of the St. Charles Chamber of Commerce.

Mr. Kline, in a masterful address, described present-day conditions of the American farmer, the legislation that is now on the statute books, how it got there, and what the federation believes should be future policy in keeping with the general American economy.

At the moment there are two camps in the thinking being done about a farm program. Mr. Kline and his Farm Bureau Federation are in one camp; Secretary Brannan, of the Department of Agriculture, is in the other camp. Mr. Kline emphasized the difference in the philosophy of the two groups, and their approach to a stable farm policy.

Both groups seem to understand that the present system of high-farm supports with its destruction of foods is never going to win acclaim from the rank-and-file citizen. Mr. Kline believes passionately in the freedom of the American farmer, and the Federation is proposing a support program that gets away from the present 90 percent of parity to a more elastic formula that will follow crop productions closely.

Secretary Brannan has trotted out what is generally known as the Brannan plan, modeled closely after the program for farmers that England has had for some years, and which we understand is not only costly but has already deprived the English farmer of much of his independence and freedom. Under this plan the farmer would continue to get the high supports of present-day legislation, the consumer would buy the products in the market place at a low price, and the American taxpayer would pay the difference between the two systems.

The farm bureaus resent Secretary Brannan's open lobbying for his plan. Brannan is swinging wildly, hitting in the clinches, and using every device known to entrenched officialdom to further support for his Brannan plan.

Mr. Kline made it very clear Monday evening that Congress, and Congress alone, makes the laws, that the administrative branch of Government—that includes Secretary Brannan—has only one job to do, and that is to carry out and administer laws passed by Congress. Mr. Kline stressed the imperative need for high-class men in Congress, and an end to politicians on the Hill who vote subsidies to farmers or any other powerful group in exchange for votes at the polls. The problems of today are too serious, said the farm leader, to continue a system of auction-block legislation, that we must have a new approach, an approach from the standpoint of the national welfare, and not from the selfish welfare of any pressure group.

In a radio-telecast program Sunday afternoon Secretary Brannan, speaking from Washington, stated that Kline, in opposing his program, is "Talking through his hat, as usual." He evidently feels that Kline doesn't know what he's talking about. In his Fox Valley appearance Monday night, Mr. Kline gave every impression that he is a remarkably well-informed man. He talked like a real statesman. He seems much more interested in how farmers eat, rather than how they vote. We are inclined to think that he is much closer to solid ground than is the Secretary, and we believe American farmers think so.

The St. Charles Chamber of Commerce is to be congratulated for having brought to the Fox Valley such an outstanding man at a time when there is much confusion in our thinking on the all-important subject of farm legislation.

A Pay-as-You-Go Proposal for Pensions

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Emily Cuyler Hammond before the Senate Finance Committee, March 23, 1950:

Mr. Chairman, my name is Emily Cuyler Hammond. I am here as a private, individual American, representing no other individual or group, to testify against H. R. 6000 on the basis of 19 years' study of social security at home and in Europe. I am at present preparing a book on security or freedom in America.

Mr. Chairman, I shall give you, if I may, first a résumé of the rather unique experience from which I draw my conclusions; second, the reasons I believe the Social Security Act to be a misnomer and H. R. 6000

to offer no real security; and, third, an outline of recommendations for a self-supporting, pay-as-you-go, American pension program.

In 1931, when the depression posed the question of what to do about those who could not take care of themselves, I went to Germany, on my own account, to investigate the whole field of social security from the point of view of the individual. I chose Germany because, since Bismarck started the social insurance movement back in 1883, the country had had time to assimilate its benefits; and the principle of insurance, it seemed to me, was more consistent with American tradition than the dole. I confidently expected to find the contributory German system a shield to human dignity as against the humiliation of public relief.

WEIMAR WELFARE REPUBLIC

After studying the Bismarckian social insurances at the University of Heidelberg, I made an investigation of those laws in operation in a number of the great industrial centers, in cities, small towns, and rural areas. I interviewed government officials in charge of the various programs on the Reich, province, and municipal levels; and inspected their institutions, hospitals, low-cost housing projects, work-relief projects, work camps, or whatever. I talked to politicians, doctors, employers, and labor leaders. Most important of all, I talked to people covered by the laws. Wherever possible, I lived in workers' houses or in the home of some other Reich beneficiary or pensioner—because I wanted to find out the impact of these insurance laws on the individual German.

BUYING OFF THE OPPOSITION

The first thing that impressed me as significant was that German social insurance was insurance in name only. In reality it was a money-raising device on the one hand and a Reich-subsidized hand-out on the other, given and taken as a right in exchange for freedom of action. Government officials looked upon "das volk," as unable to take care of themselves. Generally speaking, they assumed that the more Reichsmarks they were able to dispense in subsidy to industry and agriculture and in benefits to the people, the less trouble there would be. As Bismarck had introduced social insurance to buy off labor revolt spearheaded by the Socialists, so Weimar's social-democratic and successive leftist regimes liberalized social insurance in an attempt to buy off Communist or Fascist revolution. In 1931 and 1932, Bruning's center party was caught holding the bag.

The vast majority of the Germans with whom I talked, concerned with the administration of the so-called social insurances—with a few notable exceptions—expressed their own selfish interests. The enormous, bloated bureaucracy whose members owed their jobs to the system was for it at all costs. The higher the official the rosier the glasses through which he viewed the welfare state.

PRESSURE-GROUP MOTIVES

Employers were divided and profoundly disturbed. For the most part they clung to the belief that social insurance was the purchase price of labor peace—and cheap at that, if it gave value received. But with the depression, the increasing burden of the republic's insurance and welfare taxes had become so intolerable as further to reduce over-all production and everybody—employers, employees, and beneficiaries—had smaller pieces of the pie.

Desperate employers watching the growth of communism in their factories, among the ranks of the unemployed, and in the Reichstag, and listening to a mountebank promising to put the ancient German gods to work to start the wheels of production again, committed the crime of backing Adolf Hitler.

Labor leaders, who had abdicated their effective power by advocating Reich responsibility for the workers' welfare, boasted that it was really trade-unionism that had brought the social insurance into being, complained that the government was not doing enough, but had no solution to offer as to how it might do more and remain solvent.

All these donors of social security deluded themselves on the people's reaction. The people, the beneficiaries of so much for so little, reacted quite differently from what was expected of them.

FREEDOM FOR SALE

During those last years of the Weimar Republic's existence, the average German, I discovered, was not a free human being whose dignity was protected by his alleged insurance right to assistance in case of ill-health, unemployment, disability, or old age. He was a state serf, cringing and conforming in the presence of officialdom; carping and cheating behind the back of the law; doing the minimum required of him; devoid of personal initiative; incapable of independent reasoning; blaming the government for everything that went wrong. And no wonder.

The average German under the Weimar Welfare Republic, did not have to think for himself or plan for his future. He was dependent on the fatherland directly or indirectly for his vocational training, for his employment and unemployment compensation; for his, his wife's and his children's health; for any accident or disability that might befall any of them; for his old age; for his burial; for his survivors.

Having to make few important decisions for himself in day-to-day life, he would hardly be expected to know what to do in time of crisis. Just as his wife and his children could have little respect for the husband and father who ran to the government for every need, so in turn he could have litle faith in the paternalistic state unable to solve its own problems. The fatherland's various social insurance funds had been broke so often that the fiction of reserves was no longer taken seriously. But when the government exhibited its innate weakness by ruling by edict, the confused and harassed serf naturally turned to whomever most convincingly promised him a way out of his dilemma.

POLITICAL TRICKS COME HOME TO ROOST

Mr. Chairman, I am convinced that Bismarckian social security in its political deceit, basing rights on token contributions, robbing the people of initiative and responsibility, reducing production by back-breaking taxation, necessitating ever more centralized government controls, was the essential underlying cause of the failure of the Weimar Welfare Republic—and incidentally of Hitler's rise to power.

In December 1933, after making a comparative study of security under the Nazis, I came home, and in August 1935 witnessed, to my horror, my country following in the footsteps of Germany, embarking on a course I felt to be fraught with disaster. The Social Security Act was sponsored by men and women wanting to do good by their fellow men. Yet there seems to be not the slightest question of the wisdom of adopting a foreign concept or of copying a foreign system in extravagant detail which, however utopian it sounded in theory, had been proved in practice to be economically unsound. Whenever I brought up the point of the collapse of the Weimar Welfare Republic, the answer was: "Oh, that could only happen in Germany. The Germans are sheep. It couldn't happen here—or anywhere else."

SAME CAUSE, SAME EFFECT

In July 1937, I went back to Europe and from that time until the war brought me home again, I made a comparative study of social security in its social, economic, cultural, collective, and political aspects in France, Germany again, Poland, Austria, Hungary, Czechoslovakia, Switzerland, Italy, Albania, and Greece. Everywhere, I found that the same cause resulted in the same effect: To the extent that a government took responsibility from the individual through social security, to that extent the individual had lost his personal freedom and initiative. Social security was the barometer of dictatorship.

Since the war, I have made surveys in a number of States, to gather material for my book. Wanting to estimate the effect of Bismarckian social security on the individual American, I have talked to beneficiaries in their own homes, usually by a random ringing of door bells in working-class districts. After allaying the initial dreadful suspicion that I might be a social worker coming to spy and after taking an oath that I would never divulge identity, I have encountered remarkable candor.

Although Europe was suffering varying degrees of depression when I made my studies there, and we have been enjoying relatively high employment here, nevertheless I have the uncanny feeling that I am redreaming an old dream. There is the same sneering at the government for not giving enough, the same boasting of chiseling with the easy "Everybody else gets away with it, why shouldn't I?"

But there is a difference. There are still Americans who would rather suffer hardship than either undergo a needs test or cheat to get something for nothing. There is also a healthy questioning as to whether the law itself is not unjust and whether, after all, it would not be better to exchange alleged future security for an honest dollar.

INSECURE DEMOCRACY

I am opposed to the present Social Security Act and to H. R. 6000 because OASI is un-American economically and ideologically. It will lead to statism here as it did in country after country in Europe—unless it is stopped now. Mr. Chairman, I submit, we cannot enact laws which undermine individual responsibility and expect to survive as a free people.

I shall not dwell upon the fictitious OASI fund; the fact of double taxation, the burden on industry passed on to the consumer in inflationary prices; the expense of an expanding bureaucracy tending unnecessary wage records; or the precariously mounting costs of H. R. 6000. I should prefer to concentrate on the effect of the injustices of the act on the individual American.

UNJUST LAWS MAKE DISHONEST PEOPLE

OASI is dishonest in principle and performance. Its avowed purpose is to protect the dignity of the individual. It proceeds to try to fool the individual into believing that, by its compulsory contributions, he is paying his own way for security and old age. This is not true. The people in increasing numbers know it. And their dignity is not protected by the pretense. On the contrary.

There is neither dignity nor justice in a $20,000 windfall—a hand-out from the public purse—to a $50,000-a-year executive employee. And the same goes for the hand-outs right on down the line to the unhappy compulsory contributor who misses "insured status" by half a quarter and has to undergo a needs test to qualify for assistance.

According to the Federal Security Agency, at the end of 1949, of the 80,400,000 persons who had contributed into OASI, 36,700,000 did not have insured status. Even under the wider coverage of H. R. 6000, "fifteen or so million" of the gainfully employed will remain uncovered—not to mention those who will lose or never acquire "status."

UNFULFILLED PROMISES

In other words, OASI fails of its purpose: As a hand-out, it undermines the self-respect of those who can save for themselves and offers no protection to those who need it most. This creates doubt in the minds of many people as to the justice of the law. Why, they ask, should some who have worked diligently all their lives, have to undergo the indignity of a needs test, while others may receive windfall benefits whether they need them or not? Why should contributions ever have to be forfeited? Why should the Government want anyone to stop working?

Mr. Chairman, we cannot have unjust laws and honest citizens.

LET UNCLE SAM DO IT

Public assistance, financed by Federal grants-in-aid, is deplorable for three reasons: (a) the needs test; (b) dangerously increasing costs; (c) dangerously increasing Federal penetration in a field I believe the fathers of our country never intended the Federal Government to enter.

I take it to be axiomatic that in a free society the individual earns his own bread and butter. When the individual fails, his family looks out for him; when his family fails or he has no family, his church or his community takes over; when his church and community fail, the State takes over; and when the State wants more money, it cries to Washington. The number of representatives of State agencies who have come here professing a desire for more grants-in-aid, is an indication of the failure of the family, the church, the community, and the State.

The more Federal money made available for the needy, the more needy there will be. Eventually, the more there are depending upon the Federal Government, the less Federal money there will be. There will come a day of reckoning, as there has come to every other welfare State in history—unless, of course, we stop letting Uncle Sam do it and do it ourselves now.

We Americans as individuals have already delegated too many of our prerogatives. The delegation of love of our neighbors and of kindness to our neighbors' crippled children and other disabled members of our communities is, in fact, impossible. Love and kindness cannot be reduced to a benefit formula, nor to a price of living budget. Assistance should stay with the local community and receive not a penny of Federal aid.

UNDERMINING INDEPENDENCE

The H. R. 6000 redefinition of employee and proposal to include the self-employed under OASI would only undermine the independence of that many more of our citizens and hasten the day of an American welfare republic.

Disability allowances as proposed by H. R. 6000 would bring the Federal Government into private homes in an unconstitutional manner, and constitute strike one to socialized medicine.

RECOMMENDATIONS

Mr. Chairman, because I do earnestly believe that we as a nation are well on our way to losing our birthright of freedom, lured by the illusion of security, I respectfully ask your committee's consideration of the following recommendations:

I. That the present Social Security Act be repealed in its entirety.

II. That the present Social Security Act be replaced by an honest responsible pay-as-you-go system under which:

A. Every American citizen would pay an income tax of 3 percent on the first $5,000 of income, without exemptions, for aid to the aged.

B. Every American citizen at the age of 65 would receive a flat amount, tied to the changing cost of a bare living—$35 a month to start—without a means or a work test.

C. State and local agencies would have the responsibility of caring for the disabled for orphans and children in broken homes; and of subsidizing especially needy cases of aged.

D. The individual would have the responsibility of saving—by whatever means he saw fit—for his old age and his survivors. He would be free to work as long as he is able, to contribute to his own and his neighbor's fuller life.

III. That a special commission be appointed to make an exhaustive study of the costs of a universal, nondiscriminatory, democratic pay-as-you go system of aid to the aged; and of the possibility of keeping both the necessary taxes and payments down to the State level. It is true that State income tax set-ups would complicate the problem of interstate payments. But so is democracy more complicated than dictatorship.

OPPORTUNITY FOR SECURITY

Cutting through the thickest of complexities of OASI—the benefit formulas, the qualifications, disqualifications, inadequate contributions, increment factors, windfall benefits, innumerable discriminations, and who has a right to what—our problem is simply this:

We want to make decent provision for those who cannot take care of themselves, without undermining the responsibility and initiative of those who can. There is a very fine line which divides too much from too little assistance. Too little means poverty, disease, death. Too much means serfdom. It saps individual self-respect and initiative, breeds indolence, and eventual revolution from the right or the left. The small tax credit I suggest for all American citizens at the age of 65 would serve as a margin of error. It would be a first line of protection for those who had little or nothing. It would eliminate the temptation to cheat and to beg for more and more and more from the Government because the working and producing taxpayers in a pay-as-you-go system would always outnumber the voting recipients. It would not undermine incentive to work or to save but would return responsibility to the individual where in a free country it belongs. In the long run it would be cheaper, more efficient, more equitable and more democratic.

Mr. Chairman, I wish to express my appreciation and thanks for the privilege of appearing here today.

Eliminate "Iron Curtain" in Northern Ireland

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by Thomas Dorgan, clerk, Suffolk Superior Civil Court, which appeared in the Boston Traveler, Boston, Mass., Tuesday, April 25, 1950:

DORGAN DEMANDS FREE IRELAND—URGES STUDY BEFORE FURTHER AID TO GREAT BRITAIN IS GRANTED

(By Thomas Dorgan, clerk, Suffolk Superior Civil Court)

The amendment proposed by Congressmen FOGARTY, LANE, MANSFIELD, KEATING, DOLLINGER, and JAVITS to House bill 7797 provides that before we furnish any more economical assistance to Great Britain, we should carefully examine the iron curtain in the north of Ireland which was placed there by that self-styled defender of freedom and liberty—Great Britain.

The question is asked by all sincere, peace-loving, democratic people, "What is this iron curtain? We thought the Kremlin conspirators were the only ones who had an iron curtain." Well, it is the mutilation, or cutting up, of one of the homogenous nations in the world.

Ireland was always regarded as one nation, clearly defined and bounded by the hand of God. Even before the Christian Era, Ireland was recognized as a single unit and that unit has survived for thousands of years.

In 1914, at the beginning of World War I, Premier Asquith of Great Britain promised the Irish people, in return for their assistance during the war, absolute home rule at the end of the war. Great Britain took the field in World War I for the freedom of small nations. Premier Asquith said, "We are fighting to vindicate the principle that small nationalities are not to be crushed by the arbitrary will of a stronger and overmastering power."

Because of Premier Asquith's pledge, 300,000 Irishmen went to war and over 50,000 of them were killed in battle. But, after the war was over, Ireland was given the old harpoon by one of the greatest quarterbacks England ever produced—Lloyd George. For instance, this was one of Lloyd George's deceptive plays. In a lateral communication by quarterback Lloyd George from the famous T-formation, to Sir Edward Carson, a notorious British Tory from the north of Ireland, sent from Whitehall on May 29, 1916, he said, "We must make it clear that Ulster does not, whether she wills it or not, merge in the rest of Ireland."

CHARTERS FLOUTED

Such a statement might be expected from the Kremlin conspirators but not from the self-styled peace-loving and liberty-loving Great Britain. In World War II, people were led to believe that they were brought into conflict for the salvation of civilization and in behalf of liberty and democracy to vindicate the Atlantic Charter and the "four freedoms," and to maintain the freedom of small nations against an aggressor or any other tyrant. We know now that the Atlantic Charter and the "four freedoms" were just simply words. There is, at the present time, more slavery, more dictatorial rule than ever in the history of mankind.

If other nations, and there have been plenty, pleaded for help from America—it was graciously given. Why, then, not Ireland's cause? We must not forget that millions of young men and women of Irish descent were led to believe when they took the field in World War I and World War II that liberty and freedom would be granted to all nations, whether big or small.

Just imagine, even though Ireland was strictly neutral in World War II, over 275,000 Irish volunteers went into the army, navy, and air force of Great Britain. No such percentage of nondrafted men offered themselves for any other country in the world. And for the information of Sir Basil Brooke, the Tory Premier for the north of Ireland who is now paying us a visit, the southern part of Ireland received 12 Victoria Crosses from the British Government. This decoration is equivalent to our Congressional Medal of Honor. Irish heroes also received thousands of other decorations from the English Government—and this is all part of the record.

It is also a matter of record that there was no conscription in the English-dominated counties in the north of Ireland, and the only Victoria Cross awarded in that part of the country was given to an Irishman—not a Tory.

The only way to crystallize public opinion on this important resolution is to contact your Senator and Congressman by telegram or letter asking them to record themselves in favor of this bill at the hearing Friday before the chairman of the Foreign Affairs Committee, JOHN KEE, House of Representatives, Washington, D. C. Explain in your telegram or letter that you think the flow of American taxpayers' money to Great Britain should be stopped until such time as the iron curtain in the north of Ireland is eliminated.

Thomas H. Buckley, commissioner of administration at the state house and president of the American League for an Undivided Ireland, will represent Massachusetts.

American Security at Midcentury

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, on Saturday evening, April 29, 1950, at the forty-fourth annual meeting of the American Society of International Law, Administrator Paul G. Hoffman of the Economic Cooperation Administration delivered an address entitled, "American Security at Midcentury." Mr. Hoffman's appraisal of his country's position among the nations of the world, his reflections on America's leadership and her aims as they are inspired because of the responsibilities of that leadership, make his remarks not only timely, but of universal interest. I therefore ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN SECURITY AT MIDCENTURY

(Address by Paul G. Hoffman before American Society of International Law, Washington, D. C., Saturday, April 29, 1950)

The theme of your meeting—American security at midcentury—brings us face to face with a question of overwhelming significance not only to America but to the entire world.

In the past 2 years I have visited many countries. I am here to testify that all the free world today feels that its security is dependent upon the United States. The eminent Harvard historian, Dr. Arthur M. Scheslinger, recently said that the most important development of the first half of this century was the reluctant acceptance by the United States of world leadership * * * our emergence as one of the two world powers fated to shape the future of mankind.

I hope Dr. Scheslinger was correct in stating we have accepted our new responsibilities. Assuming that he is correct, I know that he is also right in stating our acceptance was reluctant. Few of us welcome our new responsibilities. Few of us enjoy them. Not all of us even now entirely grasp the fact that we must accept them and handle them wisely or let the fate of the free world be decided by Communist Russia.

That is one side of the coin. I suggest that we in America turn the coin over and take a look at the other side—a new look at the rest of the free world.

The day is past when American security can be preserved by American action in America alone. The time has come when we must stop thinking about the free nations of western Europe and the other free people of the world as charity cases. We must start and start now thinking of them as vitally necessary allies in this titanic struggle between the slave world of the Kremlin and the free world.

There can be no American security in midcentury unless there is security for the other nations of the free world.

In view of the fact that the United States has been cast for such a vital role in this struggle with the Kremlin, the first question we should ask ourselves is, How strong is America?

Strength, of course, cannot be built in a day. It is the result of growth. It is my belief that America has been growing steadily stronger during the past 50 years to a degree hardly realized by our own people.

To be sure, the general inclination, both here and in the rest of the world, is to look back on the first half of the twentieth century with a shudder. No less a personage than Winston Churchill, speaking at the midcentury convocation at MIT referred to this terrible twentieth century. Theologians, philosophers, novelists and politicians have echoed that sentiment. The welcome the world gave 1950 sounded more like a wake than a celebration.

It is true that terrible things have happened. A world-wide depression brought hardship and misery to tens of millions. Two of history's most devasating wars left vast areas of the world's surface in ruins. And peace, a secure peace, has eluded us.

Terrible, yes, and terrifying, but that is not the whole story. If you will accept as the basic criterion for progress the enhancement of opportunities for men, as individuals, to grow and develop, materially, intellectually, and spiritually, a good case may be made for the period as the most fruitful in history. And that is the only criterion we dare use. A nation is only as strong as its people are strong.

Using this test, America's past 50 years shape up remarkably well. The first half of the century has brought a great enrichment of opportunities.

Let us take a quick look at what has happened.

In 1900 the material benefits of our economic system were largely limited to those born on the right side of the tracks. The vast majority of other people led very austere lives.

Today there isn't any other side of the tracks. Millions enjoy comforts and conveniences unknown even to the most fortunate 50 years ago. Not too long ago Fortune magazine directed an inquiry to thousands of persons throughout America asking to what class they thought they belonged, upper, middle, or lower. Almost 90 percent rated themselves as belonging to the middle classs. I doubt if at any time in history there has been a country in which so small a percentage of the people considered that they belonged to the upper or lower class.

Opportunities for great numbers of people to achieve material benefits from any economic system are largely the results of the capacity of that economy to produce and distribute wealth. In that respect these 50 years in the United States have seen the most startling progress in the history of man. We have become the richest, most productive nation on the face of the earth.

And how did we do it? Well, between 1900 and 1950 we steadily increased efficiency of production. We used more and more machine power. We invented work-saving machines and became skilled at using them. Year by year we made better and more goods at lower costs.

With mass production came mass marketing and mass consumption. The individual's opportunity to enjoy the material benefits of our expanding economy increased enormously. The national income, in dollars of the same purchasing power, soared from $50,000,000,000 to $225,000,000,000, an increase of 450 percent. In the same period our population rose from approximately 75,000,000 to 150,000,000, an increase of only 100 percent. In the manufacturing industries, wages increased from about 20 cents to $1.40 an hour. The number of jobs went from 27,500,000 to about 60,000,000.

Intellectually the enhancement of educational opportunities opened the door to a fuller life for millions. Sumner Slichter of Harvard recently said that few periods in the world's history had made more rapid progress in breaking down the barriers to education. Back in 1890, to use some of his statistics, only 1 out of 14 children between the ages of 14 and 17 was in school. In 1945 the proportion had grown to four out of five. The number of high-school graduates has increased about 13 times as fast as the population and the number of college graduates six times as fast.

It is not so easy to gage spiritual matters since they are at once the most important and most intimate part of any individual. But surely it can be counted as a spiritual gain that we have passed from a smug disregard for social conditions to a lively awareness of our responsibilities toward our fellow men.

Back in the early part of the century it was rare indeed for anyone even to advance an argument that there should be equality of work opportunities for all, regardless of race, creed, color, or sex. Today, whatever our practices may be, we, at least, concede the validity of that concept. And our children accept it without reservation just as they accept as a fact of life the brotherhood of man.

And underlying all this progress is the determination of our people that our Government should be one of laws, not of men. That, of course, is fundamental. To quote the distinguished British political scientist, Sir Ernest Barker, "it is * * * the foundation of foundations. When you have the rule of law, the individual knows where he is; he knows where he is today and where he will be tomorrow."

That is my case for America * * * America strong and growing stronger.

Now let us take a look at Europe.

I can speak with authority only of the nations we are serving * * * the free nations of western Europe. To help in the restoration of their strength has been ECA's particular assignment over the past 2 years.

General Marshall, himself, gave a report on the progress of the program recently, stating that "a near miracle has been accomplished." I will not quarrel with so distinguished an authority.

Translating that "near miracle" into hard facts, we find that, in the past 2 years, industrial production in western Europe has risen to 20 percent above prewar. I use the phrase carefully when I say that what has been accomplished here is spectacular. The remarkable speed of the recovery pace can best be appreciated if we remember that after World War I, in which the destruction of industrial facilities was much less than in World War II, it took these same countries 7 years to restore levels of prewar output.

Agricultural production as a whole has been brought nearly to the level of prewar and, given favorable weather conditions, will reach the prewar level this year or exceed it.

This means, in human terms, that the western Europeans today have a generally adequate diet, that they can feed and clothe their children and that they are at work.

And they are working hard. * * * A fact which the production figure dramatizes.

But a near miracle is not enough. We will need a full sized miracle to complete the job. In my opinion, it can be brought about but only if the European people are given an opportunity to realize on their full potentialities.

Let us look back.

Until the turn of the century Europe was the undisputed center of world trade and commerce. The conditions in which Europe's modern economy grew great were a substantially free trade throughout Europe, a free movement of labor, and a substantially free movement of capital. Because Europe was, in effect a single market, within the limits of the then-existing knowledge and techniques full use was being made of Europe's resources. Competition exercised a relentless pressure on costs, and stimulated a continuous search for new and more efficient methods of production.

As a consequence of these benign conditions trade among the countries of Europe and between Europe and the world increased geometrically. Wealth grew so rapidly that European capital flowed out in a great stream to high-yield, productive enterprises throughout the world, stimulating still further demand for European manufactures. And with minor exceptions, there was real peace among nations.

For 50 years—up until recently—Europe has been in the process little by little of destroying these conditions of its economic greatness. The break-down of the European security system that accompanied the rise of German power late in the last century drove the nations of Europe to increasing political and economic nationalism. The nationalism was intensified after the First World War as each nation sought to solve the problems of economic reconstruction along lines of national self-sufficiency. Tariff barriers were raised to heights theretofore unknown.

Then came the world depression, and instead of attacking the problem of growing poverty by cooperative measures, each nation in Europe tried to solve it by beggaring its neighbor. Tariffs were no longer sufficient. The absolute trade restriction came into being in the form of import quotas and exchange controls. These rigidly determined the amounts of goods that could move in international trade, and sharply reduced the influence of the competitive process on the flow of trade.

It was only behind absolute trade barriers that Hitler was able to create a synthetic gasoline industry and a synthetic rubber industry. It was only behind the most rigid trade barriers that Hitler was able to convert the German economy from the production of butter to the production of guns. If the European economy had been integrated, with its resources used in the most efficient manner, with trade flowing freeing from one unit to another, neither Germany nor any other country would have been able to put itself into a position to sustain an effective attack on its neighbors.

This strangulation of intra-European trade over a long period by artificial trade restrictions practically eliminated competition in Europe's basic industries, thereby destroying a fundamental condition of increasing productivity. It caused a deficient and inefficient use of Europe's resources. And, finally, it provided a barrier behind which an aggressor twice prepared for war against its neighbors.

These were the facts and this was the situation confronting the western European nations when, with our help, they began their recovery drive.

This is the background of ECA's insistence that economic integration is a "must" if western Europe is to regain her economic strength and to stand on her own feet, independent of extraordinary outside * * * our * * * assistance.

The goal we and the western Europeans have set is the building of a single market of 275,000,000 consumers in which the goods and services produced by mass production can move freely and in which the people can enjoy a high and rising standard of living.

Then, and then only, will they be completely immunized against the false appeal of communism.

There are, of course, other factors essential to the restoration of western European strength. The "dollar gap" must be brought within manageable proportions and here we, in America, have a contribution to make beyond just material aid and advice. We must accept the hard fact that we must sell less and buy more from western Europe. There is little appeal in such a program but it is the only alternative to continuing our aid at heavy cost to the American taxpayers—or letting the European economy collapse at a heavy cost to our hopes of winning in the present struggle to preserve the free world.

We in ECA are fully aware of the difficulties involved in attaining our goals. To again quote General Marshall the 2 years before us—those between now and ECA's termination date—will be the most difficult of all.

But, looking at America, I see not the slightest reason for discouragement. We can and will attain the goals set for the Marshall program. We can and will win the cold war once we understand its significance.

This is a new kind of war. It is essential that we understand that, too. We are inclined, I am afraid, to think of wars exclusively in terms of shooting. Modern war is fought on four fronts—economic, informational, political, and military.

We are just learning how to fight on these first three fronts. And our methods, I am deeply convinced, are appropriate to our goal—an enduring peace in which all men live in decency and dignity.

On the economic front we have provided food to relieve hunger. We have provided tools to make work possible. We are teaching modern methods in order that modern tools may be used effectively.

On the information front we are fighting lying propaganda with truth and nothing but the truth. From the outset our goal has been to tell the Marshall plan story so that each European—and each free citizen—would understand his stake in the recovery effort. We have sought in every way possible to get the truth to the peoples concerned. We are contributing to the rebuilding of confidence and hope. Our goal is people who are free and strong.

On the political front—well, the western tradition, for all its heresies, has had one constant feature, its concern with freedom. Their physical strength restored, I do not think we need fear the political surrender of the western Europeans.

This is the kind of war we can afford to fight. We cannot afford not to fight it. The full 4 years of the Marshall plan will cost us something less than $15,000,000,000. What it would cost to fight a cold war in southeast Asia I do not know. I do know, however, that it would be a comparatively modest figure, and I do know we cannot afford not to spend it.

The kind of war we cannot afford to fight is a shooting war. Former Secretary of the Army, Gordon Gray, said, not so long ago, that World War II will have cost the United States $1,300,000,000,000 before the last due bill has been met. What world war III would cost no man can say. We might well pay for it in the total destruction of our civilization.

The free nations of western Europe cannot win this struggle alone. They need our aid and comfort, but it is also true that we need them. Long ago, the poet, John Donne, said that no man is an island entire unto himself. That can be said with equal truth of nations. Today, America is strong, prospercus, blessed above any nation on earth. But she is not an island entire unto herself.

The security of America—the security of our friends and neighbors overseas—calls for the drawing together of all the free nations, economically, militarily, and politically.

Together, but only together, we can win this cold war and build a peace so strong and enduring that no aggressor of today or potential aggressor of the future will dare to violate it.

Cooperative for American Remittances to Europe

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the Governor of the State of New York calling upon the people of the State to join in the observance of CARE Week, which is the period from May 1 to May 7, inclusive, in recognition of the very important humane activity which has been and is being carried on through the Cooperative for American Remittances to Europe, better known as CARE.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXECUTIVE CHAMBER,
Albany, N. Y.

STATEMENT BY GOVERNOR DEWEY

It is inspiring to know that the people of our country have sent more than $100,000,000 worth of food and other articles individually to the people of war-torn countries in the past 4 years through the Cooperative for American Remittances to Europe, better known as CARE. The packages sent include food, blankets, clothing, and books. They have been sent not only to Europe but also to the Philippines, Korea, Israel, Pakistan, India, Japan, in fact to all areas which suffered from the ravages of the war.

This generosity has been of an entirely voluntary nature and is exercised aside from the large sums we have contributed as a nation for the rehabilitation and recovery of overseas countries, on the Government level. CARE enables us as individuals to make these gifts as a matter of direct and personal help and as the expression of our friendship.

To call attention to this important humane activity, the period of May 1 through May 7 is being observed as CARE Week. I am sure the warm-hearted men and women of the State of New York will join in this observance with special response to this appeal.

Hon. Herbert Hoover's Suggestion About Reconstitution of United Nations

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, the recent suggestion of former President Herbert Hoover that the United Nations be reconstituted without Russia and her satellites has raised, and will continue to arouse, considerable discussions.

There was a very splendid study of the Hoover suggestion in the Baltimore Sunday Sun of yesterday, written by Mr. John W. Owens, which, because of Mr. Owens' long experience in the field of journalism, and his wide knowledge of matters of which he writes, will command respect and attention far and wide.

I ask unanimous consent that the article by Mr. Owens be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sunday Morning Sun of April 30, 1950]

RACE BETWEEN IDEAS AND HARSH EVENTS

(By John W. Owens)

Whether or not the United Nations shall be reorganized without Russia and her satellites, as suggested by Mr. Hoover, probably will depend less upon opinions than upon events. There is wide diversity in opinions.

Some men of wide experience and of unchallenged devotion to the cause of peace think advantages of the United Nations as now organized outweigh disadvantages. Apart from various achievements, which they count as material, though far short of the goal which was set in San Francisco 5 years ago, these men think the United Nations provides a forum which is as valuable in world debate to the West as it may be to the East. They also cling to the hope that out of the nonshooting war will come ultimately some kind of balance between West and East and they think that in that hoped-for hour of balance the United Nations as now organized may provide a meeting ground for settlements. Bordering all such theories are various ideas of union or federation of nations, some limited to the West and some more ambitious, which could, in theory, be adjusted to the framework of the United Nations. And, of course, there are opinions in the west of Europe which are not by any means at one.

There could be prolonged argument between men who hold such ideas and those who would follow Mr. Hoover's opinion that direct, swift action should be taken in reorganization of the United Nations without the Communist states. But, in existing conditions in the world, events may on any day decide for the United States and the West, not only what they should do in organization, but what they must do. In putting the Marshall plan through Congress, the Italian election of April 1948, and the danger that Italy would go Communist in a popular vote, was worth many many speeches in explanation of General Marshall's program. Russian pressures accelerated adoption of the Atlantic Pact. Russian pressure almost overnight converted a skeptical Congress into one vigorous in provision of arms for Europe. Conceivably, events in Berlin in May could make decisions for the West about the United Nations. And another crisis may lurk behind that expected in Berlin.

With the germ of Mr. Hoover's idea, doubtless millions of people in the United States mentally grapple every day in the midst of indescribable confusion. The germ is this question: How to build close, firm unity in the West? Call it regional cooperation or union or federation. Organize it inside the United Nations or outside. Continue to hope for peace with Russia or prepare for war with Russia. Short of war, count upon ultimate balancing of relations with Russia or count upon continual matching of armed strength. Whatever the wrappings, doubtless millions of people daily grapple with the question of ways and means in establishing unity in the West—hoping rather desperately that they may have opportunity to hammer out conclusions before events take the question out of their hands.

In the first place, the necessity of such unity speaks for itself. If there were absolute unity there would be no assurance that on some fine day Russia would not send her armies into the west of Europe and take her chances on what we could do to her own cities in retaliation. But, up to this time, Russia has not taken this course. Possibly she thinks she has done too well without war to invite risks. But as Russia maps her course there can be little doubt that she would be impressed if close, firm unity could be achieved in the West. On top of what has been done in hurried measures of cooperation—in adoption and execution of the Marshall plan, in formulation and development of the Atlantic Pact and its military corollary and in virtually daily exercise of imponderable habits of consultation—the attainment in actuality of close, firm unity of the west would become a major fact in Russia's calculations. She would face, not an array of allies who are still awkward in common action, but a coherent force which would be capable of decision.

In the second place, such unity would give some promise of reducing the burden which the United States carries—relatively, if not absolutely. There never was reason to think that, once the world became divided, the United States could escape the burdens of being the principal treasury of the West and the principal arsenal. In the months immediately following adoption of the Truman doctrine 3 years ago, great numbers of people seemed to think that we could throw down the gage of political warfare to Communist Russia and then go in for business as usual and politics as usual. Billions piled on billions for national defense and for military and economic aid to allies have dissipated that delusion. But we are entitled to think that, if nationalistic divisions of the West could be subdued in an actuality of unity our partners would gather enough strength and confidence to reduce, at least, our relative responsibilities as treasury and arsenal.

The reason that millions in the United States grapple with this question of unity and see only modest progress—while events rush ever onward—is that deep-rooted national barriers seem at times almost insurmountable. Take one illustration. There can be but scant hope of close, firm unity if nations of the west are engaged in economic warfare among themselves. All political, social, religious, and racial divisions could be subdued in principle, but unity would fail if there were economic warfare. At that point another question appears. How are the nations to live in economic unity if they keep tariff walls? Specifically for Americans: How are nations in Europe to live in unity with us if, after we stop giving grants, we refuse to allow them to sell us as they buy? Some day, if time is left us for rational decision, we may discover that we must make broad adjustments in our industrial life—perhaps with governmental aid—in order to achieve the economic unity, which is essential to the whole unity of the West, which is essential to our safety.

Reply of the Brooklyn Tablet to Mr. Friendly's Article in Washington Post

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last week I inserted in the CONGRESSIONAL RECORD an article from the Washington Post, written by Mr. Alfred Friendly, dealing with the activities of a Mr. Alfred Kohlberg in connection with our China policy and the current controversy concerning that policy. In the body of that article there was some reference, which escaped my notice at the time, to the Brooklyn Tablet, a publication of the Catholic diocese of Brooklyn. I did not and do not now vouch for the accuracy of Mr. Friendly's remarks, nor can I vouch for the accuracy of articles printed in the Tablet or in any other newspaper. But I know Mr. Scanlon, the editor of the Tablet, to be an extremely able newspaperman. In comment on Mr. Friendly's article, Mr. Scanlon wrote a letter to the editor of the Washington Post. The Post printed that letter on April 23. I ask unanimous consent to insert Mr. Scanlon's letter as printed in the Post in the Appendix of the RECORD, so that I may be, as I desire to be, perfectly fair to all persons.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TABLET'S ANSWER

Alfred Friendly in your issue of April 23 misrepresented in an intolerant manner, the Tablet, the official publication for the diocese of Brooklyn, which comprises one and one-quarter million Catholics.

Mr. Friendly asserts I was a sponsor for a dinner given to Archbishop Yu-pin, of China, in the Hotel Commodore, New York. What was wrong with that? I am willing to be a sponsor for any bishop of my church and particularly for one being persecuted in his own country by tyrants.

Your writer asserts the Tablet follows the Father Coughlin line. Father Coughlin has been out of public life almost 10 years; I have not seen him in 15 years and only occasionally hear of him. What is the Father Coughlin line? I do not know what it is or if any exists. But I believe the name of this priest, who has been out of the limelight so many years, was used by your reporter as the same sort of smear attack the Soviet exercises when it desires to manifest its antipathy to champions of human rights.

Your writer states the Tablet "gives aid and comfort to the intemperately reactionary elements on the American political scene." While the same charge has often been made in the Daily Worker, it's new to find it in the Washington Post or any representative

American publication. We are curious to know who Mr. Friendly considers the intemperate reactionary elements to whom we give aid and comfort. Of one thing you may be sure, it is not the group who put Alger Hiss, Judy Coplon, and 92 perverts on the Federal pay roll.

PATRICK J. SCANLON,
Managing Editor, the Tablet.
BROOKLYN, N. Y.

Proposed Extension of Federal Rent Control

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, the Senate Committee on Banking and Currency has just concluded a week of hearings on the Federal rent-control-extension question, and the House Committee on Banking and Currency will begin companion hearings on Monday of next week. In an effort to provide both committees with information and opinions in support of letting the 1949 Rent Control Act expire on its termination date of June 30, 1950, I ask unanimous consent to have printed in the Appendix of the RECORD three letters which have recently come to my desk. The mayor of Salt Lake City relates the benefits which came to a relatively large American city after decontrol. The other two letters were written by American veterans who are entitled to an opportunity to speak for themselves.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SALT LAKE CORP.,
Salt Lake City, Utah, March 22, 1950.
Hon. HARRY P. CAIN,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SIR: My attention has been invited to the prospective discussion on the theme, Should Federal rent control be continued? in which you have been invited to participate.

It occurred to me that you may appreciate hearing our point of view at Salt Lake City was one of the so-called larger cities to decontrol. Our population at this time in the metropolitan area numbers about 200,000.

Decontrol took place the first part of August 1949. Immediately, as controls were removed, there seemed everywhere to be a release of the restraints that, I sincerely feel, for years, has reacted negatively against all property ownership. I realize that such a statement may be of little value to you as it is just one of the intangibles. However, maybe I can translate this reaction into something more helpful.

From August 1, 1948, to March 1, 1949, there were 1,039 building permits issued. During the same period from August 1, 1949, to March 1, 1950, there were 1,222 building permits issued or an increase of 17½ percent since decontrol. However, for January and February of 1950, there were 290 permits as against 165 for the same 2 months in 1949, or an increase of 75.7 percent so far this year.

In the matter of real-estate sales, the activity of the last 5 months of 1949, when controls were lifted, was 261 sales greater than during a comparable period in 1948 when controls were on.

Our over-all rent increase on the basis of dollar average has been $6.48, according to our Bureau of Labor Statistics report.

You can imagine the relief to the mayor's office the removal of controls has been. Our setting up of a rental housing office met the issue. The employees were busy in that office for the first few weeks and then it tapered right off. It was soon apparent that by far the large majority of callers were simply shopping around.

This past week one of our largest operators voluntarily reduced the rentals in one of his largest and finest medium-priced properties $10 per apartment.

Several important apartment properties are now in the late planning stage and some are well on the way in construction. There are also many lesser undertakings in the apartment field which will help us appreciably to meet the rental issue.

The greatest relief which has come to this office is the cessation we now enjoy from evictees pleading for help. In 1948, for instance, there were 369 eviction notices and 27 writs of restitution. In 1949 the evictions had dropped to 307 and the writs of restitution had declined to 22. The great showing of decrease, however, is being noted this year. For the months of January and February of this year there were only 19 eviction notices as compared with 49 for a comparable period the year previous under control.

The outstanding feature of this entire achievement is the return to a more cordial feeling between our citizens, owners and renters.

The dire forebodings which were predicted as to happen to me have not transpired.

We are living and working under the American manner fully grateful for free private enterprise which, incidentally, is the only enterprise in our beloved country which is self-sustaining.

If this modest statement seems to you significant, in any way, you are at liberty to use it.

Very truly yours,

EARL J. GLADE,
Mayor.

NEW ORLEANS, LA., *March 28, 1950.*

DEAR SIR: I am writing you this letter in reference to the coming rent-control hearing.

We bought a piece of rental property 2 years ago and have invested $11,000 on various improvements to date, however, our OPA approved rent at present is $20 per month less than the 1943 ceiling on this same property.

I am a totally disabled veteran of World War II and have invested all our savings including the loan provisions of the NSLI and private loans in these improvements. If it were not for my retirement pay we would not be able to pay taxes and keep this property going on the present rents allowed by the Housing Expediter.

We therefore urgently request that you vote against any extension of rent control.

Any of the above facts can be substantiated by myself or the local rent office.

Sincerely,

C. L. EDWARDS,
Lieutenant (Junior Grade) USNR (retired).

Hon. HARRY P. CAIN,
Senator, State of Washington,
Washington, D. C.:

May I introduce myself? My name is Richard Lenington. I am 31 years of age, married, a veteran of World War II, with 4 years' service in the Air Force, and 22 months of overseas duty in the South Pacific. I work in the property-management department of White & Bollard, Inc., in Seattle, and live in an apartment under rent control. I am writing to you because I feel that in my job I have an excellent opportunity to see the actual workings of rent control and yet I am not a property owner and my opinions are not formed by any prospect of personal gain. I am in truth a married veteran with the usual problems and hopes of all veterans, and my job is a means of a livelihood as is any other veteran's. The facts and opinions I offer are honestly given and I sincerely believe without prejudice, except as a citizen of the United States who is an advocate of private enterprise and personal liberty.

I am against rent control, and I shall try to explain my reasons for this stand.

As a veteran I object, because I believe it works against the best interests of the veteran in spite of the stand of the VFW in favor of rent controls. In the years since the beginnig of the war low-rent housing has been taken over by people who were not required to give up their homes in the defense of our country. Rent control has enabled and has, in fact, forced the continuance of this condition. People who have their housing subsidized, which rent control in truth provides, naturally will not move nor can they move because the law of housing turn-over has been practically nullified.

Many apartments and other rental units are now occupied by people who are not normally renters. They have been able to sell their houses at high prices and by influence, exclusive listings, etc., have been able to secure low-cost rental accommodations to tide them over until the price of houses decline and they buy back at lower prices and thus make a tidy profit. The veteran who has no influence or an exclusive listing to offer has no opportunity to compete for the few vacancies that do occur. Instead, he is forced to buy the house at the high price in order to find a place to live.

I have friends that are veterans who would gladly pay a nominal increase in rent if these lucky people who would not consider such an increase as good business would again own their homes instead of renting. The same condition existed in the automobile business under OPA, when the dealers required a used car as a trade-in as a price for buying a new car. If the veteran didn't have a used car to turn in, he didn't have much chance to buy a new one.

I have people come in and tell me that they have, for example, a two-bedroom apartment which is much too large and they would like a small one in another location. Others have small ones which they would gladly give up for a larger one. With the freedom of movement, available if economic laws were allowed to function, these adjustments would take place of their own accord.

I have painters, carpenters, appliance dealers, etc., call on me every day seeking business. I have tenants who would gladly pay more rent if they could have their unit decorated or new appliances added, or the outside painted, or better service, all of which provides employment. Under rent control these two demands are not allowed to function. Millions of dollars of business are lost every year, because if you miss a year of decorating, you can never make it up. I don't know how long some buildings can go without proper upkeep, but I do know that many have eliminated several complete decoratings that would normally occur.

Landlords are not as a rule large property owners. We all know that thousands of landlords only own from one to three units. They are, in fact, in the majority. When people talk about landlords who do not suffer under rent control they certainly are not considering the small operators, but rather,

the large ones who perhaps can afford to let their buildings depreciate in order to show a profit. I have seen many houses and duplexes where the loss of 1 month's rent uses up an entire year's profit. These factors are not a primary concern of mine in this issue, however, because I believe this to be a risk of any business, but I do feel that a great injustice is being done to the small property owners when such statements are made.

My next point applies to Seattle because this is where I know the facts. I have found it necessary to advertise for as long as 3 weeks to rent a duplex that rents for $50 a month. This also applies to apartments that rent for $30 and $40 per month. The reason? They are located too close to the colored district. Certainly, I have received 10 to 30 calls per day for these units but how can anyone claim there is a housing shortage if the units are not taken because of location. The price charged for the units is not the reason because they are under rent control and the same units located elsewhere that rent for $57 rent with no trouble. When renters in this bracket object to location I cannot believe that a housing shortage exists any longer.

I further have been running as many as eight vacancies per month for brand-new duplexes which have ranges, refrigerators, de luxe Bendixes, full basements, landscaping service and complete maintenance. Admittedly, the rent of $77.50 per month is rather high, but the facilities offered are excellent. The prospective tenants for this class of rental are able to shop around and are able to be extremely choosy. After each vacancy we are forced to completely decorate the apartment, which is as it should be. The rent on these units will soon have to be lowered to under $70 to meet competition which would indicate to me that there is no longer a real shortage of housing.

If rent controls were lifted I am convinced that the so-called shortage would soon fade into oblivion. In fact, I sincerely believe that rent control in effect does a favor for property owners that they fail to appreciate. It practically eliminates turn-over and the cost of continued decorating. Good service and clean apartments are not necessary because normal competition is eliminated. It is becoming common knowledge among management men in Seattle that the honeymoon is over and those of us who have any property to rent other than the very best or extremely low-priced units are finding rental and collection problems quite prevalent.

The only justification I can see for the belief that continued rent control is necessary is fear—fear for their jobs on the part of the employees of the Housing Expediter and fear through lack of knowledge on the part of the rest of the advocates of such control. The union men in this city who are in any way affected by the operation of rental units will tell you privately that they know that the need for rent controls is past but that the policy of their parent organizations guide their public utterances and for some reason the word has come down to oppose decontrol. Therefore, they are afraid to say what they know is true.

If the administration fears that decontrol and the resulting competition in the rental business will destroy the rent scale of the "608" apartment loans, let them say so, but to talk about chaos and shortages as a pretext for continued controls is not fair to the American people. Any shortage that exists is caused by the very existence of rent control and even then is a very minor thing. This fact can be proved to anyone who cares to investigate without bias.

Senator, may I compliment you on your stand on this issue. You know the facts as well as I do and better. For my part, I have merely tried to explain the thing as I see it every day in the actual business of renting. I know that it's hard to make others believe the truth when so many powerful forces in government seem to have made up their minds that political expediency demands that they support this false cause of rent control.

The many people who will be provided with work decorating, remodeling and producing needed appliances and fixtures for our neglected rental units support you. The thinking tenants and prospective tenants who want a decent place to live or a competitive chance to find a place to live support you. Property owners who want the chance to improve their buildings and manage their businesses in the American way support you. The real-estate firms and salesmen who want to sell homes to people who should be owning their own homes support you. The veteran who would like to take the apartment vacated by such people support you, in spite of the dictates of some politically-minded clique who claim to speak for the veterans.

Socialistic-minded individuals and groups will oppose you. Big unions who for some reason unknown to me, think that stifling a large sector of prospective jobs is good business will oppose you. The administration, which is guided by political expediency and has a pyramid of interests to protect, will oppose you. Senator, believe it or not, some property owners who fear competition, renting costs, increased maintenance and decorating costs and who know that decontrol will bring back the many problems of renting units under a free economy, will offer opposition by the very fact that they will not give you active support.

I believe the cause is just. I believe in the wisdom of the people and their elected representatives. I believe that because ours is a free society and because competitive business will always bring better results than a controlled economy, your fight will be a successful one. I wish you Godspeed.

Very truly yours,

RICHARD LENINGTON,
Seattle, Wash.

Strengthening the Spiritual Values of American Democracy

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a memorandum which I have received from C. E. B. Ward of the League for the American Home, Inc. Mr. Ward is a prominent religious leader who is asking to impress upon American parents the fact that after all the American home and the American church should work inseparably in strengthening the spiritual values of our democracy.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

ALERTING THE CLERGY

Alerting the clergy is an appeal to the clergy of all faiths for a Nation-wide crusade for daily Bible reading and prayer in America's homes.

The appeal is addressed to the clergy, the spiritual heads of the church and Nation, to whom the public looks for spiritual guidance. Without whose active, expert leadership, Nation-wide observance of family devotions is hardly possible.

The appeal is based on the conviction that daily Bible reading and prayer in our homes would unlock and develop untold latent spiritual potentialities. Release the most dynamic force the world has known. Power for implanting faith in our children, reviving the church, building the character necessary for citizenship in a democracy. Power for preventing juvenile crime, divorce, immorality, irreligion. Power to create sufficient moral force to enable us as a Nation to implement our full responsibility in international leadership for creating and maintaining peace on earth.

Such stupendous, miraculous results inevitably follow the simple practice of daily Bible reading and prayer in our homes because it means reaffirmation and rebirth of obvious, fundamental principles which made us a great Nation. Truisms learned in childhood, tested through experience, common sense, psychology, and the Bible, but forgotten, buried by neglect, materialism, and trivialities.

For this conviction we suggest four obvious reasons:

Homes are the divinely created human welfare agents.

Religious instruction of the child is primarily the parents' prerogative and responsibility.

The child has the same capacity for the spiritual as for the material.

The dynamics of diminutive forces.

I. HOMES ARE THE DIVINELY CREATED HUMAN WELFARE AGENTS

God set the solitary in families

Dr. E. Stanley Jones' personal message given me for America, calls the family the most nearly perfect cooperative social unit, therefore nearest the kindom of God.

Roger W. Babson believes a father and mother of character living normally together with their children do definitely more in making a strong nation than Presidents, governors, legislators, educators, or clergymen * * * and settle the character and destiny of the child for time and eternity.

Lin Yutang asserts that the final test of any civilization is the type of husbands and wives and fathers and mothers it turns out.

A Japanese Buddhist after touring America's scenic wonders declared, "The 'it' of America is the American home."

In theory Americans give top priority rating to homes. Out of 40,000 personal interviews with representative Americans for a cross section of public opinion and for expert counsel, not a dozen dissented from our thesis concerning the supreme importance of home values. This truth was taken for granted. "You don't need to sell us on this idea" was heard everywhere.

But unanimity of opinion does not mean alert, concerted action to strengthen the place of America's homes in the modern social order. There is a lack of adequately organized public effort on behalf of right functioning home life. The overwhelming weight of public support is given to countless welfare agencies scattered over the country. For example, of $52,500,000 contributed 1 year by 122 leading American foundations to charitable, educational, and philanthropic institutions, not $1 was recorded as given to any movement definitely working for more stable home conditions.

Yet, the New York Times editorial warns, "Without homes, the primal source of all health and education, the billions of philanthropy must be powerless. Better give the home a chance than spend increasing billions trying to correct errors that might have been avoided if only 5 to 10 percent of money lavished on institutions were invested in homes."

Men create an ever-increasing number of agencies—institutions. Some are indispensable for organized community effort to meet existing social conditions. Others, sincerely—though futilely—attempt to substitute for the home's tragic failure.

Institutions reclaim—homes prevent

A clear cleavage exists between institutions and homes. Institutions heal, cure, restore, and reform; aid the sick, the poor, the neglected, and the delinquent. Institutions deal with youth, usually en masse, through agents, on a secular level, using reclamatory methods. In families, parents personally care for their own children individually from infancy—and if homes are religious, in a spiritual atmosphere—for the prevention of social ills.

Decades ago, Amiel in his journal pleaded for keeping pure the human stream of 80,000 newborn babes daily pouring sweetness into the world's corruption and defilement.

To keep clean this increasing stream of newborn innocence is better, faster, safer, cheaper, and more thrilling than later in life to wash out disease, immorality, unbelief, and crime. To homes, especially to mothers, belongs this fascinating preventive role. Upon the clergy rests a unique responsibility and opportunity for directing the execution of this high service.

It is significant that the United States Department of Labor reports "an almost complete breakdown of hitherto approved methods, painstakingly worked out" for meeting the needs of youth.

The family as God and Nature created it, when prepared for its task, seldom if ever fails in its unique service. Train up a child in the way he should go and when he is old he will not depart from it. Homes fail when inadequately equipped or when lax in performance of duty.

A notably successful home experiment

The 100 percent effectiveness of spiritually inspired homes was demonstrated over a period of 18 years in 20 specially created small-unit Marvel House homes with 2,600 teen-agers of all social strata, 30 nationalities, and 10 major religions whom Mrs. Ward mothered as her own sons. This proved J. Edgar Hoover's reiterated assertion that "The only solution for delinquency is old-fashioned homes, religion—and family prayers."

A large percentage of these youths were headed for or had actually come under the courts as so-called delinquents. Only one is known to have come afterward under court jurisdiction. All had been hazy regarding their future. Nearly all found their vocations. Few had had any previous religious training or cared to attend church. However, all participated voluntarily in our daily family prayers, and most of them became Christians.

J—— caught the spirit of work. I——, gifted as humorist, cartoonist, and actor, found his niche. F—— was groping, though fitted by nature and choice for scientific research. C—— shook off the gang whose whistle had sent him out nightly on criminal raids. M—— learned how to pray—could not sleep until he had said his prayers. Hell's Kitchen boys begged for a beating rather than be suspended from Marvel House home privileges.

Youth, from many nations in the First World War, never ceased wondering at the spirit of unity and brotherliness among themselves while their fathers and brothers were fighting each other in many lands. Marvel House homes welded them into one family, and prepared them for American citizenship.

Hundreds of letters from the boys express gratitude and attest these home values. W—— from Texas: "So you wrote me while on your back sick in bed. If I could get a letter like that to begin every day it would keep my mind off of other things that seem to bring on trouble." K—— from California: "If there were more people like you, Mrs. Ward, there would not be so much crime. If only I had taken your advice." D—— from Panama: "You treated me like a mother. I read more of the Bible now. Your sweet home led me to accept Christ." R—— (to his mother in India): "Here we are from different countries equally housed and taken care of by these noble hearts, Mr. and Mrs. Ward, God-fearing and duty-loving. We are constantly reminded of the supremacy of religion over the bustling materialism of the west." M—— from Egypt: "When I went out of the gate in the morning the weight and hardness of the city (New York) settled upon me, but when I returned at night, as soon as I came through the gate, the brightness and cheer and joy of the home drove away all the depression. My lovely days in Marvel House under your care passed too rapidly, as if they were dreams, happy dreams." S—— from Palestine: "I will always remember your splendid home. My parents are very grateful for all your kindness to me during my stay in New York." E—— from Iowa: "Who could picture a jollier family than I witnessed at dinner that last Sunday in Marvel House? It has stayed with me ever since."

Under proper home influence, boys were often so completely changed in a few days that even their own mothers did not know them.

If one consecrated mother with meager help could transform the lives of 2,600 teen-agers in spiritually inspired homes, 25,000 devoted mothers, trained for preventive service in the home field, could turn back the growing tide of America's juvenile crime.

Homes, through which every person comes into the world, are the universal welfare agencies. The perfect media for meeting the needs of youth. The church's most hopeful field of service and its inexhaustible source of supply. The yardstick of our American way of life. The place where America will hold its rendezvous with destiny.

To provide homes for neglected delinquent youth, to prepare youth for marriage and parenthood, to help parents to realize that what they do, teach, live, think, and feel in their 40,000,000 homes means more to the future of our children, to the Nation, and to the world than the total contribution of all institutions combined: This is to render a major service, because it is God's and nature's human welfare plan. And it works.

II. RELIGIOUS INSTRUCTION OF THE CHILD IS PRIMARILY PARENTS' PREROGATIVE AND RESPONSIBILITY

The church in thy house

Unless parents assume their spiritual responsibility we can scarcely expect children's feet to turn toward God or the church.

Proclaimed on page after page of Holy Writ is the spiritual accountability of parents. "The father (family priest) to the son shall make known Thy truth." "These words shall be in thine heart and thou (parents) shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house and when thou walkest by the way, and when thou liest down and when thou risest up * * * lest thou forget the Lord * * * lest He destroy thee from off the face of the earth." Godlessness and disaster inevitably follow parental neglect of this minutely detailed duty. The church's major role is to encourage and guide parents in assuming their share of spiritual care of their own children.

A statement asserts that if America ever falls it will be for lack of Godly homes. A governor warns that without religion no nation can survive and then reminds us that there are no less than 17,000,000 American children receiving absolutely no religious instruction. An estimate sufficient to shock the most complacent into prayerful action.

Home evangelism

The official statistician of a great Protestant denomination reports that in a recent year only 60,000 members were received into that denomination by confession of faith. In that year there were 9,000 ministers, 51,000 spiritual lay leaders, nearly 2,000,000 members, 1,500,000 Sunday-school scholars, a current budget of $33,000,000, property investment of $500,000,000, and half a million sermons delivered.

If not a Sunday-school lesson had been taught, or a sermon preached, but Christian parents had faithfully met their spiritual obligations to their children in the home, many more than 60,000 persons would have professed faith. A mighty influx of believers into churches of all denominations would follow the complementary functioning of church, Sunday school, and homes in a great, coordinated effort.

The Wall Street Journal states that "what America needs more than railway extension, western irrigation, low tariff, bigger cotton and wheat crops is a revival of religion. The kind that father and mother used to have * * * that counted it good business to take time for family worship each morning right in the middle of wheat harvest."

A professor of Christian education in a great American university estimates that of over 46,000,000 Protestants there are not 6 men or women giving full time to Christian parent or Christian family-life education. And that not one of our Christian colleges has set aside a single professor for full-time research and instruction in family religion.

After my address in a school devoted solely to preparing students for Christian service, the Dean announced "This is the first time in the history of this Christian school that fitness for Christian service in the family has been stressed, or even mentioned."

Religious instruction in the home—"precept upon precept, line upon line, here a little and there a little"—must not be disproportionately appraised as a mere or doubtful adjunct to Sunday school and church, but rather as the prime factor for spiritual rehabilitation. The "stone which builders rejected must become head" of our welfare structure. As the Spanish proverb has it, "An ounce of mother is worth a pound of clergy." Reinstating the mother in her sacred position at the source of life, spiritual as well as physical, lays a foundation on which later the clergy builds.

A Chicago pastor, who aggressively promoted spiritual home life, increased church attendance more than 300 percent, not by becoming three times as eloquent, but by introducing daily observance of family devotions into 90 percent of his membership. By conditioning all members of families toward religion and the church, his young people largely cut parks, movies, and Sunday games. He now preaches to three packed houses every Sunday, instead of one partially filled.

A New York City church, founded on a pledge taken by every family to read the Bible and pray daily, now ranks high in membership of that denomination in the city.

Auditorium, gallery, and basement are crowded Sunday morning and evening in a Miami church whose families are pledged to say grace at meals, read the Bible, and have prayer daily.

Native Christians of India and Burma, replying to a 10-point questionnaire regarding what most helped spiritual life of the church and the individual, invariably replied "Family prayer every day in every home."

A most hopeful and necessary service is to aid parents in 40,000,000 American homes to assume their share of spiritual responsibility for their own children. Godly homes assure successful churches and a stable democracy.

III. THE CHILD HAS THE SAME CAPACITY FOR THE SPIRITUAL AS FOR THE MATERIAL

Thy children shall be taught of the Lord

From a child Timothy knew the Scriptures. Samuel served in the Lord's house, receiving and transmitting a profound spiritual message, though he "did not yet know the Lord."

The head of the New York Psychological Center asserts that the strategic time is when the child is too young to understand but not too young to accept—wax to receive but marble to retain. That period from infancy through early childhood when, without clearly defined knowledge, it unconsciously absorbs the world around it, subconsciously pigeonholing it for later understanding and use.

The White House Conference on Children in a Democracy agreed that the emphasis should be shifted from adult education and from adolescent youth to early childhood. This is in line with modern psychology which teaches that the permanent bent of a child's life is determined before it is 2 years of age. Adolescent problems are solved in the cradle.

The second word heard from restless, fretful, crying 1-year-old baby girl was "ni pa" (nice prayer) when Grammy lovingly prayed that she might be quieted and go to sleep. That baby girl, now 10 years old, prays earnestly for Grammy's Nation-wide work for America's homes.

When Grampa visits his home, his 2-year-old grandson brings the Bible asking to hear read the story of the men in the fiery furnace. One asks: What can a 2-year-old understand about captives thrown into a furnace and a fourth walking with them, like unto the Son of God? But repeatedly exposed to spiritual truths, he slowly absorbs their meaning and comes gradually to believe in a higher power always ready to help. Thus, early spiritual influence and training preempt children for God and church. Fortify them against temptation. Persist through mature years. Give permanent shape to character. Ramify finally into all phases of our American way of life. Crystallize it into Christian civilization.

Dr. John R. Mott gave me this special message, "You can't overestimate the importance of early religious influences and training in the home. Tell America Dr. Mott said so."

Challenging a general belief that institutions of higher learning undermine faith of undergraduates, Dr. Lowell, ex-president of Harvard, told each incoming freshman class "No university can take away the religion a child gets at its mother's knees."

A village pastor observed wisely: "While formal religious guidance comes later in life through pastor, Sunday-school teacher, or friend, unconscious religious influences stem from the home. Without them in early childhood in the home, youth are not likely to seek formal religious guidance offered later by the church."

Save one generation of children and you have saved the world. Childhood represents divine timing.

IV. THE DYNAMICS OF DIMINUTIVE FORCES (DEMONSTRATED BY A WISE PROVIDENCE) THAT NO FLESH SHOULD GLORY

The atomic age has focused attention on the tiny, the little valued, the oft discarded. Mud packs for beauty. Oil of earthworm for healing. Bread mold for manufacturing penicillin. Electrons of speed. Atoms for power.

God also "hath chosen the foolish, weak, base, despised." "The widow's mite. The lad with five barley loaves and two small fishes. Moses' rod. The cruse of oil. Two agreed. One chasing a thousand, two putting ten thousand to flight. The second mile. The other cheek. Faith as a grain of mustard seed." Ideas, ideals, freedom, liberty, truth. Value of the individual, the child, the parent, the home. And the power of the much neglected practice of daily Bible reading and prayer in the home for the spiritual rehabilitation of the church and Nation.

A builder of Oak Ridge and developer of the atom estimates that 1 pound of atomic energy is equal to 1,500,000 tons of coal. So might 1 pound of preventive spiritual energy, generated in early childhood by parents in the home, be equal to 1,500,000 tons of curative, secular institutionalism applied later in life.

Victor Hugo wrote, "Nothing is so powerful as an idea whose time is come." The time is come again for all clergy and churches to promote with the utmost urgency the divine idea that spiritually inspired homes are powerful agents for reempowering the church, saving our youth and our civilization.

An appeal to entice angels

Forty million humble homes with a high potential. Multitudes of parents desperately needing aid in teaching their children to love and serve God. Myriads of innocents capable of receiving and retaining the divine imprint. Our own flesh and blood awaiting a parent's magic, spiritual touch. This is an appeal to entice angels.

Available helps

Ample family helps are published by all denominations, Bible societies, Federal Council of Churches, International Council of Religious Education, many groups and individuals.

The League for the American Home and Marvel House also are eager to aid through (1) free literature; (2) Method of Procedure for the Church (10 cents per copy), which stresses the importance in every local church of a home committee selected from its most consecrated members to study spiritual home conditions, needs and methods, formulate a practical, workable program and patiently undertake its execution, thus relating the church in a businesslike manner to the home problem; (3) speakers' bureau (expenses only); (4) conduct of conferences, forums, rallies, broadcasts, syndicated press articles, house-to-house visitation; (5) family prayer circle covenant, "Recognizing the tremendous power of a spiritually inspired home, as a member of the family prayer circle I will do my best for the spiritual welfare of my family, to inaugurate and maintain regular Bible reading and prayer in my home—daily if possible."

The Bible is in more homes today than is any other book. Most of it is written with such simplicity and clarity as to require little or no learned exposition. It is a "sword, lamp, light, guide, abideth forever." "He may run that readeth." No high I. Q. is necessary for understanding. Any father and family may worship with a psalm, parable, miracle, narrative, biography, even a single verse, and find inspiration, guidance, comfort, cheer for the day. And simple prayer produces amazing results: "Before they call I will answer, and while they are yet speaking I will hear."

This family-bible-prayer crusade involves no obligations on the part of the clergy save that imposed by conscience and accountability to God and to parishioners. Its importance merits—

1. Strong and repeated emphasis upon spiritual home values, in sermons and religious-education programing.

2. Pastoral planning to the end that some of the church's program has the specific purpose of reminding and equipping parents for their peculiar function and responsibility to create a religious home environment.

The League for the American Home, Inc., with headquarters at 1214 Carnegie Hall, New York City, invites the clergy to share with it plans which they have found successful in dealing with this problem. It also welcomes both suggestions and inquiries concerning its program.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the RECORD to include the fifth article by Mr. Frank C. Waldrop on the infiltration of communism in our country.

BIGGEST STORY
(By Frank C. Waldrop)

There is a Communist college of revolution running wide open today at 575 Sixth Avenue, New York City. It has regular classes, teachers, and textbooks. It is called the Jefferson School of Social Science.

A few days ago this writer dropped in there to see how things were getting along, and in a matter of minutes used up a $20 bill collecting samples of current publications the faithful are required to buy.

The Communist organization in the United States raises a great deal of money through the writing trade. Indeed, writing and printing are basic weapons with which the conspiracy recruits and disciplines its membership.

The word factories of the conspiracy produce books, plays, magazines, pamphlets, weekly and daily newspapers, tracts, handbills, and leaflets in an endless stream.

Most of these are manufactured in New York City, and the thinking that goes into them largely centers in that school of revolution above-mentioned.

But the production is not limited to New York alone. Nearly every large city in the United States of America has a production of its own that takes the New York manufactures and reworks them for local coloration.

Those without local plants at least have sales outlets, showing Communist thought-control at prices ranging from 2 cents an item up to $10 and $12 sets of collected works of approved writings.

Nothing happens in the worlds of art, literature, science, or government, that is allowed to pass untreated by the Communist discipline. For the masters of communism are wise in their way.

They thoroughly understand that man is a thinking animal. He cannot be trusted, left on his own, to stick to a single line of approved action. His natural instinct is to invent variations to suit himself.

And since it is, beyond everything else, well understood by the Communist masters that they cannot operate and manipulate people who think for themselves, the word factories work night and day producing Communist versions of thought in all its infinite variety.

The faithful are bound by the fundamental laws of their faith to believe nothing except these Communist interpretations of everything from jazz music to biology, from fiction to astronomy. Indeed they are to read nothing else if that can be avoided.

Thus from cradle to grave the mind of the Communist has a path laid out for it, and strictest orthodoxy is enforced.

This is extremely important to know in all your dealings with Communists. They have a rigid conception of mortal sin and they live by it. Therefore if you know their conceptions of sin you can judge pretty closely how they will behave in any set of circumstances, whether in war or in peace.

To a Communist, mortal sin is involved in any word, thought, or deed, done in violation of the science of Marxism. This science governs Stalin as surely as it governs the silliest sophomore in the Jefferson School of Social Science above-mentioned.

The spy who steals atomic secrets for Russia, the State Department officer who betrays his oath of office, the witness who refuses to answer a Senate committee, the college teacher who perverts American history, the girl in the street who carries a libelous placard, all these are bowing to the science of Marxism.

As long as that science rules them, they cannot be reached by appeals to traditional instincts of human decency.

Mr. Roosevelt and his advisers at Yalta demonstrated that all too well.

They hadn't done their home work on communism, even then after all those years of experience with the Communists here in Washington.

That is, you can only say ignorance was the source of error if you subscribe to the charitable theory that Mr. Roosevelt didn't mean to do in world politics what he had been doing in the domestic affairs of the United States of America from 1933 onward.

And that, as the public record shows, was to let the Communists, and him knowing it, move into seats of power in our Federal Government.

The science of Marxism is governed by one basic rule. It is that there is not room on earth for those who would live and let live. The law of life for those who are governed by the Communist idea is to conquer by any means at all, but conquer.

That law dominates every Communist every day in every way, no matter what he says or what he does to the seeming contrary.

The charity offered Roosevelt is that he thought he could make a deal with Stalin. He was wasting his time, if he thought that. The man with whom he would have had to deal died in 1883 and he was not interested in deals with anybody on any subject.

He was the author of this science aforesaid, and he caused trouble in the world.

It is a remarkable feat that one man has been able so to bewitch so many.

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the RECORD to include the sixth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

A man can be crazy and yet upset the world. Several have done that in recent times and the result is that mankind is upset today worse than ever before in any age.

Were these men really crazy? Well, take the case of Hitler.

In World War I, this backwoods Austrian was a low and obscure corporal of little education and less experience. Twenty years later, though, he was master of Germany. Yet that was not enough and so his behavior ran on beyond the reach of common sense and reason carrying millions with him.

How do these things happen? Nobody really knows. Was Hitler crazy? There can be no doubt. A man is crazy when he thinks and acts, no matter how ably, from a point of view that everybody else knows to be without any foundation in fact.

As Hitler demonstrated, a man can be very shrewd and potent, even though crazy. His thinking machinery may be powerful and smooth.

It just runs the wrong way.

The curious and disturbing thing is that such crazy men can exert so much influence.

How? Well we all know when we think about it that deep in the nature of mankind there lies a passion for order and the settlement of all problems that beset us in this life. This might be called the instinct of a place for everything and everything in its place.

And this instinct is at endless war with another passion even deeper in the nature of man.

That is the passion for free individual experience and self-made decisions.

The human race survives and triumphs over trouble by keeping those two passions, one for freedom and the other for order, in eternal conflict.

Neither ever completely wins and neither ever wholly loses. And so we get along.

But on occasion there comes some man who symbolizes one or the other of these instincts so powerfully that millions go along with him.

Then, if we are in an unlucky age, it turns out that the leader is not sane and calm, like George Washington, but insane and unreasonable, as with so many politicians of our time.

The crazy men of modern times have had one thing in common. They have been fascinated by this idea of order.

The short title in politics for this is socialism. Under socialism, the problems of life are all to be swept away.

Therefore, hand everything over to the Government, which will own and run the means of production impartially, and with the same impartial justice hand back the fruits to each according to his need.

Pretty? Ah, yes, if you are crazy enough to overlook the jagged edges and dismiss as mere detail the multitude of exceptions to the rule. Hitler was one who held the details unimportant. He was a good Socialist.

In fact, he founded a political movement revolutionary in character and ruthless in deed, titled "The National Socialist Party."

But Hitler's socialism, itself modeled on the socialism of another crazy man of our upset times named Benito Mussolini, was not the passion for order carried to its utmost extreme.

The last word in that line is "communism," the claim that not only can everything be placed and everybody's needs be met with full satisfaction to all, but that even the Government itself can be "withered away."

The whole of life will then be automatic, self-satisfying, and the whole world peaceable, prosperous, and populous.

Who could possibly fall for it?

Well, on May 5, 1818, there was born a son, christened Karl Heinrich Marx, to a lawyer of Trier, Germany.

Karl Heinrich Marx grew up to believe that communism could be impressed upon our many-talented race. But only, he decided, after a few preliminaries were out of the way.

These preliminaries he made clear and simple, as follows:

"You will have to go through 15, 20 or 50 years of civil wars and international conflicts, not only to change existing conditions, but also to change yourselves and to make yourselves capable of wielding political power."

Thus a man could calmly suggest that the world be plunged into 50 years of war on the mere off chance that he could be right about the profits that might fall in an age unborn.

His malignant influence survived his life and ultimately penetrated the Government of the United States itself.

Biggest Story

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the RECORD to include the seventh article by Mr. Frank C. Waldrop on the infiltration of communism in our country.

BIGGEST STORY

(By Frank C. Waldrop)

Government is not mere advice, said George Washington. It is authority with power to enforce its laws. It is obvious, therefore, that people who are going to be governed by others had better take care to see what the laws are, who will enforce them, and how.

Since time began there have been among us some who cared more for the exercise of authority and the enforcement of their own brands of law, than for anything else.

And when such people are out of authority they may well promise the whole earth and all that's in it to whoever will give them authority.

Americans who have been awake and alert these 20 years past know something about promise and performance in politics. We have known a man to run for President in 1932 promising peace less government, and lower taxes, ideal notions in any age. But what was the performance?

Karl Heinrich Marx, the lawyer's son from Trier in Germany, went up to Berlin in the fall of 1838 as a university student. Europe was flowering at that moment into a time of light and progress.

Just a little while before, a revolution had gone off in America, organized by a band of colonists who had asked no more than the right to look after themselves under the general rule of the least government is the best government.

That American Revolution, the only one in history that ever worked out according to plan, had been followed by another in France, so fierce and bloody as to horrify the world.

Why? Because the French revolutionists were not satisfied with the idea of least government. They wanted to make all obedient to a rigid rule of state.

Karl Marx, as many another after him, was sure that the French Revolution should have worked. The flaw was not in the idea but in the acts.

The oldest mantrap of philosophy is that of saying an idea is "right in theory but just lacked in execution." If a theory is right, why doesn't it work under test?

Anyhow, Marx was a son of the well-to-do, of respected parentage and not suffering from the lack of material things, when he landed in Berlin. He chose philosophy as his career.

And out of philosophy he moved to politics.

His philosophy was bunk, as see below, and for that matter his politics got him no place either. But just the same Marx died con-

vinced that he alone possessed the keys to the kingdom of heaven on earth, thusly:

1. Man is an animal, nothing more. He came from nowhere, he goes nowhere. Religion, therefore, is a fraud conceived by some men to deceive others.

Just how this remarkable fraud has survived so many human follies and why it comes back after every attempt of mankind to escape it, no Marxist has made clear to this day.

2. Other frauds listed by Marx were the home and family, the schools, governments, businesses, and industries of the world. Like religion, all these really are "agin" nature and do more harm than good.

In short, the world as is, can be called a mere jungle, calmed by no hope of self-improvement, because it is all a conspiracy of the rich against the poor.

3. Therefore, since the poor are many and the rich are few, the obvious thing is for the poor to rise against the rich through force and violence, and rule the world.

But this, of course, would be a complicated business.

So in order for the theory to work right, the poor must surrender their political education, direction and action, to a single, small but carefully trained, officer corps.

This command force would, of course, have to do some nasty things but as soon as the bloody business could be ended the officer corps would readily and freely commit harakiri.

This intermediate period of getting things organized, Marx called "the dictatorship of the proletariat." And the officer corps we know today as the Communist organizations of the world, all commanded from a single headquarters in an ancient palace of Moscow, Russia, called the Kremlin.

Now, anybody looking in a common-sense way at the Marxist analysis of the world, can see its imbecilities and shortcomings. And Europe, in the nineteenth century with the horrible example of the French Revolution to consider, was particularly having none of it.

Marx died embittered, lonely and frustrated. He was buried in London, where he had spent most of his adult life calling for the revolution that would not come.

His early followers and believers were as futile as he. Had it not been for the follies of the German general staff and two residents of the United States of America, Marxism would not be the issue in the world it is today.

Control of Forest Insect Pests

EXTENSION OF REMARKS
OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. BARRETT of Wyoming. Mr. Speaker, when the conference report on the urgent deficiency bill was before the House, I called attention to the fact that spruce bark beetles were destroying thousands of acres of fine spruce stands in the Roosevelt National Forest in northern Colorado and in the Medicine Bow National Forest in Wyoming. I called attention also to the fact that the mountain pine beetle was attacking the lodgepole pine in the Jackson Hole area as well as in Idaho and would destroy much of the scenic beauty of that area.

I am hoping that the deficiency committee will report out an item on the next deficiency bill to provide funds to carry on the fight on this infestation in time for work this spring. Under unanimous consent, Mr. Speaker, I insert with my remarks an editorial by Mr. Bob Cruzen, the editor of the Laramie Boomerang, in the form of a letter to Hon. JOHN TABER on this subject matter. I may say, Mr. Speaker, that Mr. Cruzen is one of the best-informed writers on this matter:

HOUSE URGED TO APPROPRIATE $4,500,000 FOR PEST CONTROL

(By Bob Cruzen)

Representative JOHN TABER,
Member of the House Appropriations Committee, House of Representatives, Washington, D. C.

DEAR MR. TABER: I am writing you an open letter in regard to amendment 13 to H. R. 7207, a bill making appropriations to supply urgent deficiencies in certain appropriations for the fiscal year ending June 30, 1950, and for other purposes.

This amendment, which pertains to the control of forest-insect pests, was reported in disagreement by your committee of conference in House Report 17941.

ACTION IS CHALLENGED

As you will recall, Representative CLARENCE CANNON, Democrat, of Missouri, made public a statement in lieu of a report on March 20, 1950. It was at this time, that Members of the House representing States in the Rocky Mountain and far West areas, challenging the actions of your group in reducing the amount of appropriations needed to fight forest pests which are now destroying thousands of acres of our best timber.

Representative FRANK BARRETT, Republican, of Wyoming, pointed out to your group that the conference report indicates that nothing has been appropriated for the protection of pine and spruce beetle infestation in Wyoming and Colorado.

As I understand it, your committee has begun work in preparation for the next deficiency bill and at a later date our western Representatives will again be heard on this issue. However, forest officials and entomology experts in this region agree with Representative SANBORN of Idaho who told your committee that "there is just one time to treat these beetles, and that is in the spring of the year."

Mr. SANBORN, in commenting on funds for this project, added that "the sum should be adequate to take care of the total operation," and pointed out that "it is absolutely worthless to do a partial operation."

WASTED FUNDS

He further stated that "if the sum that is being suggested in this amendment, which is only $750,000, were scattered out over the various projects that need attention, the money would be wasted." "However," he concluded, "if an adequate sum of money were appropriated in this amendment, then the situation would be met and this valuable timber could be saved which otherwise will be lost."

GRAVE CONCERN

The fact that your conference committee has seen fit to eliminate desperately needed monies to fight beetle infestation in the western mountains, is cause for the gravest concern here in the Rocky Mountain region. The facts presented to your group by Representatives HILL and ASPINALL of Colorado, Representative BARRETT of Wyoming, Representatives SANBORN and WHITE of Idaho, Representative D'EWART of Montana, Representative CASE of South Dakota, Representative HOLMES of Washington, Representative MANSFIELD of Montana, and Representative ANGELL of Oregon are far from exaggerated.

Authorities on the subject of beetle infestation have told us that this is one of the worst epidemics in the history of the West. After viewing the damage done by the spruce beetle in the White River and Routt National Forests of northern Colorado, it is increasingly apparent to residents of southern Wyoming that our lush forests are in immediate danger of becoming seriously infested.

Representative CANNON's statement that the deficiency bill "is intended to carry only urgent deficiencies appropriations where extreme need exists," leads me to believe that your committee has ignored the facts presented by your congressional Representatives. How much greater can a need be before action is forthcoming?

IMPORTANCE OF FOREST

Our forest lands are of vital importance to the West. We depend upon the forest for many things. Timber for industry, timber to protect wildlife, and timber to provide recreation.

Mr. ASPINALL, Representative from Colorado, was not only speaking for the residents of his State but for the entire region when he told Representative CANNON that "I especially support the proposed expenditure of $4,500,000 in addition to the amount now available which is needed presently in five of the Western States."

In this country, Mr. TABER, we are extremely concerned over the current beetle epidemics.

Because of congressional apathy, 3,000,000,000 feet of board measure—Englemann spruce and lodgepole pine—have been killed to date in the forests of northern Colorado. The value of this stumpage alone has been estimated at $7,000,000. At the present time, spruce timber along the Wyoming-Colorado border is threatened in the amount of $11,040,000. The total of all timber now threatened in our area is valued at $490,200,000. This, of course, represents stumpage alone and does not include the loss in salaries, wages, and services of the lumber industry if this timber were manufactured into lumber and other forest products.

Is it any wonder, then, that peoples of the West take a dim view of penny-pinching congressional committees which balk at spending $4,500,000 to save many times that amount of valuable timber?

TIME IS NOW

The time to start this war on beetles is now—this spring. In fact, the whole program should have been launched several years ago. The Forest Service has been waging a continuous war on insects but it takes money to get the job done. This is not the time to criticize the Bureau of Entomology for inefficiency. It is a time for immediate and drastic action.

If the Bureau was at fault, as some claim, then it should be held responsible. But let's get this project under way now and take care of the Bureau later.

Regarding our immediate problems in northern Colorado and southern Wyoming, the regional forest office has stated:

"If any control work is to be done, this year is the time to start. There will be need for control work for two more years in addition to 1950."

As I understand it, your committee will pass a verdict on the required $4,500,000 forest-pest control appropriations bill early next month. In the interests of the five Western States, I earnestly request that your committee give extremely serious consideration to the above-mentioned sum.

Sincerely,

R. B. CRUZEN,
Managing Editor, Laramie Republican-Boomerang.

LARAMIE, WYO.

Brannan Plan Discriminatory

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. HOPE. Mr. Speaker, there is a widespread feeling throughout the country to the effect that, if the Brannan plan is as good as its sponsors say it is, it should be expanded. A good many people apparently feel that in its present limited form the plan is discriminatory. These people feel there should be a universal Brannan plan.

As an example of this grass-roots demand for a nondiscriminatory Brannan plan I desire to call attention to the enclosed letter to the editor which was published in a recent edition of the Hutchinson (Kans.) News Herald. Under leave the extend my remarks, it is included herewith:

HOTEL BRANNAN

The Brannan farm plan does not go far enough. Let's apply it to other industries. Let's have a Brannan beer joint where we can get a large mug of beer for a nickel. We need a Brannan hotel where we can get an old-fashioned square meal for 15 cents. And we should have a Brannan barber shop where we can get a shave and haircut for two bits. Then let the Government send the beer dealer, the barber, and the boarding-house lady a subsidy check for the balance. John can pay the bill. John Q. Taxpayer has lots of money. He likes it, I guess. At least, he voted for much of the New Deal gimme stuff.

MILO C. BILYEN.

LIBERAL.

Contribution of Capital to American Standards of Living

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 1 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial entitled "Capital Punishment," from the April issue of the magazine Partners. The editorial very effectively expresses the idea that American workers enjoy an improved standard of living, not only because of organized labor's long and patient crusade, but also because of the incentives of American capitalism, that is to say, free enterprise.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAPITAL PUNISHMENT

Many a labor leader, sincere and otherwise, would lead us to believe that everything the American worker enjoys today has come to him solely as a result of the rise of organized labor, and that each and every gain has been registered in the face of stubborn resistance on the part of organized capital.

Such a presentation as this is more rash than rational, and to fall for it is to carry forward in our minds a badly distorted picture of the actual facts. This none of us can very well afford to do in these days when the survival of our American economy depends upon mutual understanding and harmony between the partners of industry—the worker and his employer.

Certainly the unions have played a prominent part in elevating the social and economic status of the worker—particularly the organized worker. But to run away with the notion that the unions have managed the job single-handed is to labor under a decidedly false impression.

CAPITAL'S CONTRIBUTION

The standard of living of American labor has steadily increased with the years, first of all, because of the progress of American industry—because of capital investment in technology, plant capacity, and marketing facilities. It was the development of the mass-production technique by capitalized industry which, first of all, enabled management to pay labor higher real wages. With mass production of goods came increased purchasing power, to the worker in particular—in the form of more dollars with which to acquire lower-priced commodities.

Here, then, is a highly significant contribution to the economic welfare of the working man—and one which enriched his home life, not as a result of militant unionism, but rather as the free result of capitalistic vision, ingenuity and enterprise. No union, we should remind ourselves, played any part in the development by Henry Ford of a low-priced automobile—nor was any demand of labor behind his historic move to establish a $5-a-day minimum wage for his workers at a time when the average wage for the industry was somewhere around $1.50 per day. As a matter of record, the vision of Ford, the capitalist, exceeded the vision of any of the labor leaders of his day—for, as a pioneer mass producer of automobiles, he saw in his workers, not only so many production hands, but likewise so many potential customers for his product.

Thus, here as elsewhere, before the cart must go the horse—and before we strike off a medal to pin on the breast of organized labor, we must strike off one of equal size and brilliance to pin on the breast of its partner in bettering the lot of the worker. Certainly it is a foregone conclusion that, lacking the benefit of mass-production machinery and technique, there wouldn't be enough cars produced to reach the members of Walter Reuther's auto workers' union, no matter how loudly Walter might shout and pound the table at contract-making time. Nor is it likely that Phil Murray, without the facilities and know-how of the steel companies, would be able to turn out enough metal—for all his million members—to supply the mousetrap industry.

THE CASE OF SHORTER HOURS

What is true of increased purchasing power in the hands of the workers is likewise true of today's gift to them of increased leisure hours in which to rest from toil and exert that purchasing power. Too many labor leaders would create the impression that it was they and they alone who were responsible for the 8-hour day and the now generally accepted 5-day week.

But here again they spout just so much hog wash. For no labor leader, no matter how powerful, is capable of striking pay days from the calender—unless his particular industry is already equipped with labor-saving machinery efficient enough to pay for lost hours of production. Shorter working hours are the direct result of longer machines, and here again chief thanks must go to capital and the management of industry for having provided, through their own ingenuity and incentives, the sound economic wherewithal. Minus the intricate mechanization of the modern shoemaking industry, all the cobblers in the land banded together in a single union couldn't shorten their hours of effort without at the same time shortening their livelihood.

All along the line we find the same situation—labor and management combining to lighten their mutual burden and to provide for their mutual gain. It is at no point a solo performance; everywhere it is a case of partners at work. Capital, through the agency of management, provides the ingenuity, the know-how, the savvy to create labor-saving devices; labor, through the agency of its unions, steps in to claim a fair share of the saving for itself. And from labor, by means of suggestion plans and promotions, the ingenuity and know-how which resides within its ranks is handed up to management in a never-ending stream.

That is the true picture of American industrial development—and it is not the picture of a monopoly.

THE HUMAN SIDE OF CAPITAL

Indeed, we should be taking a shallow view of things were we to attribute the gains of the American workingman solely to the efforts of his union leaders. Worse, we should be lacking in what by this time should be common knowledge. For the record is replete with the names of businessmen and firms whose contributions to the welfare of the workingman have both antedated and outrun all union demand:

The Endicott Johnson Shoe Co. didn't improve working conditions and provide for their workers' security as a result of union pressure. Nor did James F. Lincoln, president of Cleveland's Lincoln Electric Co., develop his spectacular system of incentives because some labor leader stood over his head with an ax. The Bettendorfs, of Iowa, didn't open their coffers to their workers, when times got tough during the depression, because some union presented them with an ultimatum. Nor did Kohler, of Kohler, Wis., build a workers' paradise in response to union demand. Nor did Hershey, the chocolate king. Nor did Hormel, the meat packer. Nor did any of a tremendously long list of progressive industrialists advance the cause of their workers because union leaders shook a stick at them. In each and every instance, the impulse sprang from the heart; and in each and every instance, the result was a well-thought-out experiment in industrial partnership.

THE MEANING OF CAPITAL PUNISHMENT

Unions in this country have grown strong, and this is as it should be. But this fact gives them no license to let their strength run away with them. Along with numerical strength, they must grow in moral and intellectual stature, as well. They must learn to give credit where credit is due and they must learn to appreciate that, being in themselves an expression of the spirit of free enterprise, they can exist only in a climate of free enterprise.

I doubt that even the meanest union leader of non-Communist stripe would wish upon his membership the political conditions which in Socialist and Communist countries make of all unionism a farce. But the trouble is, all too many union leaders, knowingly or not, are paving the way for a new order wherein the tyrants of socialism will rule the roost. This being true, it is essential that each and every American labor leader who is in any way true to his calling should somehow be made to appreciate the disastrous effect of this unending harassment of capital by union word and deed. Labor's organizations, from the bottom to the top, must learn before it is too late that the

capitalistic system of free enterprise is the only system in the world where unionism itself, as such, can remain free and that for their own good, if for no other, this unfair punishment of capital must cease.

The labor leader who preaches hatred against the employer, withholds the true picture of capital management's partnership with labor and promotes nation-wide strikes and slow-downs—chiefly for the purpose of asserting his own leadership—is a menace to the cause he espouses and a cruel traitor to his membership. For his actions in effect contribute to social conditions which can spell the end of free unionism.

Unreasonable demands, vengeful strikes and slow-downs and monopolistic pressures in general add up to mortal economic sin—and here, as elsewhere, the wages of sin is death.

In a Socialist state, free unionism soon perishes on the scaffold of social planning. Thus, also upon organized labor itself the final effect of unfair punishment of capital is capital punishment.

Frankly yours,

MAURICE R. FRANKS,
Editor.

Why Farmers Should Vote in the Primary

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. JENISON. Mr. Speaker, it is common knowledge that one of the greatest threats to the survival of Government by the people, as Americans know it, is the unfortunate apathy of too many of our citizens toward the responsibilities of citizenship. This is particularly apparent on election day, and notably so in primary elections when the people themselves have an opportunity to choose the candidates for public office.

It is evident that something must be done to get a higher percentage of the voters to accept their responsibility by going to the polls on every election day. One organization trying to do something constructive about this problem is the Illinois Agricultural Association. Through the various county farm bureaus in its organization, the association promoted an essay contest among school pupils to stimulate interest particularly in the importance of voting in the primary election recently held in Illinois. This program met with success in a large number of counties and notably so in Jasper County. There the Jasper County Farm Bureau had a large number of essays offered, and in addition, Harry Shumard presented an original cartoon which was published in the Mentor-Democrat, Jasper County newspaper published at Newton.

Winner of first place, most remarkably, was an eighth-grade student. Marilyn Ragsdale, a pupil at Wheeler School, of which Delbert Birch is principal, wrote an essay revealing such a mature appreciation of the land in which she lives that, under permission granted to extend my remarks, I am including it in the CONGRESSIONAL RECORD. Young Miss Ragsdale is the daughter of Sam Ragsdale, farmer and rural mail carrier of Wheeler. Her prize-winning essay, as published in the Mentor-Democrat and in the Newton Press, follows:

WHY FARMERS SHOULD VOTE IN THE PRIMARY
(By Marilyn Ragsdale of Wheeler School, eighth grade)

The aim of the primary election is to give us, the people of the United States of America, the chance to nominate for public office, the man we think will fill the position best. The primary election has not proved a remedy for all the ills of party politics, but it offers an opportunity to defeat the unfit candidate or to nominate one who is better fitted.

Our American men have fought and died so that the American people might have freedom of the polls. Therefore, we should take advantage of this and vote. The farmer, who feeds and clothes the world, is just as good as the politician, the Senator, and the Congressman. Let your vote count for the man you want.

In Jasper County, every man is guided only by his own mind, his own conscience, and his own sense of what is right. He goes to the polls, not because one candidate offers $10 for his vote, but because he knows what he wants, and he intends to do something about it. If you and you continue with your indifference toward governmental affairs, soon these elections will be run by one party boss, and by something like dictatorship, simply because you, the voters, refuse to respond to your duty and obligation.

A man in our community, whom we shall call Farmer Brown, is one of our foremost citizens. He is a school director and a member of the church board, a land owner, and a taxpayer. However, when primary election rolls around, Farmer Brown can be found in his fields or barnyard, refusing to go and cast his ballot. "All foolishness," he calls it. He neither knows nor cares of the results, because to him it is "all foolishness." Foolishness. Is it so foolish for the people to want to elect the officials to govern their country, State, county, and township? No, it is not. Farmer Brown cannot truthfully be called a good citizen until he has fulfilled his obligation to his country.

It doesn't take much gasoline, sweat, and shoe leather to go to your nearest town house or community center and cast your ballot, and you will only be doing yourself a favor, and your duty to our country.

Farmers, this is a challenge to you. Your voice is the voice of America. Let it sound forth for what you want and stand for.

Go to the polls this April 11. Let your conscience be your guide and vote your own choice; yes, vote.

As you go, bear in mind this poem:

I am only one,
But, I am one;
I cannot do everything,
But I can do something.
What I can do,
I ought to do,
And what I ought to do,
By the grace of God,
I will do.

Program of Army Chemical Corps

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. SIKES. Mr. Speaker, one of the Nation's most distinguished soldiers, now head of the great and important Army Chemical Corps, recently made an interesting speech containing much valuable information about the work of that organization and its strategic place in the country's defenses.

I urge its careful reading by the Members of the Congress. It follows:

ADDRESS BY MAJ. GEN. ANTHONY C. MCAULIFFE, CHIEF, ARMY CHEMICAL CORPS, AT THE ONE HUNDRED AND SEVENTEENTH ANNUAL MEETING OF THE AMERICAN CHEMICAL SOCIETY, DETROIT, MICH., APRIL 17, 1950

Mr. Chairman, distinguished guests, gentlemen, in gathering here this evening, we are paying tribute to the extremely fine spirit of cooperation which has existed between the American Chemical Society and the Chemical Corps since its foundation.

I welcome this opportunity to meet such a distinguished group of scientists.

Dr. Volwiler suggested that my talk be sufficiently broad to appeal to the interests of you gentlemen representing every phase of the chemical industry.

Since I am a newcomer to this field, I would like to confine my remarks to an examination of the over-all program of the Chemical Corps. I will try to give you a comprehensive picture of our mission, its technical objectives, the goals of our mobilization-planning program, and the extent of civilian assistance in the so-called unconventional fields of warfare.

Biological, radiological, and toxic chemical warfare are usually considered together because they are all aspects of unconventional warfare. They also have many common characteristics.

Incendiaries rained fire and destruction on the Nazis and the Japs. Flame-throwers smoked out the enemy wherever he was hidden. Smoke screens effectively concealed our beachhead operations, ports, river crossings, and troop concentrations on all battlefronts of the world. These weapons are all subject to further improvement.

Biological and radiological agents as weapons are as yet unproved in warfare. Evidence indicates that other nations have experimented with new and untried forms of toxic chemical warfare.

We cannot disregard, therefore, the potentialities in these fields. The United States must be adequately equipped to carry on this type of warfare, if the threats to its security come out into the open. And what are these threats?

Events, since our final victory in the recent war, indicate that the road to permanent peace is no longer paved with good intentions. A few years ago, we thought that international harmony, peace, and good will would be reestablished throughout the world.

When, and if, the cold war becomes hot, we must be prepared to retaliate with everything at our disposal.

But the military concept of annihilating the enemy's military might and destroying his industrial potential has radically changed since the end of the recent conflict. The speed of our scientific progress demanded that.

We in the Chemical Corps believe that the weapons developed or now being developed by us provide an opportunity, at the smallest logistical cost, to reduce a potential enemy's will to resist and thereby obtain victory without the destruction of his economy.

We have no quarrel with the peoples of a nation. We have no desire to destroy their national life or their economy.

But we do want the members of the community of nations to be peaceful members of that community.

I do not believe that the United States would be the first nation to use the weapons we have been talking about. Our use of them would be purely retaliatory. Events of the past war proved that our preparations for

gas warfare, in all probability, deterred the enemy from their use.

So, let us be ready to defend ourselves—our country, our homes, our industries, and our democratic way of life—with all the weapons at our disposal.

Do not forget, however, that during the recent conflict we had time to prepare. We won't have time again on our side.

If, despite the grace of the Almighty, the cold war should become hot, we must be prepared to combat whatever weapons are directed against us.

And that is the reason for our unique mission in the unconventional fields of warfare.

MISSION AND OBJECTIVES

The mission of the corps can be explained in very few words. Our over-all mission is to study and to investigate all phases of chemical and biological warfare and radiological defense. We are responsible for providing technical supervision of Army-wide training in these fields. We are also responsible for developing, manufacturing, procuring, and supplying matériel and equipment pertaining to these types of warfare, except for any function which has been assigned to other agencies.

However, it is the technical objectives in each of these fields which we are primarily concerned with this evening. Now what are these objectives? I will clarify each one as we go along.

Our technical objectives are assigned by the Research and Development Board and the General Staff of the Department of the Army. This Board coordinates the over-all projects of the Department of Defense, and assigns a priority to each objective.

Within the over-all program of research and development labeled A, B, C—atomic, biological, and chemical—warfare, the corps is developing agents, munitions, materials, and techniques as defense against these highly toxicological forms of warfare. Since these fields are similar in many respects, the efforts in each field are closely integrated in the interests of economy and efficiency. Our primary aim is to develop materials and techniques which are common to all fields whenever possible.

RADIOLOGICAL

In the field of atomic warfare, the Chemical Corps has primary responsibility for developing defensive measures against the use of atomic weapons and radioactive materials. These could be used by a potential enemy to produce death or casualties in man, animals, or plants, or to render areas uninhabitable through the use of such weapons.

The Corps has undertaken three separate research and development programs in this field. First, the development of chemical means of detection and measuring radiation; second, the development of decontamination procedures for use in case of atomic attack; and third, development of individual and collective means of protection against atomic attack.

Security regulations, however, prevent a more extended discussion of this particular field. I might mention in passing, that the Corps is offering extensive training in radiological defense to all members of the Department of Defense team. The recent disclosure that atomic energy can be released by other nations has placed increasing importance upon this part of our program.

BIOLOGICAL

In the field of biological warfare, or BW as it is popularly known, the Corps has been assigned full responsibility within the Department of Defense, for all research and development projects.

Our primary objective is to investigate all methods and equipment which can be used by a potential enemy, of living organisms, toxic biological products, and chemical-plant regulators to produce death or casualties in man, animals, or plants.

Our work in this field consists of research and development on new and improved methods of analysis and detection, decontamination procedures, and the protection of personnel, animals, and plants against these agents.

At the present time, educational institutions and scientific research centers are also conducting research in this field under special contracts with us. In addition, the Air Force and the Navy are continuing their war-time collaboration with us in these fields.

The United States Public Health Service, the Department of Agriculture, and such national organizations as the Red Cross and others maintain close watch on public health statistics which may prove of value in the study of civilian defense aspects of BW.

Now, what are we accomplishing under this program?

Basically, our research includes identifying every type of disease-producing germs which could possibly be used to spread disease and infection among the civilian population. This also includes those organisms which could be used to deplete our food stocks and meat supply.

In this connection, I would like to point out that many of the popular articles appearing on the subject of BW, have been inaccurate, misleading, and highly sensational.

One article, for example, states that 1 ounce of a particular biological material could kill 200,000,000 persons.

Such fantastic statements have no factual basis in the light of present knowledge. It is not even certain that an epidemic of significant proportions could be produced at will.

Despite these conjectures, certain very basic steps have been developed in civilian defense measures for the control of natural outbreaks of disease and the protection of our crops and animals.

These measures include the prompt identification of BW agents, adequate public-health measures, and proper sanitation control procedures to limit the spread of such agents. Prompt medical treatment should minimize their effects. Now what does this mean? Let me illustrate by an example.

Many of you may recall that in the spring of 1947 a Mexican visiting New York City died in Bellevue Hospital of smallpox. Nine more cases and two more deaths from this same disease were reported shortly thereafter..

The public health authorities of this sprawling metropolitan city of over 11,000,000 persons took immediate precautionary steps to check and prevent further spread of this disease. Within a month more than 6,000,000 persons received smallpox vaccination. As you can easily surmise, the disease was promptly checked.

Here is a concrete example of coordinated action on the part of public health authorities and the military which supplied much of the serum. In wartime such an outbreak could be the result of sabotage.

Lack of preparedness in this field could cause entire cities to be laid low. To be prepared for any eventuality is, therefore, one of the primary objectives of this program.

By contrast, let us see what measures have been developed for the protection of our food and meat supply.

Extensive research has been carried on in these two fields since disease-producing organisms could be easily spread by sabotage. To counteract this possibility we have studied the effects of thousands of biological and chemical agents. We have recorded their effects on the growth of plants, on checking obnoxious diseases, and on increasing the productivity of the soil.

With respect to our meat supply, a joint United States-Canadian commission has achieved significant results in the control of livestock diseases of importance to both countries. We have established the immunity of livestock to certain biological agents. Great advancement has also been made in the treatment of certain infectious diseases of cattle.

These measures, as you can see, are all defensive. They must be made in advance of any possible use of biological warfare agents by a potential enemy. It is only in the continuation of our research in this field that an adequate defense against their use can be assured.

CHEMICAL

In the field of chemical warfare, our objectives are to carry on research and development on new and improved methods and techniques of toxic and nontoxic chemical warfare.

It is the considered opinion of many experts that toxic warfare was not employed by the enemy, during World War II, largely because we were so well prepared to defend ourselves against its use, and to retaliate.

Let us not overlook the significance of the Axis' failure to use this form of warfare in spite of their careful preparations.

During the Nuremburg War Crimes Trials, Admiral Speer, the German war production expert, testified that two of the newer German war gases were still being produced as late as November 1944. The Japanese ceased war gas production in September 1944, but only because they relied upon the Allied pledge not to initiate gas warfare.

There is no doubt in my mind that the Axis knew our capacity for meeting any challenge in the chemical warfare field—and refused to accept the gauntlet. That we were so well prepared is due in large part to the supreme industrial efforts of the chemical industry which you gentlemen represent.

With respect to further work in this field since World War II, it is a well-known fact that many German scientific experts on toxic chemical warfare are being exploited by Soviet Russia.

It must be assumed, therefore, that we are not the sole possessors of the offensive and defensive secrets of the new nerve gases.

Our research in this field is directed toward keeping us abreast of the latest developments. We are seeking to perfect all methods and techniques for the detection, decontamination, and the protection of personnel and animals from these new agents.

The incendiaries, flame throwers, and screening smokes so widely used in smashing the enemy on all battlefronts of the world, were often vital in the successful prosecution of the war. The sterling contributions of your industrial organizations materially aided the corps in accomplishing its world-wide mission, and are now part of the corps' official history.

We are continuing to make considerable progress in the development of new materials and techniques of nontoxic chemical warfare.

Now how do we publicize the findings of our scientists in these fields?

Chemical Corps policy permits our scientists maximum freedom in the publication of their research findings within the limits of military security. They are encouraged to present abstracts of their work to the scientific world. Their talks and papers are presented before military, scientific, and educational bodies, associations, and other interested groups.

Their articles appear in the leading military, scientific, and industrial publications. All these groups thereby collaborate in disseminating, for the benefit of the entire Nation, as well as the scientific world in general, the combined results of military, scientific, and industrial research. To date, for instance, over 200 papers on biological warfare alone, have been cleared for publication.

EVALUATION OF RESEARCH AND DEVELOPMENT PROGRAM

This examination of our mission and the technical objectives of our research and development program would not be complete unless we evaluated it.

I could shoot off a lot of words about how important the program is to us. But it would not mean much to you gentlemen, who have heavy investments in industry, unless we spoke in terms of dollars and cents.

Since VJ-day, we have spent increasing sums on this program. In 1946, for instance, the first year following wartime cutbacks in this field, we obligated more than $6,000,000, or somewhat over 10 percent of the corps' total budget.

From 1947 to 1949, these obligations rose to more than 33 percent of our total budget. In this fiscal year of 1950, we plan on obligating over 39 percent, or more than $12,000,000 of our total appropriations to carry out the corps' research and development responsibilities.

A substantial portion of these obligations is, as you gentlemen know, obligated under various types of research contract with your research institutions and industrial organizations.

You can visualize the tremendous importance we place on your continued collaboration in assisting the corps to meet its objectives. But research and development alone would be worthless unless coordinated with our industrial and mobilization planning responsibilities.

INDUSTRIAL MOBILIZATION

Industrial mobilization became a separate program under the jurisdiction of the Munitions Board by the provisions of the National Security Act of 1947.

The program is primarily concerned with the allocation of industrial capacity on a priority basis, to all members of the Department of Defense Team. Operating Annex No. 47 of the Munitions Board Manual entitled, "Allocation of Private Industrial Capacity for Procurement Planning of the Armed Services," governs such allocation.

These documents have been given wide distribution by the Munitions Board and I am sure that you gentlemen are familiar with them. Comprehensive policies established by the Board, are set forth to govern every phase of industrial mobilization and procurement planning.

These policies govern the distribution of industrial capacity, when it is converted to war production, among the several military services. Through advanced planning, the Board hopes to assure the most effective utilization of the Nation's resources in an emergency.

The outstanding features of the plan are the standardization of specifications and the allocation of purchase authority of technical equipment and end items of common use. These are to be procured by a single agency, or purchasing authority.

In other words, the Chemical Corps would be authorized to procure all items for chemical warfare under these regulations and policies. Such procurement authority would include procurement of chemical warfare material for all branches of the Army, the Navy, and the Air Force.

The industrial mobilization plan of the corps seeks to assure for the corps certain definite levels of industrial production capacity to meet the corps' requirements for any future M-day.

Our limited arsenal production will enable us to carry the ball until industry converts to war production. Industry then carries the ball augmenting arsenal production in accordance with our procurement planning program.

PROCUREMENT PLANNING

Our procurement planning program has been set up to meet the corps' obligations for definite levels of supply and equipment. These will be required for the execution of the corps' responsibility in the over-all strategic plan of the Joint Chiefs of Staff. Requirements are computed on the troop basis for mobilization.

It must be pointed out, however, that the Munitions Board is not making any definite allocations of private industrial capacity at the present time. It is, therefore, up to the technical services and allied industries to get together in preparing joint plans based on past experiences and procedures in the solution of common problems.

Now what does this mean to the industries which you gentlemen represent? First, let us examine the various categories set up by the Board; and secondly, what part of the Corps' budget is being set aside to carry out this planning?

The entire field of industrial mobilization and procurement planning is broken down by the Munitions Board into four main categories. These are (1) maintenance of standby plants; (2) acquisition and maintenance of machine tools and manufacturing equipment which are difficult to obtain in an emergency; (3) planning studies and preparedness measures undertaken by industry, through special contracts, to develop, or preserve industrial know-how; and (4) planning within the Department of the Army. The cataloging and standardization of spare parts program is also considered an integral part of the foregoing.

The Chemical Corps has expended increasing sums on its part of the over-all program which was established as a separate project, under its own appropriation, in 1947.

In 1948 for instance, we obligated almost one and three-quarters million dollars; in 1949, more than two million, seven hundred thousand. For this fiscal year 1950, we have an estimated obligation of over $4,000,000 to carry out the corps' procurement planning responsibilities.

ACCOMPLISHMENTS

Now what are our accomplishments to date? I will touch on only two of the main categories to give you some idea of our over-all progress in the plan: Categories 2 and 3.

Under category 2, we are holding in reserve machine tools and manufacturing equipment with an estimated value of almost $20,000,000. These reserves comprise approximately 10,000 items of special production equipment, in addition to 31,000 items of inspection equipment.

These items must all be preserved in a serviceable condition for immediate use in an emergency. The corps is, therefore, continuing a program of inspection verification, preservation for storage, and periodic surveillance of these items.

Under category 3, "Planning studies and preparedness contracts with industry to preserve industrial know-how," the corps is seeking to solve one of its most difficult procurement problems.

Many of you gentlemen know that over 90 percent of our items are strictly military in nature. They have no civilian counterpart. In some cases industry has never produced any of our newly developed items. Others have never been produced in the quantities required by the mobilization plans of the Joint Chiefs of Staff.

To meet our responsibilities in this connection, we are maintaining preparedness contracts with industry, in order to preserve and to further develop, industrial know-how as contemplated by the Munitions Board.

These contracts, whose limits are set by regulations, are of three types depending upon the degree of progress in the over-all plan.

Phase I contracts are of the general exploratory type by which industry conducts general exploratory work on an idea for the corps.

Phase II contracts involve a more advanced stage in which planning, engineering, and development of an idea are initiated. Phase III, or the education production contract, involves the limited production of an item in pilot plant models.

Thus, the over-all picture involves the preparation of manufacturing floor plans, plant layouts, and flow sheets. It includes assembling operational data on all elements of production from the receipt of raw materials to the final packaging of end items.

Through these preparedness contracts, we are obtaining vital production know-how. By means of these preliminary investigations, we are able to plan and prepare with industry for future emergency production.

I would like to emphasize at this point, that our industrial preparedness measures with industry have already reduced production lead-time, on some items, by many months. We hope to reduce this lead-time still further.

CHEMICAL PROCUREMENT DISTRICTS

How do we administer the program and maintain contact with industry?

The corps' industrial mobilization and procurement planning program is administered through six chemical procurement districts with headquarters in Boston, New York, Atlanta, Chicago, Dallas, and San Francisco.

These districts are responsible for all industrial mobilization and procurement planning functions within their respective areas. Although their functions are purely advisory at the present time, they will become active procurement districts in an emergency.

These offices maintain contact with industry on procurement planning activities of the corps. They collaborate with industrial-plant managers in the preparation of production plans for the manufacture of specific items in designated plants. These plans cover the procurement of end items and of subassemblies and other component parts of Chemical Corps matériel for use in our manufacturing arsenals.

These districts also assist in the administration of our various types of procurement planning contracts.

Right here I would like to call your attention to the fact that it is not necessary to contact any middlemen to do business with the corps. You can get all the information you need by contacting us directly.

If any of you gentlemen should desire information regarding our procurement plans within the jurisdiction of the Chicago chemical-procurement district, comprising 13 Midwestern States, please direct your inquiries to the commanding officer of this district at 226 West Jackson Boulevard, Chicago 6, Ill.

That office is responsible for all procurement and procurement-planning functions within this area.

If any of you gentlemen are from other sections of the country, please contact your local chemical-procurement district office, or drop a line to the Chemical Corps Procurement Agency, at Army Chemical Center, Edgewood, Md. They will be glad to furnish you with all the desired information.

If any of you would like to contact me in Washington, my door is always open. I will be glad to welcome you at any time.

CIVILIAN ASSISTANCE

I would like to extend my thanks at this particular point to all those scientists and technologists assisting me in carrying out the many responsibilities of my office.

As I previously stated, I am not a scientist. I am a field soldier appointed to do a tough job. I need your advice and assistance, and I encourage your further collaboration.

I wish to extend my sincere thanks to the board of directors, to Dr. Walter Kirner, and to other members of the committee advisory to the Chief, Chemical Corps, and to the members of all the committees of the American Chemical Society. I would like to assure you that I am familiar with the extent of your aid to the corps since its creation as a permanent branch of the Army in 1920.

I also wish to thank Dr. W. Albert Noyes, Jr., former chairman, and Dr. H. F. Johnstone, present chairman of the Research Council of the Corps, as well as other committee members, for their splendid and continuous cooperation.

I believe that our example of seeking to achieve common goals in joint endeavors could very well serve as a model of unification between industry and the military services.

It is my personal feeling that in these committees I have a group which can deal effectively with all phases of our unconventional fields of warfare, and that they can serve as the nucleus for rapid expansion in an emergency.

SUMMARY

In summing up this over-all survey of the Chemical Corps' program, I have attempted to point out the various aspects of the unconventional fields of warfare which are our responsibility.

We have looked into the research and development and industrial mobilization and procurement planning programs. We have also examined some of our accomplishments.

But this is just the beginning of our efforts, for our joint endeavors must be aimed at solving our common problems for mobilization readiness.

When, and if, the potential threats to our security become active, there won't be time to prepare as in the past.

Our mobilization readiness requires, therefore, intensive planning between industry and the corps to assure the rapid execution of our mobilization responsibilities. It likewise requires full knowledge on the part of industry as to where it fits into the overall program.

In an emergency, industry must be ready to shift immediately from peacetime operations in order to guarantee its allocation of raw materials, and to prevent its labor force from being drained away to essential production.

In the final analysis, the very existence of your organizations may depend upon your mobilization preparedness.

On the basis of past experience, I know that you members of the chemical industry will do your share in assisting the Chemical Corps to accomplish its mission.

Preparedness of both industry and the military is a tangible form of insurance in this highly scientific day and age. Our preparedness plans may one day prove to be the deciding factor in maintaining our democratic way of life.

Them Good Old Horse-and-Buggy Days

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. STIGLER. Mr. Speaker, a few days ago I received an original poem from one of our former colleagues and my very good friend, the Honorable Jed Johnson, who represented the Oklahoma Sixth Congressional District for many, many years with distinction. He is now rendering outstanding service as one of the judges of the United States Customs Court of New York City. As part of my remarks, I include his poem entitled "Them Good Old Horse-and-Buggy Days":

THEM GOOD OLD HORSE-AND-BUGGY DAYS

Often I think of the modest farm home,
Down in the heart of Texas,
Of my pioneer parents going there alone,
Thoughts of their courage perplex us.
In their first twenty years,
Amid laughter and tears,
Ten brats to their union they bore,
With crop failures and droughts,
And ten hungry mouths,
They kept the old wolf from the door.
Ours was a simple way of life,
Back in the days of old.
Though crowded for room,
There was little strife,
We were happy without silver or gold.
For movies we had God's sunset rays,
For television an evening star,
And in those horse-and-buggy days,
No question who drove the car.
No scary radio skits of nights,
No crime plays filled the air,
No modern homes nor electric lights,
No Bergman pictures there.
Though things were not so very fine
In the days of yes-ter-year,
The kids all hit the hay at nine,
No atomic bombs to fear.

For country lads there were loads of fun
With a coon-hunting dog and a big shotgun,
We had scads of things not seen in town
Like pecans and walnuts thick on the ground.
Like old Chambers Creek brimming full of fish,
Like a fine swimming hole, all a boy could wish.
Like birds and squirrels chirping away at me,
Like a rabbit or a possum in every hollow tree,
Like wild blackberries growing all around,
Or like finding a bee tree while clearing new ground.
Like wild grapes covering the old hackberry tree,
Yes, 'twas a wholesome life and how carefree!

For readin', writin', and 'rithmetic,
To a one-room school we went.
If the teacher had no hickory stick
For an elm or willow he sent.
To the Johnson home no liquor came
For dared we take a cigarette,
To drink or swear would blight our name,
The thought lingers with us yet.
The Bible was our daily guide,
Our motto the Golden Rule.
Although 'twas most an hour's ride
To church and Sunday school,
The Johnson clan was there on time,
Excuses did not avail,
Though we be ill or feeling fine,
The Lord we could not fail.

Could I turn back the hands of time
And be once more a lad,
I'd choose the same sweet Mother o' mine—
Also the same dear Dad.
No bonds or stocks or cash they left,
Except sweet bonds of love,
But by no means were they bereft
Of riches that count above.
The heritage handed down to me
Cannot be bought with gold.
Their high ideals, once hard to see,
Give me courage to be bold;
To go to bat for things worth while,
As Dad and Mother used to do;
To do my utmost with a smile
And to my God be true.

The Devoted Sisters of St. Ann

REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. PHILBIN. Mr. Speaker, it is with a great deal of pleasure that I bring to the attention of my colleagues in the House the one hundredth anniversary of the founding of the famous religious order of the Sisters of St. Ann, whose headquarters in the United States are located in my district in the beautiful city of Marlboro, Mass.

The observance of the anniversary was celebrated last week with religious and civil ceremonies in this country and Canada, which will continue until next September. Among the high lights of this observance will be the visit to Marlboro next fall of Eugene Cardinal Tisserant, a native of France, who is Bishop of Porto and St. Rufina in Italy. For many years, Cardinal Tisserant has maintained a deep and active interest in the progress and work of the Sisters of St. Ann and about a year ago he was designated by Pope Pius XII as the Roman Protector of the Community of the Sisters of St. Ann.

I am distinctly honored and privileged to have the opportunity today to pay my own humble tribute to the outstanding, magnificent work of the Sisters of St. Ann in the fields of education and teaching, hospital care of the sick and afflicted, and missionary activities in foreign lands. From the small group of five young French-Canadian girls banded together 100 years ago in the common cause, the religious community of St. Ann has grown to more than 3,000 devoted sisters scattered over the world in 100 religious establishments. The Sisters of St. Ann carry on their work in colleges in Canada and the United States, parochial grade and high schools, novitiates, hospitals, dispensaries, and missions located in Haiti, Alaska, and Japan.

The Mother House of the order is located in Lachine, Quebec, and the Provincial House for the United States is at Marlboro where the Sisters have two schools, Anna Maria College and St. Ann's Academy, which provide college and high school classes for girls. In addition, the Sisters are in charge of St. Anthony's Parochial School, providing grammar school instruction for the children of St. Mary's parish, a French-speaking parish in Marlboro. Parochial schools are conducted by the order in several other communities in my district.

Founder of the Sisters of St. Ann was Miss Sureau Biondin, a Quebec school teacher, who first broached her dream of a religious teaching order to four young friends in the small community of Vaudreuil in Canada. These five sisters received their religious vows on September 8, 1850, in the parish church at Vaudreuil and within 3 years this small nucleus had grown to 22 teaching sisters, 6 novices and 6 postulants. Today, many recruits annually take vows in the order, now numbering some 3,000 members. As a further indication of the order's growth, the Sisters, during 1949-50, taught some 29,000 students and treated more than 20,000 persons in the community hospitals and over 6,000 in the dispensaries.

The Sisters of St. Ann first entered the mission field in 1858 and now maintain hospitals, schools and missions in British Columbia, Alaska, Haiti and Japan. The order has been recognized for its good work in Alaska where the community has institutions at Juneau. Koserefsky in

the Yukon, Nulato, an Indian village near the Arctic Circle, and Skagway, among others. At the request of the United States Government, the Sisters assumed direction of a sanatorium for tubercular natives at Skagway.

The Sisters carried their missionary activities to Japan where a commercial high school and grade school were established in Omuta in 1934 and 1935. At the outbreak of the war, the schools were demolished by the Japanese and in 1942 the Sisters were sent to a concentration camp and subsequently repatriated the following autumn.

Conspicuous ecclesiastical honors have been conferred upon the order and the present Superior General of the Sisters of St. Ann. The Reverend Mother Mary Leopoldine, who has held that post for 24 years, holds the pontifical medal, Pro Ecclesia et Pontifice, presented to her last year by Pope Pius.

In attendance at the anniversary observance were the Most Reverend Richard J. Cushing, Archbishop of Boston, and the Most Reverend John J. Wright, bishop of Worcester, who headed the list of religious and lay officials scheduled to pay well-deserved tribute to the Sisters of St. Ann on the occasion of the one hundredth anniversary of the founding of the order. These illustrious and brilliant church leaders, so endeared to Massachusetts by their presence and their eloquence, would render impressive testimony to the noteworthy achievements of these self-effacing, self-sacrificing, and noble women.

A nation is rich indeed that shelters and protects within its borders groups like the zealous sisters of St. Ann whose superb faith in God, whose unselfish labors for the poor, the weak, and the fatherless, whose unceasing works of mercy, charity, and love reflect an ever-present light of inspiration and hope to lift up and give heart and strength to despairing humanity.

I extend my heartiest congratulations to the Sisters of St. Ann on their one hundredth birthday and express the hope that their future success and accomplishments may be increasingly beneficial. I wish for them continued happiness in their lives of devotion and sacrifice in the years to come. Above all, I thank them for their many contributions to the welfare of the people of my district, the State, and the Nation, and the cause of suffering humanity.

Extend Federal Rent Controls

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of April 22, 1950:

EXTEND FEDERAL RENT CONTROLS

President Truman has asked Congress to extend for another year the Federal Rent Control Act which expires on June 30. He marshals the reasons for this extension very convincingly.

There is, he says, still a serious shortage of housing in many places. The shortage is most acute in housing which families with incomes under $300 a month can afford. Citing what has happened in areas already prematurely decontrolled, he argues that unless the Federal law is extended, rents will skyrocket, especially for those least able to meet unjustified increases.

His proposal is that the law be extended for the 8,000,000 units which will still be under control at the end of June and that the present policy of permitting justifiable increases be continued.

It seems to us that Congress will be wise to follow the President's desires in this matter, even though Federal controls are of no further direct interest to us here in Wisconsin.

Wisconsin's own rent control law, which superseded Federal law, also expires in June. We cannot return to Federal control and only a special session of the legislature could extend our own law. So, whether or not Congress reenacts the Federal statute, decontrol will come in Wisconsin on June 1.

What our experience will be remains to be seen. Many renters will be secure until the end of the year, because of leases which run through December 31. There are, however, hundreds, particularly in the low-rent brackets, who do not have this protection. Unless a considerable amount of low-cost housing is built in the next few months, we are therefore likely to find that, while high rents remain relatively stable or even decrease slightly, rents will rise sharply for the lower priced units, which are still in wholly inadequate supply.

In other words, we are likely to follow the pattern which the President fears will strike the whole country if Federal controls lapse. We will have a landlord's market, and what happens will depend to a degree on the landlord's conscience.

McCarthy's New Look

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. HILL. Mr. Speaker, under leave granted to extend my remarks, I wish to call the attention of my colleagues to the following editorial from a recent issue of the Rocky Mountain News of Denver, Colo. It presents an interesting comment on the current investigation of the charges of Senator MCCARTHY of the Communist infiltration in our Government and the menace of these radical individuals who have crept into top-flight policy-making positions in the State Department and other Federal agencies.

The editorial follows:

MCCARTHY'S NEW LOOK

It has seemed to some of us that Senator MCCARTHY was supporting his charges of Communist influences in the State Department with more noise than evidence.

But it also has been apparent that a surprisingly strong segment of public opinion was rallying to his support.

Was the Wisconsin Republican beating the Communists at their own game, simply by outshouting them? Or was he the coincidental beneficiary of a ground swell of public resentment against official indifference to a very real menace to national security?

Whatever the explanation, we are convinced that Senator MCCARTHY himself is a factor to be reckoned with since hearing him present his case before the American Society of Newspaper Editors.

His speech was loaded with tough, pertinent questions which could not be laughed off. He is equally adept at answering questions directed at him.

Asked why he hadn't named the Communists in the State Department, he said he would name names when the Department's files were opened to him, adding: "If those files proved that MCCARTHY was a liar, they would damn well be opened tomorrow."

That challenge may have to be answered the next time President Truman takes the stump. It's whistle-stop language.

The Senator cited the case of a man who, he said, was investigated 11 times by the State Department Loyalty Board before finally quitting and taking up active Communist Party work.

"Eleven times the President's Loyalty Review Board lacked the guts to order the man fired," he charged.

That, too, is whistle-stop stuff.

There was the case of George Wheeler, now attacking American foreign policy from behind the iron curtain. Why was this man cleared for highly important State Department work in Europe? Why, indeed?

Dr. Philip C. Jessup has just been appointed head of the State Department's high Policy Board, which will map our cold-war strategy.

"Why does he always join Communist fronts? Why not anti-Communist organizations?" Senator MCCARTHY asked, submitting photostatic evidence that Dr. Jessup had been a member of five fronts.

JOE MCCARTHY will not be alone in questioning this appointment, particularly when it is recalled that Dr. Jessup gave a character testimonial for Alger Hiss as late as last year.

Whatever he may have lacked to support his charges at the outset, Senator MCCARTHY is picking up new ammunition and finding new targets as he goes along.

It isn't all just old stuff, either, but material reflecting on persons now in Government service, which will question the integrity of the Government itself unless it is rebutted to the public's satisfaction.

Sister Helen Madeleine

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks, I am including the following editorial from the Boston Post concerning Sister Helen Madeleine of whom Boston is extremely proud:

SISTER HELEN MADELEINE

The courage of nuns is commonplace knowledge. These women develop a quiet confidence in God to whom they have dedicated their lives. The result is that no enterprise is too difficult, no task staggering. Sister Helen Madeleine, dean of Emmanuel College since its founding 31 years ago, is a case in point. After those years of service when the ordinary college dean might seek retirement to a life of study or ease, Sister Helen Madeleine will journey to Japan to help open a new college there staffed by the Notre

Dame nuns. She has had many honors since the doors of Emmanuel College opened. She has had the tremendous satisfaction of seeing the school, in its short span of years, become one of the leading Catholic educational institutions in the country, and one of New England's outstanding colleges for girls. Its success, though she would blanch at the statement, is mainly due to her great personality. It will never lose the impetus she has given it. She will be honored at a formal reception at the college next month and will leave for Japan in June. The accomplishments she leaves behind make her one of the great women in the history of Boston.

Reopen Army-Navy Hospitals

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. PHILBIN. Mr. Speaker, in my opinion, the order closing many Army and Navy hospitals at this time is a great mistake. It cannot possibly be justified in the light of the needs of our servicemen, their dependents, and our veterans.

To the credit of this House, the eminent and distinguished gentleman from South Carolina [Mr. RIVERS] and his able Subcommittee on Armed Services has not only protested this action and demanded its cancellation but has also conducted a very penetrating investigation into the general situation projected by the arbitrary closing of these hospitals.

The facts already brought out by this inquiry are astounding in many respects. For example, the committee has disclosed that the economies claimed for the order are largely illusory. It is shown conclusively that money saved in one way will have to be spent in other ways and that the net effect of the closings may well in the end constitute larger cost and expense to the Government.

It also appears that medical and hospital service to our armed services personnel and their dependents and veterans of certain categories would be unreasonably and harmfully restricted. For example, the closing of Murphy General Hospital at Waltham, Mass., and other closings would mean that the only Army general hospital east of the Mississippi River remaining available for service men and women of the entire eastern seaboard would be the Walter Reed Hospital at Washington, D. C., an institution already besieged by many service personnel who are unable to secure admission and who, regardless of the seriousness of their condition, in most cases, have to wait long periods to obtain proper medical care to which they are entitled by law.

The very able, gracious, and distinguished gentleman who represents the district where Murphy General Hospital is located [Mr. DONOHUE] must be greatly commended for his persevering and unyielding efforts to keep this fine institution open. Because of the high regard in which he is held in this House and the confidence which our colleagues have in his judgment, many Members, including the great chairman of the Armed Services Committee [Mr. VINSON], have joined him, as I have done, in appealing to the Secretary of Defense to save this and other hospitals. There are some indications that these repeated appeals may receive some consideration.

Such orders do violence to both the hospital and the present well-merited drive for economy. No economy measure that does not have public opinion squarely behind it can be sustained in the long run. The public is outraged by attempts of the Department of Defense to sweep aside hospital facilities provided by Congress for the armed services.

I hope that the Department of Defense, which has so unwisely, so unsoundly, and so hastily moved in those matters, may soon be persuaded by the logic and facts of the real situation as it unfolds and promptly cancel the closing orders. Otherwise Congress must act by considering changes in certain basic laws which many people think repose too much power in the hands of the Department of Defense. That is a most vital question to which I propose to give my closest attention.

Meanwhile, Mr. Secretary, I respectfully appeal to you to revoke the order closing service hospitals.

New York's Example on Rent Control

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal of April 12, 1950:

NEW YORK'S EXAMPLE ON RENT CONTROL

Should rent controls be extended beyond June 30, when the present Federal law expires? President Truman has asked—though not very loudly as yet—that Federal ceilings be extended another full year, but Congress has not even done much talking about the controversial subject so far, and opponents of rent control say they have enough votes to kill it, when and if.

That may be true. The real estate lobbies have done their usual effective job in Washington. Many Congressmen are sincerely convinced that there is no longer any need for Federal ceilings.

But we are willing to bet a political dollar that a good many Congressmen who vote against extension of rent control this spring will find themselves at the short end of the balloting next fall. And our hunch is not based on any mastery of the conflicting sets of statistics put out by those who say that the public interest requires extended control or by those who say that it does not, or even by the evidence that where controls have been lifted rents have jumped 20 to 100 percent over controlled standards.

Our hunch is based on nothing less than the action by Gov. Thomas E. Dewey and his Republican legislature in New York. The city of New York had already passed local rent control legislation to backstop the progressive postwar weakening of Federal acts, but this was not enough, politically or practically, for State Republicans. Faced with the possibility that Federal controls would expire this June, the Republicans put through a bill transferring residential rents from Federal to State control effective May 1. And Governor Dewey, praising this measure to the detriment of a Democratic bill lost in the shuffle, signed it with the pointed observation that the new law freezes virtually all rents until March 1951, while the Democratic formula would have permitted immediate increases.

New York isn't exactly typical of the rest of the country, but on rent control, we suspect, Tom Dewey's pulse-feeling would do for a good many other States as well. The economists say our boom-rate buying is likely to continue through 1950, and if rents, long recognized as the classic inflationary item in all booms, are allowed to zoom skyward, millions of Americans are going to be subjected to ruinous pressure. New York Republicans have shown a proper apprehension that such pressure, aside from its economic results, might yield political dynamite.

John S. Service—His Record

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as usual Mr. Henry J. Taylor is rendering a patriotic service in pointing out the record of John S. Service as a high-ranking diplomat in American foreign service. On March 20, 1950, in a Nation-wide broadcast he related some facts about this man. Under leave to extend my remarks, I am including the broadcast referred to:

SUBJECT

Mr. Taylor, you attended the Alger Hiss trials, and reported on them. You have been working on the case of Diplomat John S. Service ordered back this week from India for review of his loyalty record. Most of us have never heard of John S. Service.

Mr. TAYLOR. The same forces for protection which closed in around the then unknown Alger Hiss are now closing in around John S. Service. All of which makes me leery. For I love this country as you do. But it is being eaten out from within.

STATE DEPARTMENT OFFICIALS BLEED

Just as Secretary of State Acheson promptly bled for Alger Hiss, so the Deputy Under Secretary of State now promptly takes it upon himself to announce—and I quote—that "the sympathy and good wishes of the entire State Department go out to John Stewart Service."

Why all this stir of defense, this bleeding, because John Stewart Service is to be questioned? Who is he?

Let me give you some first-hand facts I obtained from a man Service worked for—the United States wartime Ambassador to China, Patrick J. Hurley. I verified and confirmed these facts over the week end, with Mr. Hurley himself.

I first met Alger Hiss at the Dumbarton Oaks international conferences some months before I ever heard of John S. Service. This was in 1944.

CHUNGKING DOUBLE-CROSS

When I did encounter this man Service I was in China. There, toward the end of the war, I was with Ambassador Hurley at Chungking.

Hurley told me then that State Department officials in his own American Embassy staff—and he named them—were, in his opinion, double-crossing him with Stalin's stooges, the Chinese Communists. He said they were trying to put American policy into the Communist camp.

I can see him now, pacing the floor of his Chungking house, a worried and frustrated patriot. Behind the closed door he named these men to me, one by one.

Among others, he named John S. Service. Now remember, this was in 1945. That was nearly five long and fateful years ago—fateful for the security of your land and mine, our homes, our future, our very lives.

ELEVEN COME HOME

Shortly after I left him, Hurley ordered back to Washington from China 11 embassy officials who, in his opinion, were so cosy with the Communists that he pulled them out. John S. Service was included in this group.

This is what Hurley said about them, publicly, in the New York World-Telegram, on November 28, 1945: "Most of them have continued to side with the Communist armed party and, at times, with the Communist imperialist bloc, against American policy."

But Mr. Hurley, as you recall, was smeared at once by all the political forces of protection. He was given a cold shoulder by highest State Department authorities, including Mr. Dean Acheson. Then came the famous saying, "It's all a red herring."

Yet you see how truthfully and courageously Ambassador Hurley spoke—albeit how thanklessly. For today's whole outcome was foreseen and foretold by Hurley and others five long years ago. But nothing was done to save us.

THE ROYAL WELCOME

As for the men Hurley threw out, what happened to them when they got back to the State Department in Washington? Let's be exact about this.

John D. Davies, one of the eleven, was appointed to the top planning board of the State Department, which is the brain trust for American foreign policy. Davies was given the job of calling the American signals about China—and at the top policy level. He was then sent to our Embassy in Russia along with Horace H. Smith, whom Hurley also threw out.

Arthur Ringwalt, also sent back by Hurley on suspicion of procommunism, was made Acting Chief of the China Division in Washington.

Who were appointed assistant chiefs? Two more of the very same 11 men Hurley threw out in the same bunch, Edward E. Rice and Fulton Freeman.

You have seen what has happened to us in China since then—as well as in Moscow and throughout the world. Yet we talk now about total diplomacy in the hands of the same leaders.

Stalin must be laughing at us. Total diplomacy? Whose diplomacy is it we have—his or ours?

Now we come to John S. Service. Here are the facts. Please listen carefully, if you fear America's position in a next war.

First, Ambassador Hurley told me that John Service had already been relieved of his duties once in China, and sent home, by Supreme Commander Lt. Gen. Albert C. Wedemeyer, another fine American. Nevertheless, State Department officials in Washington sent John Service back to China, through another channel, to the Communist area of Yunnan—by bypassing Wedemeyer, and without the knowledge or consent of Ambassador Hurley.

THE WHITE HOUSE INTERVENES

Ambassador Hurley told me that, when he discovered this, he went to the White House and protested to President Roosevelt. Remember, all this is news. He produced letters John Service and others had written, reflecting their views. May I say that the Senate and the American people should read those letters and reports now, while the bleeding is on.

President Roosevelt authorized Hurley to send such characters home. So Service was sent home for a second time.

When Service reached America, he was arrested by the FBI. He wasn't just questioned by the FBI. He was arrested by the FBI, as Mr. J. Edgar Hoover would verify to you. For J. Edgar Hoover is not afraid of anybody. That's what makes him a great American.

THE WHITEWASH TREATMENT

Service was brought before a grand jury, but he was let off—although the claim is made that his FBI record was never fully presented to the grand jury by Government attorneys. A State Department whitewash quickly followed.

Then what happened?

Was Service detached from policy decisions? Well, hardly. After all this, Service was assigned to Japan to tell General MacArthur, of all people, how to negotiate with Russia. General MacArthur reportedly rejected Service.

But Service showed up in Japan anyway, on some kind of authority from the State Department. Then, after Mr. Acheson became Secretary of State, Service was actually boosted even higher.

Today we have John S. Service on the way to high official duties in India, a critical place in our problem of communism.

WHO WAS HOLDING THE UMBRELLA?

The question arises: What mysterious power has protected his record? After five long years since the charges of 1945, and after 13 months of latest so-called study, the Loyalty Review Board of the Civil Service Commission now states that it does not feel it can give John S. Service "loyalty clearance."

He is asked to come home for the purpose of giving personal answers—no more than that at this stage. But why have the FBI record on John S. Service, and the China and Moscow background, and his FBI arrest been treated by protectors as if they didn't exist?

Certainly something has gone frightfully, tragically, terribly wrong with our security measures, even if our own officials will not admit it. For it has already been shown in court that we do have traitors working in our Government.

Blindness to the Communist strategy has already cost us Asia. It can cost us the world. It can cost us the United States. It can be a question of life and death to our Nation in the event of a surprise war—unless we wake up and insist that America's safety is more important than anybody's refusal to let the chips fall where they may—and there is no time to lose.

Centennial Speech at University of Utah

EXTENSION OF REMARKS

OF

HON. REVA BECK BOSONE

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mrs. BOSONE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following centennial speech, February 28, 1950, by A. Ray Olpin, president, University of Utah:

Governor Lee, President Smith, Mayor Glade, distinguished delegates, members of the board of regents, members of the faculty, students, ladies, and gentlemen, there are times when the office one holds places him in a difficult position. I find myself in such a position today as I attempt to respond to the eloquent tributes paid to the University of Utah on this, its one hundredth birthday, a milestone not yet achieved by any other State-supported university west of the Missouri River.

I am fully conscious of the fact that the enviable position held by this educational institution is the combined result of wise planning by the founding fathers, sound guidance by governing boards, superior instruction by competent teachers, and the intelligent leadership of former presidents, three of whom are present and participating in this centennial observance. Moreover, the distinction achieved by this school reflects the loyal and generous support of generations of citizens motivated by a conviction that man cannot be saved in ignorance.

Yes; there have been some persons in the past as there doubtless are some today who feel that Utah's institutions of higher learning are outgrowing the State's ability to support them, what with twice as many students enrolled here for each 1,000 population as in a typical State. But I can find nothing in the history of the University of Utah that would indicate that the university has developed more rapidly than, or out of proportion with, the plan envisioned by its founding fathers. Else why did the regents, following their very first meeting March 13, 1850, stake off a rectangular area of more than 560 acres, including the plot we now occupy, and set it aside as the campus on which the university was to grow?

Although these plans for physical growth received a temporary setback in 1862 when the United States Army appropriated all of the land for a military reservation, named by President Lincoln after his political opponent, Stephen A. Douglas, some 460 acres of this army post have reverted to the possession of the university, thanks to three separate acts of Congress and opportunities opened up by the Surplus Property Act. Even so, the campus today is 100 acres smaller than it was a century ago.

If it were not the intention of the original planners to establish and foster here a great and varied university, with low tuition, why do you suppose the first chancellor heralded through the printed page the following message to the people of Great Britain on October 1, 1850:

"This institution is needed to meet the wants of thousands that annually emigrate to this Great Basin. The immigrants and outcasts of all nations will here find an asylum of safety and a nursery of arts and sciences available upon the cheapest terms. It is neither arrogant nor extravagant to say that this institution is forthright prepared to teach more living languages practically than any other people on the face of the earth. Whatever is valuable in the laws and usages of nations or in their antiquities; whatever in the structure of diversified languages or in practical mechanism; whatever in the fabric of governments or in domestic sociality or in morals can be gleaned that is valuable, we venture to say unhesitatingly will be copiously poured into the lap of the institution. Graduates of colleges and students of law, medicine, and theology may here receive weekly lectures gratis. No person will be denied the benefits of the university for want of pecuniary means."

Or, why should Gov. Brigham Young, at about the same time, announce with exuberance the arrival from England of a shipment of goods that included "an excellent

telescope, microscope, globes, chemical tests, and mineralogical specimens, all of which are most valuable acquisitions in promoting scientific research" and that the books of the Utah library had "been unpacked in good order, great variety, and of a choice selection."

Now, remember—those published statements were not made by professional educators living in erudite communities. They issued from pioneers in western frontier country, so far removed from the National Capital that news of the signing on September 9, 1850, by President Fillmore of the Organic Act creating the Territory of Utah did not reach Salt Lake Valley until 4 months later. Actually, the authors of those philosophies of education had been in this valley but 2½ years when the University of Deseret, as this institution was then called, was incorporate'. Immigrants from the world over were even then still arriving from the Midwest, East, and European countries on foot, wearily dragging their limited belongings behind them in handcarts.

There can be only one explanation of this enthusiasm for higher education, namely, a conviction that it would lend security to both government and religion. Most of the early settlers, as is well known, were converts to Mormonism, and the saving graces of education constituted a basic tenet of the Mormon religion.

With Brigham Young, whose own formal education was limited to 11 days of classwork, higher education was almost an obsession. As Governor of the Territory he pleaded with a less sympathetic legislature for meager appropriations from a near-bankrupt treasury, and failing in this effort took steps to petition the Federal Government for financial assistance to keep the doors of the university open. In 1852, the United States Congress was memorialized for $24,000 to be invested in some productive fund, the proceeds of which would be applied to the support and use of schools.

In the light of current-day fears of so-called socialized education, it is surprising to learn that such a rugged individual as Brigham Young should seek help from Washington. It serves to remind us that Federal aid comes into the scheme of school financing when local units of government fail to meet their obligations. The Federal grant was never made and the University of Deseret closed its doors for 15 years for want of funds, although regents were regularly appointed and met to consider the problems of the public schools.

Even after the university reopened for classwork under the very competent and inspiring leadership of Dr. John R. Park, to whom every alumnus and student here today owes a debt of gratitude, there were times of near financial starvation. Particularly trying were the years when unsympathetic Territorial governors vetoed legislative appropriations. The university's growth was assured, however, and today there are 500 times as many faculty members and students as there were in 1850. Even the campus, though still a little smaller than it was initially, could well be ample for all buildings that may be contemplated during the next 100 years.

Historically speaking, 100 years is a relatively short interval of time. It seems much longer when we are living in that period or when it is characterized by many major events. The century just ended seems surprisingly long because so many momentous happenings occurred during that period of our Nation's history. Actually, the past century embraced five-eighths of the period during which Americans have lived under the protection of the United States Constitution. In order to get properly oriented, we might well remember that more generations of people have lived and died since this university was founded than lived and died under the American flag prior to that time.

At the time the university was founded; that is, at the opening of the century just ended, human bondage was common in many parts of the United States. Two important events were yet to happen before this practice was to be fully abolished. The first was the Civil War, still a decade off, and the second, the technological and industrial revolution, still a quarter of a century in the future. Reliable records indicate that the first of these two events was anticipated by the founding fathers but it is doubtful that any of them even guessed that the 10 years 1876–86 would witness the birth of the telephone, the first successful arc lights, the first really commercial dynamo electric machinery, the first practical gas engine, the phonograph, the electric furnace, the incandescent lamp, electric traction, electric transformers for the use of alternating-current machinery, electric storage batteries, synthetic indigo, alloy steel, steam turbines, gas engine-propeled road vehicles, nitrogen fixation, and the introduction of rare earth gas mantles as a means of illumination. Four of these inventions—the telephone, the incandescent lamp with its closely associated AC and DC dynamo electric machinery, the practical high-speed gas engine, and the chemical processes which underlay the synthetic production of indigo—were the foundation stones on which have been erected four of the world's greatest modern industries. These have been followed by airplanes, radio, television, and a multitude of other important developments, all greatly extending our faculties for acquiring information of cultural and practical value and all multiplying our capacity for work. Human slavery was now outmoded. Each and every man, woman, and child now has at his or her command, merely by pushing a button or pulling a lever, literally hundreds, if not thousands of mechanical and electrical slaves.

That the world could change so rapidly in three-quarters of a century is a tribute to both the power of science, which underlies these developments, and man's ability to apply science. The inventions mentioned above could well be labeled byproducts of higher education. At the same time, by their very nature, many of them were destined to revolutionize teaching methods and social relationships in the civilized world. They could not help but exert a greater influence on education than any developments of previous history. For, were not distance and time now virtually eliminated? People could be brought together, though scattered in all parts of the world, in personal converse as though sitting across the table from one another.

But, valuable as was this new found ability to rapidly interchange ideas, it also posed problems for educators which have not yet been solved. For one thing, the intimate and exclusive relationships between teachers and pupils have been broken down. The teacher no sooner relaxes his or her influence on the student at the end of the school day than someone, more often than not some unprofessional, prejudiced employee of a social pressure group or merchandising firm, takes over for the rest of the waking hours. The privacy of the home is invaded to the point that even the parents' influence on their children is weakened.

In order to better understand the impact on society and education of the scientific and industrial developments of the past century, let us contrast the pattern of living at the beginning and end of that century.

In 1850, people rose early, worked hard, retired early. Most of them owned their own means of making a livelihood; built fences around their property rather than laws around their jobs, as at present. Craftsmen learned their vocational skills as apprentices. There were no sharply defined class distinctions. Blue-shirted workers as well as white-collared executives considered education an adornment, and courses were offered which would add knowledge to all alike and which would train people in clear, straight thinking. Entertainment was self-made, not commercial. Reading was confined mostly to the Bible and to the classics. Families were closely knit because the members spent so much time together. Strangers in a community were usually welcome visitors because they served as sources of information.

A person was free to formulate his own philosophy and to strive to make the world what he thought it should be. The schools and churches had no great competitors in their efforts to develop the minds of young and old alike. The teachers, therefore, occupied a more elevated position and congregated around themselves many enthusiastic disciples. These students had little else to do after they left their instructors than to meditate on the day's teaching and experiences, concentrate on preparations for the morrow, and contemplate the significance of all. Yes, they even had time to supplicate for supernatural aid in making the world a better place in which to live.

Now, in 1950, we find that the days are so full and life is so busy that man can find little time for meditation, concentration, and supplication. We find we no longer have days and nights; we merely have longer days. At the flip of a switch any room in our house takes on the brilliance of noonday. Street lights in the cities and headlights on automobiles provide complete and safe means of moving about out of doors at night. Hard-surfaced highways instead of muddy roads make it possible for us to chase around in every direction at dangerous speeds, riding comfortably on pneumatic tires in heated vehicles. On nearly every corner we find motion-picture houses or some kind of commercial recreation or entertainment where someone leads or directs our thinking. We are even induced to visit these places because of propaganda which reaches our ears via radio and our eyes via the press.

Actually, we spend so little time at home that we feel a bit uncomfortable at being there. But we relieve our concern at this confinement by turning a dial and tuning into actual happenings going on all over the world. We listen to speeches as they are being delivered in an effort to control the minds of the listeners. Or we pick up one of the scores of newspapers and journals which are competing so strenuously for circulation that they devote considerable space to writing columns that will please rather than stimulate thinking. And then, if we stay at home we can now have piped into our very living rooms by television special entertainment in its various forms, ranging from faked wrestling matches to sporting events, to fashion shows, to sex stories, to wild-west shooting battles, and so on. Even our children in their tender ages, when they are too young to be permitted to go out in the evenings alone, can sit at home, turn a dial, and have all of the worries of the world, the vices as well as the good things, brought vicariously to them.

In the modern world we find ourselves so concerned with mensuration and calculation that we have little time for meditation. The importance of concentration has been lost in our concern over compensation. But, more lamentable still, our leisure is dominated by propaganda which, if nothing else, is entertaining advertising of patent cureall for every drudgery and ailment. We are told we can purchase security in every form. We develop a feeling of self-reliance and an attitude of self-sufficiency. We find growing within us an air of sophistication which is not conducive to supplication. Pride replaces humility. We are led around by the tinsel of artificiality and commercialization. If the trend continues, we will soon develop a generation of puppets who can be maneuvered this way and that with ease by a

few propagandists striving to control the minds of men.

Well, what are we going to do about the situation? One thing is apparent. The problem is no longer one for educators alone. It is one for society, for you and for me as parents and citizens of a free community. After all, the time spent by the pupil in the schoolroom is but a small part of the day and but a fraction of the year. It is probably the influences on the child outside of school hours that are our biggest concern The battle for the minds of men seems to become more intense as the day progresses into night.

I am sure the schools and universities will do their part. They can and should do everything within their powers to develop within their students the methodologies of independent and objective thinking, a type of teaching stressed by the founders of this great university. It is possible that this will provide the best insulation against the propaganda of pressure groups. Perhaps the schools can help improve the quality of the commercial entertainment to which youth is exposed, but in this we need the cooperation of all parents and civic organizations. We will continue to be bombarded with whatever we demand and whatever we are willing to tolerate.

May we all work together in the century ahead to see that the great liberalizing forces ushered in by the technological revolution of the past century are directed in constructive channels for the enrichment and betterment of the lives of all. As president of a university which today commemorates the first century of its service to the people of this State and this Nation and begins the second century of such service, I pledge our efforts and resources to that goal.

Prescription for Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. MULTER. Mr. Speaker, I am pleased to call the attention of my colleagues to the article entitled "Prescription for Small Business," written by Herman Limberg, which appeared in the April 1950 issue of Systems. I have known the author for many years as an able economist. He is now an instructor in management, systems, and procedures at New York University and at the City College of the City of New York. The article is very timely:

PRESCRIPTION FOR SMALL BUSINESS

(By Herman Limberg)

A BASIC DIET OF SCIENTIFIC MANAGEMENT OFFERS A FORMULA TO HELP THE SMALLER ORGANIZATION CONTINUE TO GROW IN A HEALTHFUL ENVIRONMENT

Because of its recognized importance to the national economy, small business has received considerable attention and study in recent years. Both private organizations and Government agencies have sought to provide a healthful environment in which small business can continue to grow and flourish.

In June 1947, the Committee for Economic Development published a report which should be cherished as a bible for all small-business men. Entitled "Meeting the Special Problems of Small Business," this report revealed that 98 percent of the firms operating in this country are small businesses. "They are," said the report, "the foundation upon which our whole system of business enterprise is built."

To prescribe for the soundne s and good health of this vital segment of American enterprise, the CED diagnosed the ills which usually beset small business and grouped them into three categories: management, financing and taxation, and competitive opportunity.

The most significant finding of the CED study was that the number one problem of small business is management. More failures are due to lack of skill in running the business than to any other single cause. In this statement lies the key to the successful operation of any small business.

SCIENTIFIC MANAGEMENT

Management—scientific management—is even more vital to the success of small business than to big business, since the margin for error (if there is any at all) is substantially narrower in the operation of small business. Nevertheless, the basic cause of distress of many small businesses is a chronic allergy to the implications of scientific management.

The alleviation of the number one problem of small business is not only the prime essential for a sound framework for profitable operation, but is the basic requirement for effectively solving the problem of financing and taxation and meeting the challenge of competition.

There is nothing esoteric in the practice of scientific management. In fact, it is the practical application of common sense, with which most small businessmen are vastly endowed. It involves, in substance, the determination and clarification of business objectives; the compilation, analysis, and interpretation of all pertinent facts and figures; the development of plans for the efficient and economical attainment of stated objectives; and the establishment of effective controls for the direction, coordination, and integration of the enterprise toward the realization of plans and objectives.

COST CONTROLS

A major factor in scientific management is the establishment and maintenance of cost controls. Small business often risks its survival either by incurring unduly high costs or by indiscriminately slashing costs. Since costs are one of the vital links in the management chain, scientific determination of cost requirements, in the light of stated objectives, and effective control of obligations and expenditures on a continuing basis, are essential.

Improperly conceived reductions in costs often beget results more costly than those desired. Reductions in personnel may lower morale and productivity. Reductions in services to customers, advertising, and quality of products may adversely affect existing markets. Reductions in quantity and quality of purchases may result in higher buying costs as well as production costs. Reductions in office and administrative costs may adversely affect all internal and external relations with which the business enterprise is concerned. It is evident, therefore, that the proper planning and control of costs are essential elements of scientific management.

To meet the No. 1 problem of small business and to insure the strength and vitality which small business needs to grow and flourish, the following prescription for scientific management is offered:

1. Clear definition by top management of its objectives and policies and their communication to all employees.
2. Establishment of quality standards for personnel, customers, sources of supply, as well as for materials, equipment, and supplies.
3. Establishment and maintenance of adequate quality controls.
4. Establishment of quantity requirements and standards for personnel, customers, sources of supply, materials, equipment, and supplies.
5. Establishment and maintenance of adequate quantity controls.
6. Maintenance of good public relations with employees, customers, sources of supply, and the public in general.
7. Insistence upon giving and receiving fair value in every business operation and transaction.
8. Establishment and maintenance of an organization of competent, well-informed, well-directed, well-trained, and properly motivated people.
9. Provision of adequate facilities for efficient and economical operations.
10. Establishment and maintenance of efficient systems for recording, compiling, analyzing, intepreting, and reporting essential data and facts upon which to base policies and plans and evaluate performance.
11. Establishment and maintenance of adequate controls for effectuation of policies and plans.
12. Daily follow-up to ascertain progress and results, and to determine the needs for possible revisions or adjustments in plans, policies, or procedures.

The foregoing prescription embodies the fundamentals of scientific management. It is not guaranteed as a panacea for all the ills from which a small business may suffer. It is, however, offered as a basic diet without which the slightest infection may be fatal.

Responsibility for good management must be borne by the individual enterprise itself. Furthermore, to quote the CED report: "There is a responsibility that each businessman act so as to strengthen the free-enterprise system. It is a responsibility he owes to the system in which he believes."

Closing of the Van Nuys-Birmingham Hospital

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to add to the picture of the veterans' hospital situation in California which was described in my remarks of March 14 and April 18.

The Paralyzed Veterans' Association, of Van Nuys, Calif., has a particular stake in the Birmingham Hospital and the Public Law 702 homes of its members. Their case against the closing of the hospital and the removal of the hospital facilities to Long Beach is given very forcefully below in a recent letter from Ted Anderson, executive secretary:

PARALYZED VETERANS ASSOCIATION,
BIRMINGHAM HOSPITAL,
Van Nuys, Calif., April 21, 1950

Representative HELEN GAHAGAN DOUGLAS,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR MRS. DOUGLAS: I am writing you in reference to a proposed plan of the Veterans Administration to move Birmingham Hospital to the naval hospital in Long Beach. Though we are not located in your congressional district, I know of your interest in veteran affairs, and particularly disabled veterans.

I believe you are acquainted with Public Law 702, which provided Federal grants of $10,000 for specially adapted wheel-chair homes for service-connected paraplegics.

Under this law, nearly 100 of our 450 membership have built their special homes (with ramps, lowered closets, wide doors, extra wide halls, etc.) near Birmingham in the San Fernando Valley. Another 100 are in the process of building, or have acquired valley property with that intention.

It is absolutely necessary for paraplegics to live near a VA paraplegic center for indispensable periodic medical treatments and supplies.

These Public Law 702 homes represent more than $1,000,000 invested by the Federal Government already. It is also a million-dollar investment for us paraplegics. I think you can readily see why we are so worried about the proposed move to Long Beach.

Birmingham is the only VA paraplegic center west of the Mississippi. Many of our members are men who have transferred here from the eastern centers in New York, Chicago, etc. They moved to the San Fernando Valley to live in the warm, sunny climate so vital to paraplegic health.

Long Beach is cold, foggy, and terribly oil-smelling, as you well know. The warmth and nice climate of the San Fernando Valley is perfect for the comfort of the paraplegic injury.

Doesn't the health and financial welfare of 450 combat-injured paraplegics warrant consideration in any proposed move of an established VA hospital?

Many of our members have invested in businesses which can be operated in a wheelchair.

A move to Long Beach would mean a complete disruption of the educational program of 60 paraplegics in our association attending U. C. L. A.

So, you can see the picture: Sell our specially adapted homes at great financial loss, uproot all our business ties, destroy the educational program—and move from the sunny San Fernando Valley to the fog and oil wells of Long Beach.

Are we to become a group of Government transients who must move every time the VA decided to change the paraplegic center location?

If this move is made, it will be the grossest injustice to California paraplegics.

We are asking your aid and support in preventing any such movement. We want only to live in our own homes—homes which are built especially for us.

I would appreciate hearing from you, and whether you think the change will be made.

I remain,

Cordially yours,

TED ANDERSON,
Executive Secretary,
Paralyzed Veterans' Association.

Mr. Speaker, in addition, I have continued to receive many individual letters, as well as resolutions against the closing of the Van Nuys Birmingham Hospital from interested organizations, similar to the one that appears on page A2769 of the Appendix of the CONGRESSIONAL RECORD. I shall not here again quote the resolution but merely list for the attention of my colleagues in this body the names of nine additional organizations and their officers which have gone on record against the closing of these needed veterans' hospital facilities in California: Kiwanis Club of Van Nuys, Calif., E. M. Lambert, president, F. Haworth, secretary; Veterans of Foreign Wars of the United States, Glendale Post No. 1937, Glendale, Calif., John W. Fellows, commander, Norman White, adjutant; VFW, Pvt. Oliver L. Sylva, Post No. 5387, Sundland-Tujunga, Calif., Lawrence L. Groll, commander, W. C. Nelson, secretary; VFW, Pvt. Oliver L. Sylva, Post No. 5387, Ladies Auxiliary, Vivian Leafdale, president, Bertha Garrett, secretary; Catholic Daughters of America, San Fernando, Calif., Angie Fusano, president, Lucile M. Mahon, secretary; I. O. O. F., San Fernando Rebekah Lodge, No. 348, San Fernando, Calif., Evelyn Harmon, noble grand, Margaret V. Moye, recording secretary; Fernangles Civic Association, North Hollywood, Calif., Ben Gotter, chairman public relations committee, and Messrs. Erskine, King, Carson, and Maddox, committee members; Canoga Park Chamber of Commerce, J. H. Fraser, president, Ralph D. Dyer, secretary; Sherman Oaks Chamber of Commerce, Sherman Oaks, Calif., K. P. Crater, president, William C. Keim, secretary.

Hon. Barratt O'Hara

EXTENSION OF REMARKS
OF
HON. JAMES V. BUCKLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 28, 1950

Mr. BUCKLEY of Illinois. Mr. Speaker, I am sure the Members of Congress will want to join me in extending best wishes and congratulations to our distinguished and worthy colleague, the Honorable BARRATT O'HARA, Representative from the Second District of Illinois, on this occasion of his birthday anniversary.

As a gesture of my sincere appreciation of the fine background, and broad, noteworthy experience which Mr. O'HARA brings with him to the Congress, I wish to acquaint the Members of the House with a short résumé of the life and works of the gentleman from Illinois.

Mr. O'HARA, a senior in years of service in the cause of liberalism, is a veteran legislator from Chicago. Long a champion of organized labor, he served in 1913 as Lieutenant Governor of Illinois and spent years in the Illinois State Senate. There, as chairman of the wage committee, he conducted an investigation of low wages paid women workers in stores and factories which attracted national attention and led to the passage of the first State minimum wage law.

For a number of years he was a trial attorney for some 10 or more Chicago labor unions and for 5 years he made the remarkable record of speaking nightly over WCFL, Chicago Federation of Labor radio station, presenting the viewpoint of organized labor on all public questions. For his long record of activity in behalf of labor, he was selected to oppose Richard B. Vail, whom he defeated.

Congressman O'HARA has a colorful background. He joined General Shafter's army in Cuba at 16, the youngest American soldier in the attack on Santiago on July 1 and 2, 1898, in which one of his comrades was the late Theodore Roosevelt. At 30 he became Lieutenant Governor of Illinois and also served as labor's representative on the late Redfield Federal Board of Inquiry into the tragedy of the steamship *Eastland*, which overturned in the Chicago Harbor, taking hundreds of lives. At 34, Mr. O'HARA took over the organization of the famous D. W. Griffith's motion-picture studios, and a year or so later was again in the Army in World War I, in which he served in the Twelfth and Eightieth Divisions. Following the war he practiced law in Chicago and was defense counsel in more than 200 murder trials. In 1939 he was special attorney with William Secton for the city of Chicago in traction litigation which ended with a comprehensive unified system of local transportation.

Mr. O'HARA, during his colorful past, at times was engaged in newspaper work. He has been sports editor of the St. Louis Chronicle and Chicago American; he has also been cable editor of the Chicago Chronicle, Sunday editor of the Chicago Examiner, and editor in chief of the Chicago Magazine. He is also author of several books, including a history of the United States Constitution entitled "Who Made the Constitution"—with co-author Marie Crowe. He is also active in veterans' organizations, including the American Legion, Veterans of Foreign Wars, and the Chicago Press Veterans Association.

I am proud that I have had the opportunity to acquaint my colleagues with this splendid record of achievement of the gentleman from the Second Illinois District in his long and honorable career in public service to his State and the Nation. I know you feel, as I do, a deep sense of pride in sharing this happy occasion of the birthday anniversary of our good friend, BARRATT O'HARA.

Blabbermouths in Washington

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Billy Rose, in his syndicated column entitled "Pitching Horseshoes," calls attention to a Washington practice which should be stopped. There are too many experts in this city who, with a few drinks under their belts, tell all they know. I commend this article to all Members of the House, as follows:

Hon. HARRY S. TRUMAN,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: It may interest you to know that there's a man in New York who knows exactly how many atom bombs we have, exactly where they're hidden, and exactly how they're guarded. What's more, he is connected in no way with the Atomic Energy Commission, the Army, Navy, or any other branch of the Government.

With your patience and permission, I'd like to tell you about him.

Not long ago, this man—the editor of a national magazine with more than 15,000,000 readers—went to Washington on routine business. The day he arrived he was invited to a dinner party in Georgetown, and over

the postprandial brandy he got into a bull session with several members of the military and bureaucratic elite.

When the subject of the atom bomb came up, a high-ranking official laughed. "Don't worry about our A-bombs," he said, and then, without prodding or prying, he proceeded to tell the editor and the other guests precisely how many bombs we had, where they were stored, and the security measures in force in the area. At the end, the drinky-talky notable smiled as if to say, "You folks didn't know what a bright boy I was, did you?"

The editor, an old friend of mine, told me the story a couple of days after he got back to New York, and I've been using a lot of barbiturates ever since.

He's a zipper-lipped citizen who edits his thoughts as carefully as his copy, and I believe him when he says that Washington is currently a-busting with blabbermouths who, at the drop of a daiquiri, blurt out top secrets with only a prefaced "This is off the record" to tidy up their consciences.

Fortunately for us, this magazine man is not apt to talk out of school or turn, but it stands to woeful reason that if he can come away from Washington with this kind of information a lot of other people can too—including those who cash their pay checks in the First National Bank of Moscow.

In this day and dilemma, Mr. President, government by gossip can easily mean the end of government by consent, and from where I sit and tremble, it's high time you pressed a few buttons and initiated some big scale tracking and cracking down.

If heads must fall, then let them fall—and if you want to take that literally, it's all right with me, not to mention 150,000,000 other Americans who don't own a bomb shelter or a lead-lined tuxedo.

Respectfully,

BILLY ROSE.

P. S.—It may further interest you to know that, according to a recent estimate, the per capita consumption of hard liquor in Washington is greater than that of any other town in this country.

Brannan Farm Plan

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. VURSELL. Mr. Speaker, since Secretary of Agriculture Brannan is touring the country in an effort to put over his Brannan farm plan, I think the farmers should examine it very carefully.

First, the demand for this bill has not come from the farmers. It came from the CIO labor leaders who figured this scheme out to give those in the big cities lower food prices through subsidies paid out of the Federal Treasury to the farmer on about two-thirds of his products. The farmer would doubtless be criticized for accepting the subsidy, while those living in the cities would get the benefits to help pay a part of their grocery bills.

IT IS A POLITICAL PLAN

It is a political bill which has great appeal. It says to the farmers, "The Government will guarantee you a high income"; and it says to labor and the consumer, "We are going to give you low-priced food." That comes mighty close to utopia, if it is true.

WHO WILL PAY IT?

Uncle Sam. And the only money Uncle Sam has is what you and I give him through taxes. That means every farmer, every consumer and all of us will have to pay higher taxes to get the money to carry out this gigantic spending operation.

WHAT WILL IT COST?

The Department of Agriculture of Illinois has said, "It will cost as much as the total Federal budget before the war." That was about $10,000,000,000 a year.

This Department also estimated the Brannan plan for hog supports alone might cost $700,000,000 annually. The American Farm Bureau says on milk alone it would cost $2,480,000,000 annually.

This cost is only on two products out of many. A study of the bill indicates it would cost $10,000,000,000 annually.

CAN FARMERS DEPEND ON CONGRESS?

One of the great dangers to the farmer in the Brannan plan is that each Congress has the power to appropriate, or not appropriate, the money to carry out the plan.

Suppose any Congress in the future would say, "With a $267,000,000,000 debt, and a $10,000,000,000 deficit, we cannot appropriate over $4,000,000,000," when $8,000,000,000 or $10,000,000,000 is necessary. The farmer would be ruined and left holding the sack.

It is dangerous for the farmer to be put in the position where he must depend on the action of Congress for many billions of dollars of his income. To swap the present support program, which is the result of the best thinking and study for many years of the ablest farm leaders in the Nation, and the ablest members of the Agriculture Committees of the Congress, for such an untried scheme would be a tragic gamble on the part of the farmers and the Members of Congress.

BETTER IMPROVE PRESENT PROGRAM

If we are to have any farm program, it would seem wise to retain the best policies of the present program and try to improve upon it for the future. A prosperous agriculture is so important to the entire economy of the Nation that its program must be built on sound and proven policies, and not be sacrificed on the political altar of any party.

FINES AND JAIL SENTENCES

The bill contains 15 pages of penalties against farmers who violate its regimentation and controls. Here is a sample of just one of many sections:

"It provides that all farmers must keep such books and records and make such reports as may be required by the Secretary; and that if they fail to keep these reports and records they will be deemed guilty of a misdemeanor and upon conviction fined not more than $500. And if they make a false report or record they shall be guilty of a misdemeanor and upon conviction fined not more than $1,000 and imprisoned for not more than a year."

If this bill ever becomes a law, we may have to have more farm bookkeepers, or bigger jails.

Why I Am Proud To Be a Mississippian

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an article written by the very capable and genial editor of the Summit (Miss.) Sun, Mrs. Mary D. Cain, entitled "Why I Am Proud To Be a Mississippian":

WHY I AM PROUD TO BE A MISSISSIPPIAN

(By Mary D. Cain)

To ask me why I am proud to be a Mississippian is like opening giant floodgates; once I get started talking about why I am proud, an effort to stop me is comparable to trying to dam such waters.

Proud to be a Mississippian? Of course I'm proud! I'm a Mississippi woman and if there is anyone in the world who has a right to be proud of her State, it's a Mississippi woman. The Elizabeth Female Academy at Washington, Miss., was the first school in the United States to confer degrees on women; the bill for the establishment of the first industrial college for women was drafted in Claiborne County; MSCW is the oldest and one of the largest State-supported schools for women in the United States; Mississippi was one of the first governments in the world to recognize the right of married women to own property. Today Mississippi grants to her women citizens every right and privilege she gives her men with the exception of jury service and the right to examine banks. These rights are in the making, I feel confident.

Yes, I am proud to be the daughter of a State that has been so kind to its women, helping us to achieve full stature as citizens, but it goes much deeper than that.

ANGLO-SAXON HERITAGE

We are credited with more race prejudice in Mississippi, I suppose, than almost any State in the Union; largely because we are so proud of the pure Anglo-Saxon strain that runs through us * * * a heritage that we jealously guard. But because we believe in segregation it need not be assumed that we are failing to do our part for our Negroes. I recall with pride that Mississippi was the first State in the Union to provide an agricultural and mechanical college for her Negroes; over at Mound Bayou, Mississippi has given the Nation the first example of Negro self-government. True, we haven't given our Negro citizens all we would like to, but people who criticize are forgetful (or ignorant) of the fact that we have come a long way with them since the days of the Civil War when our beloved State lay prostrate and almost helpless. And we did it without any Federal help. We had no Marshall plan. We are still self-reliant; we still want no Marshall plans.

Over at Itta Bena we are establishing a new Negro college which will do much to develop better Negro teachers. At Alcorn and Jackson Colleges, budgets have jumped proportionately with those of our white institutions of higher learning, and salaries compare favorably. Negro schools which have the support of religious denominations are doing an excellent job in the State; agricultural high schools for our Negro youth are among the foremost in the Nation; and the work of our Negro county agents and home demonstration agents further give the lie to loose statements concerning the status

of the Negro in Mississippi. True, our Negroes still have a long way to go, but I am proud of our Mississippi Negroes for having come so far in so short a time, and of Mississippi's white citizens for dealing with them so sympathetically and in such understanding of their cultural lag. Somewhere in my Sun file is a list of the prominent Negro educators who were trained in this State but who took their talents to greener fields and today hold high positions in the educational worlds of other States. Somehow, I always feel (because service is the only excuse I have ever seen for living and the field here is so wide) that these men and women have let their people down by not staying here to help in elevating the educational and cultural standards of their race. Maybe I'm wrong, but that's the way I feel.

EDUCATIONAL LEADER

Because of our Negroes and their cultural lag, we are said to be at the bottom of the scale in the field of education, but no one can deny that Mississippi spends a larger percentage of tax income on education than any State in the Union. And we have more young men and women in college, in proportion to white population, than any State in the Union. It is our boast that Warren County had the first consolidated high school system in the world and that today, at Crystal Springs and Cleveland, we boast the world's two largest consolidated schools. Our Ole Miss school of law is the fourth oldest State-owned law school in the United States and our State library at Jackson is said to have the third largest collection of law books in the Nation. Our daily and weekly newspapers compare most favorably (maybe I'm partial, but I really think we have an edge) with those of other States, and at West Point we boast that we have the smallest town in the world with a daily newspaper served by full leased A. P. wire. And, despite the position we have been given on the scale, we have more authors and poets who are nationally and internationally known than perhaps any State in the Nation. As Clayton Rand once said, "We don't read books * * * we just write 'em." At any rate, we look with pride to the long and challenging list of renowned Mississippi authors and poets.

And mark this with pride when other States boast of educational achievement: Mississippi was the first State in the Union to establish institutions for our deaf, dumb, and blind.

This is far too long already, but how can I forego the pleasure of boasting of our long line of distinguished statesmen, our orators, who have long fought for the American way of life? And how can I relinquish the delight of expressing my feeling that today Mississippians stand in the forefront of those who are fighting for restoration of constitutional government to our beloved America? Our statesmen, our orators, are still among us.

Mississippi's public health service program is recognized as the foremost in the Nation, and Harrison County has the oldest public health unit in continuous operation of any county in the United States. We have pioneered in so many fields, but lack of space forbids that I go into this.

Mississippi has so many things that are the largest in the world: cotton plantation, tung-oil plantation, clay-made filter factory, apiary, tomato center, pecan nursery—so many things in which we take the lead here in the South—a stone, marble, and granite industry, our cheese plants, our infants' garments factory, our oyster banks off shore from Pass Christian. Eighty percent of the Nation's shrimp supply is caught by Mississippi fishermen and is shipped and packed by Mississippi workmen.

Mississippi has over 4,000,000 acres of land under lease for gas and oil production and today we are booming in this respect; the strides made by industry under our balance agriculture with industry program have commanded the attention and respect of the entire Nation. We have one of the finest systems of paved highways in the Nation, and it is growing steadily.

We have the most perfectly preserved of all the major battlefields of the world at Vicksburg; the first monument raised in the South to honor our Confederate dead was at Liberty; Memorial Day had its origin at Columbus, Miss. The First Mississippi Regiment is the only one that has participated in every United States war since 1798.

Need I go on? The list is endless. In giving reasons for my pride in being a Mississippian I could exhaust both myself and my readers, but never my subject. Mississippi may have her critics—and she does have some bitter ones—but you will never find me among them. Considering the fact that we had so much prior to the Civil War (12 of the United States 75 millionaires lived in Natchez, Miss., and our whole State boasts a cultural background) and that we have had to battle every inch of the way to our place in the sun which we enjoy today—a place of which every Mississippian has a right to be proud—I offer no apology for my State. It has my complete loyalty, my affection, my understanding, and all of my pride.

Point 4 Screwball Spending

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as a part of my remarks I include an editorial by Robert Bliss, editor and publisher of the Janesville Gazette, Janesville, Wis., regarding the point 4 program and the American taxpayers' responsibility in the underdeveloped areas which I think is excellent:

POINT 4 SCREWBALL SPENDING

The peculiar thinking of some of our Washington long-hairs tickles one's curiosity as to how they arrive at their spending hallucination. For example, thanks to the Senate Foreign Relations Committee, the President's dreamy point 4 program is being amended—but not enough.

The wild guarantees of private investments abroad did not deter the House from passing the bill. It would allow private investors to keep the profits they make abroad but would saddle the American taxpayer with any losses. Does that make sense?

The House bill had Secretary of State Acheson's approval in these words: "Protection from some of the risks—to foreign investment—cannot be provided by treaty no matter how sincere the intentions of the participating governments. Therefore, a bill has been introduced (to guarantee and insure private investors) specifically against expropriation, confiscation and seizure, and against inability to convert local currencies."

The foreign governments may try, but they are often completely unable to prevent seizure of American property or forbid conversion of currency. We recall how often governments have been overthrown. But Secretary Acheson would have Mr. and Mrs. American taxpayer make good such losses.

How far will $45,000,000 go in this kind of thing? Chairman CONNALLY, of the Senate committee expects it will be only a starter.

One wonders where there may be an end? The ECA (European Recovery Administration) should be terminated by June 30, 1952, but Administrator Paul Hoffman doubts if expenditures for foreign aid can be held below $2,000,000,000 annually.

Are American taxpayers ready to subsidize point 4—underdeveloped areas everywhere? We are ready to help with our know-how, but some officials in Washington soon should learn that the United States does not owe the rest of the world a living, nor can it build TVA projects on the Nile or Euphrates or any other foreign river—nor should it. Such talk is pure nonsense. Even if it were possible, the peoples we set out to help by our paternalism could not take advantage of our spendthrift lunacy.

From illusions of point 4 issued by the Foundation of Economic Education, Irvington, N. Y., we learn:

1. Point 4 proposals parallel American Communist proposals of 1944.

2. Capital diverted under point 4 would not flow into such projects, would simply shift from private to government or socialistic projects—it would not add to capital.

3. We cannot get wealth by giving wealth away. What capital development we give away will decrease by that much our own capital.

4. Point 4 projects are no more practical than the Lustron house loans or the British peanut fiasco—Britons subsidized peanut growing in Africa, but it would not work—money was wasted.

5. We already have the financial means to back point 4 progams in the International Bank for Reconstruction and Development and Export-Import Bank.

6. Government hand-outs to foreign countries will no more build sound recovery than it builds self-supporting citizens in this country. It is the opposite of what experience has already taught us.

Lending our know-how to countries which want to rebuild is one thing. Spreading gold before unfortunate peoples who have not the skill or desire to use it for their benefit is pure waste.

Generoso Pope

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. MULTER. Mr. Speaker, the city of New York today is mourning the loss of another great American. Generoso Pope was the owner and publisher of Il Progresso, an Italian-language paper in the city of New York, which under his guidance was in the forefront in teaching democracy and the American way of life.

He arrived in this country 49 years ago, a poor immigrant boy, but by dint of his own efforts, taking advantage of the opportunities of this great land of ours, he educated himself while earning a livelihood, and then went on to reach great heights in the business and public life of our community. He was an outstanding businessman, a great philanthropist, and a leader in civic life. Having learned his lesson of American democracy so well, he successfully lead the fight against communism in his native Italy.

The country has lost a good citizen.

Congressional Secretaries Get First-Hand Knowledge of Cotton Exchange

EXTENSION OF REMARKS
OF

HON. FRED L. CRAWFORD
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. CRAWFORD. Mr. Speaker, the Congressional Secretaries' Club, which was formed about 15 years ago to promote better relations between our congressional offices and the departments of government and to provide an increase in knowledge for our office staffs in many fields with which we are concerned, visited the New York Cotton Exchange over the last week end and learned at first hand of the operation of this great commodity exchange.

The visit to the Cotton Exchange was a part of the program of the club's annual New York trip, which usually fulfills the club tradition of carrying on an educational as well as a social program. After attending a briefing session at which our secretaries met officials of the exchange and heard addresses by Mr. Charles B. Vose, president of the New York Cotton Exchange, and Mr. Perry E. Moore, its vice president, they were taken to the floor on which the trading pit is located and there witnessed the last hour of trading.

Since the remarks of Mr. Vose to the congressional secretaries so clearly explain the functions of the exchange, I wish to include them here:

ADDRESS BY CHARLES B. VOSE, PRESIDENT, NEW YORK COTTON EXCHANGE

Ladies and gentlemen, I am delighted to have this opportunity of welcoming this congressional secretaries group to New York, on behalf of the members of the New York Cotton Exchange.

It gives us an opportunity to become personally acquainted which is, indeed, a pleasure.

From another point of view, there is the fact that so frequently we all suffer from a lack of personal acquaintanceship and also from a lack of knowledge of each other's efforts and endeavors.

It is grand that your visit will remedy both of these situations and as our program for you includes a visit to the trading floor of the New York Cotton Exchange, you will then see, first-hand, the actual operations of our exchange and meet more of our members.

Unfortunately, there is much misconception and a real lack of information concerning the broad aspects of the part played by commodity exchanges in the production, marketing, manufacturing, and distribution of the Nation's agricultural products and, as a result of this unfortunate situation, it frequently happens that the commodity exchanges become whipping boys for varying events, for which they are neither the reason nor the cause.

As you all know well, lack of understanding sometimes lends itself to misapprehension and particularly is this evident in the case of our legislators who, on the face of it, could not be expected to be trained in and to understand all phases of national business.

It is, therefore, particularly pleasing to me to have this opportunity of attempting to briefly portray for you the utility of and the necessity for the cotton exchange, in the hope that this better understanding on your part will be enlightening to those who are called upon to cast their vote on all types of farm legislation, tax matters, and on kindred bills which affect such a large percentage of the national farming and industrial population.

How important the proper functioning of the cotton markets and the cotton exchanges are to you may be shown by the fact that there are 1,500,000 persons growing cotton in America, in some 18 States, from coast to coast, and that for many of these States cotton is the principal cash crop and source of wealth. Cotton manufacturing employs over 500,000 workers from Maine to Texas. There are over 1,000,000 people employed in the garment trades where cotton still outranks its closest competitor in yardage by 5 to 1. In addition to farmers and mills, there are banks, merchants, shippers, oil crushers, wholesale, and retail traders and other elements of our economy having a vital interest in cotton. One way or another it has been estimated that about 1 out of 10 of our population are directly or indirectly affected by cotton in their livelihood. So omnipresent is cotton in our affairs that it is clear without further illustration that free enterprise and cotton go hand in hand, and that they stand or fall together.

Fundamentally cotton merchandising does not greatly differ from that of other goods sold without benefit of a futures exchange. If you were a drygoods retailer needing goods, you would negotiate with your regional wholesaler, or perhaps with one of the larger converters or fabricators or a mill sales organization. You would look over the styles and qualities offered, weigh the price quoted, and by private trade, purchase to your best advantage.

Similarly, if you were a mill buying cotton suitable for making print cloth or bedsheeting from a cotton merchant, or if you were that merchant buying various kinds of cotton from a primary dealer, you likewise would negotiate your purchase, by private trade, and to your best advantage, with no shouting or fanfare about it.

Let us now see how this phase of the industry is related to the futures market. Amid the towers of lower Manhattan, we find the cotton exchange building with a great three-story room on its top floor where all trading is conducted. There is a ring in its midst around which many brokers are congregated. They are shouting bids and offers at each other. The clamor at first seems unintelligible, but we soon find great amounts of cotton are changing hands. As each trade is made, reporters flash it by finger signal to a rostrum near the ring. Operators there telephone it to men who chalk up every trade, its time and price, on great blackboards, or telegraph it wherever in this country or abroad the price of cotton is important to business people. We find also that the orders to buy and sell that brokers are executing are flowing to them from telephone booths all around the room and telegraph offices on the floor.

Closer inspection shows us that this speed of transactions in cotton is possible for just one reason. Every order is for 100 bales, called a contract, or for multiples thereof. Also there is no haggling over qualities of cotton, for every contract is based on Middling 15/16 inch, although when the cotton matures it is the privilege of the seller to deliver certain other grades and staples, with the price adjusted to actual differences of value as then reported by the Department of Agriculture. All trading in cotton futures is for delivery at later dates. Thus a sensitive, fluid, market results since the brokers who represent buyer and seller have only to agree (1) on the price, (2) month of delivery, and (3) on the number of contracts, that is—whether 100 bales or a multiple thereof. As a result of the constant flow of business, price changes are close, and normally whether rising or falling values change but one one-hundredth of a cent between transactions. A final thing we learn is that in the vast majority of cases a purchase and/or sale of cotton on the exchange, for later delivery, is usually liquidated by resale or repurchase.

What is the reason for this exchange and what does it contribute to cotton marketing?

The answer lies in the nature of cotton itself. Cotton is a vast enterprise. Millions of bales are grown annually. Wind, rain, drought, sun, insects, temperatures, and Government policies all affect the supply. A host of factors, on the other hand, affect demand. Ownership of cotton thus involves tremendous capital risk. Again cotton is harvested in a few months, but it is consumed throughout the year. Someone must buy it and hold it until the spinner needs it. Without the New York cotton exchange and like institutions, a merchant would have to buy cheaply from growers and sell dearly to mills, adding a high mark-up, because of the many occasions when his market judgment would be incorrect and therefore he would have to bear great losses.

Instead, cotton merchants as well as mills and many other handlers protect their cotton transactions by the method we call hedging. Simply illustrated, the merchant buys cotton from time to time, acquiring a stock for mill requirements, which will show up later. As he makes these purchases of the actual cotton, he sells corresponding amounts of cotton futures contracts on the exchange. He thus hedges, or offsets, the inherent risk of price change while he is waiting for a customer. If prices rise, the actual cotton he put in stock will be worth more, but the futures contracts he sold will also reflect the higher price, so that the gain on the actual cotton will be offset by the loss on cotton futures. If prices fall, the loss on his stock of cotton will be offset and insured by a profit in the cotton futures.

Now that may sound like profitless prosperity, but let me assure you it is not. The merchant has gotten rid of his big risk of major price change. He can now assort his cotton into the exact qualities he expects mills to require, thus performing an essential service, and he will profit according to the judgment and merchandising ability he shows in selling particular qualities to the mills.

He has thus avoided speculating in a volatile commodity. He has done a useful merchandising job. His profit is one of selling skill, not of luck or chance. He can do a bigger business. His credit is good at the bank. His profit margin frequently is one of the narrowest in all commerce. He can pay more for cotton, and charge less for it, than if he had to shoulder the whole risk of price change over extended and uncertain periods of time.

The hedge system, in this and other forms, is used by many people, buyers and sellers of cotton, merchants, mills, and others. There are hedges sold and hedges bought, transactions offsetting cloth business as well as cotton business. In this brief talk, we cannot enter into a detailed study of this long-established and highly efficient method of doing business. But we must point out one important factor.

It is readily seen that buying and selling orders from merchants and mills will hardly coincide in time and quantity. Again the essence of futures is that both buyers and sellers seek to insure themselves against price change, and the insurance must be readily available whenever wanted and whether or not the individual is ready to act now or a week from now. Cotton mills furthermore cannot be expected to insure merchants, or

merchants to insure mills. There must be another source of capital ready at all times to accept the risks which the trade interests desire to minimize. We thus find a class of traders in futures who are speculators or investors, constantly trading in hope of personal gain. Their activity helps to absorb and to underwrite the price risks which cotton men and textile men wish to eliminate.

Needless to say speculation is meticulously regulated by the exchange. A careful check is constantly kept on speculative dealings. Any tendency to excess is corrected promptly. For the exchange recognizes that it operates in the interest of the trade and that only to the extent that speculation provides the risk capital necessary to serve the trade's hedging needs is speculation economically justifiable. The record testifies to the value of properly controlled speculation, and to the success of the exchange in controlling it.

As I said at the outset, cotton is a bulwark of our economic liberties. Freedom of enterprise, freedom of opportunity, go with a soundly functioning cotton industry. The speculator plays an important role in helping to create and maintain broad, fluid markets. Every business involves risk, but the exchange provides means of eliminating great risks from the operations of those in the cotton industry who use these facilities by transferring the risk to insuring speculators.

With time so limited, it does not seem possible to go into technicalities as my sole purpose was to illustrate to you the necessitous role played by the exchanges in the movement of agricultural products.

Before closing, however, I would like to merely say that when referring to speculation, it should never be forgotten that there is speculation in buildings, there is speculation in homes, there is speculation in real estate or, in other words, there is speculation in every form of our national existence and it will so continue as long as we are fortunate enough to remain in a free economy where venture capital can be used according to the dictates of one's own free will.

I am very happy to have had the pleasure of seeing you, making your acquaintance, and attempting, with these few remarks, to bring to you a clearer understanding of the functions of the commodity exchanges in general, and the New York Cotton Exchange in particular.

Hoover UN Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Trohan, from the Washington Times-Herald of May 1, 1950:

HOOVER UN PLAN RECALLS TRAGIC DEALS
(By Walter Trohan)

Former President Hoover's proposal for reorganization of the United Nations without Communist nations in it has served to emphasize New Deal and Fair Deal playing ring-around-the-rosy with the Soviets since 1933.

As President, Hoover had refused to recognize Russia and in 1941 he warned the American people that collaboration with Joseph Stalin to bring freedom to mankind was a gargantuan jest. Last Thursday night he told the Nation's editors he used the wrong adjective, "I should have said tragic."

Hoover noted that Soviet Russia has violated more than 35 solemnly signed agreements in a dozen years and instead of expanding liberty the Reds have enslaved a dozen nations and 600,000,000 human beings.

STARTED BY ROOSEVELT

Many observers have traced the rise of Soviet Russia as the No. 1 threat to civilization and liberty to democratic acceptance of communism and Communist programs in the dizzy international whirl of the last two decades.

Until President Roosevelt entered the White House the American Government had refused to recognize the Communists. Republican administrations had refused to recognize a nation ruled by men who relied upon mass murder for power and who boasted of bad faith as the keystone of their foreign policy.

EXTENDED HAND TO STALIN

In 1933, against the advice of many members of his party and over Republican protests, Roosevelt extended the hand of fellowship to Josef Stalin. He gave a cordial and friendly welcome to Soviets as members of the family of government leaders.

Maxim Litvinov, Soviet Commissar for Foreign Affairs, was welcomed into the White House in the Christmas holidays. The American people were treated to a radio play in which the Russian husband and family telephoned seasonal greetings to his Moscow family.

Persons who attempted to warn against the Soviet dangers were ridiculed and smeared. Notable among these was the late Dr. William E. Wirt, of Gary, Ind., who revealed that insiders in the New Deal regarded Roosevelt as the Kerensky of an American revolution.

Two years later the American people were given the inside story of the recognition, which revealed Litvinov as boasting he had put one over on the President. Dr. David H. Dubrowsky, former director of the Soviet Red Cross, who was living in the Soviet Washington headquarters at the time Litvinov returned from the White House after reaching the agreement, told his story to the House Un-American Activities Committee.

Dubrowsky said Litvinov entered rubbing his hands with glee and reported, "Well, all is in the bag; we have it."

"They [President Roosevelt and Secretary of State Cordell Hull] wanted us to recognize the debts that we owed them, and I promised we were going to negotiate, but they did not know we were going to negotiate until doomsday," Litvinov continued, according to Dubrowsky.

LITVINOV SARCASTIC

"The next one was a corker. They wanted me to give them freedom of religion, and I gave it to them. I was very much prompted to offer that I will collect all the Bibles and ship them out to see them."

Dubrowsky also said that Litvinov regarded the promise not to propagandize in the United States as not worth the paper it was written on because it was a promise made to a bourgeois state.

The propaganda pledge was almost immediately broken. In the summer of 1935 Roosevelt was moved to protest. Stalin ignored the protest, and Roosevelt did nothing.

The Roosevelt recognition shed respectability over the comrades. Earl Browder, general secretary of the Communist Party in America, was able to report to Moscow that the New Deal had thrown its doors open to the party, that the New Deal was a collectivist enterprise in which capitalists were being hunted down and that the profit system was being destroyed in America.

RED HELP FOR F. D.

On the eve of the second term election, Comrade George Dimitroff, keynoter of the Third International meeting in Moscow, which ended in August 1936, threw party support behind F. D. R. in the American presidential campaign.

Dimitroff urged that "the Communist Party should support the election of President Roosevelt, because his defeat might enable forces now opposing our forces to give us a body blow."

Similar sentiments were expressed by Reds in this country. Eight years later Reds claimed their support elected F. D. R. to a fourth term.

From 1934 to 1939, according to Dmitry Z. Manuilsky, member of the executive committee of the Communist International, the Communist Party was able to increase its members, after the recognition, from 20,000 to 90,000. Each party member he emphasized was a responsible leader of 15 to 20 fellow travelers. This meant the New Deal had encouraged recruitment of 1,050,000 Communist followers in 5 years and that in 1939 a total of 1,350,000 Communist Party liners were active in the United States.

RED INFILTRATION

Many came into the Government. Records of the House Un-American Activities Committee showed that the White House repeatedly sidetracked and disregarded evidence of Communist penetration into the Government.

In Washington love feasting with Stalin was excused on the ground that Stalin was an enemy of Adolph Hitler. In 1939 Stalin pulled the rug out from under these apologists by negotiating the pact with Hitler that started World War II.

Mr. Roosevelt in the White House was silent on the pact. Russia invaded Poland with Hitler. The White House still was silent. Estonia, Latvia, and Lithuania were invaded by Stalin. Mr. Roosevelt in the White House was still silent.

Stalin threatened Finland. Roosevelt expressed hope that Stalin would not impair Finland's independence. On November 29, 1940, the Soviets invaded Finland.

ROOSEVELT'S EXCUSE

On December 29, 1940, Roosevelt used Russian aid to Germany as an excuse for American aid to Britain, saying "it is no more unneutral for us (to send aid to Britain) than it is for * * * Russia and other nations near Germany to send steel and oil and other war materials into Germany every day of the week."

On February 10, 1940, Roosevelt uttered his strongest condemnation against the Soviets. He harangued the American Youth Congress against the absolute dictatorship of Russia and was soundly booed by members of the organization, which was labeled as a Communist front in Congress.

In April 1941 the Soviets, undisturbed by expressions of American disapproval, sought to strengthen their position by entering into a nonagression pact with Japan. Negotiations with this end of the Rome-Berlin-Tokyo axis were in progress when Hitler attacked Russia June 22, 1941.

Roosevelt's condemnation of Russia's absolute dictatorship and wanton disregard for law were forgotten overnight. Russia became a noble democratic defender of freedom against Nazi aggression.

Another to join in praise for the Soviets was Wendell Willkie, GOP candidate for President in 1940, who won the nomination through machinations of the White House with Wall Street internationalists. Willkie was an ostensible opponent of White House foreign policy in campaign speeches, but had secretly assured internationalists he was with them if he should be elected. He joined with the White House after the election and dismissed his criticisms of New Deal foreign policy as campaign oratory at a Senate hearing.

After Pearl Harbor the chorus of adulation for Russia swelled into an oratorio which drowned out things American.

WHITE HOUSE AIDED HISS

There was only one jarring note in the great friendship and that came from Moscow. The Reds demanded a second front and ignored the dying of Americans in the Pacific, Africa, and Italy. Russian propaganda made it appear the Soviets were fighting alone.

At Tehran President Roosevelt played up to Stalin at the expense of Churchill at various conferences and festive occasions where drinks flowed freely. The official picture of the conference reveals Stalin wearing a cat-swallowed-the-canary look, Roosevelt as worn but pleased with himself, and Churchill as seething with inward fury.

At Yalta the wooing of Stalin went even further. Roosevelt continued the secret agreements and understandings which gave the Soviets a chain of satellites in eastern Europe and paved the way for extension of Soviet influence in Asia.

Prominent in the Yalta Conference was Alger Hiss, then in the State Department. Hiss is the convicted perjurer spy, revealed in the testimony of his accuser, Whitaker Chambers, to have been a member of the Soviet spy ring in Washington for years.

Hiss was secretary general of the United Nations founding conference at San Francisco in 1945. He owed his appointment to the White House. Later he was named president of the Carnegie Foundation through the sponsorship of John Foster Dulles, foreign policy adviser to Governor Dewey, twice GOP Presidential candidate.

ASSERT HISS WAS LOYAL

Defenders of Hiss have said that if he did turn over secrets to the Soviets, he did so because of Roosevelts' cooperation with Russia. Friends say Hiss was loyal to Roosevelt in helping an ally.

Hiss' friends include State Secretary Acheson, his State Department associate, who said he would stand by his friend even after Hiss was convicted as a spy-perjurer.

Hiss was only one of the officials linked to Russia. Government and congressional investigators have disclosed that their files contain evidence reflecting on the loyalty of more than 2,200 Federal officials and employees. More than 500 of these were reported to occupy key posts with access to confidential information of high interest to the Soviets.

There has been a long chain of sudden deaths, suicides, mysterious deaths, and strange accidents in the New Deal high command. Many of these have befallen officials linked to the Communist spy disclosures or to various failures of American policy in dealing with the Reds.

Roosevelt and President Truman repeatedly balked investigation into Communist penetration. Mr. Truman, who ratified the concession made to Stalin at Yalta in the Potsdam conference, began as an enthusiastic follower of the laid-Russia policy.

Before his nomination in 1948 Mr. Truman told an audience "I like Joe Stalin." He described Stalin as a gentle soul, a prisoner of the Politburo.

Since that time Mr. Truman has switched his position to anti-Soviet. Political observers have speculated that he hopes to win re-election in 1952 by keeping the cold war crisis alive.

BROWDER AND NEW DEAL

Browder entered into wholehearted cooperation with the New Deal. After the defeat of Germany and Japan, Browder was removed as party leader, which signaled the end of Communist cooperation with the New Deal and with capitalism. During the war capitalists joined hands with New Dealers and Communists in promoting internationalism.

In the trial of Harry Bridges, west coast Communist labor leader, it was revealed that Washington intervention had prevented his deportation. It was said that Bridges would never have been prosecuted had Roosevelt lived.

After the death of Roosevelt Red propagandists called for bringing American soldiers home immediately to ward off any possible check of Red aims. In complete submission to the Reds the Allied zone in Berlin was left without any avenue of approach, which later forced the costly airlift.

There Seems To Be Much Iron Ore Near the Minnesota Mesabi Range, After All

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. VAN ZANDT. Mr. Speaker, those who are advocating the construction of the St. Lawrence seaway are now using the shortage of iron ore in Minnesota as a reason why this billion-dollar project should be built.

According to an article in the April 14, 1950, issue of the Vindicator-Telegram of Youngstown, Ohio, there seems to be a lot of iron ore left on the Mesabi Range in Minnesota.

The article referred to is as follows:

THERE SEEMS TO BE MUCH ORE NEAR MESABI RANGE, AFTER ALL

(By John W. Love)

About the time we began talking of a possible shortage of iron ore in the Lake Superior district several years ago, lofty gentlemen in the ore business allowed that iron would probably be found there as fast as it was needed.

The inference by us outsiders was that the experts had notions where the ore lay but didn't want to uncover it too fast, on account of the land taxes.

Much furious exploring has been going on since then, however, a lot of sloshing through muskeg and jungle, and ore has been turned up in hundreds of millions of tons total in Labrador, Venezuela, Mexico, and other places.

ORE TO BURN

But the lords of Lake Superior may have been right the first time, even though they or others got pretty nervous later. There may be enormous quantities of yet-untouched hematite not very far from where it has been taken out for nearly the last century.

Hints have been drifting down from the Northwest concerning magnetic indications of large ore beds in Minnesota, and of great deposits in the Steep Rock property back of the Canadian shore of Lake Superior.

It is at least imaginable that by the time the Labrador ore is coming up a St. Lawrence seaway and Venezuelan ore by the port of Baltimore, iron will be in sight in as large a quantity as ever in the Superior district. Considering all the places where ore has been found, it may yet run out of the Western Hemisphere's ears.

DOODLEBUG FINDS IT

Reports from Minnesota concern the revelation of two potential iron formations, one in the northeastern part of the State, the other in the west central. Federal and State geologists have been cooperating in an aerial magnetic survey since 1947.

The word now is that something of significance lies buried under the glacial drift in a belt extending 30 miles across northern Itasca County, west of the Mesabi Iron Range. Likewise in a belt of 80 miles length and up to 10 miles width in Otter Tail and Becker Counties. The existence of ore has been known there for many years, but it lay too deep. The geologists have been using the magnetometer, or "doodlebug," carried on the end of a cable from a plane. More reliable exploration by drill is likely to follow.

ANOTHER 300,000,000 TONS

Steep Rock Iron Mines of Steep Rock Lake, Ontario, and Cleveland (C. S. Eaton, the chairman) has been drilling around on its own property, and so has Inland Steel of Chicago on a leased portion. In two main ore bodies indications were found some time ago of the presence of something like 200,000,000 tons. Exploration on the Inland concession during the winter is said to suggest another 100,000,000 tons.

The Inland Steel geologists and their crew spent several weeks running diamond drills on the ice of Steep Rock Lake. The lake itself is about 250 feet deep, and the drills have been going several hundred feet beyond the bottom Reports are that the ore runs 50- to 68-percent iron and to be spread over enough area and depths to indicate the total tonnage mentioned. The lake itself would have to be pumped out, of course, and that would take some months.

Thus, ore in considerable quantities exists in three segments several miles apart. The twisted lake is 15 miles long, and its shape is roughly that of the ore body which Joseph Errington claimed in 1940 that he had outlined. I met Errington at that time, before any Americans were interested, and he said high-grade iron was to be found along its entire bottom.

If the ore body were as long as Errington thought it was and as wide and thick as it has shown to be in spots, then a billion tons is not beyond the possibilities. All this is highly conjectural, of course, but no more so than the possibilities the doodlebug has turned up in Minnesota. Hence the notion that the Northwest might yet disclose enough ore to run us several decades longer than we'd thought.

Mexican Seizure of American Fishing Vessels

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. PHILBIN. Mr. Speaker, I am in complete agreement with my distinguished colleagues, Mr. LANE and Mr. NICHOLSON, and others, who have so ably protested in the House the recent unwarranted seizure of American fishing vessels in Mexican waters.

I am not informed officially as to all the facts and circumstances of these seizures, but from the information at hand it seems to me that a grave offense against international law has been committed by Mexican officials.

It is stated that the vessels in question were wrongfully apprehended and seized while they were engaged in shrimp fishing about 8 miles off the Mexican coast.

This point is clearly outside the established international limit and I know of no treaty or convention which prohibits fishing by Americans in these waters.

I am forced to conclude, therefore, in the absence of evidence to excuse or justify these acts that they were entirely illegal, wrongful, arbitrary, and high-handed violations of law, of comity between nations, and a serious blow to the mutual respect subsisting between Mexico and this Nation.

I eagerly join in the vehement protests against this outrage and urge this Government to institute immediate action to submit formal protest to Mexico, demanding explanation and redress, full compensation in damages, and assurance that these acts will not be repeated.

Address of Hon. Herbert Hoover

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. AUCHINCLOSS. Mr. Speaker, I am greatly honored in receiving the permission of the House to extend my remarks in the Appendix of the RECORD and include the recent speech by our only living ex-President, Herbert Hoover. This address was made by Mr. Hoover before the American Newspaper Publishers Association on April 27, 1950, and was of such significance that President Truman is reported to have telephoned him his approval immediately on its conclusion. That in itself is most unusual and significant, but the speech is even more so. It contains sound reasoning and reveals what is in the hearts of men and women everywhere who are lovers of freedom and who yearn for peace. I believe it to be one of the most significant utterances of our times and that it will command the attention of the whole world in its effort to seek a way out of this cold and profitless era in which there is no peace.

The great respect and affection in which Mr. Hoover is held by his fellow countrymen adds immeasurably to the force and potentiality of his words. There is no man living today who is more highly esteemed for his sincere love for his country and his many unselfish contributions to the benefit of mankind. I hope that my colleagues will read and reread this notable speech and thereby gain in their thinking about peace.

ADDRESS BY FORMER PRESIDENT HERBERT HOOVER TO THE AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION

It is a great honor to address the editors and publishers of the United States. You are the most powerful of all influences in our country.

My subject on this occasion arises from my suspicion that the world in its tumults has abandoned most acceptance of history as a guidepost.

There are plenty of voices about but the voice of experience seems to have become stilled.

I have had to do with the boiling economic, social, and political forces during two world wars and their aftermaths. I propose for a few moments to add some of the voices of world experience into the present clamor. I shall explore four samples, one each from the economic, social, political, and international field.

ECONOMIC EXPERIENCE

In the economic field there are many shrill voices proclaiming that our American economic system is outmoded. They say it was born of undesirable parents, such as American individualism and a French lady, named laissez-faire. They accuse the ghost of Adam Smith as having had something to do with the matter. They concluded our system is of the jungle or dog-eat-dog variety.

It might be observed that the alternative offered us is a drink mixed by three different ghosts. That is, the shade of Karl Marx with his socialism. The shade of Mussolini with his dictated and planned economy. The spook of Lord John Maynard Keynes with his "operation cuttlefish" comprising managed currency, peacetime inflation by deficit spending, and perpetual endowment for bureaucrats. And we have contributed an American ideology of give-away programs. It might be called the ghost. However, the handiwork of the ghosts and their auxiliaries furnish you most of your page 1.

I am not going to repeat the old and valid defenses of the American economic system; I may mention that in recent years we have taken strong drinks from the three "hants" I have mentioned, and from the new generosity, all mixed with varying amounts of pure water from the American system.

THE ECONOMIC REVOLUTION

Be all that as it may, my purpose here is to call your attention to a less obvious world experience.

Sixty years ago our American system was divorced from the laissez-faire lady. We started proceedings in 1887 when we created the Interstate Commerce Commission, thereby initiating the control of natural monopolies. But far more revolutionary was the Antitrust Act of 1890.

Western Europe never has had effective antitrust laws. To the contrary, there grew up in those countries a maze of state-favored private trade restraints, combinations, trusts, and cartels. This form of economic organization sought profits by fixing prices and by control of production and distribution.

Under our revolutionized American system, competition remained the restless pillow of progress. It had to seek profits from improved technology and lowered costs of production.

In time, western Europe, without the full pressure of competition, lost much of the impulse to improve methods and equipment. Plants became obsolete; standards of living stagnated.

OUR SYSTEM DYNAMIC

In contrast, our technology with 100 times as many inventing laboratories and a thousand times more trained technicians has steadily improved its tools. Our standards of living increased with cheaper costs and more goods. Our system was dynamic; theirs was static.

Finally western Europe with its obsolescent plants, its inability to compete in world trade except at the expense of labor was desperate. It took to hard drinking of the potions from the shades of Marx, Mussolini, and Keynes—plus the new generosity.

Our American system continues to produce despite periodic indulgence in these drinks. It does it despite two world wars, innumerable interferences with incentives and a Government take of 60 or 70 percent of its savings. It still retains the dynamic power to provide the greatest and widest spread of comfort to our people that the world has ever known. That is, if we would join Alcoholics Anonymous and quit mixed drinks.

Lest any dangerous thought flash through your minds, I am recalling this experience exclusively to you as publishers and editors.

EXPERIENCE IN SOCIOLOGY

Now lest someone think all this is economics without humanism, I offer an experience on the social side. It is punctuated today by the siren voices calling for security from the cradle to the grave.

Security from the cradle to about 18 or 20 years of age, and from about 65 to the grave, has always been sacred to the American people. The training of our children, the care of our aged and the unfortunate have been a part of our system since the founding of the Republic. It is part of our civilization. The governmental part, however, needs some repairs.

But the voice of experience which I wish to recall relates to the idea of security for the middle group—say, from 20 to 65 years of age. We have less than 70,000,000 providers in these groups, and they must provide for 80,000,000 children, aged, sick, nonproductive Government employees and their wives. It is solely from the energies of this middle group, their inventions, and their productivity that can come the support of the young, the old, and the sick—and the Government employees.

SYSTEM CAN BE DESTROYED

Unless there is the constant pressure of competition on this group between 20 and 65 plus the beckoning of fairies and rewards to simulate incentives and work, the children and the aged will be the victims. This middle group can find its own security only in a free but tough system of risk and self-reliance. It can be destroyed by taxes and the four mixed drinks.

Experience calls sorrowful confirmation of all this. My recollection is that the Lord remarked to Adam something about sweat.

Be that as it may, there is convincing evidence from the British experience of trying to include the middle group in blessed security. Their incentive to sweat has diminished under that illusion. The needed leadership of the middle group in production and distribution is being destroyed. Otherwise they would not need lean on the new generosity.

There are also some lessons of experience to be had from Russia where the grave is close to the cradle. And 15,000,000 people are compelled to work in slave camps under the whip.

The voice of experience also calls loudly as to organization of the political field. In 1938, I spent some months on the Continent inquiring how come 15 new democracies after the First World War had failed.

The downfall of the representative governments was due in part to the drinks compounded by the three ghosts. But there was another step in their arrival at chaos, which contains a potent experience for America.

There had grown up in their legislature a multitude of splinter parties. There were all the way from 5 to 15 of them. In consequence, there was no responsible majority. Governments were driven to improvised legislative coalitions, which could only agree upon negative policies and give-away programs. In each coalition small foreign-controlled tricky groups played a part. In confusion and despair, their peoples welcomed the man on horseback.

TWO MAJOR PARTIES NEEDED

Even though old-time religion, it is worth repeating that the preservation of representative government requires two major political parties.

I am not going to deliver a history of the rifts between major parties in the United States. So you may relax. I might mention that once upon a time, say for about 60 years,

the members of both of our major political parties were, in large majority, liberals in the nineteenth century sense. They quarreled mostly over the tariff but not over ideologies.

However, since Lenin's implication that the hermit crab, by seizing the shell of another animal knew his business, the term "liberal" has lost its soul. Its cheerful spirit of less power in government and more freedom of men has passed to the world beyond.

Nor am I going to try your after-dinner souls with ideological definitions—not even of statism. That definition has already been made instinctively by the common tongue of all nations where free speech still has a part in their proceedings. That effective but perhaps unrefined definition is "right wing" and "left wing."

PARTIES REORIENTED

The point I am concerned with here is that from the ideological tumults stirred by three shades and their helpers, our major American political parties have been in large degree reoriented into these new compartments of right and left.

I do not charge the real Communists to the American left wing. They are agents of a foreign government.

If a man from the moon, who knew the essentials of representative government, came as a total stranger to the United States, he would say some obvious things within the first week or two.

He would say to the Republican Party: There is no room for you on the left. You must be the party of the right, or you will split into ineffective factions.

And with equal emphasis he would say to the Democrats: Your die is cast. You are the party of the left, or you will likewise split into futile factions.

He would say to some members of both parties: You are not in your proper spiritual homes.

He would say that in all this ideology tumult, if there cannot be a reasonably cohesive body of opinion in each major party, you are on a blind road where there is no authority in the ballot box or in government.

He would say that if you want confirmation look at 15 European countries where representative government was torn to shreds.

IN THE INTERNATIONAL FIELD

I need not remind you that our page 1 international issue is Communist Russia. There are seven phases of this experience which I must recall before I come to a proposal of action.

The first phase of experience with Russia began under the czars. Since Peter the Great they steadily have expanded their reach of empire over the largest land mass in the world. Their method was that of a burglar going down a hall. If there was no one in the first room, he took everything including the doorknob. If he found someone in the second room who protested, he weighed the strength of the protestor and might leave part of the furniture. If he found an armed man in the third room, he closed the door and waited.

Lenin and Stalin added a new apparatus for the robber. They now make the man in the second room a party member and rob him later and by degrees. They now put the armed man in the third room asleep with a nonaggression pact or a promise of peace. Thus, he neglects his weapons. In any event they steal his secrets.

The second phase of this experience with Russia was a period of 16 years during which four Presidents and seven Secretaries of State opposed our having any relations with this malignant Government. Their attitude was that when our neighbors are living a life of spiritual and other disrepute we do not attack them. But we can hold up standards in the world a little better if we do not invite them into our homes by so-called recognition.

LEFT-WINGERS HAD WAY

The third historical phase arrived when our left-wingers had their way in our relations with Communist Russia. They produced the recognition of the Soviet in 1933. They produced the alliance with Russia in 1941. They produced the appeasement of Russia in western Europe until its reversal by President Truman and Secretary Byrnes in 1945. I will not join in the explanations about China. Up to now there is agreement on only one point. We lost the game—400,000,000 to nothing.

Many of our left-wingers were not consciously doing all this. They were just trigger-happy to anything new in ideological life.

Lest anyone think I am a recent convert in these, I may cite that just 9 years and 63 days ago I warned the American people that collaboration with Stalin to bring freedom to mankind was a gargantuan jest. I used the wrong adjective. I should have said tragic. For a result, instead of the expansion of liberty, we witness a dozen nations and 600,000,000 human beings enslaved.

The fourth phase of this experience was that Soviet Russia has in the last 12 years violated more than 35 solemnly signed agreements.

NOW A PROPAGANDA FORUM

The fifth phase of this experience has been with the Communists in the United Nations. That Charter for which we hoped so much contains lengthy pledges to the independence of nations, to human liberty, and to nonaggression. About a dozen provisions of that Charter have been violated either in spirit or in letter by Soviet Russia. The Kremlin has reduced the United Nations to a propaganda forum for the smearing of free peoples. It has been defeated as a preservative of peace and good will.

The sixth phase of this experience is that we now find ourselves in an expensive and dangerous cold war. We conduct the battle with subsidies to beguile peoples to rectitude from internal communism. A year ago we made the Atlantic military pact. The expressed hope was that although there was no commitment to go to war these nations would build up their own arms to adequately defend their own rooms. In persistence to an old habit, we are taking up the check.

In the meantime we learn that our first defense—the atomic bomb—has been stolen from us.

The final phase of our experience with Russia is the belated realization that this is not one world but two worlds. The one world idea seems to be lost in the secret files.

One world is militaristic, imperialistic, atheistic, and without compassion. The other world still holds to belief in God, free nations, human dignity, and peace.

SHOULD TAKE COLD LOOK

Now to come to the point of all this. The American people ought to take a cold and objective look at this experience before we go any further.

The look should be directed to the fact that more and more the burdens of defending free men and nations are being thrust upon the American people, who are only one-sixth the population of the globe. We are becoming more and more isolated as the sole contender in this cold war. We are steadily losing ground because the non-Communist states are being picked off one by one or are compromising with the Communists. Our countrymen are in a fog as to what, where, and when all this leads to.

What the world needs today is a definite concrete mobilization of the nations who believe in God against this tide of Red agnosticism.

It needs a moral mobilization against the hideous ideas of the police state and human slavery. The world needs mobilization against this creeping Red imperialism. The United States needs to know who are with us in the cold war against these practices, and who we can depend on.

CALLS FOR REORGANIZED UN

Therefore, I have a proposal to make.

I suggest that the United Nations should be reorganized without the Communist nations in it. If that is impractical, then a definite new united front should be organized of those peoples who disavow communism, who stand for morals and religion, and who love freedom.

This is specifically not a proposed extension of a military alliance or any color of it. It is a proposal based solely upon moral, spiritual, and defense foundations. It is a proposal to redeem the concept of the United Nations to the high purpose for which it was created. It is a proposal for moral and spiritual cooperation of God-fearing free nations.

If the free nations join together, they have many potent moral, spiritual, and even economic weapons at their disposal. They would unlikely ever need some weapons. Such a phalanx of free nations cou'd come far nearer to making a workable relation with the other half of the two worlds than the United States can ever do alone.

COULD KEEP AGENTS OUT

By collective action we could much more effectively keep their conspiring agents and bribes out of all our borders and out of our laboratories.

It may be the non-Communist world is not willing to take such a vital stand. At least it would clarify what we have to do.

The test I propose is the logical and practical method of total diplomacy. It would make diplomacy dynamic and lessen the dangers of the American people. All this may give pain to some people. But by their cries ye shall know them.

My friends, I am not disheartened by all this recall of disturbing experience. We must retain our faith in western civilization. In support of that faith we are perhaps a slow but a resolute and intelligent people. We have the greatest organ of education known to man—a free press. You can dissolve much of our confusion and frustrations.

And in rejecting an atheistic other world, I am confident that the Almighty is with us.

The Late Dr. Charles R. Drew

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. HERTER. Mr. Speaker, the tragic death in an automobile accident on April 1 cut short the career of one of this country's most distinguished citizens, Dr. Charles R. Drew, chief surgeon at Freedmen's Hospital and professor of surgery at Howard University. The contributions which he made in the fields of medicine and science were many, and he achieved international reknown for the pioneering work he did in connection with the development of blood plasma—work which incidentally won for him the directorship of the first plasma division in 1941 and also the honor of being the first director of the American Red Cross blood bank.

A Negro himself, Dr. Drew worked unceasingly to train other Negro surgeons, and the success of his efforts is attested to by the fact that more than half of the Negro surgeons who have been certified by the American Board of Surgery studied under Dr. Drew.

An Amherst College graduate in 1926, he received his medical degree from McGill University in Montreal, Canada, in 1933, and served as resident doctor at the Montreal General Hospital until he came to Howard University as an instructor in pathology and an assistant in surgery in 1935. In 1938, he was awarded a Rockefeller fellowship in surgery at Columbia University, where he received his doctor of science degree in 1940. He was the recipient of the Spingarn medal in 1943—an award for distinguished service given annually by the National Association for Advancement of Colored People.

Dr. Drew was a member of the board of directors of the district chapters of the National Foundations of Poliomyelitis and of the American Cancer Society. He was a member of the board of trustees of the National Society for Crippled Children, and was chief of the surgical section of the National Medical Association.

It is always deeply distressing whenever a career of selfless service is brought to an abrupt and accidental end. This is particularly true in the case of Dr. Drew, whose humble and competent approach to whatever problems he was faced with made him respected and admired by all who knew him.

Justice for Poland

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. KENNEDY. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD a speech by Judge Blair F. Gunther, supreme head of the Polish National Alliance of North America, on justice for Poland, together with an introduction by Attorney Martowski:

INTRODUCTION BY ATTORNEY MARTOWSKI

The most alarming tension confronting the American people is caused by the spread of communism throughout the world. Probably not many of us do realize that the appeasement policy of our diplomats at Yalta, Tehran, and Potsdam, has helped Stalin to dominate two-thirds of Europe and most of China and become a threat to our security and world peace. Whether we yielded to Stalin by sheer ignorance of Russian history, confused thinking, or unfamiliarity of Communist methods; or whether our own Communist sympathizers, skillfully planted in the important governmental departments, have misguided our actions we are paying dearly for the colossal errors committed at the highest levels of our officialdom. Gradually we have recognized our blunders and in order to correct them, at least in part, we are now spending billions of dollars for the Marshall plan, Atlantic Pact, and the rearmament of western democracies. We are becoming more aware that communism is based on atheistic materialism with its totalitarian regime enslaving common people. God is set aside and with Him the basis of morality. The dignity of human beings, the inalienable rights to life, liberty, and pursuit of happiness, are replaced under communism by the police state abrogating all rights and privileges. This brutal ideology is infiltrating even the United States. Within our gates the fifth column is plotting the destruction of our Government. This fifth column is becoming more bold, more aggressive, and more effective than ever before. So that today even the safety of America is at stake in the face of a cruel, stealthy, ruthless, and clever Asiatic enemy with his agents operating in our midst. But more on the subject of communism will be given by our distinguished speaker, Judge Blair F. Gunther. He was born in Hasting, Pa., son of a coal miner. He graduated from the Kanty Preparatory School and received his LL. B. degree from Duquesne University in 1927. From 1935 to 1938 Mr. Gunther was deputy attorney general. He was appointed to the bench in 1942 and was elected in 1943 despite a Democratic landslide. Judge Gunther is supreme head of the Polish National Alliance of North America, a fraternal organization having over 300,000 members in the United States. He is chairman of the board of trustees of the Alliance College and is the national chairman of the American Resettlement Committee for Displaced Persons. For the fifth consecutive time, he was elected chairman of the Polish-American Congress of Western Pennsylvania. It is with pleasure that I present now the recorded address of Judge Blair F. Gunther of the Allegheny County Court. Judge Gunther.

JUSTICE FOR POLAND

(By Judge Blair Gunther)

I am very happy to speak to you under the auspices of the Polish-American Congress, of western Massachusetts, and especially upon the invitation of my dear friend, Dr. Karol Smolczynski, who has done so much for our country and in the interests of Poland.

I am very happy to speak on a subject that is of interest to many of us—the demoralization of communism and its designs on the world. Let us today in this season of Lent start appeasing God instead of appeasing Joe Stalin, if we are to avert another world war. In the words of one of our distinguished clergymen in western Pennsylvania, who is also a spokesman for the Polish Congress, "The demoralization is gaining ground especially among the young people of our country." The Communists today try to show how it satisfies for a while the seeking and longings of man which we know that only God can satisfy. They try to point out how it offers a temporary substitute for the religious cravings of men.

Today I'd like to note two things in particular in which communism imitates Christianity: First, its demand for blind faith; second, its perversion of the Golden Rule. First, it denies God in all things because there are some things which they cannot see, taste, or touch, and they cannot verify by sense experience. In short, the Communists want to throw out all faith which, as we know, is defined as a virtue by which we believe in God and the things which He has revealed, for it is He who has redeemed us, and He cannot be deceived. And yet communism itself demands blind faith. In fact, today we are living in an age of unprecedented faith. The materialists—the best known of whom are Marx and Lenin—hold out the promise of heaven on earth. Of course, they also point out that this heaven on earth will come after a somewhat bloody revolution.

It has its own stake in martyrism. Saints are canonized in Moscow faster than in Rome because in Rome they are more cautious in bestowing sainthood.

There are many sects and denominations that believe in communism. Its head is Joseph Stalin. Since this religion is so great in power and persuasion, it declares that this head is the supreme pontiff and he is infallible. Now you see by comparison the Communist laughs at Catholics who accept the Pope as Christ's successor, who speaks infallibly on faith and morals. Yet, they declare the same about Joe Stalin. If the Catholic denies the authority of the Holy Father, he is a heretic. If the Russian denies Joseph Stalin's authority and infallibility, he's a dead duck. The Communists mock the Christians for accepting the incarnation and ridicule our belief in the miracles of Christ at Lourdes, but the disciples of communism believe many more mystical propositions and miracles. For instance, it believes that man, or as he likes to call him, the common man, lives by bread alone and that only when his stomach is full is he supremely happy. He passionately believes that all will be good and peaceful when each man will have two cars in every garage, two chickens in every pot, and two pairs of legs on every chicken. Men are still unhappy and still behave terribly. Now, don't ask him why it is that men who have all these things are unhappy. He will answer this: No man will be good unless all men can have everything which, judging by human nature, can never come about.

The same thing may be wrong in Moscow and right in America. Don't ask a Communist why it would be suicide for a Russian to strike at Moscow, but it is right for an American to strike against bad working conditions, or why freedom to disagree with the press is a human right for a Communist here, but a mortal sin and a crime in Russia. Or why it is superstitious to make the sign of the cross in memory of Christ who was crucified, but all right for a Communist to make the sign of the clenched fist in front of Lenin's tomb. The truth about the religion of communism is that it is, of all the heresies, the silliest and most irrational. It demands more acts of faith. The Communists expect more miracles from Stalin than the Christians expect from their own God. They say that communism is a Christian heresy. It is not, strictly speaking, since it denies all Christianity completely, while most of the sects that have sprung up in the shadows of the cross in western civilization during the past thousand years are heresies of the Church founded on some article of belief or dogma which they feel have been neglected. Now, in our western world, what has needed emphasis for the past 200 years was certainly the Golden Rule. The second part of the great commandment "Love thy neighbor" and this neglect of the brotherhood of man was noted by Karl Marx and taking this commandment, disregarding all else, he made a religion. Of course, he made one slight change which resulted in the complete destruction of that great commandment. The Christian commandment of love of neighbor was based on the commandment "Love thy God," although Communists thought you could have the brotherhood of man without the love of God. Man did not create God, but God created man. But Karl Marx did succeed and will succeed as long as Christians exploit their neighbors and trample on human rights. Even here in America, theoretically a Christian nation, there still is much despair, degradation, oppression, crime, and misery. We have forgotten Christ's commandment to love one another. Against our terrible social crimes we have a right to protest. But to destroy our Government, to attempt to change human nature by murder and robbery, this would bring

about a revolution. This is not the American way. This is the Communist way.

Here in America the Communists put us American Christians to shame. We don't always do as we believe, but the Communists, in this sense, believe in brutality involving the liquidation of human beings. Now, we are not advocating that doctrine. What we are trying to say is this: Let us act the way we believe, let us practice what we preach, bring real equality according to the individual merits and practices. Let us act as we say that there is a just God who will reward the good and punish the evil.

The Communists say, "All hail to the new world religion, all hail to its messiah, Lenin, all hail to its prophets, Marx and Engels, all hail to the supreme pontiff, Stalin." Communism does not promise the kingdom of God nor life hereafter, but it tries to hold out a hope of paradise on earth. Instead of a Bible, men are asked to accept the hammer and sickle. Men who have rejected God get on their knees and, turning their eyes to the east, mock God in their prayer. "Our father who art in the Kremlin, Stalin is thy name. May your will be done in Budapest, Prague, and Washington as it is in the Kremlin."

Investments in Human Resources

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a speech given by John L. Thurston, Assistant Administrator for program of the Federal Security Agency, before the Association of Credit Unions of the State of Michigan, April 22, 1950, entitled "Investments in Human Resources." This speech sets forth in a clear and enlightened manner the merit of our basic investments in the preservation and development of human happiness and effectiveness:

INVESTMENTS IN HUMAN RESOURCES

(By John L. Thurston, Assistant Administrator for program, Federal Security Agency)

I am pleased to be here tonight, for three reasons. First of all, I am glad to address the Michigan Credit Unions as a member of the Federal Security Agency partnership. The Bureau of Federal Credit Unions, now about to complete its second year in the Federal Security Agency, is the newest addition to the FSA family—and we are very enthusiastic about our new member.

As I was leaving Washington, Claude Orchard, Director of the Bureau, asked me to convey his personal regards to the Michigan Credit Unions and to tell you how proud we are at headquarters over the progress which Federal Credit Unions have been making here in Michigan.

I understand that there are 320 operating credit unions in the State of Michigan with assets of more than $12,750,000, and that more than 180,000 residents of this State are members of credit unions. This represents a marvelous growth in the last few years. I know these people are adding to the financial security of their families through participation in the voluntary, self-help activities of their credit unions. Promotion of thrift is a constructive influence in our economy, and protection from excessive interest rates increases the purchasing power of working people. I am glad that the Bureau of Federal Credit Unions is a part of the Federal Security Agency.

Second, I came here to Detroit because I am always pleased to have an excuse to come home again. I was born in this State—at Grand Haven—and spent most of my youth in Benton Harbor, which is my legal residence. There is something satisfying about coming back to your home State, and I am always glad to have the chance to do so.

In the third place—I am glad to be here because I think I have something to say. Something which is not particularly new or startling but which is of fundamental importance, and which is not always widely recognized. And I have a feeling that what I intend to say tonight will be understood and appreciated by this particular audience. Credit unions combine two great virtues: the virtue of self-help and the virtue of mutual aid. Members of credit units know that the Lord helps those who help themselves. They also know that the Lord helps those who help each other. Added to these virtues of self-help and mutual aid is the factor of foresight. You prepare against the rainy day and afford protection for him on whom the storm descends without warning. Perhaps as clearly as any other form of investment, credit union funds are directly invested in human resources and human welfare. I therefore do not apologize tonight for speaking to you in a rather serious vein on the subject, "Investments in Human Resources."

I

At the outset, I should like to state two extreme points of view, for the purpose of rejecting both. No one present tonight would make the error of putting me or himself in either of these categories I am about to describe; but I have learned from experience that it is sometimes useful to say clearly what one does not mean, in order that one is not misquoted or misinterpreted.

Not so very long ago, it used to be generally accepted that public expenditures were nonproductive. Farmers and manufacturers and laborers produced the food, clothing, and shelter for mankind. Professional people produced the services. These were said to be productive. Money put into farms, factories, transportation and communication, office buildings and the like—that was productive investment. But money put into paying for teachers, judges, policemen, legislators, and prisons—that was another story. Public expenditures didn't produce anything, it was argued. Public expenditures were merely that much taken out of what the economy produced. Everybody was poorer by the measure of every dime that went into the public coffers. That was a fairly common assumption 50 years ago—and there may be a few alive today who hold that view.

According to this philosophy, the best public expenditure was the smallest that could possibly be made. Prisons were good enough if they prevented the escape of criminals. Mental hospitals were to keep patients out of harm's way, and from harming others—at the least possible money cost. School teachers should be paid the minimum going rate, with no frills and folderol added; no foolishness like manual training and domestic science and art and music and citizenship.

This negative philosophy even extended to industry. What was the point in putting safety guards on machinery, merely to prevent accidents? The point was to get goods produced in largest quantities with minimum cost. To set safety standards by legislation, and then to establish a corps of government inspectors to swarm through the factories to enforce those laws, was held to be one more example of nonproductive government expenditure.

Now experience has long since demonstrated the fallacy of the negative notion of government expenditure—to most of us, at least. In the field of industrial safety, for example, industry itself has learned the lesson so well that it pretty generally tends to keep well ahead of the minimum standards established by legislation. Recently the National Association of Manufacturers asked about 2,000 plant operators what their savings were, due to the establishing of medical and safety departments. Practically all of them reported that these projects were paying off handsomely. Here are the average reductions they reported:

	Percent
In occupational disease	62.8
In absenteeism	29.7
In compensation costs	28.8
In labor turn-over	27.3

As this lesson has become clearer with the passing of the years, resistance to wise Government expenditure in programs of industrial health and safety has disappeared. Instead, we find today that there is the closest working cooperation between Government and the general public, including management and labor, in pushing programs of health and safety in industry. All have learned that it pays off handsomely.

Much of the same thing is true in other areas. Enlightened people no longer think of prisons just as places to lock up criminals at minimum expense. Though we still have a long way to go, we really believe that they should be what the newer name says: "institutions of correction." And our thinking today goes even beyond correction—our current concern with juvenile delinquency puts the accent on prevention. Experience has proved that the supervised playground turns out better citizens than the alley gang.

Education is one of the crowning examples of the passing of the negative notion of public expenditure. A century ago, as the idea of universal free compulsory schooling was battling to win its way, there were those who condemned the whole notion as socialistic and dangerous. "What," they cried, "would you tax one man to pay for the education of another man's child?" But a century of the common school in America has demonstrated its value so conclusively that no responsible voice attacks the basic idea that it is wise to put public moneys into public schools for all the children. It pays off, in better citizens, better producers, finer people. It pays off, too, in dollars and cents, as any comparison of the man-hour productive efficiency of an educated labor force with an uneducated labor force shows.

These examples only begin to suggest the reason why most of us have cast aside the ancient error that Government expenditures are parasitic and unnecessary. I shall say more, a little later, about the way in which public investments in human resources pay off. All I have said up to this point is that we are no longer confronted with the erroneous assumption that public expenditures are unproductive. We now know that they are productive. Just how productive they may be is a matter to which I shall soon turn.

But before doing that, I must disassociate myself from a second error which occasionally appears in private and public discussions. Once in a while one meets some starry-eyed person who sees the truth that public expenditures pay off, and who goes on from there to indulge in wild and speculative schemes of dangerous proportions. They are like the housewife who listened to a fast-talking salesman's claim that the gadget he was peddling would cut her housework in half. "Oh," she said brightly, "then I'll take two of them and cut out all my housework." Just because public investment in human resources pays off, it does not follow that a limitless multiplication of that expenditure will be desirable for the individual, or will be in the national interest.

We must disavow this extreme just as clearly as we deny the assumption that public expenditure for human welfare is unproductive. We shall do well to recognize that public investment, like any other investment, must be wisely made and guided by the rules of reason. This is a hard-boiled, realistic approach to the problem of human welfare. It supports all the finer ideals of humanity—and it keeps its feet on the ground as it moves forward.

With that perspective, let's turn to the question of what public investments in human resources actually cost—and who pays for them. Do we put more into them than we get out of them? Do public investments represent a total waste, or a partial waste, or a net gain? What is the balance sheet?

In general, I think we can say that much depends on what sort of public investment we are talking about, and the degree of adequacy of that investment in the light of the need it tries to meet.

If a man's roof is leaking, it will pay him to invest in more pots and pans to put in the attic to catch the drip. That saves the plaster and paint in the floors below. Even the minimum sort of public expenditure in picking up the pieces of wreckage left by the processes of history has a monetary justification of a sort. Property values are higher and people rest more securely when everyone feels that the police system is doing an adequate job in restraining crimes of violence. The general economy has greater stability and continuing purchasing power when there is adequate unemployment insurance and when social security for the aged maintains the purchasing power of the older segment of the population. A sick man who gets well quickly is a better producer than one whose absenteeism is high because of recurrent illness.

But any wise householder knows that it is better to fix the roof than to run around the attic with pots and pans every time a shower comes. Whether he will put on a slate roof or use shakes or shingles or asphalt and gravel will depend on a lot of factors of judgment and pocketbook. But he knows that a tight roof is better than a leaky one, that a tight roof pays off. From year to year he cannot point to exact financial returns on a good roof; but he can know that he has not had to plaster the back bedroom after every spring rain.

So it is with these investments in human resources. Certainly we shall never see the time when there will be no leaks in the roof, when we shall never need to spend something to help the afflicted and the unfortunate. But we also know that the wisest expenditure is that which reduces to the minimum the number of pots and pans we have to keep in the attic of the Nation, a policy which keeps the roof as tight as possible.

Take it in the health field, for example. Every year the Nation loses a sizable sum because of short-term illness, incapacitation, and partial disability. Estimates for 1947 put the figure as high as $27,000,000,000 a year which the productive economy loses from these three causes alone. I pass over the loss of production which comes because of the premature deaths of workers, estimated for the same year at about 27,000,000 life-years annually, a loss of around $11,000,000,000 in production and wages each year through premature death. That is over and beyond the direct losses from underproduction by the living.

Now, put over against this annual loss the figure of what we spend for medical and health services. We are losing more than twenty-seven billions, about 10 percent of the annual production, because of poor health; but in 1947 we spent only about eight and one-half billions, about 3 percent of the national product, for medical and health services. That included all funds, private and public, spent on medical and health services. Private individuals and organizations spent by far the largest share of this—six and one-half billions. All governments—Federal, State, and local—together spent less than two billions for medical care and prevention, including all research and including expenditures for veterans' health programs. That's an over-all view. Now look at a few specifics.

Cancer

The report of the Hoover Commission's task force on public welfare calculates what might happen if an adequate program of treatment of cancer were introduced. Without waiting for any further progress in research, merely using what we now know about cancer, the task force report concludes that more than 95,000 premature deaths could be prevented every year if the services and facilities in the best cancer-control centers were available throughout the country. The Hoover report cites a study for one State which shows that about half of the cancer patients are under 60 years of age. And it concludes "a very considerable number of productive years may be saved by the widespread application of known cancer-control methods. As research improves the results of treatment, the outlook will undoubtedly improve further."

Tuberculosis

Today we know how to control tuberculosis. But we are not doing it. Tuberculosis takes a wage earner away from his family and away from his job for years. In addition to his loss in earnings, it costs a lot for medical care and family maintenance (often borne by the community). And we still have a half million cases of tuberculosis in the country. The expenditure today of a little more effort and money would save literally millions of dollars in the future.

Malaria

Everyone knows the dramatic story of the conquest of malaria and the building of the Panama Canal. Nearly the same thing is now true in this country. Only a few years ago, malaria was a direct cause of poverty in the United States. Malaria time is farming time. This disease puts people to bed when they need to be out in the fields, causing suffering in families, in whole communities, in whole States. People are kept poor when they cannot grow the crops. And people who have the malaria parasite in their blood are too tired to care if their crops are bad or their houses are run down. Malaria makes them poor in pocketbook and poor in spirit. Before the war it was estimated that malaria cost the Nation approximately one-half billion dollars annually in lost production in the 17 Southern States alone. But we are no longer merely putting rusty kettles and pails under that leak. The last knock-out campaign, for which Congress has appropriated an average of about nine million dollars a year, is proving even more successful than expected. The complete elimination of malaria is in sight. The successful control of malaria has undoubtedly contributed greatly to the economic and cultural progress of the South which we have witnessed in recent years.

We might go on through a long list of diseases—typhoid fever, tetanus, smallpox, meningitis, plague, yellow fever, the venereal diseases, and cholera. The story, based on experience with the armed forces, is substantially a repetition of what we have just been saying about these other great scourges of mankind. In a study of the white males from 20 to 65, the Metropolitan Life Insurance Co. estimates that nearly 4 years could be added to working life expectancy at age 20 and that, for this entire group, the elimination of premature death through the control of the 15 major causes of deaths would add 178,500,000 working years to the labor force.

Do we need any more argument to convince us that the Nation would be healthier, stronger, and more prosperous if we stopped thinking in terms of catching the drip under the leaks and began to act in terms of more effective protection?

Another field in which investment in human resources pays off, and one in which the actual dollars and cents pay-off can be demonstrated with startling clarity, is the work of the Office of Vocational Rehabilitation, in the Federal Security Agency. Here are some facts:

If we do not rehabilitate a dependent person, it costs us, in public funds, anywhere between $500 and $1,400 each year to maintain that man and his family at a minimum level of subsistence. That cost goes right on, year after year. But instead of that, we can spend an average of $445 a year to rehabilitate a man and pay it only once. That man then removes himself and his family from the public-assistance lists—becomes a wage earner and family supporter; and within 5 years he has paid back through income tax alone, the total cost of his rehabilitation. Over the average life span of rehabilitated persons, every one of them pays back, on the average, directly to the Federal Government, in income taxes, ten times as much as it costs to rehabilitate him. In 1949 alone, the wage production of persons rehabilitated increased from $17,000,000 a year before rehabilitation to $93,000,000 after rehabilitation.

These dramatic demonstrations of the net returns that come through medical and health services and rehabilitation are matched by no less dramatic facts from many other fields of public investment. Just as a vast system of feeder roads, built mainly at public expense, is essential to the productive capacity of the Nation's farms; just as the industrial and agricultural potential of the Tennessee Valley has blossomed with the coming of electrical power and flood control, accompanied by wise programs of soil conservation and education; just as our great system of free elementary and secondary schools has given us a literate and intelligent people whose productive capacity has gone into the building of a nation strong and prosperous beyond anything that previous history or contemporary experience in other countries could dream—just so, the time has come to give clear and explicit recognition to the public and private benefit derived from investments in human welfare of all kinds.

We have long recognized that it is wise policy to replenish and renew our natural resources. Experience with the dust bowl of the 1930's in our great Southwest, with the denuding of our mountains by the timberman's axe, of the polluting of our streams and the decimation of wildlife—these experiences have taught us that mankind prospers only as natural resources are renewed at least as rapidly as they are consumed. Investments in human resources also pay off. But let me be clear that the case for such investment by no means rests solely on dollars and cents. Quite the contrary. The salvaging of human dignity which comes through every good deed of human sympathy is beyond money value. A genuine concern for one's fellows is firmly rooted in American tradition, and its fruits are of incalculable value. The quality of American life is better because of the spiritual heritage, which stresses this concern. And the quality of every community is better because hospitals and schools and playgrounds and libraries have been built and staffed and supported. Investments in human resources—in the dignity and worth of every human being—is beyond price or profit. The fact that they do pay off is not a justification. It is an additional dividend.

At the same time, these facts as to the economic value of this dividend provide an important perspective on the question of who pays for these investments.

Some people might put it this way—that Government investments in human resources

pay for themselves. That is true as far as it goes. But it is not the whole truth. It is also true that private investments in human resources pay for themselves—a fact to which every field of private business will testify.

For myself, I would prefer to put it this way: Wisely planned investments in human resources, both private and public, not only lift the quality of life by salvaging and preserving the dignity of man in the face of an impersonal society; these private and public investments pay off, too, through the strength and happiness and leisure and enjoyment of the people, and through the undergirding of our American way of life. And rightly planned, these investments in human resources also pay a rich dividend in dollar values— both through increased productivity and through saving great money losses which would have to be borne by the general public if these investments were not made.

II

It is one thing to say that investments in human resources pay for themselves. It is another thing to inquire as to the source of the funds for this investment.

In reality, the total amount invested in human welfare comes from one ultimate source, and only one: It comes out of what is produced. The funds invested in human resources are a charge on the gross national product. This is as it should be, because the return on these investments show up in exactly the same place—as increases in the gross national product. Investments in human resources are paid out of the national product, just as they, in turn, pay off with an increase in that product.

The flow of these funds for investment resources is principally through three channels: (a) Individual spending and donations are out of personal income; (b) corporate spending and donations out of corporate income; and (c) public spending out of tax revenues. Sometimes the investment is a personal one, as when a man sees his dentist regularly at his own cost, or when he gives to the community chest out of his personal income. Sometimes the investment is corporate, as when a company introduces measures of industrial health and safety or adds a pension plan or community recreation facilities to its operating budget. Both individuals and corporations contribute to the support of the voluntary and private philanthropic agencies and institutions which have played an important part in bringing this Nation to its present high level of well-being.

And I wish to leave no doubt in anyone's mind as to my attitude toward private philanthropy in its investments in human resources. The remarkable story of philanthropic effort in this Nation is one of the finest chapters in American history. It is the story of wise and expanding investments in human welfare, and its pay-off is undeniable. Every investment through private philanthropy, to the extent that it is a wise investment, means not merely the salvaging of the individuals benefiting from the philanthropy but also the enlargement and enrichment of the whole economy of the people.

But the total capital investment in human welfare cannot come exclusively through private and corporate donors—and even if it could, there are sound reasons why they should not be expected to carry the whole load. What private enterprises or philanthropies should or could undertake to rid the Nation of malaria? Many important investments in human resources and human welfare call for concerted action throughout a whole community, a whole State, the entire Nation. Sometimes these activities involve the use of the police power of the Government (as in controlling the pollution of water and air). In most cases they call for the kind of combined operations which can only be achieved through the full cooperation of all private and public agencies concerned.

Consider, for example, how far along we would be in education in this country if universal free compulsory schooling had not been adopted. We would still be in the days of the private tutor and the private academy for the children of the few, while the children of the many continued in illiteracy and ignorance. At the same time, our great private schools and universities are invaluable to sound education; thus public and private together further our national welfare. Where would transportation be today if local, State, and Federal Governments had not invested huge sums in free public highways? Motorists would be stopped at every crossroads to pay another toll, and our roads would be today where canals were a hundred years ago. It is not enough that a man patches the roof over his own particular bed, if he permits it to rain on the pantry and the parlor which others use as well as he, yet, since all will benefit from having a dry roof over the entire house, ought not all to share in putting on a good roof?

This, then, is the justification or public investment in addition to private investment in human resources: (1) sometimes the job is too big for private endeavor to do without public aid; (2) sometimes the job calls for the doing of things which only Government can do; and (3) since everybody benefits, it is only fair for everybody to share in the support.

There is a good deal of interest these days in the notion of a capital budget as it interprets the meaning of public expenditures for enduring purposes. It is argued with some cogency that the only fair way to interpret the total expenditure of Government is to divide that expenditure between the items which represent current operations and those which represent long-term investments. It is silly, for example, to put the entire costs of the Grand Coulee Dam into the budget for the years bracketed by its period of construction. Any wise industry takes its capital investments and sets up accounts which amortize the value of that investment over the life span of the capital goods purchased. Should not wise Government policy also begin to speak of the enduring investments which are annually paid for out of each budget, and let the investment itself be charged over against the life span of the capital goods which are purchased? And if there be any merit in that suggestion, then I am ready to urge a corollary which is at least as important. The same principle applies to investments in human resources. Funds invested in human welfare can properly be thought of as investments which pay back their returns over the life span of the people who benefit. Just as surely as a farmer's tractor which costs him $800 and lasts 8 years actually costs him only $100 a year for capital investment, so also $445 invested in the rehabilitation of a disabled worker who thereby becomes a productive worker for 30 years costs less than $15 a year over the life span of the man in whom that capital is invested.

Take education. Would anyone question that the money invested in a child's schooling pays dividends? And should the total cost of education be charged against the 12 to 16 years of school attendance—or against the whole lifetime during which the individual—and society—reap its benefits? Our investments in future scientists and skilled workers—and alert citizens—are as truly fundamental investments as our investments in highways and hydroelectric power.

My argument can now be summarized in a single sentence: Investments in human resources come out of the total national product, flow through both private and public channels as they are invested in human beings, and in turn pay off in an increased national product as well as in human happiness and effectiveness. These are what I term basic investments in human resources.

I am quite ready to leave entirely to the area of what is debatable any questions having to do with how much should be invested at what time in which human welfare enterprise. The free play of debate and discussion in the light of what research and experience uncover is the only means which a democratic people should employ in planning and making their investments in human resources or natural resources. But what I am unwilling to leave in the doubtful limbo of the undiscussed is the matter on which we have been speaking tonight. Investments in human resources are investments which (a) come out of the total national product and (b) feed back into the total national product at least as much as they cost—and usually much more than they cost—and can properly be considered as hard-headed, long-term investments.

III

I do not contend that the full justification of this investment can be measured in dollars and cents. On the contrary, at every step of my argument I have insisted that there are other dimensions which are primary and basic, and that the money return is simply an added dividend.

I am one of those—and there are many of us, both in and out of Government—who believe deeply in the practice of self-help and mutual aid, as these have come down to us through the Judeo-Christian tradition. I would be prepared to defend investments in human resources even if they did not pay off financially. It would be a strange kind of concern for one's fellows which would check each generous impulse with a prudential caution—just as it would be a futile concern which would debase each generous impulse into an empty day dream.

The practical argument in behalf of these investments comes, actually to this: bread cast upon the waters returns after many days—an ancient truth which we have on the best authority. Deep in the wellsprings of humanity is a noble impulse of human worth and human dignity on which we must and can rely, if our children are to realize the full stature of their heritage.

Address of Rev. George S. L. Connor

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. FURCOLO. Mr. Speaker, I thought the Members might be interested in the following address of welcome to Most Reverend Christopher Joseph Weldon, delivered by Rev. George S. L. Connor, on behalf of clergy, in Hotel Waldorf-Astoria, New York City, on March 24, 1950:

It is indeed a privilege to be permitted to say a brief word on this happy occasion for the priests and people of the diocese of Springfield. If a man would travel from New York City east and north through Connecticut he would come to the historic State of Massachusetts. If he entered that section nearest to New York he would find himself in a lovely country known as western Massachusetts. This is a land of thriving cities, historic towns, green meadows, rolling hills, winding rivers and purple-tinted mountains. There is in it a quiet beauty

and a refined magnificence that only the hand of God could bestow. In the north where the Green Mountains of Vermont cast their shadow over the verdant fields of Massachusetts, the majestic Connecticut flows gently on her course. A traveler following that river south, could see some of the strength and beauty of the diocese of Springfield. Greenfield, the gateway to the Mohawk Trail would be his first stop. He would find there broad streets and spreading elms, green fields and colonial homes, but he would find there too a vigorous church, with magnificent school, and a Catholic hospital caring for the sick of this lovely section. Below Greenfield the river feeds a farm land second to none in the East. Great fields of tobacco and onions line her banks and stretch off to the rolling hills in the distance. A sturdy Polish people with the background of their Christian faith has gradually taken over these farms from their Yankee neighbors, and the historic towns of Deerfield and Hatfield and Hadley know now the sound of marching feet on the way to Catholic worship. Still following the river our traveler would come to the beautiful city of Northampton. This is the center of a section, where education is a business, and where the renowned colleges of Smith, Mount Holyoke, Amherst, and University of Massachusetts cater to the youth of this land. The church is standing guard there, striving earnestly to protect the sound principles of Christianity in a youth that needs this protection. She stands there not in the spirit of apology or defense but with an aggressiveness that makes even the scoffer stop and investigate. And because the truth is in her she is winning converts from a group that ridiculed her claims because, though scholars, they never knew the beauty of her doctrine.

Still the river rolls on toward the sea. Her banks grow farther apart, her descent becomes more rapid, she develops more power as she rushes into Holyoke to turn the wheels of industry in a city that will make our new bishop proud and happy. Nestling along the banks of the majestic Connecticut she has imbibed into her spirit some of the grandeur and grace of the river that enfolds her. She has a heart to love and a will to do, and these she has used most effectively in producing a way of life that marks her distinctly as a genuine Catholic city. She has magnificent churches, many of them; a Catholic school population larger than the public-school enrollment, hospitals, day nursery, two old people's homes, two orphanages, a mother house of the Sisters of Providence, and many other evidences of a faith that is deep and productive. The faith has been well planted in Holyoke.

Just below on the other side of the river lies the city of Chicopee, the home of the first Catholic school in our diocese, and the site of our Diocesan College of Our Lady of the Elms. Chicopee is a city composed of Poles, French, and Irish, with a few Yankees thrown in to keep the peace. The churches there are numerous, the schools strong, the faith deep, and the Catholic way of life the accepted rule in a city where three-fourths of the population claim allegiance to our church. As you stand in Chicopee on the banks of the Connecticut you look across to the thriving town of West Springfield. It is a lovely rambling town clinging for miles to the river's bank and quietly surveying the activities of her busier neighbors on the other shore. West Springfield is served by four progressive parishes, but West Springfield serves the whole diocese by the prayers of her cloistered Dominican Nuns and by the incomparable work of the Bishop O'Leary retreat house conducted by the zealous Passionist Fathers.

Two bridges lead from west Springfield to the heart of the Episcopal See. Springfield is known as the city of homes. It is a good name, and we trust always she may live up to it. Springfield is a good place in which to live, and we know that Bishop Weldon will find there a home in the truest sense of that word with all the joy and comfort that only a real home may bring. Springfield is a center of industry and commerce but with a background of culture and refinement that makes living there a delightful experience for one who seeks the good things in life. No more about Springfield for a new bishop soon finds out all there is to know about his Episcopal city.

But is there no more to the diocese of Springfield? Oh, yes. If you journey directly westward from the Episcopal city you will enjoy an experience that has thrilled many who have traveled broadly in this glorious land of ours. Eight miles from Springfield you will find yourself in the hustling city of Westfield. It is not big in population, but it is big in spirit, where people of many nations have joined forces to make a community where living is good. The church is there, too, speaking many languages, but teaching one doctrine, the saving doctrine of Christ's divine revelation.

Still traveling westward you come to the foothills of the Berkshires, and soon begin the climb up Jacob's ladder. And as you climb you readily see a striking resemblance to the ladder of Jacob's dream. For the rugged beauty of the mountains, the tumbling waters of the onrushing streams, the myriads of majestic trees piercing the heavens, the whole scene flooded with a greenness greener than anything this side of Ireland, gives one a foretaste of the heaven, where the scriptural ladder terminated.

From the summit, 2,300 feet above sea level, you may feast your eyes on the beauty of the Berkshires unfolding before you. Down in the valley how eagerly you seek out the secluded grandeur of Lenox, the soft beauty of Stockbridge, the entrancing loveliness of Great Barrington, and the arresting peace of all the towns nestling so gently at the foot of the Berkshires. In all these towns churches as beautiful as the hills that enfold them minister to the needs of a devout Catholic people, while the great religious orders taking over the elaborate estates of the rich have skillfully turned them to the works of religion.

Turning north at Lenox this road takes you through a vista of enchanting scenery until suddenly it bends and there below you is the city of Pittsfield, the heart of the Berkshire hills. Pittsfield is an unusual city. Today she is highly industrialized, her marts of commerce are busy, and yet she retains some of the quiet elegance, the rustic charm, the inviting friendliness of the days when the horse and carriage with pomp paraded down her aristocratic, elm-shaded South Street. The catholicity of Pittsfield, like the city, is unusual. The people are friendly, cooperative, and highly progressive. Parishes there have multiplied very rapidly, schools have been built, a magnificent Central High School crowning them all, a modern, perfectly equipped St. Luke's Hospital cares for the sick and infirm, and a Catholic Community Center caters to the recreational and social needs of the people. Pittsfield is a progressive city.

The last leg of the journey takes you northward. Skirting the mighty Greylock Mountain you pass through the Catholic town of Adams with her three splendid parishes, and come to the city in the mountains, North Adams. This is a rugged city for the mountains dip down almost to the main street, and the people in it are rugged. They have four excellent parishes with three schools and a central high school where the Sisters of St. Joseph have been training the youth of several generations. A step out of North Adams and you are in Vermont. A step on the other side and you are back in New York. This is the end of your journey. This, Bishop Weldon, is your diocese. It is a good diocese with a fine historical background, and many of us love it sincerely. Because we love it we are happy today to welcome as our new bishop the excellent choice of our holy father, Most Reverend Christopher Joseph Weldon. We can't do much for you today except to proffer our obedience and our love. These we give you gladly with the assurance that you will have a long life as bishop of Springfield. We have an unique pattern for our bishops there. We treat them so kindly; we make their living so pleasant; we remove so many difficulties from their path that they live many, many years to preside over the destinies of our diocese. In our 78 years as a diocese only three bishops have occupied the episcopal throne. Patrick Thomas O'Reilly served 22 years. Thomas Daniel Beaven directed us for 28 years, and our late beloved Bishop, Thomas Mary O'Leary was with us for 28 years. This further fact is worthy of comment, we kept all of them so well so long that an auxiliary bishop never lived in the confines of our diocese. Be of good heart, then, Bishop Weldon. Your stay with us should be long and happy. We are receiving you in the full flower of your young, vigorous, manhood. Your every movement gives indication of a healthy body and a contented mind. We like you that way, and a loyal clergy, a zealous sisterhood, and a devoted laity will do everything to keep you as you are, a noble successor of the 12 apostles of Christ.

Your record is known to us. We have been thrilled by your achievements in the priesthood. Your service in the Navy of our country has won the admiration of all. By the favor of His Eminence, Cardinal Spellman, I was charged as vicar delegate in the Military Ordinariate to visit at their posts all the chaplains of New England. On one occasion I called at the naval air station at Quonset Point, R. I. Did you ever visit Quonset Point? It is the station de luxe of the Navy. It is the aristocrat of the air force. It has an officers' club that would do justice to any institution in the land. We met there the chaplain in charge. He was an upstanding, intelligent, vigorous young priest, who organized skillfully the spiritual activities under his control. He understood perfectly why he was in the Navy and he permitted nothing to interfere with his work as a priest. The type of priest in the service was universally good, but in my memory two stood out above the others, and one of them was Christopher J. Weldon. This estimate of his worth was later confirmed by the commanding officer of his ship, who termed him "the ideal chaplain of a fighting ship," and the Secretary of the Navy, who stated that "his outstanding record in the Navy as a wartime chaplain was a noteworthy one."

The thought of service seems to have permeated his whole life. Everything he has turned his hand to he has done well, and his hand and his heart have been turned to many things. His priesthood is the dominating factor of his life. It so consumes his being that the days seem too short to carry out its divine mission. A bishop is the servant of servants, and what an ideal bishop this man will be, who has made service the driving force of his life. His best friend communicating with me has said, "wherever he might serve that area will profit by his service, and come to glory in his complete dedication to the cause. I am glad and proud that this will be in Springfield." Thus spoke his best friend, and thus we speak. We are glad and proud that Springfield will be the object of his loving care, and that ours shall be the joy to glory in his complete dedication to our cause. In return we promise him the undivided support of priestly men, and the prayerful service of many priests.

Our bishop—ad multos annos.

The Late Generoso Pope, Sr.

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. TAURIELLO. Mr. Speaker, it was with great sorrow that I learned of the death last Friday of Generoso Pope, Sr., and I want to join with many of my colleagues in paying tribute to a truly great man.

Gene Pope's passing brings to an end a colorful, dynamic, and distinguished career. He came to America from Italy a penniless young immigrant and secured a job as water boy with one of the construction companies in New York. Through diligence and hard work he rose to the top through the ranks, became a construction superintendent, and later established his own construction company.

In the 1920's he purchased the Il Progresso Italo-Americano, which, through his guidance, became the largest Italian-American daily newspaper in the country.

As a publisher and editor, with clarity and forcefulness he made known to the people of America his thoughts upon social, economic, and political problems. His was never a doubting voice. He was a positive character, sure of the rightness of his convictions, and loyal always to them.

Throughout his lifetime countless individuals were the beneficiaries of his works and America is likewise the real beneficiary of his good deeds.

Progress is not automatic. The world grows better because people wish that it should and because they take the right steps to make it better. Gene Pope played his full part in the destiny of America. He was known for his outstanding citizenship and his many philanthropic works.

He was the masterful advocate of many humanitarian, educational, political, and religious causes and exerted wide influence. We respect him for his undaunted courage and the energy and devotion with which he championed all just causes.

He was loyal to the very core of his being, loyal to his friends and family, loyal to the country which gave him birth, and loyal to his adopted country which gave him opportunity.

He recognized the fact that he owed much to America and made a magnificent individual contribution to the inspiration, the courage, and the strength of his adopted land. In turn, America owes much to men like him who, by giving of their best energies and talents, have done much to guarantee its future existence not only as a free country for Americans but the hope of the freedom-loving people of the entire world.

Not only will the Italian-American people miss him—all America will mourn him. It was my privilege to know him personally, and to know him was to love him. His death is a personal blow to me.

To his widow and his family, I extend my sincere and heartfelt sympathy in their great sorrow.

The World's Monetary Problems

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. WHITE of Idaho. Mr. Speaker, there is inserted herewith an interesting and illuminating article on the problems confronting our country and I may say the other nations of the world by Mr. Frank Lilly, prominent mining statistician of Spokane, Wash. Mr. Lilly's article follows:

THE WORLD'S MONETARY PROBLEMS

Problems! Problems! Problems!—they abound throughout the world. There are problems of war, problems of peace. There are problems of overproduction and surpluses. There are problems of shortages and starvation. There are Communist problems, Socialist problems, health problems, and disease problems. There are social problems, racial problems, and political problems. There are labor problems, industrial problems, and housing problems. There are defense problems, offense problems, tax problems, debt problems, economic problems, etc., and almost ad infinitum.

When thoroughly analyzed, all of the major problems largely resolve themselves into monetary problems. Wars cannot be waged without money. Peace cannot be attained or maintained without money. In fact, one may say without fear of successful contradiction that monetary problems are at the root of wars, and a corollary of this fact is that peace can be established and maintained only by an honest monetary system.

No one can deny that most of the health problems of the world could be solved, or at least ameliorated, with money. Money would solve most of our social problems and even some of our political problems. In fact, money is in itself a good and positive force; it is only the greed for money ("love of money") and the greed for the power that money gives that is evil.

The essayist Swift said that "Money should be in the heads of men and not in their hearts." I interpret this statement to mean that money is a proper subject for thinking and not for feeling. Unfortunately, most of the things that people believe they know about money are really what they feel about it.

A little boy from the city slums was spending a few weeks at a summer camp under the direction of a social worker who, one day when some baby chicks were hatching, pointed out how wonderful it was that the little chicks had been given an instinct with which to solve the problem of getting out of their shells. The little boy's comment was: "Yeah, but the big problem is how in hell did the chicks get into the shells."

Therefore, before discussing the way out of the world's monetary problems, I propose that we first consider how we got into the shell.

LOOKING BACKWARD

Briefly reviewing world history, you will recall that, beginning with Greece, or, further back with Assyria and Babylonia, and coming on down to the present, the great nations have thrived up to the point where they became greedy and sought by war to grab the wealth of their neighbors. All of them succeeded to an extent, but, in the end, the wars they waged finally plunged them into the debts that destroyed them.

Debts and the Devil are the two greatest negative forces in the world. Debt, because it is negative, enslaves men and brings decay to civilizations and death to nations. A man who is in debt is, in effect, a slave to his creditors and slavery fosters injustice. Debt is, substantially, synonymous with danger, disaster, dishonesty, disease, decline, dissipation, and death.

The D-bomb of debt is a far greater danger to the world than the A-bomb or the H-bomb. The A-bomb can, of course, kill in units of thousands and possibly the H-bomb could kill in units of tens of thousands. The D-bomb can kill the souls and destroy, through the slow death of its moral fiber, the millions of the greatest of nations.

This bomb destroyed Greece, and when Rome plunged into debt, it, too, was doomed. The Roman Government, by the way, resorted to every monetary device known to the modern banking system, including the fixing of prices, wages, etc. and resorted to every financial trick that in recent years has been used throughout the world in an effort to manage its monetary system, but to no avail.

Thinking men of that day saw the dangers of inflation, deflation, and managed currency, but the demagogues and do-gooders prevailed, and finally, when people would no longer accept the dishonest money which had been created out of and on its debt. Rome fell and plunged the world into 600 years of darkness because there was no honest money with which to maintain the industrial and cultural elements essential to civilization.

Until the time of Nero, Roman money was honest, hard money, principally in the form of the 99-percent pure silver denarius, but there was not enough silver denarii and gold to provide the honest money that the Roman Empire, which was being expanded by wars, needed to meet the mounting debt. Therefore, as in our day, currencies in the form of credits issued in exchange for a debt, were utilized.

The time came, during the reign of Diocletian, when it took 1,440 of these promissory denarii, or the equivalent of $216, to buy a pound of steak. The hoarding of gold and silver had started in the meantime and metal money all but disappeared. Finally, after the more prudent Romans had converted their currency into bullion, real estate, jewelry, and anything else that had concrete value, the debt-based Roman currency went the way that was subsequently followed by the paper currency of Kubla Khan in China, the continental currency in the United States, the assignats in France, the mark in Germany, and so forth.

TODAY'S WORLD DEBTS

What is the debt situation as it exists in the world today? Almost unbelievably, most of the nations of the world are in debt, the United States most of all. In 1914, before the First World War, the public debt of the United States was only a little over a billion dollars. Today it is over $255,000,000,000. In other words, our debt is now over 250 times as much as in 1914. The debt of France is 56 times what it was in 1914. Canada's debt is 32 times; Great Britain's debt, 35 times; Australia's, 8 times; India's, 4 times; and Mexico's, 3 times.

In comparison with 1938, the United States debt has increased six and one-half times; France's, five times; Canada's, five times; Great Britain's, three times; Australia's, two times; and India's, two times; Mexico and

Venezuela, on the other hand, have reduced their debts.

There is a fallacy in the widespread assumption that because the debt of the United States is largely owed to its own people, it is not really an important matter. This fallacy can best be appreciated when we reduce the situation to a family basis. One or more members of a family may borrow from other members of the family, including cousins and other relatives but if, for any reason, these debts are not paid, someone loses. We all know how often this happens in the best of families and with the best of intentions on the part of the debtor.

There is a great deal of fuzzy thinking about debts because too often both the creditor and the debtor tend to think of the debt as an asset. Sam had loaned Rastus $20, for which he received a note. Time passed, as it will, and Rastus had made no payment. Finally Sam collared him and said, "Now Rastus, if you don't pay this note, I'se gwine tear it up." To this threat, Rastus indignantly replied, "You all tears up my note and I'se gwine to have the law on you."

Our national debt far exceeds the total assessed value of all the taxable property in this country. The per capita debt is approximately $1,700. Note in this connection that if you now own $1,500 worth of Government bonds, you are, nevertheless, approximately $200 in debt.

It is beside the point that the first World War and the Second were inevitable and that the greater part of the debt was justified by the circumstances. The important point is that the debt must, in the end, be paid or repudiated. Incidentally, it cannot be paid in a currency created by debt because that would amount to piling Ossa upon Pelion, compounding the debt.

It is elementary that the value of a note or a bill is not in the debt involved, but lies in the ability of the debtor to fulfill the promise to pay. And this is true not only for individuals but also for nations.

Without the shadow of a doubt, the American Colonies intended to pay the currency they authorized and obligated themselves to pay, but they could not do so and the continentals became worthless in spite of the fact that by law they were legal tender. In the autumn of 1779, Congress spurned the idea of repudiation as ridiculous but less than five months later it undertook to redeem the continentals on the basis of 40 paper dollars for one silver dollar—and failed.

The founding fathers, aware of the dangers inherent in paper promise-to-pay currency, expressly stipulated that United States money should be gold and silver coins, and delegated to Congress the power to regulate the value thereof. Thus, only gold and silver coins comply with the monetary provisions of the United States Constitution.

THE WAY IN

How did it happen that we got our present "shell" of debt-based currency notes and bills system in which it is illegal for a citizen to possess either gold coin or bullion, and in which silver is given minor role to paper currency? The answer is, debt, primarily created by war and, incidentally, by political expediency.

Actually, the monetary situation in the United States today is strikingly similar to what it was in Rome when Rome was lured away from honest hard money into the managed soft currencies that resulted in inflation, deflation, debt moratoriums, interest cancellations, bank holidays, land banks established to help the farmers—and finally disaster.

War-debt currency is tainted with blood and tears because it is the ill-begotten child of Mars. Such currency is dishonest in that it exacts an indirect and hidden tax by reason of the fact that it is based upon an interest-bearing debt.

In connection with our Federal Reserve notes, Congressman COMPTON I. WHITE points out that the way in which this currency is created is "fine except for the taxpayer. * * * The Government puts up its bonds that bear interest in exchange for Federal Reserve notes that do not bear interest." Incidentally, it is not generally recognized that the Federal Reserve banks are not Government agencies.

Debt-based currency is good only for spending and for loans upon which to collect interest; it is not sound saving money because it has no intrinsic value. Such currency is only a medium of exchange and a measure of price; it is not real money because it lacks storage of value, which gold and silver money provide.

Gold and silver are fundamental and universal forms of wealth. They were created and stored in the bosom of the earth by the Almighty and can be obtained only by the sweat of man's brow. Either in the form of coin or bullion, they are forms of wealth whose value cannot be wholly destroyed, even by fire. Gold and silver money is honest money because it provides a permanent storage of value in addition to serving as a medium of exchange and a measure of price.

In this connection, one should bear in mind that no business, no form of insurance, no social security can be considered safe unless money is sound. No substitute can be as good as the thing for which it is substituted. The fact that debt-based paper currencies are being widely used as a substitute for hard money does not make them money. A wooden leg is not the same thing as a blood, bone, and muscle leg. You can walk with a wooden leg, but you can't run very fast nor jump very far if, in a pinch, you need to do so in order to protect yourself against an accident. Debt-based currency is a wooden leg.

The contention that confidence makes paper debt-based currency the equal of hard money is at best a half-truth for, in any event, it applies only as long as confidence is maintained. Confidence is a mental attitude and may or may not be justified by subsequent events. The Germans were, up to a certain point, confident that they would win the recent war, but—

DEBT-BOMB EXPLOSIONS

The Roman Empire's D-bomb finally exploded in a chain reaction of inflation-deflation-repudiation that plunged the civilization of Europe and Asia Minor into almost total darkness. No nation can long endure when there is no inducement for it to labor and produce and store away in honest money the fruit of its efforts.

Kublai Khan and his Mongol army came close to conquering all of Europe, but his debt problem, which he attempted to solve with paper notes, conquered both him and the huge Chinese Empire that had, during the thirteenth century, grown into the world's major power. Debt-based currency brought inflation, which, in turn, was followed by deflation and repudiation.

During a period of 200 years, up to 1780, France defaulted 56 times. Complete repudiation came in 1796. By frequent recourse to devaluation of its present currency, finally down to a mere fraction of what it was at the beginning of the First World War, another repudiation has been avoided. Germany's repudiation was, of course, complete; its paper currency finally becoming worth less than the paper on which it was printed. Czarist Russia's paper currency obligations were also completely repudiated. Note, however, that the value of German, French, and Russian gold coins have, in the meantime, more than doubled, even in terms of United States currency.

GOLD VALUE INCREASES

England has met its major debt crises by increases in the measuring value of gold in its monetary system and/or devaluations which, in effect, have given gold a higher working value in the country's economy.

In England, gold was priced at the equivalent of $4.05 an ounce around the middle of the fourteenth century. Approximately a century later, the price was more than doubled to approximately $10 an ounce to offset the debt incurred during the War of the Roses. By the time of Henry VIII, debts had again increased and the price of gold was raised to nearly $15 an ounce. The debt of the Marlborough wars brought on an increase to $24.33 an ounce. This figure proved to be a little higher than necessary and the price reacted to around $21. Following the Napoleonic Wars, the price advanced to above $24 and was finally pegged at $20.67 an ounce on a 16-to-1 basis with silver, which was ample at the time because silver was also an integral part of the monetary system with a fixed price of $1.25 an ounce.

The chain reaction of the D-bomb is illustrated by the events that followed the First World War. Great Britain was forced off the gold standard in 1918 and by 1920 the price of gold reached $27.49 an ounce in the free market which was then permitted in London. In 1925 the gold standard was restored on the basis of the old $20.67 an ounce, but, as this figure was not realistic in relation to the debt, Great Britain was again forced, in September 1931, to abandon the gold standard and by 1933 the gold price was higher than ever, at $30.38 an ounce.

In the meantime, Germany had liquidated its debt by repudiation, and France had devalued the franc both in terms of sterling and the dollar. Then, inasmuch as gold had a higher purchasing value in terms of foreign currencies than the United States price of $20.67, gold began to flow out of the United States. The final result was depression and the so-called bank holiday, which forced the United States off the gold standard despite the fact that the price of gold was increased in 1934—at least 2 years too late—to $35 an ounce.

Germany's "D" bomb exploded despite the World Bank, League of Nations, Dawes plan, Young plan, and United States aid. This explosion spread by chain reaction, so to speak, to every other country in the world, finally hitting the United States with the most disastrous depression of modern times.

Then, because all of the leading nations failed to recognize the dangers inherent in soft debt-based currencies and overlooked the fact that there is no substitute for honest money, the stage was set for World War II.

History repeats itself because each generation of mankind tends to make the same mistakes. Thus, history has been repeated in the post-World War II inflations that have wound up with repudiation in Hungary and Greece and the devaluations that have, to date, occurred in every leading country of the world except the United States and Switzerland. Because Switzerland's money is backed 100 percent with gold, devaluation can be avoided there, but can the United States do so—that is the question and the problem:

The fact that we have more gold than all other countries combined is offset by the fact that our debt is proportionately much larger and our monetary requirements enormous. Past experience has shown that a national debt should not be more than four times larger than the value of the gold supply, and the paper currency and check credit supply should not be more than 60 percent greater. Actually, this country's national debt is ten times larger than the value of our gold at $35 an ounce, and its paper currency and check credit supply, 500 percent greater.

WHAT TO DO?

We can take a page out of history and give gold a larger measure of value or, in other

words, give it a price that will enable it to do more work in the monetary system. This is a tried and proven method that makes sense. The past has demonstrated time and time again that a monetary system consisting of debt-based currency is doomed to failure. Such currency is at best useful only under fair weather conditions; when the rains come the shifting sands on which it is built give way and the house falls apart.

There is no point in being married, so to speak, to a $35-an-ounce price any more than there was to the $20.67 price, or any of the still lower prices of past history. We couldn't hold the price of bread to 5 cents a loaf; why should we expect to be able to hold gold at that equivalent? We cannot, in fact, do it, and we run grave risk in trying to do so: Depression and/or repudiation.

We know what happened when Great Britain devalued its currency in 1931—that country got a large part of our gold because the gold had greater buying power in that country—$30.38 there as against $20.67 here. Great Britain's devaluation in September of last year gave gold a $60.79 measure of value in that country as compared with $35 here. No wonder our exports have declined and our imports increased. And the end of devaluation is not yet, for England and the sterling-bloc countries need more gold—lots of it.

As a matter of fact, since last September 41 different countries have by devaluation increased the measure of gold in their currencies in order to get more gold into their monetary systems.

Russia devalued its currency 90 percent in the latter part of 1947. Then on March 1 of this year Russia revalued the ruble in terms of gold, not at the old rate of $35 an ounce (since she did not have enough gold to make that practical), but realistically, by increasing its measure of value upward to the equivalent of $79.10 an ounce. Obviously, it does not require as much gold at $79.10 an ounce to provide currency backing as it does at $35. And because gold obtained at $35 an ounce in trading with us has a buying power of $79.10 in Russia, that country will get the gold and the trade of its ruble-bloc countries and also, in all probability, some of our gold, as Great Britain and the sterling-bloc countries have been doing since their devaluations of last September.

This country avoided repudiation of United States notes following the Civil War only for two reasons: (1) Approximately half the debt was wiped out by repudiation of Confederate currency; (2) mining development of the West was encouraged by a free market and higher prices for gold and by the Government, especially President Abraham Lincoln, with the result that the new gold and silver produced was soon sufficient to provide for redemption in honest hard money.

To debts which this country incurred in two world wars have now been added the burden of unpaid debts owed to us and our aid to foreign countries. There is no chance this time that the mines of the West can produce the enormous amounts of gold and silver that we need, even if mining were encouraged instead of being, as it is, discouraged and restricted.

The inherent power of gold properly measured and utilized is the only sure solution for the world's monetary problems which, when solved, will in turn provide a solution for most of its other major problems, and while Congress delays in regulating the value of gold upward as an initial step toward reestablishing honest constitutional money, the United States is going deeper and deeper into debt with more and more debt-based currency.

As for a solution to our debt problem, there are only two ways out of the present situation: (1) Ultimate repudiation; (2) a realistic revaluation of gold at a figure that will give it the larger measure of value needed to provide an honest monetary system based on hard money. Repudiation? No. A larger measure of value for gold? Yes. We can and should take the path of honest money. Will we do it?

National Science Foundation Act Among Great Accomplishments of the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. O'HARA of Illinois. Mr. Speaker, among the accomplishments of the Eighty-first Congress, the importance of which will come greater and greater into realization with the unfolding of the future ahead, was the passage of the bill establishing a National Science Foundation.

With ours the responsibility of world leadership, and the fountains of basic science in the Old World upon which we had drawn dried up and no longer available to our need in the application thereof, it was imperative that we provide here in the United States a source of knowledge in the realm of basic science keeping us ever ready while in the today to step, prepared, into the tomorrow.

The fact that the heads of our great universities, I believe without exception, and our eminent scientists and educators generally, united in urging upon the Congress legislation establishing this Foundation is sufficient to show its importance. Briefly, it was a matter of making provision, and immediately, for the creation of a well of basic science in the United States or of starting on the slip backward as scientific progress might advance elsewhere and we were outdistanced.

As the Representative of the Second District in Illinois, wherein is located the University of Chicago, having on its faculty so many scientists of world-wide renown, I felt there devolved upon me in the faithful representation of my constituency the duty to support this measure not merely by my vote when it reached the floor of the House but also by all honorable means open to me prior to the reporting out of the bill.

DR. GERARD'S PRESENTATION HELPS

Thus, on June 9, 1949, I requested and was granted unanimous consent to include in my extended remarks in the Appendix of the CONGRESSIONAL RECORD the address of Ralph W. Gerard, professor of physiology at the University of Chicago, delivered at the St. Louis, Mo., meeting of the American Association of University Professors. The forceful presentment of the arguments for a National Science Foundation in the article by Dr. Gerard, as printed in the Appendix of the CONGRESSIONAL RECORD, volume 95, part 14, pages A3635–A3637, as part of my extended remarks, I feel, was most helpful in creating among many of my colleagues an intensified interest in the pending legislation.

THIRTY EMINENT EDUCATORS SPEAK

On July 5, 1949—see extension of my remarks on pages A4275–A4276, volume 95, part 15, of the Appendix of the CONGRESSIONAL RECORD—I again called to the attention of the House the importance of the measure establishing a National Science Foundation. I included in my remarks excerpts from letters favoring the Science Foundation received from 17 eminent scientists and educators in the Second District of Illinois and the names of 13 other scientists and educators of high standing in my district who had written me in like manner.

LOYALTY OF SCIENTISTS

In my remarks on that day—July 5, 1949—I said, as bearing upon provisions which had been suggested in the name of national security but which many thought were carried to the extreme of unnecessarily casting a reflection upon the unquestioned loyalty of our scientists and educators:

> The question that will be presented to us is not, I think, one that relates to national security. If it were such, I of course, would support the provision. In two wars, in one just passing 15, and in the other past draft age and the father of four children, I think that my loyalty to country was placed where never it could be an issue.
>
> But I do not believe that we strengthen the security of country by placing our scientists and our educators in the category of suspicious persons. The greatness of America has been that in America free men have enjoyed freedom of thought. We wisely have accorded to all citizens the presumption of loyalty to the same extent that we have presumed them to be law abiding. Under the orderly processes there is a procedure to be followed when there is violation of the criminal laws, and this procedure has always protected us against the criminal acts and conspiracies of those who would use, or advocate the use of, violence in the overthrow of Government.

DEBATE ON FLOOR OF HOUSE

On February 27, 1950, the National Science Foundation bill being under debate in the House, I spoke in its support and stated that I had received over 100 letters from the distinguished members and great scientists of the faculty of the University of Chicago who were united in saying that there was no legislation pending that, in their opinion, was more necessary to continue the predominance of the United States in industry as well as in science and to assure its security. Yielding to the distinguished chairman of the committee, the gentleman from Ohio [Mr. CROSSER], the following colloquy took place, as reported on pages 2413–2414 of the CONGRESSIONAL RECORD, February 27, 1950:

> Mr. CROSSER. Mr. Chairman, will the gentleman yield?
>
> Mr. O'HARA of Illinois. I yield to the gentleman from Ohio.
>
> Mr. CROSSER. Does the gentleman know that the president of Harvard, the president of Cornell, the president of Columbia, and the presidents of any number of the other big institutions that rank with the institution which the gentleman from Illinois referred have been begging for this legislation?

Mr. O'HARA of Illinois. I thank the gentleman from Ohio for his contribution in making it perfectly clear that the great educators of the Nation are pretty thoroughly in accord in their endorsement of the plan for a National Science Foundation as set forth in the measure before us.

THE SMITH AMENDMENT

On February 28, 1950, an amendment was offered by the gentleman from Virginia [Mr. SMITH] which I understand was hastily drawn by the author during the heat and excitement of a debate which had carried into the evening and which was adopted without the careful study which, under ordinary circumstances, it would have received. In fairness to the distinguished gentleman from Virginia I wish to say that I do not believe it was his intention that the amendment offered by him should have gone as far as it did in according to the FBI the authority not merely of investigation but of passing judgment.

I, with a few others, voted against the Smith amendment, but on March 1, 1950, when the National Service Foundation bill, as amended, came to a roll call on first passage, I voted affirmatively. The bill was passed, 247 to 126, as shown by the roll call appearing on page 2603 of the CONGRESSIONAL RECORD, March 1, 1950.

DANGER OF POLICE STATISM

But before voting for the bill, the gentleman from California [Mr. HOLIFIELD] and I, in speeches from the well of the House, pointed out the unprecedented lengths to which it appeared on careful study and analysis the Smith amendment would carry us in the direction of a police state. The gentleman from California [Mr. HOLIFIELD] and I stated that we would vote for the bill with the expectation that the conferees would eliminate the objectionable features of the Smith amendment, but if the bill came back from conference with the amendment we would vote against the bill.

In my remarks from the well of the House I said, as reported on page 2581 of the CONGRESSIONAL RECORD, March 1, 1950.

Mr. O'HARA of Illinois. * * * yesterday in committee I voted against the Smith amendment, and in so voting I was responding to the sentiment of the good, patriotic people of the district I represent.

This amendment would go further in the establishment of a police state than anything that has been suggested up to this time by the most rabid advocate of police statism. It does not end with ordering a police investigation of every person applying for a scholarship. It goes much further—to hitherto unheard-of lengths. It gives the investigating police the power to exclude the applicant on a police finding, without hearing and without judicial review, that such applicant, in the opinion of the police, is not loyal. I am sure that Mr. Hoover of the FBI would be the first to say that such power—the power both to investigate and to pass judgment—should not be vested in his or any other policing body.

Furthermore, the Smith amendment makes ineligible any applicant who at any time, whether with knowledge and disloyal intent or not, belonged to an organization which the Attorney General later declared subversive.

When hysteria goes to the extreme of making the billy of the policeman the crosier of benediction, it is time that we got back to common sense and the good, old-fashioned sort of American patriotism.

PUBLIC SENTIMENT AROUSED

The dangerous lengths to which the Smith amendment would carry the policing power—far beyond its proper and legitimate field—far beyond what the gentleman from California [Mr. HOLIFIELD], and I felt strongly Mr. Hoover of the FBI would wish and approve—immediately following the remarks in the well of the House on March 1, 1950, referred to, became the subject of wide discussion in educational circles and in the editorial columns of the newspapers of the Nation. The Washington Post, I might add, is entitled to a large measure of credit for the intelligent manner in which it gave both editorial and news coverage to a matter which so vitally affected the very fundamentals of our democracy.

OPPOSITION OF SCIENTISTS

In the extension of my remarks in the Appendix of the CONGRESSIONAL RECORD—see pages A1810–A1811—I included a letter from Cyril Stanley Smith, director of the Institute for the Study of Metals, University of Chicago, which sets forth in clarifying manner the sound objections of the scientists and educators of the Nation to the Smith amendment.

On March 13, 1950, I extended my remarks to include an article by Clifford Grobstein, vice chairman of the Federation of American Scientists—see page A1863 of the Appendix of the CONGRESSIONAL RECORD—and on March 28, 1950, included a letter from Joseph E. Mayer, of the faculty of the Institute for Nuclear Studies of the University of Chicago. On that occasion, I said, as reported on page A2268 of the Appendix of the CONGRESSIONAL RECORD:

Mr. O'HARA of Illinois. Mr. Speaker, among the scientists and educators of the Nation, as I have remarked on other occasions, there is a strong feeling that the great promise held forth both to our industrial development and our security by the National Science Foundation bill is sadly dimmed by the Smith amendment. This feeling is growing, and I am sure my colleagues would wish to give the subject further study in the light of the intelligent and well-considered objections raised in so many quarters of unquestioned loyalty.

REPORT OF THE CONFEREES

On April 26, 1950, the conferees filed their report, which appears on pages 5828 to 5834, inclusive, of the CONGRESSIONAL RECORD under that date, and on April 27, 1950, the House agreed to the conference report. Concerning the amendment which he had offered and which had been adopted—although not by unanimous vote—the gentleman from Virginia [Mr. SMITH] said, as reported on page 5907 of the CONGRESSIONAL RECORD, April 27, 1950:

Mr. SMITH of Virginia. * * * It was hastily drawn. It was subject to the objection that it required the FBI to evaluate as well as secure the information. I am glad to be corrected in that respect. I think the language now adequately covers what I had in mind, and I am very happy that the conferees should have worked the matter out as carefully as they have.

I wish to join, Mr. Speaker, with my colleague from Virginia in complimenting the conferees on returning to us a bill for which all of us who support the establishment of a National Science Foundation could vote with that good conscience which is possible only when in our voting there is no violence to the fundamental principles of our individual convictions. I would compliment also the gentleman from Virginia on his forthrightness and honest frankness in stating that the amendment, having been hastily drawn, went further than he had intended and that, his attention being called to it, he was glad to be corrected.

DANGER IN COLD-WAR HYSTERIA

No one in this body, I am sure, wants in our United States of America a police state. The danger we face is that in the period of a cold war the hasty consideration of measures conscientiously proposed in the spirit of loyalty and patriotism for reasons of security nevertheless may result if passed without calm and poised consideration in destruction of the very rights and liberties we seek to preserve. A cold war is characterized as a war of nerves. May I suggest, Mr. Speaker, that in the Congress of the United States we well may continue to exercise an eternal vigilance against the infiltration into this Chamber and into our deliberations of that hysteria to be expected when nerves are unstrung and cool judgment is dethroned. The best proof to the country that calm reasoning, and an honest attempt by all Members to reach common grounds of understanding, prevail in this Chamber over hysteria is furnished by the manner in which the disputed phases of the National Science Foundation bill were worked out to the general satisfaction.

EXCERPTS FROM FORD LETTER

I commend to the country, and especially to the scientists and educators who were so much concerned, a reading of the full text of the conference report which is to be found on pages 5899–5906, inclusive, of the CONGRESSIONAL RECORD, April 26, 1950.

Chief of the objections to the Smith amendment voiced by me in my remarks from the well of the House on March 1, 1950, prior to the vote on the bill as amended, were, first, the amendment gave to the FBI the power not only to investigate but to pass judgment, an extension of authority which I expressed the opinion Mr. Hoover would not wish or approve; and second, it made ineligible for scholarship any person who at any time, whether with intent or not to join in disloyal activities, had belonged to an organization later declared by the Attorney General to be subversive.

On these points the letter of the Honorable Peyton Ford, the Assistant to the Attorney General, which was adopted by and included in the report of the conferees, stated:

Concerning point 1:

To place the Bureau in the position of an evaluating agency regarding the loyalty of persons affected by this legislation is fraught with peril, not only to the Bureau itself, but also to the country at large. In the opinion of the Director of the Federal Bureau of Investigation (Mr. Hoover), with which I

agree, such legislation would constitute a clear departure from accepted fundamental theories of American Government and lay a foundation of criticism of the Bureau as a state police organization.

Concerning point 2:

It is also to be noted that the amendments, in precluding the employment of, or the awarding of a scholarship to, any person who has at any time been a member of any subversive organization seeks to deny to the Foundation the services of many Americans of unquestioned loyalty to the United States and its form of government who innocently joined a so-called front organization with the highest motives and who withdrew their membership from such organization upon their first suspicion of its subversive character. * * * This amendment would unjustly penalize many completely loyal Americans who innocently joined such organizations and would, in some measure, tend to defeat the carrying out of the purposes of the act. * * * This opportunity (in the showing of innocent membership) to defend oneself in a manner consistent with American concepts of justice and fairness is lacking from the amendments.

I am happy, Mr. Speaker, that the contentions first raised by me in my address to the House on March 1, 1950, and in which the gentleman from California [Mr. HOLIFIELD] joined, were upheld by the conference committee.

A NOTABLE PUBLIC SERVICE

In closing I wish, for myself as well as for my constituents among the scientists and educators on the faculty of the University of Chicago and elsewhere in my district, to express to the distinguished majority whip of the House, the gentleman from Tennessee [Mr. PRIEST], appreciation of and compliment on the great public service he has rendered in assuring the future of science in the United States and all the developments in industry, in medicine, in national security, and in the cultural arts which start in the well of basic science. The gentleman from Tennessee may well be proud that the National Science Foundation Act bears his name and the imprint of the months of hard work he gave in its behalf.

UN Should Be Rebuilt or Scrapped

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New Hampshire Morning Union of April 29, 1950, entitled "UN Should Be Rebuilt or Scrapped." The Union is published in Manchester, N. H.

UN SHOULD BE REBUILT OR SCRAPPED

In his address before the American Newspaper Publishers Association, former President Herbert Hoover stressed a note that should be given prompt attention by our national leaders. Mr. Hoover proposed that the United Nations should be reorganized without the Communists, and that if this proved impractical, then a new united front should be established among those people who disavow communism and stand for morals and religion and who love freedom.

That position is held by this newspaper, and it is encouraging to have it advanced now by our ablest elder statesman. There is no doubt whatever that the United Nations as it exists today is washed up and a hindrance, rather than a help, to world understanding. Soviet Russia has slugged every constructive move the agency has made and has used it as a cloak to its aggressive designs. It has been employed chiefly by the Soviets as a propaganda forum for smearing free peoples.

The time has come when this kind of thing should be stopped. There has been some talk about abolishing the veto, the weapon by which the Soviets have carried out their tactics of obstruction. But this is not enough. The real fact is that the one-world idea has gone into the discard. Instead of one world in which it was hoped the United Nations would be able to establish peace, we have today two worlds irretrievably split in their objectives. One of these worlds, as Mr. Hoover so well said, is militaristic, imperialistic, atheistic, and without compassion. The other still holds to belief in God, free nations, human dignity, and peace. It is folly to believe that these two worlds can be brought together in a world peace organization. The time has come when the nations that believe in God, freedom, and human dignity, must mobilize against Red atheism, Red imperialism, the hideous practices of the police state, and human slavery, if they and the principles for which they stand are to survive.

Members of the Secretariat of the United Nations will fight to justify the continuance of that organization. They want to keep their jobs. But the United States cannot afford to hand out millions of dollars to pay the bulk of the expense of a defunct and futile organization, whose perpetuation in its present form constitutes a cloak for the godless, grasping, perfidious Soviets to use for their purposes.

Western civilization is at the crossroads, faced with the question of survival. The time has come for all nations that believe in morals, religion, and freedom to stand together and be counted. Such an alinement, as Mr. Hoover said, could be invincible if it is made in deep earnestness. In any case "by their cries ye shall know them." We cannot afford to entertain longer vain dreams and fatuous hopes about world peace and cooperation while the foundation of our very lives is crumbling away. Free, God-fearing peoples must unite in their own defense against the ruthless forces of anti-Christ or see themselves destroyed.

Tariff on Imports From Communist-Dominated Countries

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. PATTERSON. Mr. Speaker, I wish to have the RECORD show that affirmative action was taken by Post 17, American Legion, of Naugatuck, Conn., in protecting reductions in tariff on imports from Communist-dominated areas of the world.

The letter setting forth this action follows:

AMERICAN LEGION,
NAUGATUCK POST, No. 17,
Naugatuck, Conn., April 24, 1950.

Congressman JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATTERSON: Naugatuck Post, No. 17, American Legion, Naugatuck, Conn., home of Charles Goodyear and the pioneer rubber town of the world, protests against any American law, regulation, or agreement now existing or under consideration which affects favorably in any way the importation for competition with American products of any rubber products manufactured un-American—in fact, anti-American standards in Czechoslovakia or any other area dominated by the Russian communistic government. This post is strongly opposed to any such trade arrangements not only on the general principles affecting the interests of the rubber industry and the rubber workers of Naugatuck, but also because the post believes the United States Government should not make any concessions to Russian communism compromising the livelihood or other interests of American industry and workers.

Very truly yours,
CHARLES CLARK, *Commander.*

For Whom Do the Bells Toll?

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. KILDAY. Mr. Speaker, under permission to extend my remarks, I incorporate into the RECORD an original oration written by Miss Gay Zedler of box 465, Luling, Tex., who won the oratorical contest sponsored by the women of the Pan-American Round Table at the Battle of Flowers in San Antonio recently.

In my judgment Miss Zedler has made an outstanding contribution in so well expressing the thought that out of the conflict between the Latin-American and Anglo-Saxon that occurred on Texas soil today comes forth the movement to cement friendly relations between the peoples of the United States and the peoples of Latin-America.

Her oration follows:

FOR WHOM DO THE BELLS TOLL?

Listen with me to the cathedral bells in San Antonio de Bexar, magnificent city of missions:

"Spain and France sowed every sentient
clod with brave romance
The cloven hoofprint of the buffalo
Outlined its course three centuries ago."

Planting the holy rugged cross on the site where a hamlet was soon to arise, the "Conquistadores and their followers pressed on sternly toward empire in the fabled west." But following in their footsteps came the penitential Franciscan monk, with holy urge, barefooted, at his waist the knotted scourge, whose lonely, self-sacrificing work was to make possible San Antonio, Tex., most picturesque city whose past is pregnant with dramatic action, romantic appeal, and heroic sacrifice, no city in the Nation can match its charm and historic interest. Here in the

fiesta city are a happy blending of two cultures, a harmonious mingling of two races and a concerted effort to preserve the best of Latin civilization.

The first officially recognized civil settlement in Texas was the villa of San Fernando, settled at the order of the Spanish King in 1731 by 10 families from the Canary Islands. Symbolic of their Old World culture is the historic San Fernando cathedral which these families built in 1738. The names of these Spanish settlers are familiar to the ears of San Antonians today and within the sacred walls of the cathedral still worship direct descendants of its builders. San Fernando cathedral became the social and civic center of San Antonio. From its tower rang the bells which called strong men, booted and spurred to repel Indian raids. The parochial bells of the cathedral joyfull, proclaimed the coronation of a sovereign, gravely tolled the death of a ruler, or pealed a glad welcome to illustrious visitors. The cross on the dome of San Fernando is today as it was in yesteryear: the golden milestone from which San Antonio measured all distances and the bells of San Fernando echo sweetly as in the days of long ago.

But today the tolling of the bells is more than a call to worship, it is a call to remember the conflict that in the shadow of the cathedral spilled and mingled the blood of the Latin-American and the Anglo-Saxon. A call to awaken in the heart of every Texan the realization that out of this conflict was woven a strong and durable fabric for lasting peace, a fabric woven from the fiber of the souls of strong men, both Latin and Anglo-Saxon; a fabric dyed in their lifeblood, mingled with the tears of their noble women.

It is fitting that San Antonio de Bexar, the city of the cathedral bells, should be the birthplace of a movement to cement friendly relations between the peoples of the United States and the peoples of Latin-America. A movement unique in the annals of man's everlasting search for peace.

This foresight was given over a generation ago to the brilliant mind and generous heart of a Texas woman, the beloved Florence T. Griswold—founder of the pan-American round table. Remembering the Arthurian legend that only at a round table could all be equal in precedence, and peace and harmony thus prevail, her's was the vision, the foresight and the wisdom which called together in round table a group of Texas women whose ancestors had spilled their blood for Texas independence, to form a nucleus for drawing together the women of the Americas.

In recognition of the principle that when the women of a country unite on a firm foundation of mutual understanding and trust, coupled with unanimous concerted action, the men of that country cannot long misunderstand one another; the pan-American round table was founded.

The round table is convinced that through education and not through legislation will the ultimate aims of the organization be attained. With this conviction, the round table views with interest the educational systems of the Latin-American countries, and points with pride to the fact that San Antonio, the city of its origin, is also a pioneer in the educational field.

Pan-Americanism is one of the natural phases through which the Western Hemisphere must pass in its onward progress toward that unity of western ideals which will inevitably make of this continent a solidified front for the defense of democracy.

Just as truly as that the Cathedral of San Fernando was built in the shape of a perfect cross, just as truly as the bells from its tower ring out the same sweet tones they rang in years of old, just so truly is the spirit of pan-Americanism ringing in the ears of the Western Hemisphere, pervading its general structure, revitalizing interrelations among its countries.

With the trend in that direction it remained for some one potent element to organize and direct the forces that will ultimately bring about a workable basis upon which to predicate a union of western nations.

Womanhood knows not national boundaries. Motherhood is a universal concept, and womanhood is a logical ground on which a representative proportion of the constituent members of any nation, or group of nations, may find a meeting point. Logical it is therefore and economically sound that women should marshal their forces and group themselves into an organization that has for its objective provision of mutual knowledge, understanding and friendship among the people of the Western Hemisphere, to develop closer ties between those nations whose interdependence and solid front would create a formidable barrier against foreign aggression and make of them a world power for peace.

On April 14, 1935, in Laredo, Tex., on the International Bridge, there was unveiled a Pan-American good-will marker. Lighted by rays of a perpetual light the marker will ever be a reminder to all passing between these nations of the pan-American aim. This marker, dedicated as it is to the womanhood of all the Americas, bears the hopes and prayers of its donors that it may worthily represent them in the promotion of peace and good will among the nations of the Western Hemisphere, thereby fulfilling a prophetic rather than a commemorative purpose.

Although the organization of round tables has spread from San Antonio throughout the Americas, the spirit of pan-Americanism must not be confined to the limits of this exemplary organization. Every Texan who thrills with pride at his glorious heritage, who participates with joy in the commemorative battle of flowers, must seat himself at the round table of pan-American brotherhood and understanding, that the bells of San Fernando may toll never again for bloodshed but for everlasting peace.

In the words of John Dunne, "Send not to know for whom the bells toll, they toll for thee and for me."

GAY ZEDLER.

Mr. Hoover's Proposal for United Nations Reorganization

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial, entitled "Hoover's Plan," which appeared in the April 29, 1950, edition of the Worcester (Mass.) Telegram.

Former President Hoover's proposal to reorganize the United Nations has undoubtedly excited wide interest and reflection. These wise and practical comments, from the Telegram, on his suggestion are well worth reading.

The editorial follows:

HOOVER'S PLAN

There can be no doubt that former President Hoover speaks the grim truth that the free peoples of the world need a new and dynamic and united front against the "creeping Red imperialism." His criticisms of Soviet purposes and Soviet actions are not in any way exaggerated. He has the record to back him up. But it is a highly debatable question as to whether it would be wise just now to try to reorganize the United Nations with the Communist countries left out. That was the radical step which Mr. Hoover proposed Thursday night in New York when he addressed the Bureau of Advertising of the American Newspaper Publishers Association.

Mr. Hoover recalled that he had warned the people 9 years ago that cooperation with Stalin would be a "gargantuan jest." Five years ago, however, Mr. Hoover said this: "Russia has again, and I hope forever, demonstrated by her gallant armies * * * that she is impregnable." At that time, in April 1945, Mr. Hoover also said that he believed "that with collaboration between the great centers of power in Washington, London, Paris, Moscow, and Chungking that peace can be developed in an atmosphere of good will and understanding."

That's what virtually everybody was saying then, on the eve of our victory in Germany. They said the same thing when the Charter of the United Nations was being drafted at San Francisco, and after the surrender of Japan, and during the first few months of the existence of the UN. Even the realistic Mr. Churchill had faith in Soviet purposes—at first.

With all respect to Mr. Hoover, his own record in foreign affairs does not in itself make his voice a supremely authoritative one at the present moment. When he was President he made much of the Kellogg Treaty and he and Secretary of State Stimson evolved the nonrecognition doctrine. Those instruments were valueless—utterly useless in curbing the Japanese and other aggressors. Also, Mr. Hoover persistently opposed President Roosevelt's foreign policy, from Munich to Pearl Harbor.

Five years ago, and a little later, Mr. Hoover was not talking about the menace of Russian imperialism or of communism. That is nothing against him. The Russian conduct after the war came as a disagreeable surprise to countless Americans. Mr. Hoover did, however, make a keen and farseeing remark 5 years ago when he said that the big five veto practically "puts all the great military powers out of reach; and world wars are not started by small nations."

Herbert Hoover was thus one of the first American leaders—perhaps the very first—to recognize a fundamental weakness in the UN Charter. But that fact is not proof that he is necessarily right in saying that we should seek to reorganize the UN without the Communist nations. Neither does it prove that Mr. Hoover's new proposal is unwise, merely because some of his measures failed in the past.

This proposal cannot be settled in terms of Mr. Hoover's record. It needs to be fully argued, not only by the critics of the UN but also by its supporters.

There Shall Be No Retreat

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1950

Mr. RIVERS. Mr. Speaker, under the leave to extend my remarks in the REC-

ORD, I include the following keynote address of George Warren:

THERE SHALL BE NO RETREAT

(Keynote address of George Warren, South Carolina Democratic Convention, Columbia, S. C., April 19, 1950)

Today, in America, aye, in the world, freedom is the major issue. Amidst the complex problems facing the people of this country now, the maintenance of liberty stands out as the dominant problem. Never before in recorded history was there more need for an intelligent approach to the solution of these problems.

Our people thought that they were secure in the enjoyment of their liberty and freedom under the best Government in the world, and that the talk about "eternal vigilance being the price of liberty" was a catch phrase coined for the guidance of our forefathers—not us. And many people still are thinking similarly.

But the world is on fire with tyranny in the form of communism and socialism, and in America we have a creeping socialistic revolution in progress which, unless stopped in its development, will engulf this Nation and destroy our Government and the American way of life.

So again I plead for the preservation of our Constitution, the continuation of our dual form of government with its proper balance of powers between the States and the Nation; and with all the force at my command, I condemn encroachments upon the powers of the States by either Congress or the President, in whatever form, whether by enactments of law, by usurpations, or oligarchy masquerading under the banner of democracy.

Two years ago the democracy of South Carolina in convention assembled, calmly and without passion or prejudice, mapped out a course it would pursue, declared its platform and principles and directed its officials as to its policies. And in pursuance to its declarations the chairman, the executive committeemen, its delegates to the national convention, and its other officials have faithfully, honestly, and fearlessly carried out those policies and principles. Those officials were at times booed and heckled and subjected to rebuffs in the performance of the tasks assigned them. In the discharge of their duties those representing the party—State executive committeemen and county chairmen—were hailed into a Federal court and actually in so many words threatened with a Federal prison. What shall we tell these men who have acquitted their stewardship with honor and faith? Shall we repudiate their actions? Shall we turn our backs upon them and disclaim our own directions? By the immortal God who made me, I am sure I speak the sentiments of the noble people, the proud people of this State, when I say to them, "Well done, good and faithful men. From the stand you took there shall be no retreat."

And those words, "no retreat," should be the keynote of this convention.

All that we say and do here today can be put in concentrated form. All people of all parties can know exactly what our keynote is and exactly where we stand. In just two words that keynote is no retreat.

At our last convention and subsequently the South Carolina Democratic Party demonstrated to the Nation and to both Republican Party and National Democratic Party that this State was no longer "in the bag," that our people could still exercise independence of action on matters of broad policy, that by a concert of action the people of the South could actually become the balance of political power in national elections, and that we are now a factor to be considered both in party councils and national elections. I cannot picture any political party in a national election deliberately turning down electoral votes which may constitute the difference between success and failure in a country-wide election. I very much doubt that any future representatives of this organization will meet with the treatment accorded your delegates at Philadelphia last election year. Nor do I think that our presentation of the ideals and principles of government will again be jeered and hooted in a national convention. After all, national committees and national party chairmen, and even candidates for President and Vice President are looking for electoral votes. If they want our votes it is pretty certain we at least will be permitted to take part in party councils and espouse the policies and principles of government in which we believe. Our stand of 2 years ago publicized great principles and concepts of government and focused the attention of the people of the country in an emphatic way upon the inroads of socialism upon the body politic and upon the national economy. At a time when both of the great political parties—and their respective candidates—were vying with one another to see which could outdo the other in advocacy of a totalitarian state, a police state, a socialistic state, a poorhouse state, our voice was the real voice of America sounding a clarion call to preserve our constitutional form of government, to sustain our traditional way of life and battle the evil forces of socialism. And while we did not elect a President, we won a great victory, because in the minds of the people of America we planted the thoughts that even now are blocking socialistic programs. The thinkers of America are saying, "Thus far you have gone. No further shall you go." Today in America our fight has the Reds and the pinks on the run. Let's keep them running. Let there be no retreat.

In May 1948, awakened to the need of militant action to stem the onrushing tide of socialism which threatened (and still threatens) free America, the democracy of this State calmly and dispassionately declared its platform of principles which for decades had been the cardinal foundation of the Democratic Party of this Nation. We claimed then, and I proclaim today that the members of the Democratic Party of South Carolina constitute the defenders of true democratic principles, the opponents of totalitarian rule, supporters of constitutional government, and preservers of the ideals and concepts and traditions revered by our party for generations past. Succinctly and precisely we took our stand and proclaimed it to the world. No misunderstanding could possibly exist about where we stood. Nothing has happened in the past 2 years, so far as I know, that would cause us to change or to consider that we were wrong then; unless there are those here whose social concepts and election law predilections follow those of a Federal judge of this State who, deserting the doctrines of his forefathers, advocates outside interference and Federal force to impose his will upon a people once free.

It is true we have had court orders. But undying principles cannot be changed by order of a court. It is true we have had a few hand-outs from Washington—very few—and we may get back some part—a small part—of the Federal taxes we pay in the form of grants or benefits. But these hand-outs or grants—a mess of pottage—cannot buy the souls of a free people. The trend toward socialism has been accelerated some since then. The need today is perhaps greater for us to maintain and declare and militantly defend those principles, ideals and concepts and traditions. We cannot lightly brush aside the threat of a socialistic state.

Socialism inevitably leads to tyranny. Take the case of Russia. Those who started the break from Czarist tyranny were old Socialists. They fought tyranny, but when socialism was set in motion it grew into the most tyrannical government in human history—present-day Russia.

This country was settled by those fleeing from tyranny and established to free us from tyrannical rule. Today it is our bounden duty to hold the line for the American way of life. First, we should recognize the presence of a creeping Socialist revolution and make our leaders not only recognize that fact but put a stop once and for all to any further advance to socialistic laws and economic trends. We are the sovereign people. Let's make the Congress and the judiciary and the executive of our Government get back to the Constitution and to the Declaration of Independence and the American way of life.

We told the world of our ideals and principles; on the ramparts of American life we hoisted our flag. We maintain the same ideals and principles today. If you will join me, I say, "There let it wave, and long may it wave." We make no retreat.

The people of America do not believe in socialized labor. They do believe in collective bargaining, the right of the laboring man to join together for the benefit of himself and his fellow laborers for their mutual benefit; they believe in individual freedom; and the people of America believe in free labor—not slave labor. When any party or the leadership of any party attempts to herd the working people of this country into the corrals of a socialistic order, then is the time for warnings to be sounded. South Carolina democracy today should tell the laboring people of America and their organizations that heed should be given to the signs of the times—the gradual drift of the United States into socialism which will embrace labor as well as business. The examples of Nazi Germany, Fascist Italy, and Communist Russia disclose accurately where the laboring man will stand under socialism.

The people of America do not believe in socialized medicine. They do believe in governmental public-health activities to the extent that such shall preserve freedom of our people to choose their own doctors and hospitals and medical care and shall not interfere with the freedom of our surgeons and doctors to practice where, when, and for what they please under the regulatory power of the States to prescribe their qualifications. Socialized medicine is directly opposed to the fundamental concepts of Americanism. South Carolina democracy today should tell the people of America that the time has come when these concepts of government are endangered and that the creeping progress of socialism will be advanced unless strong efforts to curb that progress are made. Do I have to give examples today of the dire results of socialized medicine? Look to any country where it has been tried.

The people of America do not believe in socialized business. They believe in free enterprise and individual initiative. When any leadership of a party or any government advocates laws or enactment of laws aimed directly at doing away with those beliefs, the time has arrived for the business people of the Nation to put forth every possible effort to prevent socialized business. In view of the trend of our National Legislature to regiment the Nation's business and circumscribe free enterprise and individual and corporate initiative, the Democratic Party of South Carolina should send out a call to the business people of America to combat with all of its force the advancing march of socialized business.

The American people do not believe in a socialized state. They believe in democracy as that term is defined by the acts of the founding fathers of this country. When any party or its leadership or any official of our governmental set-up would, by act or

deed, send America down the road to socialism, a time of danger has arrived, and the Democratic Party of South Carolina should speak out to the people of the Nation words of warning with a call to join us in safeguarding and perpetuating the representative democracy under which for nearly two centuries we have lived in happiness and prosperity.

Voicing the feelings of the great people of this State, I say that South Carolina's democracy views with alarm these signs of a drift away from fundamental Americanism, and with all of our resources we dedicate ourselves and our party to combat socialism. We are doing this today; we should do this in all party councils elsewhere and everywhere in the future. With sincerity we feel that the salvation of our Government depends upon setting up a road block in the path of socialism. We call on the national Democratic Party to join in that effort, and all true Americans everywhere to do likewise. The fight transcends persons and parties. So today South Carolina democracy gives to the Nation a motto all can well adopt: Fight socialism.

Everyone everywhere knows that if an individual spends more than he makes over a period of time he will go broke, and if a business spends more than it makes over a period of time, it will wind up broke. It does not require an economic expert to know that when a government spends more than it takes in, such government over a period of time will go broke. (Let me interpolate here that it seemingly does require an economic expert to decide otherwise.) Therefore, when it appears that the United States Government or a State government undertakes over a period of time, in a time of peace, a planned system of deficit financing, it embarks upon dangerous seas, and we would not be true to our concepts of honesty if we withheld our disapproval of any such program. Today the democracy of South Carolina should view with alarm and condemn deficit financing, and our Representatives in the Congress and the State legislature should be told of our views.

In line with our views, those truly representing the South in the Congress many times find themselves alined against legislative proposals of the present national administration. On this account we are called conservative, and even reactionary, although in fact we are the true liberals, in the traditional meaning of the term. Because we have dared to fight for the historic doctrines and principles of the great Democratic Party, we have been referred to as Dixiecrats by the hatchet men and character assassins of the motley crew who have temporarily captured our party. The term "Dixiecrat" is nothing more nor less than a smear word, designed to obscure the unanswerable logic and reason of our stand by a base effort to create sectional prejudice. We repudiate the term and proudly reaffirm our faith in and adherence to the traditions and beliefs of the great Democratic leaders and standard bearers who have gone before us.

It is true that we have not blindly followed radical proposals or radical leadership. If a party or a person advocates measures or men which we regard as un-American or socialistic we would be craven cowards to forsake our ideals. We fought within the national party for States' rights, under whatever name called. Within the national party we battled for State sovereignty, free enterprise, local home rule, and for the preservation of constitutional government. We waged that fight in the national convention after first telling the national committee that we would not abandon the old-line Democratic principles and ideals carried in the platforms of the party for many, many years. There was no misapprehension of our stand when we participated in the convention at Philadelphia. In the following national election we invoked and exercised our right to vote for the preannounced program. We carried our fight to that election and established to all and everyone that the Democratic Party of South Carolina stands for State sovereignty, home rule, and constitutional government. We maintain that should the national party tell us to stick our heads into the fires of socialism we do not have to obey such a demand. We still possess freedom and are not abject slaves to the forces of evil that would shackle us to a socialistic order. And from that stand I say there should be no retreat.

The older members of our party know why the dual form of government here was adopted, with the States, originally separate and independent republics, surrendering certain rights to the Federal Government and retaining and reserving all other rights to themselves. However, they should tell the large number of new voters of the great purpose of the founding fathers, which was to create a government of divided powers to prevent autocratic rule, to prevent tyranny, to prescribe home rule or local self-government, to preserve for posterity that freedom and liberty which they had bought and paid for in human blood. The old and new members of our party should remember the conception of George Washington that the balanced powers constituted a system of "reciprocal checks" which was necessary; should remember that Jefferson said that "support of State governments in all of their rights" was the "surest bulwark" against antirepublican tendencies and that Franklin Roosevelt said. "We are safe from the danger of any departure from the principles upon which this country was founded just so long as independent home rule of the States is scrupulously preserved"—and he added, "and fought for whenever it seems in danger."

Until recently the old Democratic Party has followed the States' rights line, and but for a few of the ilk of Humphreys we think would have followed the States' rights line 2 years ago.

The South Carolina Democratic Party adhered to the States' rights line 2 years ago. From that commendable stand for the preservation of our great form of government there should today be "no retreat."

Those in high places have brought about bloc government in the place of party government in this country through their bartering for votes of one kind or another. In pursuing this policy, they have cynically sought to stir up the fires of racial and sectional prejudices. Two years ago, we knew that there were those in the party who advocated the enactment of laws such as FEPC, removing all separation of the races in our places of business and other laws removing all separation of the races in schools and colleges. We found that there were those who by executive edict would integrate the white and Negro races in the armed forces. But until recently we never thought any Democrat would declare that any and all separation of the races constitutes discrimination and is unlawful. Such has happened.

Article 3, section 33, of South Carolina's constitution says "The marriage of a white person with a Negro or mulatto, shall be unlawful and void." There are those who even approve intermarriage of whites and Negroes, and contend for the annulment of this provision of our constitution. For the record let it be said that in Columbia at high noon on April 19, 1950, the keynoter of the Democratic convention with all of the emphasis at his command said that the Democrats of this proud State repudiate any such principle, frown upon any such efforts, and militantly declare our intention to uphold our State constitution.

We do not believe that the informed Negroes of this State advocate doing away with the constitutional provisions against intermarriage, or the abrogation of separation of the races.

For many years the white and Negro races have lived in South Carolina in peace and harmony. The better elements of both races have worked hard to improve the lots in life of both races. Great headway has been made by both. Both want to preserve the racial purity of each. Outside agitators, for purely selfish political reasons, seek to stir up racial prejudices and animosities. We condemn such efforts and declare our belief that social and educational separation is not discriminatory. On May 19, 1948, the South Carolina Democratic Convention in its platform and its principles said: "We believe in the social and educational separation of the races." From that stand there shall be no retreat. We have been insulted with a civil-disturbance program, erroneously labeled a civil-rights plan. We were outraged by the threats of "force bills" which violated our conceptions of freedom as guaranteed to us under the Constitution. All separation of races is sought to be declared discrimination; even our laws respecting intermarriage of whites and Negroes being threatened with annulment. And those insults and outrages are still being heaped upon the people of the South. These things have happened before. Our political institutions have been assailed before. We have faced perilous ordeals before. Bayonets of Federal soldiers have been crossed over our ballot boxes in the past. But never yet have our heads been bowed in shame; never yet have we truckled even in defeat.

And though we may be deserted by an errant national party leadership, and Federal courts attempt to control our elections, yet we face the problems confronting us with courage and faith that right and justice will finally triumph. Under God, the author of liberty, we still stand for the individual freedom and personal dignity of the American citizen.

Education on Radio

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by me at the television dinner sponsored by the Association for Education on Radio, University of Pennsylvania Museum, April 20, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR FRANCIS J. MYERS AT TELEVISION DINNER SPONSORED BY THE ASSOCIATION FOR EDUCATION ON RADIO, UNIVERSITY OF PENNSYLVANIA MUSEUM, APRIL 20, 1950

Like many parents who have a TV set in their home, I'm forced to admit that my children are the television experts of the family. The children sold me on television over 2 years ago, and at that time, my son—then in junior high—was prepared to explain to me, his not too up-to-date father, just how television worked.

I strongly suspect this has pretty much been the experience of most families who

have bought, or are thinking of buying, a television set.

So, with several years of experience in looking and listening to their credit, my children are old hands in terms of the lively young television industry. From time to time, I've heard some spirited dinner table discussion of some of the fine programs the children have seen and heard on TV, and from these and other discussions, I've gathered that some splendid work is being done right here in Philadelphia in television programming.

I must admit, however, that much of my information about this is second-hand—because my work in the Senate keeps me away from Philadelphia most of the time—and as a matter of fact, I've probably participated in almost as many television broadcasts as I've actually seen.

I got a real eye opener several months ago on Philadelphia television developments when Miss Martha Gable of the Philadelphia board of education sent me quite a bit of material describing the education shows that have been worked out jointly by our local television stations and school officials.

As I say, I was aware that something of this sort was going on from what others had told me, but I had no idea that anything so comprehensive and significant was being developed right here in Philadelphia.

The story which emerged from reading the material Miss Gable sent me indicates that Philadelphia is playing a leading role in evolving a vital and all-important new educational and informational technique. Moreover, it was quite apparent that a great many people were working together to make these new programs possible.

The managements of the local television stations have given freely of their time, imagination, and other resources. Teachers and officials of all our schools—public, private, parochial—have worked hand in hand with the stations and with each other. School children themselves have been very much involved, both as participants in the programs, and as the audience for whom the programs were intended. Too, several large manufacturers of television sets have lent equipment to schools, and the parent-teachers associations have assisted by raising funds for the purchase of TV equipments to bring the programs to more of the children.

Now I'm extremely proud of the trail-blazing work which has been done here at Philadelphia in utilizing the assets of television to further education and promote better understanding among our people.

Without question, there has never been a time in our past where the American people have needed to know as much about as many things as they do today. The complex life that all of us share in this year of 1950 is too involved merely to let matters take care of themselves. It is imperative that we—as a people—know where we are, where we are going, and where we want to go. We no longer can afford the luxury of letting things grow like Topsy.

In this age where men themselves may travel at the speed of sound—where we can communicate with one another at the speed of light—the man on the street needs far more facts to pass sound judgment on the issues that must be met to keep democratic institutions alive.

It is a real blessing that the same kind of technical advancement which has complicated our lives so much has, at the same time, provided us with extraordinary means of acquiring information. Radio and television provide us with ringside seats at the great events of the day. Within a short space of time thereafter, the same events are recapitulated in our newspapers, newsreels, and magazines, and in the long run, books run off on giant presses furnish us with permanent records and assist us in fitting events into sensible historical perspective.

No one underestimates the potential of television as the newest addition to our fountainhead of information sources. It is taking an important place in partnership with our other communications and shares with them the dual responsibility of furnishing us with enjoyment and with information which we must have to meet the future.

Returning for a moment to the educational programs that have been developed locally here in Philadelphia, I was particularly gratified to notice the extent to which information about world affairs had become a part of these telecasts. I recall seeing names of foreign students who described life in their countries, and of newly arrived displaced persons, and others which referred in some fashion or another to events and places beyond our shores.

Because world peace is the central issue of our time, I think this sort of program is of particular significance—not only for our children in school, but for everyone—and I want to enlarge on some of the factors which seem to me so essential to an understanding of the world problems which confront us today.

As a nation, America has done a lot of growing up in the past 10 years or so. Without doubt, the biggest single obligation we've undertaken—in our recent history, at least—is that of assuming our share of the responsibility for world peace. And by shedding our former policy of isolation, we have undertaken a vast new job which requires us to come up with solutions to problems which had never previously been of much importance to us. With the coming of our new international responsibilities, we've had to think in new terms, and unlearn many modes of thinking which were adapted to the policy of isolation.

This is not an easy job to do—and all things considered, I believe we have shouldered our load and have met our new problems in a mature and straightforward fashion. We must remember that we broke with the past when we repudiated isolation. But the break was clean, and it was wholeheartedly supported by the overwhelming majority of our people. It's true there are still a few who urge us to let the rest of the world go hang—but I'm satisfied this is a minority which is growing steadily smaller as we continue to go forward with the job of peacemaking.

But isolation, as a matter of national policy, served the best interests of America for a substantial part of our national history. Broad oceans insulated us from the recurrent strife of Europe and Asia, and by turning our backs on the troubles of the rest of the world for a hundred years or so we kept ourselves busy and grew great in expanding our Nation across the continent. And by the close of the nineteenth century the United States had become a factor of wealth and resources to be reckoned with.

But the policy of isolation—so useful in frontier days—had the rug pulled out from under it by science. Not all at once, but gradually and steadily. Transportation did it. The nineteenth-century developments of power through steam, electricity, and the internal-combustion engine shrank the size of continents and pulled them closer together as ocean vessels grew larger, faster, and began to use steel hulls. Whether we liked it or not, the nations of the world were being brought together.

The airplane was really the last straw so far as isolation was concerned. Even at the close of World War I the potential of the airplane was not real enough to convince a majority of Americans that the world's troubles were our troubles, too. We turned thumbs down on the League of Nations, and said in effect, if isolation was good enough for grandma, it was good enough for us. And even those nations which joined the League weren't prepared to think in terms of working cooperatively on an international basis. National jealousies were, if anything, stronger at the time of the Versailles Treaty and in the years which followed than they were prior to 1914. War does things like that to people and nations.

When the prosperity bubble burst here in the late twenties and the ever-darkening night of depression settled upon us, we were too preoccupied with our own troubles to pay much attention to the fact that we weren't alone in our misery. The depression was world-wide—and as a nation we failed to realize that the American economy had become so linked to that of large parts of the world that even depressions were no longer isolated affairs.

The totalitarian dictatorships which spread their evil through the depression years and finally plunged the world into a second great war within a quarter of a century were the ones who exposed to everyone the fallacy of isolation. By the time World War II drew to a close in 1945 the American people recognized that if we could take our armed forces to Europe and into the far reaches of the Pacific and on to the Continent of Asia itself—and there achieve victory—others might some day bring war to us across those same oceans.

No wonder we were ready to repudiate isolation by 1945. No wonder our participation in the United Nations was so overwhelmingly acclaimed by the same people who, 25 years earlier, could not be convinced that a League of Nations was necessary to world peace.

The Russian delegates in the United Nations soon made us realize, however, that the Communists had their own schemes for world peace—schemes which would carry out their long-announced plans for world communism. With the economy of Europe tottering, the Russian veto fell across every measure to come before the UN which offered to bolster Europe's foundations, and judging from Communist tactics in eastern Europe, it was apparent that Russia sought the domination of all of Europe without firing a shot. The Communists were counting on the democracies to collapse, and they expected Communist dictatorships to rise up from the wreckage.

To save Europe, something had to be done, and done fast. In rapid succession, interim aid program was created to furnish American food to a starving Europe. The Truman doctrine was born to aid the Greek Government in stamping out Communist-led guerrilla warfare and to strengthen Turkey against Russian threats of aggression. Just 2 years ago this month, the first of the Marshall plan shipments began to flow across the Atlantic to aid the western European democracies in getting back on their feet. Last year, the Atlantic Pact was signed, and the nations of the North Atlantic community pledged themselves to stand united against any threatened aggression. Last month the first supplies crossed the Atlantic under the military assistance program which is designed to furnish the additional arms the Atlantic Pact nations will need to make good their pledge of mutual defense.

These programs are stopping the spread of communism. Europe is getting back on its feet with its industry well above prewar levels, and progress is being made at reducing the trade barriers which have hampered Europe's economic development for the past half century. Peace has been restored in Greece, and Turkey is much better prepared to call any Communist bluff hurled at her. The Marshall plan still has a big job ahead—in fact, a job which will cost an estimated $3,000,000,000 in the coming year. But Mr. Paul Hoffman, whose splendid

leadership and vision have had so much to do with the success of the Marshall plan to date, feels that the program is ahead of schedule and that we can safely afford to reduce ECA spending to the $3,000,000,000 level this next year. He adds the precaution, however, that the figure cannot be reduced below that amount without endangering all the good which has been accomplished thus far.

We have much more work ahead of us on the world front. But I am confident that we possess the intelligence and the ability to do the job. In large areas of the world, great masses of people live at primitive, starvation levels. The Communists have already made overtures to them, promising them pie in the sky through dictatorship. There is, however, as we all know, an honest solution to the problems of the people who live in the underdeveloped areas of the world—a solution which does not hold out the empty promise of security through dictatorship.

The solution I have in mind is to be found through the point 4 program which is now pending in Congress. Under point 4, American technical know-how will be one of our major exports. We will furnish, through the United Nations wherever possible, trained technical assistance which can aid the backward nations in improving their agricultural methods and in laying the foundation for industry. The experience we've had in this sort of work under the Marshall plan has demonstrated its effectiveness, and in addition, has taught us a great deal about that problem.

Another phase of point 4 will encourage the investment of American dollars in the underdeveloped areas by insuring the investors against political risks of loss through changes in policies of the countries in which the investments are made—and the countries which will participate in point 4 will give their assurance through treaties that they will safeguard the investments of foreign capital which goes in to promote industrial production.

Point 4 promises to be a major vehicle in meeting the Communist threat in such areas as the Middle East and the Far East.

Another grave problem as yet unsolved lies in the fact that the atom, now harnessed by science, has yet to be harnessed politically. Once more, it is Russian opposition which has stalemated things—this time by the Soviet refusal to permit free international inspection, which is of course essential if international control of the atom is to be achieved.

We have, on the other hand, met and mastered other difficult problems in carrying out our international responsibilities in this postwar period, and I am quite confident of our ability to do so in the future.

I do not underestimate the magnitude of the job ahead. We have, up to this time, faced the world united in our desire to cooperate in helping the world achieve peace and freedom under democratic institutions. We cannot turn back the clock. We cannot retreat to isolation. We cannot permit our foreign policy to tumble into the political arena. Our foreign programs have been shaped on a bipartisan basis up to this point—and responsible members of both major political parties have redoubled their efforts to keep foreign policy on that high plane as the isolationist remnant in Congress and elsewhere have sought to undermine bipartisanship by trying to stampede and divide us.

I am very proud that America has accepted the mantle of world responsibility in a spirit of dignity, sincerity and devotion. We have been willing to settle world problems squarely on their facts and merits. So long as we continue to conduct ourselves thus—so long as we continue to inform ourselves as fully as possible and think clear-headedly—I have no fear for our future.

Freedom and the Welfare State—Citation From League for Industrial Democracy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the distinguished junior Senator from New York [Mr. LEHMAN], entitled "Freedom and the Welfare State," which he delivered on the occasion of the forty-fifth anniversary of the League for Industrial Democracy, at the Hotel Commodore, New York, N. Y., on April 15, 1950, together with a citation to him by the League for Industrial Democracy.

There being no objection, the address and citation were ordered to be printed in the RECORD, as follows:

FREEDOM AND THE WELFARE STATE

(Address by Senator HERBERT H. LEHMAN at luncheon on the occasion of the forty-fifth anniversary of the League for Industrial Democracy, Hotel Commodore, New York City, Saturday, April 15, 1950)

I feel deeply honored today at this forty-fifth anniversary luncheon of the League for Industrial Democracy to receive the league's citation for public service in behalf of a more democratic world. I particularly appreciate this citation because of your organization's long and consistent record of devotion to the ideals and the achievement of a more democratic Nation and a more democratic world.

I cite the words of the honorary president of this organization, that beloved philosopher, Dr. John Dewey, who defined the goal of the LID as the creation of a democracy that shall be a living reality in every aspect and reach of our common life. And what do we mean by "democracy?" Another great contemporary of ours, the Reverend Harry Emerson Fosdick, put it this way. "Democracy," Dr. Fosdick said, "is based on the conviction that there are extraordinary possibilities in ordinary people." I know that your organization is dedicated to that conviction.

The title of my remarks today is "Freedom and the Welfare State." I can think of no more appropriate audience than this for such a discussion. The League for Industrial Democracy, in striving for almost half a century to promote industrial democracy, has been working at the same time in behalf of both freedom and the welfare state. Your ideal as well as mine is a nation conceived in freedom and dedicated to the welfare of all the people. But that ideal is no innovation of ours. We are not its original sponsors. One hundred and seventy years ago the welfare state concept was translated into the basic law of this land by the founders of the Republic. This concept was set forth in the preamble of the American Constitution. The object of our Federal Union, the Constitution states, is "to establish justice, promote the general welfare, and secure the blessings of liberty to ourselves and to our posterity." Hence, the founding fathers were the ones who really originated the welfare state. And in many lands, long before our Nation was born, courageous champions of human liberty were working toward this same ideal.

"Democracy," said one of the world's greatest men, "arose from men's thinking that if they are equal in any respect, they are equal absolutely." Those words were written more than 2,000 years ago by a Greek named Aristotle. Those words define the welfare state as much as any phrase of Franklin D. Roosevelt or Harry S. Truman.

It has become fashionable in circles of political reaction to attack the concept of the welfare state as being prejudicial to individual liberty and freedom. These reactionaries view with fright and alarm the current and proposed activities of government in the fields of housing, health, and social security.

"These are steps on the road to communism," the alarmists cry. But these same men uttered the same cries in the same tones of fear and outrage when President Roosevelt proposed the Securities Exchange Act, the Fair Labor Standards Act, the Holding Company Act, the Federal Deposit Insurance Act and many other pieces of legislation which even reactionaries would not dare to attack today. The same cries were raised when Woodrow Wilson proposed the Federal Trade Commission Act in 1913 and when the Railway Labor Act was first placed on the statute books in 1926. I could cite laws and programs by the score enacted over the violent opposition of the reactionaries—laws and programs which were assailed as communistic at the time—but which are now accepted even in the most conservative circles.

This cry of state tyranny has been raised during the last half century whenever the community has attempted to interfere with the right of a few to destroy forests, exploit little children, operate unsanitary and unsafe shops, indulge in race or religious discrimination, and pursue other policies endangering the health, safety and welfare of the community. These few have completely ignored the fact that, when their license to exploit the community was restricted, the freedom of the many from ignorance, insecurity, and want—the freedom of the many to live the good life—was measurably enhanced.

I do not believe that our Federal Government should seek to assume functions which properly belong to the individual or to the family, to the local community or to free organizations of individuals. But I do believe that our Federal Government should and must perform those functions which, in this complex and interdependent society, the individual, the family, or the community cannot practicably perform for themselves.

Today we in America and in the entire freedom-loving world are confronted with a world-wide threat to that principle which we hold most dear, the principle of individual dignity and of individual freedom. For the preservation of that principle we are willing to dedicate our lives, if it should prove necessary. But while this is a threat which we face on the world front, we face another danger here at home. That is the threat to our freedom from those within our own country who would identify individual freedom with special privilege. Any move to diminish privilege, to stamp out discrimination and to bring security to our citizens is branded by these people as un-American.

Not so long ago an American political leader said that the governments of the past could fairly be characterized as devices for maintaining in perpetuity the place and position of certain, privileged classes. The Government of the United States, on the other hand, is a device for maintaining in perpetuity the rights of the people, with the ultimate extinction of all privileged classes. Was it some Communist, some irresponsible radical or reformer who made that statement? No, it was not. It was the late President Calvin Coolidge in a speech at Philadelphia in 1924.

It is my firm belief that the extinction of special privilege is an essential and basic program of the welfare state. Today the forces

of special privilege provide the chief opposition and raise the wildest cries of alarm against economic security for all.

In addition to the forces of special privilege who are opposed, on principle, to all social legislation, there are some who, while paying lip service to liberalism, claim to be troubled by the expanding scope of government in its direct concern with the welfare of the individual citizen. These people, while conceding merit to the specific programs of the welfare state, and while approving the welfare state programs of the past, join with the forces of privilege in contending that if the Government provides any further services, it is moving in the direction of totalitarianism.

In my opinion these men of little vision have lost sight of the most important—and to me the most obvious—truth of our times—that a government which has secured the greatest degree of welfare for its people is the government which stands most firmly against totalitarianism. The critics of the welfare state do not understand this simple fact. They spend their time looking for Communists in and out of government and at the same time attack those measures which would deprive Communists and would-be Communists of their ammunition—and of their audience. The measures which would provide for the welfare of the people are the surest weapons against totalitarianism.

The Communist International, its leaders, and their philosophy, have been responsible for many designs which we in the democratic world consider the quintessence of evil. Certainly the suppression of basic rights—the police state and the slave-labor camp—constitute the most repulsive and obnoxious way of life we can imagine.

But, as a liberal, I have a special resentment against the Communists. I feel that one of their greatest disservices to the cause of human progress has been their identification of economic security with the suppression of freedom. It is their claim that in order to achieve the solution of the economic needs of the many, it is necessary to curb the freedoms of all. They say, in effect, that you cannot have a full stomach and a free mind at the same time.

I reject this concept. I reject it as being the ultimate in reaction. This is but another demonstration of the basic affinity between Communists and reactionaries in their thinking about man and his problems. Both groups believe that a nation of freemen cannot possibly conquer the scourges of hunger, disease, lack of shelter, intolerance, and ignorance. And they both have much to gain if they convince enough people that freedom and security are incompatible.

It is a strange paradox that the same conservatives and reactionaries who pose as champions of national security express the greatest antagonism toward individual security. Most of us readily acknowledge that the nations of the world cannot be free if they are not secure. It seems equally logical to me that individuals cannot be free if they are beset by fear and insecurity. To my mind the welfare state is simply a state in which people are free to develop their individual capacities, to receive just rewards for their talents, and to engage in the pursuit of happiness, unburdened by fear of actual hunger, actual homelessness, or oppression by reason of race, creed, or color.

The fear of old age, the fear of sickness, the fear of unemployment, and the fear of homelessness are not—as some would have us believe—essential drives in a productive society. These fears are not necessary to make free competitive enterprise work. The fear of insecurity is rather a cancer upon free competitive enterprise. It is the greatest threat which confronts our economic system. I hasten to add that I believe in free competitive enterprise. I believe it is the best system yet devised by man, but it is not a goal in itself. It must always serve the public interest.

We have had 20 years of the New Deal and the Fair Deal. Who would say that the American worker, the American farmer and the ordinary American businessman is less free than he was 20 years ago? Actually, freedom in the true sense flourishes more generally and more widely today than ever before in our history. The worker, the farmer, and the businessman have vastly more freedom than they ever had before. They are freer to enjoy the fruits and benefits of a productive economy and a full life. But they are not yet free enough.

We are still far from the goal we seek. Insecurity still haunts millions. Inadequate housing poisons the wells of family life in vast numbers of cases. Inadequate schooling handicaps a great segment of our people. And the fear of sickness and old age still clutches at the hearts of many, if not most, of our fellow citizens. Until we solve all these problems and quiet all these fears, our people will not be truly free.

This must be our goal and purpose, to set our people free, to win for them, and with them, the fullest measure of freedom which can be secured in a dangerous and dynamic world. Toward this end the welfare state is a means. It is not, in itself, an end. My efforts are pledged, as they always have been, to work with and for my fellow men to achieve security and equality of opportunity. Let us strike hard at the shackles of fear and insecurity. Our goal is freedom and fulfillment. With faith in mankind and confidence in the rightness of reason, we press forward together toward this goal.

CITATION BY LEAGUE FOR INDUSTRIAL DEMOCRACY TO HERBERT H. LEHMAN, UNITED STATES SENATOR FROM THE STATE OF NEW YORK

APRIL 15, 1950.

For over a generation, you have been an outstanding leader in the battle for racial and religious equality, economic and social welfare, and the enlargement of human freedom, here and abroad.

For 10 long years, as Governor of the State of New York, you carried out, ably and devotedly, the liberal tradition of your distinguished predecessor, Franklin D. Roosevelt, and placed upon the statute books a volume of noteworthy labor and social legislation.

On the completion of your decade of service as chief executive of the State of New York, you threw your magnificent energies into the task of saving from starvation, through the UNRRA and other public agencies, tens of thousands of victims of war and dictatorship throughout the world.

Last year, in your race for United States Senate, you made it crystal clear that only under a democratic welfare state could maximum freedom be assured to the plain people of our Nation.

During the present session of Congress, you have been in the midst of the good fight to make our National Government increasingly responsive to the needs of the people, and to render it a source of help and inspiration to the downtrodden of other lands.

In recognition of your public services to the Nation and to the world, the board of directors of the League for Industrial Democracy dedicated to increasing democracy in our economic, political, and cultural life, expresses its deep gratitude to you, and wishes you many years of continued service in the cause of economic security and human freedom in the challenging years ahead.

JOHN DEWEY,
Honorary President.
CLARK STURN,
Chairman of the Board.
HARRY W. LAIDLER,
Executive Director.
JOSEPH SCHLOSSBERG,
Treasurer.

Proposed Rent Control Extension

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me before the Senate Committee on Banking and Currency on Wednesday, April 26, in support of rent-control extension.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR FRANCIS J. MYERS, DEMOCRAT, OF PENNSYLVANIA, BEFORE SENATE BANKING AND CURRENCY COMMITTEE ON WEDNESDAY, APRIL 26, IN SUPPORT OF RENT CONTROL EXTENSION

My statement this morning will not be detailed. No startling claims remain to be made, no completely unsuspected facts to be explored on this question of rent control extension. The point is—simply—that the arguments which made rent control extension an absolute essential to the Nation's economy last April are still true today to only a slightly less degree.

First and foremost, the fact remains that there still exists in a great majority of the communities in our country an extreme housing shortage. Any rent control extension hinges primarily on this point. And if someone can prove to me that this housing shortage no longer exists, I shall be more than willing to do everything I can to call off this whole thing.

But when those who claim the shortage no longer exists begin presenting their facts and figures, I don't want them to include completely uninhabitable quarters merely because the roof hasn't fallen in completely, or because the holes in the floor are still small, or because three walls are still standing.

No, I am not interested in classifying such structures—and I use the term loosely—as inhabitable rental units available for a tenant. Certainly too many people in this country of ours are forced to live in such dwellings now. And certainly too many people will live in such dwellings in the future—particularly if rent controls are lifted now. But I am of the firm conviction that the Congress of these United States must not make itself a party to such shameful conditions. These uninhabitable quarters—which are in fact inhabited—represent a threat to our national economy, to our national health, to our national moral standards. Perhaps some of you read in this week end papers in Washington the results of a study made by the Washington Housing Association to determine the effect of slum conditions on the health of children. It was found that out of the 211 families studied, 26 percent of all children under 12 years of age required hospitalization in the past 2½ years.

And when those who now come forth and say a shortage no longer exists show their facts and figures, let them not include dwellings many of our people cannot afford. We must be realistic about this problem of insufficient housing. We simply cannot go to the people of the United States and say "Look here, there's a beautiful new apartment right across from the park and it's half empty now. If you need a place to live, why don't you move in? The rent's only $110 a month."

It must not be, therefore, the policy of the Government of the United States to encourage people to spend more than they can afford in order to have a roof over their heads.

All right then, let us take a look at the information I have which leads me to believe a severe housing shortage still exists. I have in front of me a table summarizing certain recent studies of the Bureau of Labor Statistics giving the over-all vacancy rate and the habitable rental vacancy rate in many of the most important cities in the United State. Pittsburgh, perhaps the most important production center in the country, had, in January 1950, a habitable vacancy rate of 0.4 percent. Memphis, Tenn., had in December 1949, an over-all vacancy rate of 2.3 percent and a habitable rental vacancy of 0.6 percent.

This marked difference between the vacancy rate and the inhabitable rate in Memphis illustrates what I was referring to earlier when I said we must not consider such substandard dwellings in determining the lack of, or presence of, a housing shortage. The results of studies in the other 25 cities show, generally, the same low vacancy rate as Memphis and Pittsburgh.

To determine the housing situation specifically in Pennsylvania, I have studied the reports made for 14 of the areas still under control in my State. The picture was a consistent one—an extreme housing shortage, particularly for those in the lower income brackets.

Let us take a few examples. In Bethlehem, a city of about 70,000, the local government runs a trailer camp of 119 trailers. As of about a month ago, all the trailers except two were completely occupied and there was a waiting list of 274 applicants, 212 of which were veterans. These trailers house approximately 420 people—adults and children.

In Pittsburgh, the housing shortage is particularly acute. The administrator of the Pittsburgh Housing Authority estimates that about 35,000 homes are needed for low-cost housing to meet the demand. As of January 1, 1949, a total housing need of 51,000 units for Allegheny County was estimated by the Allegheny Conference on Community Development. This included the excess of families over dwelling units and an estimated needed 4 percent vacancy reserve considered normal, but it did not include 41,000 accommodations reported as dilapidated and beyond repair in this area. The total of 51,000 moreover, is hardly affected by the 1949 volume of building which was 1,842 for the city of Pittsburgh only. Furthermore, with several large industries scheduled to move into Pittsburgh in the near future—General Motors and Continental Can Co. among them—and with expansion being planned by such companies as Jones and Laughlin Steel Corp., and the H. J. Heinz Co., an increase in population for the Pittsburgh area is now predicted. And such a population increase can mean only continued shortages in housing.

The Philadelphia picture is not as gloomy at Pittsburgh's, but it certainly is far from encouraging. The Philadelphia Housing Authority estimates that the city requires approximately 84,000 additional low-rent housing units. There is an almost total absence of vacant accommodations in the city in the rental ranges of under $60 to $65 per month. The maintenance of the temporary housing of almost 4,000 units now under the Philadelphia Housing Authority is becoming more and more difficult, and the executive director of the authority warns that some or all of the units may have to be removed before the housing shortage has been conquered. This would, of course, add to the needs of the city.

It is true that a Philadelphia ordinance of August 1947, provides that "as and when the Federal Government shall relinquish control * * * the rents of such accommodations shall be stabilized as of the date of such relinquishments." But communities in the Philadelphia metropolitan area would obviously not be protected by the Philadelphia ordinance. This would create some difficult problems since for housing purposes, demand and supply do not stop at the city boundary. Furthermore, it seems to be the prevailing opinion that the city ordinance would be declared unconstitutional because of definite limitation on the city's powers granted under the State constitution.

The hardest hit area employment-wise in Pennsylvania is the Scranton-Wilkes-Barre area. And to call the housing situation in this area shocking is to use strictly mild language. In 1949 there was not one bit of new construction for sale in Scranton, and the grand total of two units were constructed there for renting purposes. This * * * in a city of 145,000 population. The city treasurer is quoted as saying that "the housing shortage has resulted in many families trying to occupy condemned city properties held for taxes by the city of Scranton. In some cases we have felt sorry for them and have allowed them to occupy these premises in return for repairing them, but they are not fit to live in."

The Scranton Housing Authority estimated that 41 percent, or 9,000 of the city's tenanted homes, are substandard. And chamber of commerce officials have indicated that the housing shortage has seriously affected their attempts to bring new industries into this hard-hit city.

In neighboring Wilkes-Barre building activity is even less than in Scranton. There has been no new construction for sale or rent in the city of Wilkes-Barre, a city of 90,000 population, in 1949.

The picture is the same throughout the State. Lancaster is one of the most congested areas in the United States, with 65,000 people jammed into an extremely small space. The decontrolled rents in Lancaster remain high, one strong indication that the demand for housing has not been reasonably met. A study made of Chester by the University of Pennsylvania reveals that 31 percent of the dwellings are substandard. In McKeesport, an important industrial center about 15 miles from Pittsburgh, only 41 permits for new residential one-family units were issued in 1949, though the city has a population of about 60,000 people. Allentown needs in the neighborhood of 1,300 to 1,500 rental units at a range of between $38 to $50 per month, according to city housing officials. The Housing Authority of the City of Erie has a waiting list of over 2,000 families.

Letters I have received from people pleading for the extension of rent control tell the same story as these studies, but in a much more heart-breaking way. Here's one from a Philadelphia mother:

"I am a mother of two children. As a result, I am forced to live in the slums. For, like many, I am in the lowest income group. No one seems to want to rent to tenants with children. The few who might, ask rents beyond our means. The housing projects refuse to rent to separated families. It is certainly not my fault that my husband chose to desert his family. After rent, I have little for food and other necessities my children require. Yet if they grow up to be unhealthy citizens, I certainly will be blamed.

"Under the rent-control law, I have some protection. Those who claim this bill to be one-sided are wrong. Those landlords who are justified in increases certainly must get them. Only this morning I received notice of an increase. In my particular case, I don't think an increase was justified. Yet this increase was not entirely unfair. The landlady requested an increase of over 50 percent. This percentage, of course, was not granted. Can you imagine what would have happened, however, if the rent-control law was nonexistent? I know. Many persons like myself would be living in the streets."

The following letter from an Erie tenant gives some clue as to what the rent increases will amount to in case of decontrol in that highly important industrial center:

"My present lease contains a clause to the effect that at the expiration of rent control the rental will be increased 50 percent over that which we are now paying. If other rental units were available, this condition would not be so bad, but in the circumstances the tenants are at the mercy of the landlord."

These reports, studies, and letters have convinced me that a shortage still exists. I am willing to listen to the proof of those who would challenge this conclusion, but I sincerely doubt that they can come up with anything remotely close to substantial evidence.

In addition to the fact that a shortage does exist, we must remember that a tight law—a law like the one in effect during the war years—simply does not exist today. New construction is not under controls. Converted structures are not under controls. Today, if a landlord presents a reasonable case in applying for rental increases, he must be granted such increases. In the past year, the Office of the Housing Expediter has approved 76 percent of requests for increases. And the increases granted have averaged 17.8 percent.

Mr. Woods, in his testimony on Monday, went over some of the many grounds for granting rent increases. I might say at this point that the Housing Expediter's office has probably been much too agreeable in authorizing increases. They certainly cannot be accused of being too tough. And I think I should indicate at this time my conviction that if Congress had not been in such a hurry to remove controls from certain types of construction we would not face today the problems raised by many landlords who honestly feel that they are alone in their failure to cash in on the temporary gravy-train which is the inevitable byproduct of inflation.

Let us talk now about the present methods of decontrol under the Rent Control Act. Admittedly I opposed the local option provision when it was first proposed for the Rent Control Act of 1949. I felt that Congress, by adopting such tactics was trying to avoid its responsibility. But local option does have the merit of letting the folks back home decide for themselves what protection they wanted against sudden rental increases. And I think the fact that so few cities or States have exercised the option is indeed indicative of the conviction of most of the country that rent controls are still necessary. Perhaps I can make my point most effectively by reading from a February issue of Headlines, the weekly newsletter of the National Association of Real Estate Boards:

"* * * If we get Federal decontrol on next June 30, it will be because rent decontrol actions are rolling up so fast that Congress will be persuaded to let the Federal law die. If, at the end of a year of local option, only one-fifth of the total number of rental units has been decontrolled, then Congress will say, 'Okay, Mr. President, we'll grant your request for another year of Federal control.' * * * Here's the tale in a nutshell: National rent decontrol depends on what your board does or has done to get rid of rent control in your town. Now is the time for action on your community."

I read this article because it illustrates the fact that real estate interests recognize the importance of the local-option provision as a test of whether the people back home

really want rents decontrolled. As a matter of fact, according to Mr. Woods' testimony Monday, there has been a marked decrease in the number of decontrol actions in recent months. Mr. Woods assigns as the reason for this the fact that most communities which no longer needed controls had already lifted them—that those remaining felt the urgent need of some sort of brake on rentals.

The results of the study made by the Bureau of Labor Statistics on the effects of decontrolling in certain important communities throughout the country have already been given the committee. I know you share my feeling that the study indicated our present economy would suffer a real jolt if controls over rentals were withdrawn this June 30. I do think—with regard to the Bureau's study—that two points can stand frequent repeating: (1) That the communities included in this study all supposedly no longer needed rent controls, and (2) that the increases were highest, percentage-wise, for those in the lowest income brackets.

I introduced yesterday a substitute for the original rent control extension bill I cosponsored with the distinguished senior Senator from Illinois. This substitute is the same as the present bill with one small—but I think highly important—addition. For under my substitute bill, rent decontrol and rent recontrol becomes a two-way street. As you know, under the present bill, the Housing Expediter can only order recontrolling when he has originally ordered the decontrolling. If the decontrolling, on the other hand, is done either by the local or State governments, there is nothing either the Housing Expediter or the people in the affected communities can do to reinstate once again the badly needed rent controls. By my bill, any community—no matter how it was decontrolled—can again be put under the Federal law if the people in the community think such a step is necessary. This would be strictly a local proposition, and no one in Washington or in any regional office would make the decision. We would thus have available some safeguard, some last resort if people faced overnight outrageous increases they could not meet.

As to this question of whether rent control still remains to a major degree a Federal problem, I would like to answer an emphatic "most certainly the administration of a rent-control law is an obligation of Congress." I cannot understand the reasoning used by those who say the whole thing must be turned over to the States. Are they trying to make us believe, for example, that what happens to the economy of the manufacturing cities of our country—most of them still under control—cities like Pittsburgh—isn't reflected in the economic picture of the whole country? Are they so blind to the facts of life that they fail to realize a loss in real wages to a laborer in Pittsburgh will probably be reflected in an attempt at obtaining increased wages at the first opportunity. The average worker in the General Electric plant in Erie is reported to receive about $53 a week. If his rent suddenly skyrockets from $50 to $75, don't think for a moment that come the next contract negotiations time he won't be out asking for a wage boost to even up the score.

There are other reasons, of course, why rent control remains at this time a Federal problem. The Federal Government has the experienced personnel to handle such a setup. The Federal Government has an adequate law, with the necessary interpretations of that law. Probably the most important factor in this problem is the proposition so frankly discussed by Governor Bowles, in his testimony before this committee on Monday. He pointed out that the great majority of the State legislatures are dominated to an out-of-proportion degree by the rural areas in the States. Though the cities in most States represent the bulk of population, all too frequently legislation aimed at helping the population centers just does not stand a chance in a State legislature. And such would probably be the case with regard to State laws on rent controls.

I want to thank the members of this committee for the attentiveness they have showed me this morning. I know that the idea of working out once more an adequate rent-control law holds no great attraction for you. We all had hoped that by now the need for such legislation would have evaporated and that the housing shortage that has plagued our economy all these years would have disappeared. But, unfortunately, gentlemen, that shortage is still with us.

And I can truthfully say I feel the Congress of the United States would be making a tragic error if we permitted the end of Federal rent control within the next few months.

Shall We Give Free Rein to the Enemy in Our Midst?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Shall We Give Free Rein to the Enemy in Our Midst?" as published in a recent issue of the Rapid City Daily Journal, Rapid City, S. Dak., which supports the efforts of the Mundt-Ferguson-Johnston bill to both expose and curtail the activities of those subversive organizations which seek to establish a conspiracy against the Government of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHALL WE GIVE FREE REIN TO THE ENEMY IN OUR MIDST?

In a speech to the Federal bar association Monday night Harry Truman, President of the United States, chief executive officer of the Nation, said:

"There is no area of American life in which the Communist Party is making headway—except in the deluded minds of some people."

Mr. American Citizen, whatever your partisan hopes and beliefs may be, do you believe that statement?

Do you believe that Communist thinking has not made serious headway in this country? Do you believe that it is not now boring from within, with the most cunning malevolence and the utmost persistence?

Do you believe that the Hisses, the Coplons, the Klaus Fuchs did not do this country very great injury?

Do you believe, as the President says, that "not a single person who has been adjudged to be a Communist or otherwise disloyal remains on the Government payroll today?" If you so believe, are you sure that no such person who has not been so adjudged, may not still be there?

Do you believe, as the President implies, that there is today no threat of communism within this country?

Conspicuously Senator KARL MUNDT, of South Dakota, has been fighting communism and subversive interests within this country and beyond its borders. He is one of the authors of the Voice of America, taking to the Russian people the true purpose of the American people, showing them the American way of life, so free and full compared to their own.

Today Senator MUNDT is one of the authors of the Mundt-Ferguson bill in the Senate, a bill designed reasonably to curb communism in this country.

That bill in substance passed the House overwhelmingly in the Eightieth Congress. It has now been favorably reported in the Senate from the Judiciary Committee by a vote of 12 to 1.

The bill has been written and rewritten, revised and re-revised, studied with utmost care from every angle in order to obtain a working act that will adequately restrain communism and yet not interfere with the fundamental and constitutional right of the people to freedom of opinion, speech, and action.

Communists, naturally, are violently opposed to the proposed act. But there are also others, some undoubtedly sincere, others perhaps not so sincere.

Those who oppose the regulation by law of subversive activity in this country say that the Mundt-Ferguson bill is unconstitutional, that it will abridge the right of free speech and free assembly, that it will establish guilt by association, whereas guilt should be a personal matter; that it is so vague that an offender would not know when he was violating the law, and that it violates due processes of law.

This bill has been much discussed in the press, and by commentators on the radio. The Washington Star, in a thoughtful recent analysis of the bill, gave this answer to the objections we have briefly named:

"These are points on which well-meaning men can and generally do differ when any such legislation as this is under consideration. In the Star's judgment, the criticism is not sound. The bill, of course, will be carefully debated in the Senate. If the language can be made clearer, if more safeguards can be devised without vitiating the bill, that should and undoubtedly will be done. But it should be kept in mind that the lines on these issues are firmly drawn. What most of the critics really object to is not the form of this particular bill. They will oppose any measure designed to achieve the same objectives and containing the necessary teeth. So the essential questions are whether the Communist conspiracy is real enough to justify the enactment of such a measure, and whether the Constitution will permit its enforcement if enacted.

"The reality of the conspiracy is attested by the fact that we are spending more than $20,000,000,000 a year to defend ourselves against the Communists and to check their encroachments abroad. In that setting, it would be an absurdity not to do all that can be done to curb the Communists and their sympathizers in this country. Will the Constitution permit this? If not, then it follows that that document denies to Congress the power to adopt laws to protect the Nation against those who would use our constitutional liberties to destroy us. It is hard to believe that this is the case."

We think the Washington Star's position is further well taken when it suggests that all possible further improvements should be made in the bill and then acted into law and its validity passed upon by the courts. "It should not be allowed to die simply because some people think it is unconstitutional and because some others pretend to think so." * * *

It is true, as President Truman said to the Federal bar Monday night, "that the greatest threat does not come from Communists within this country."

It is true, also as he says, that Communists are "a noisy but small (comparatively) and universally despised group" in this country.

But the President does a disservice to his country when he makes light of them. They have already betrayed valuable American defense secrets to the enemy. They have already, over a period of years, given the detailed secrets of the atom bomb to Russia. They infiltrated into the Government in numbers, attempting to corrupt American policy at its source, and to betray it, with all the cunning of the unscrupulous purpose of aggression which dominates them. Worse, far worse, they have instilled the poison of communism into American schools and colleges and into a shocking number of American minds.

Card-carrying Communists may be hard to put the finger on, but communist workers, sympathizers and fellow travelers, hidden or avowed, have been and are in many walks of American life, and some of them have been found in high places. We still nourish such vipers in our breast.

Is America so indifferent to the communist dangers from within, or so weak and unresourceful, or so chocked with partisan selfishness that it will not fight except with shot and shell and the blood of its sons?

Confusion as to Subversive Activities Investigation

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Confused Press," from the Maynard News, of Maynard, Minn.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CONFUSED PRESS

NEW YORK, N. Y. (from the Minneapolis Star-Tribune, April 25, 1950).—William Dwight, general manager of the Holyoke (Mass.) Transcript-Telegram, said today that "clever propagandists" are using newspapers "to put their subversive ideas across."

Dwight was among the speakers at the first session of the convention of American Newspaper Publishers Association. He was chairman of the session devoted to publishers of newspapers with from 10,000 to 50,000 circulation.

He urged publishers and editors to resist the propaganda of pressure groups.

"We print columns of propaganda," Dwight said, "under the guise of news advocating those things which we know threaten to destroy us. We justify it on the basis that we are broadminded and want to give both sides of the story.

"If we only would give both sides of the story. Instead, the clever propagandists are using us to put their subversive ideas across while many of us stand by silently."

The editors of the Minneapolis Star-Tribune are in an embarrassing position. For the past 6 weeks they have been slanting headlines, writing editorials, and in every way possible defending the character, reputations, loyalty, and personal honesty of Owen Lattimore, and others who have been named by Senator MCCARTHY as having Communist affiliations. The crowning insult to the fighting Senator from Wisconsin was a cartoon published in the Star a few days ago, picturing him in a clown's suit, being pulled off the stage with a long hook.

In addition, Star-Tribune columnists, such as Drew Pearson, Mrs. Roosevelt, and Marquis Childs, are carrying on a campaign of belittlement, smear, and misrepresentation against MCCARTHY which is not honest or justified.

The testimony given by Budenz is not sufficient to convict Lattimore, because to this date it is one man's word against another. Only the naive would discount the Budenz testimony, because his past record demonstrates that when he "puts his finger" on a Communist the courts ultimately prove him to be right. His collaborating evidence was responsible for the conviction of Gerhart Eisler, Alger Hiss, and the 11 United States Communist Party officials. If the Lattimore case falls into the same pattern there is a good chance that Lattimore will be convicted for perjury and possibly treason.

The Star-Tribune editors now recognize the seriousness of the Budenz testimony, and their comments on the case Friday morning of last week were less arbitrary than were their previous editorials against MCCARTHY. Their present reluctance to believe the worst about Lattimore can be summarized in their own words:

"What shall we believe? When it is Budenz' word against Lattimore's, where shall the confused mind go for reassurance?"

There are "confused minds"—but whose? Most of the public is confused because of the anti-McCarthy propaganda that has been hurled at them through the press and radio. However, how about the minds of the men in the editorial offices who are supposed to think things through and come up with the right answers? Wouldn't it be fair to say that the confusion originates in those editorial minds and is transmitted to the public?

To the editorial inquiry, "* * * where shall the confused mind go for reassurance?" may we humbly suggest the following advice to the owners of the Star-Tribune?

1. Dismiss the editorial writers who cannot distinguish the difference between civil-rights issues and honest efforts to clean out of Government the subversive radicals who may or may not carry membership cards in the Communist Party. (Alger Hiss did not carry a card.) Hire writers who will more accurately reflect the good judgment and patriotic philosophy of the president of the two newspapers, Mr. John Cowles.

2. Discontinue the publication of the Drew Pearson column. His record over the years has proven him to be an unreliable, sensational keyhole reporter, who has consistently been the hatchet man for the extreme left wing of the administration. His smear attacks against public officials who won't play ball with the left-wing clique and against Members of Congress who try to expose radicalism in high places should disqualify him as a contributor to the columns of respectable newspapers like the Star-Tribune. Mrs. Roosevelt and Marquis Childs adequately represent the philosophy of the New Deal and the Americans for Democratic Action.

3. Give your readers a chance to read the other side of the story by adding the column of George Sokolsky and using more of the material released by David Lawrence of the United States News and World Report.

These suggestions are being made in all seriousness and without malice.

Proposed Curtailment of Mail Deliveries

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release by me on April 28 regarding the proposed curtailment of mail deliveries.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

MYERS CALLS POSTAL CUT-BACK "ILL-CONSIDERED"

PHILADELPHIA, April 27.—United States Senator FRANCIS J. MYERS (Democrat, Pennsylvania) took issue tonight with the Post Office order to curtail mail deliveries, calling it "an ill-considered move—made without any study of the hardship it would cause—and one which would probably cost more in the long run than it purports to save."

The Pennsylvania senior Senator, assistant majority leader of the United States Senate, addressed the Tri-County Postal Meeting tonight at the Drexel Brook Inn.

"As a matter of fact," Myers said, "no one seems to know just what the order means. I have seen estimates that 10,000 postal employees would be laid off—but that is about the only concrete number I've seen. There doesn't seem to be any agreement as to how much this move is supposed to save—and no one seems to have any idea whether the need really exists for more than one mail delivery daily.

"Apparently the Postmaster General got pressured into this by the House Appropriations Committee. The committee announced point-blank that it would not recommend the funds necessary to operate the Post Office next year—and in short, told the Post Office to cut deliveries to help make ends meet.

"Well, cutting mail deliveries—without paying the slightest attention to whether the present service is needed—is not any solution to the postal deficit. An impulsive move of this sort is a slip-shod way to do business, and I am dead set against this sort of procedure. The committee, in forcing the order, didn't hold any public hearings to get the facts—and it didn't suggest that any effort should be made to get the facts before the cut-back went into effect. In short, all it said was that the cut should be made—and the damage determined later.

"Last year—as all of you know—there were some changes made in reorganizing the Post Office Department along some of the lines suggested by Hoover Commission recommendations. The 21 newest reorganization plans submitted to Congress by President Truman propose several more reorganization changes—and though some of the changes have met with a bit of opposition, the Reorganization Plan No. 18, which was the subject of some controversy, received a favorable endorsement just the other day from the House Committee on Expenditures in the Executive Departments, and at present there is no indication that a move will be made in the Senate to block the plan.

"The important point to keep in mind about the Post Office—and this goes for any Government function—is that we must stick with the merits of the issue; we must get the facts; and we must avoid fly-by-night efforts to achieve 'economy' by hastily conceived moves such as the order to cut postal service."

The Critical Condition of the Maritime Industry and Its Effect on the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum entitled "The Critical Condition of the Maritime Industry and Its Effect on the Pacific Northwest," submitted to me by Mr. Homer T. Shaver, of Portland, Oreg.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE CRITICAL CONDITION OF THE MARITIME INDUSTRY AND ITS EFFECT ON THE PACIFIC NORTHWEST

(By Homer T. Shaver)

Very few of the general public and especially the taxpayers who pay the bills realize the investment that they have in waterborne commerce in the United States. They generally take it for a fact and feel that it is the other man's burden, not theirs. This not only applies to the citizen who does not come directly in contact with it, but also to the man who is in the business and the employees of the maritime industry who are responsible for its production.

In confining ourselves locally to the Pacific Northwest the amount of money invested by the taxpayers in the different ports of the States of Oregon, Washington, and Idaho in terminals on both rivers and harbors will run considerably over $63,000,000. Certainly it is about time that the people who are paying the bills and their representatives in both Congress and State legislatures should have this fact brought to their direct attention. The public has the investment and the men representing them in public life should realize that it is their duty to protect that investment. Outside of this public capital invested in terminals, there are other millions invested by private owners in like terminals and the same obligation by our legislators should apply to them as well as the public ports. To arrive at the full use and benefit of these facilities that are installed on rivers and harbors, it has also been necessary to invest both public and private capital in the construction of water transportation systems; such as: the off-shore, coastwise, and intercoastal vessels and last, but not least, the inland water carriers.

TERMINAL OPERATOR

From the standpoint of port interest, marine terminal facilities whose continued operations are predicated upon the commercial movement of maritime shipping are finding economic survival difficult. Major port facilities, as I have stated before, require large investments. They have large overhead costs which cannot be justified unless they earn regular revenues from a normal shipping service. Also the commodity movements upon which these terminals depend for revenue present a serious question to public and private terminal operators. In fact, the economy of the Pacific Northwest is affected by the situation that exists today as far as the maritime industry goes and will become further intensified unless measures are taken to restore that which has been lost. The loss of steamship service, coastwise and intercoastal, not only affects the public and private terminal but also a large part of our laboring public engaged in the maritime industry; such as: stevedores, warehousemen, and allied trades.

STEAMSHIP LINES

The situation that the offshore, intercoastal, and coastwise steamship operators find themselves in at the present time is more serious than the general public seems to realize. Due to the enormous increase of costs of operation piled upon steamship operators in the last few years, they find themselves in the position of not being able to obtain sufficient revenues to even pay for the operating costs. The postwar adjustment that was necessary to be made has been the worst ever faced by the steamship industry. Mounting costs, constant crippling strikes, low-cost foreign competitors, and depressed noncompensatory rates by railroads have practically eliminated some steamship operations entirely.

There are some foreign trade lines that now enjoy a superior competitor position with good earnings, a large fleet, an adequate backlog of tonnage but the domestic trades now must have public assistance. Domestic and offshore maritime commerce is absolutely essential to the welfare of the Pacific Northwest for the protection of its investment in terminals and for its economic survival, and we certainly cannot overlook the fact that here again the taxpayer, through the Federal Government, is vitally interested in the capital that he has invested in the maritime fleet and as far as our public representatives go, the investment of the private shipowners is just as important.

INLAND WATER CARRIERS

The inland water transportation industry, up until recent years, has received very small recognition in the part it plays in the transportation system of the United States. Our Federal Government has millions invested in its own barge lines and also through loans from the Reconstruction Finance Corporation to private owners. The total investment of inland water carriers alone in the Pacific Northwest on the great Columbia River and its tributaries and our harbors and sounds runs well over $20,000,000.

The inland water carrier is an integral part of maritime commerce in feeding and receiving cargo from the steamship lines as well as other forms of transportation, the motor carriers, and is the connecting link in many port facilities. Few of us realize that the accumulated capital investment by the United States for developing its inland water systems and coastal areas, not including navigational aids, up until 1945 had reached a total figure of $1,266,000,000. These figures, no doubt, are impressive but when apportioned among the 156,000,000 inhabitants Nation-wide, the investment has returned benefits in economic transportation plus property protection through flood control far in excess of the expenditure.

In specifically confining ourselves to the Columbia River system the growth of our inland water industry especially from Portland, Oreg. to Pasco, Wash. shows an increase in total tonnage from 635,400 tons in 1932 to 3,582,700 tons in 1947. These figures seem to show that there is a clear justification for the investments of the Federal Government in our inland waterways in the Pacific Northwest and also our public terminals.

The Pacific Northwest is doubly blessed in the possession of enormous territorial areas in its hinterland, rich in mineral deposits, grazing and agricultural resources with this entire area served by the Columbia River system. This waterway offers the finest, safe, and economical system of transportation permitting the development of this great area of natural resources. This requires the use of suitable and economical facilities for transportation and our inland water system is the most economical known.

NATIONAL DEFENSE

In times past there has been national agitation against subsidies for the construction and maintenance of services for maritime commerce. The general public seems to lose sight of the fact that the maritime industry is absolutely necessary for our national defense. This should be self-evident to our men in public life in light of the record of our domestic fleet and inland water carriers in World War II. Our merchant marine and Great Lakes fleet bore the first brunt of the war providing us with shipping capacity at a time when our national security hung in the balance. Ships were readily available, manned by experienced crews and furnished our first line of defense until the shipbuilding program got into full swing. What would have been the situation in the United States after Pearl Harbor if there had been no intercoastal, coastwise, and Great Lakes fleet? National disaster would have ensued.

In our own Pacific Northwest there is little known of the magnitude of water transportation during World War II on the Columbia River by the inland water carriers. If it had not been for the barge lines taking over the entire gasoline supply program for the Army and Navy Air Corps, when there wasn't enough tank cars available, the program would not have been accomplished. In doing this the inland water carriers overcame tremendous navigation hazards and invested an additional $11,000,000 in new equipment—gambling on the future.

Still there are people in the face of the war record of the maritime industry who would put their heads in the sand and gamble with the national security by arguing that domestic shipping has served its role in our national development; that railroads need the traffic; that the water-borne shipping should go the way of the horse and buggy. These people are willing to gamble the country's security for the sake of profit and for the sake of monopolistic control of transportation by one form of transportation only, little realizing that in the end they are asking for complete Government acquisition.

It has been repeatedly stated by our top military authorities that an adequate merchant marine and inland water-carrier service is essential to our national defense and that the Navy and Army programs could not function without them. No detailed discussion on this point should be necessary.

INTERSTATE COMMERCE COMMISSION REGULATIONS

The Transportation Act of 1940, part III, vests in the Interstate Commerce Commission the duty of regulating water carriers engaged in interstate commerce. Under parts I and II, of the ICC Act, they already have the power of regulating railroads and motor carriers. Under part III, the Commission is charged with the duty of setting up a national transportation policy of coordination so as to best serve the shipping public and to preserve the inherent advantages of each form of transportation without unfair or destructive competition.

It was hoped that this act would provide a solution to the ruthless rail-water competitive problem as it did for the railroads when this act was originally passed. After 8 years of operation under this law, the situation has deteriorated steadily and in fact has reached the point of the present crisis.

While the Maritime Commission is charged with construction and operation of maritime fleets and their services, it has taken encouraging steps in initiating an investigation of rail-water rate structures, but it has no control over the domestic trades. It can merely recommend or appeal to the Interstate Commerce Commission.

Unless the ICC takes immediate appropriate action to terminate this ruthless competition through noncompensatory rates and to restore a reasonable balance between rail and water service in accordance with its duties as charged in the law, it will be absolutely necessary for our legislators in both Congress and the different States to pass a mandate of a character which will permit water-borne commerce to live. It can neither operate nor exist under present conditions. Congress has recently appointed a committee to investigate the noncompensatory rates of railroads and also the operations of the ICC, but unless this matter is kept before the committees it will just die a natural death.

RAILROAD COMPETITION

The present situation of our entire water-borne transportation system is due to abuses of long standing. For many years, it has been progressively undermined by ruthless, railroad competitive practices. This is not a mere accusation but a condition which has been recognized in official reports of the Interstate Commerce Commission and other authoritative agencies. The domestic carrier can never hope to renew service under present operating costs when depressed rates in effect, at the present time, by the railroads which in many cases are noncompensatory to the railroad itself keeping him from receiving sufficient revenues to operate and pay his costs of operation plus a reasonable profit.

A full investigation will show that where the ICC has allowed an increase in rate for railroads that they were only increased where they were not in competition with water carriers. Applying this practice to our Pacific Northwest, every time an increase is allowed by the ICC on a percentage basis, it places the Pacific Northwest in a more unfavorable position in the form of transcontinental rates from the Middle West to the Pacific Coast. Every percentage increase on a long haul makes it cost more to lay cargo down in Pacific Northwest ports moving across the Pacific so that the off-shore carrier who now comes into the picture finds his cargo tied up and being diverted to the east coast or the Gulf ports. This immediately dries up revenue for off-shore operators as well as the terminal operators and affects our whole economic system. Therefore, it resolves itself down to this: Present depressed rail rates are an effective barrier to the increase of water rates and the water carriers are thus unable to recapture the added cost of operation under present inflated conditions. The railroads through the maintenance of depressed rates have made it impossible for water lines to operate on a compensatory rate basis. As long as this situation continues, our maritime commerce of the Pacific Northwest is in a hopeless position.

REMEDIES

Innumerable official studies and public hearings are available outlining the handicap concerning water-borne commerce in the postwar years. It would be superfluous to undertake here a detailed discussion of all these problems, the nature of which is well known to our Maritime Commission, Interstate Commerce Commission, various congressional committees and State legislative committees. In considering the rehabilitation of water transportation we must recognize the factors of inflated initial costs of construction and inflated operating costs and a depressed rate structure which makes it impossible to operate at a profit.

As we see it, there are two possible solutions to the water transportation problem:

1. An adequate adjustment of the rail-water rate controversy by the ICC taking immediate appropriate action to terminate this ruthless competition and to restore a reasonable balance between rail and water service in accordance with its duties as charged in part III of the ICC Act or if it fails to do so, direct congressional action by Congress or State legislatures to put through a legislative mandate of a character which will permit water-borne commerce to live. This adjustment, either by ICC or legislative action, should once and for all solve the problem of the railroad practice of instituting noncompensatory rates on water competitor traffic merely for the purpose of holding this traffic to the railroads even though at a loss.

2. Another possibility for the rejuvenation of water transportation would be a public recognition that maritime commerce is essential to the national defense and that it should be maintained by the Government at whatever the cost. This would imply subsidies in the form of favorable charter conditions or underwriting by the Government of operating losses. Under our form of democratic government, I do not believe that any of us would choose this as the final solution.

However, in reviewing the last possibility the Merchant Marine Act was enacted at a time when the merchant marine was unable to compete with foreign operators and construction and operating subsidies were provided to overcome this and to assure that the American fleet would continue to ply the seas. Recent statistics have shown that this subsidy for both construction and operation has returned more and cost the taxpayer less than any other subsidy provided by the Federal Government.

Our domestic commerce would, under this plan, have to have the same public assistance as our off-shore operations. Naturally other forms of transportation would publicly oppose any such suggestion contending that it would be discrimination. However, other forms of transportation are forgetting the fact that they are discriminating against the general public and the shipper when they are carrying cargo at a loss where competing with water carriers and then charging an excessive rate where there is no competition. If domestic water commerce is essential to national defense, then the cost should be carried on as one in the face of our national security program.

The American people, whether they know it or not, have a tremendous stake in their water-borne commerce and in their ports and harbors. The Nation has no cheaper form of transportation and this same transportation has always been a great leveller from high rates from other forms of transportation. It has for a great number of years acted as a cover over excessive rates. Its contribution to the national welfare in economy in both war and peace cannot be challenged.

As we have said before, there is a great national investment in navigation equipment, harbor improvements, and terminal facilities, the full benefits of which cannot be realized unless it is fully restored and protected by either ICC action or legislative action both through Congress and our State legislators.

Poll of Minnesota Farmers on Continuance of Egg Supports

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, one of the most vital issues facing the farm community is that of the price-support program. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD the Minnesota poll of April 23, 1950, which was taken on the basis of a State-wide sampling of farm opinion. The poll has been conducted for several years, and has a record of reasonable accuracy insofar as the sampling of public opinion is concerned.

The poll reveals that on the question of whether or not the principles of the Brannan plan should be applied to egg producers, 63 percent of Minnesota farmers said they would like to see it tried, and 26 percent said they were opposed to it.

So I ask unanimous consent that the poll may be printed in the Appendix of the RECORD.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

STATE'S FARMERS STRONGLY FAVOR CONTINUED FEDERAL EGG SUPPORTS

Farmers throughout Minnesota tend to favor corn acreage allotments and potato production controls, and they strongly advocate continued Federal support of egg prices, a State-wide sampling of farm opinion by the Minnesota poll indicates.

Three out of every five farmers questioned in the survey also say they would like to see the Government try out a plan for letting market conditions set egg prices, with the Government making payments to egg producers if market prices prove too low to yield a fair return to them. This would be in effect the Brannan plan approach to the problem.

A representative cross section of farm men and women in all parts of the State was interviewed in the survey. Results show that 38 percent of the farmers in the sample grow corn for market, 77 percent sell eggs, and 10 percent grow potatoes commercially.

Interviewers asked first:

"Are you personally for or against acreage allotments this year on corn production?"

The answers:	*Percent*
For allotments	45
Against	32
Qualified	1
No opinion	22
	100

Under corn acreage limitations announced in February—the first in more than a decade—Minnesota's commercial corn acreage this year will be 24 percent less than the 1949 corn acreage.

Farmers who grow corn for sale are more in favor of the acreage allotment program than are those who grow corn for feed, according to the survey results.

Another question was:

"Do you think the Government should or should not continue to support the price of eggs?"

The replies:	*Percent*
Should	75
Should not	15
Qualified	1
No opinion	9
	100

Seventy-eight percent of the people who sell eggs on the market endorse Federal price support, as compared with 63 percent of those who do not market eggs.

Those answering that the Government "should" continue to support egg prices were asked:

"How do you think the Government should support egg prices?"

Some suggest a support program based on egg quality—"so that good eggs get the best prices." Others favor Government purchase of surplus eggs, or "setting a minimum price," or "basing the price on the cost of

feed." Twelve percent think "the present method is all right," with the Government maintaining prices through arrangements with egg-drying plants.

More than two out of every five farmers who favor egg price support say they have no ideas to offer on how that should be done.

All farmers were asked:

"What would you think of this kind of plan? Let market conditions set the price of eggs, but have the Government make payments to the egg producer if the market prices are too low to give them a fair return. How does that strike you—would you like to see that plan tried, or would you be against it?"

The answers:	*Percent*
Like to see it tried	63
Against it	26
Qualified	1
No opinion	10
	100

A Bigelow farmer commented, "That sounds like Brannan's plan, and I wouldn't be in favor of it," and a Lake Elmo farmer said, "I'm against all Government payments." But a Winthrop farmer believes such a plan "would be fairer—all could make a living," and a Pine River farmer said he would favor trying out the plan if the "fair return" were based on the cost of production.

The final question was:

"Do you favor or oppose production controls for potatoes?"

The replies:	*Percent*
Favor	49
Oppose	22
Qualified	1
No opinion	28
	100

The relatively few commercial potato growers questioned in the survey were evenly divided in their opinions on the question of production controls, but among other farmers there was a vote of more than 2 to 1 in favor of such controls.

News Letter by Senator Myers to the People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Washington News Letter dated April 20, 1950, written by me, being a personal report to the people of Pennsylvania.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

APRIL 20, 1950.

Coal is having its troubles—and to important coal-producing States like Pennsylvania, the sweeping changes that have taken place in our fuel tastes in the past 30 years or so have a vital significance in terms of employment and industrial growth.

Questions of grave national concern arise from our fuel developments. I have recently introduced Senate Resolution 239 to authorize gathering all the facts about fuel in order that a national fuel policy may ultimately be worked out. To establish this policy, we must know—

Our energy requirements for the foreseeable future in terms of needs for an expanding peacetime economy and for security in event of war.

What fuels are best adapted to meet our energy needs—considering costs in terms of available resources—and the possibilities offered by research.

How much we can rely upon fuel imports in event of war, recalling our wartime power shortages, and the difficulty of bringing in materials from abroad.

We must have an abundant supply of energy at reasonable prices. This is fundamental, and every phase of our national life depends upon energy—energy to produce, to transport, to heat and light our homes—in short, energy for everything.

Our national energy needs have jumped 70 percent since World War I. But, though our needs have sky-rocketed, coal has steadily played a smaller role in supplying them. The recurrent labor-management disputes in coal are the symptoms, not the cause, of the changes which have taken place since World War I. Here are a few comparisons:

Coal furnished 82.3 percent of our energy in 1918—but by 1949, only 38.5 percent came from coal—anthracite production last year was 50 percent less than in 1918—and bituminous output in 1949 was only 75 percent of the 1918 production.

Petroleum supplied 10.9 percent of our energy in 1918—and 37.4 percent last year.

Natural gas rose from 3.6 percent at the end of World War I to 19.1 percent in 1949.

Water power, still a small fraction, climbed from 3.2 percent to 5 percent in 1949.

There isn't an easy answer to explain these big shifts. The following points, though the list is far from complete, are involved in the picture:

Vast new energy markets have developed that rely on liquid fuels—the automobile, the truck, and the airplane are notable examples.

Pipe lines carry energy in the form of oil and gas at far lower costs than are possible through the costly handling of coal by rail and water.

Labor costs for coal are far greater than for oil and gas. Once an oil or gas well is drilled, the product is pumped from the earth or flows out under its own pressure. Every ton of coal must be dug—a job which, despite big mine safety improvements, is still difficult, dirty, unhealthy, and costly.

Oil imports are capturing important industrial markets which formerly used coal, and while it's true we still export nearly as much oil as we import, the recent rise in oil imports has cut directly into coal markets.

Profits in oil and gas have been much higher, permitting far more research—and heavier capital investment—which have lowered oil prices.

Determining a national fuel policy will be a complex job. Facts about particular fuels are frequently contradicted by other fuel suppliers, and comparisons are difficult. Coal makes up 95 percent of our known fuel reserves, so our much more limited supplies of oil and gas raise questions of conserving our resources. Energy must be available at reasonable prices or our economy will falter—and our economy must expand to meet our goal of full employment.

My resolution tackles the necessary job of finding the facts we must have to meet the future. When we know what our future energy needs will be—and where the energy will come from—we have the basis for determining policies which will lead us to still higher living standards, full employment, and much stronger foundations for our free-enterprise system. A big and needed task is ahead, but it must be undertaken now as a matter of national welfare.

FRANCIS J. MYERS.

Commendation of Senator Wiley by Wisconsin Weekly Newspapers

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. THYE. Mr. President, we are all familiar with the fact that the weekly newspapers of America are one of the most vital information links between the Congress and the American people at the grass roots of the Nation. The weekly papers provide indispensable services to folks at the grass roots, keeping them in contact with developments in their own community, in Washington, and throughout the world.

In this connection, I was delighted to note in two weekly newspapers of Wisconsin—the Waupaca County Post and the Clintonville Tribune Gazette—published in the northern part of the Badger State an editorial message in praise of the senior Senator from America's dairyland. I think that this editorial published in these two affiliated papers voices the judgment not only of many other Wisconsin weekly newspaper editors, but of daily editors and of the people of Wisconsin as a whole.

I ask unanimous consent, therefore, that the text of this fine and well-deserved editorial as published in the April 27 issues of the Clintonville Tribune Gazette and the Waupaca County Post entitled "WILEY Alert for Wisconsin" be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILEY ALERT FOR WISCONSIN

Senator ALEXANDER WILEY deserves to be congratulated on his alertness in protecting and advancing the interests of Wisconsin in Washington.

The Senator now is engaged in a campaign to force the Department of Agriculture to step up milk research in order to counteract the damage which the Democratic Congress did to the dairy business by passage of the oleomargarine bill.

The Department, he discovered, spends four times as much money for cotton research as for dairying, yet dairying is the farmer's greatest source of income.

"Some observers have called the present Democratic administration peanut and cotton crazy, judging from the constant emphasis of the administration (dominated by southerners) on expanding cotton and peanut production," said WILEY.

The recent farm bill signed by President Truman, the Wisconsin Senator points out, is a fantastic measure to increase farm and peanut acreage, especially, at the expense of the entire Nation.

Senator WILEY also is seeking removal of barriers to certification of Wisconsin and Minnesota milk for interstate shipment, as a means of aiding farmers in expanding their markets.

Another pet project of the Wisconsin senior Senator is authority for an inventory of the forest resources of our State. He has found that the many wood-using industries of the State will be glad to cooperate with the governmental forestry agencies in this task.

Because Wisconsin is a self-reliant State, her Senators and Representatives in Congress are not called on as frequently as those from many other States to plead for special interests. Some of our Western States are almost wholly dependent upon the Federal Government, which owns much of the land in them.

In making a vigorous fight against the oleomargarine bill and in promotion of the dairy and other Wisconsin industries, however, WILEY has found a field in which he can rightly claim a square deal for his State. In any event, he seems determined to champion Wisconsin causes most vigorously in Congress.

Rent Control

EXTENSION OF REMARKS
OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, the junior Senator from Washington probably receives as much mail on the question of Federal rent control as does any other Member of the Senate. Citizens write to me from every State in the Nation about their views, and their letters find a very warm welcome. Because both the Senate and the House of Representatives are presently considering whether Federal rent control ought to expire on June 30, 1950, or be extended for a further period, I wish to share some of my mail on the rent-control subject with my colleagues. Those who wrote the letters are not my constituents, but I gladly seek to provide them with an opportunity to be heard. I believe their observations to be valid and deserving of consideration. I ask unanimous consent that these letters be printed in the Appendix to the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

APRIL 26, 1950.

Hon. HARRY P. CAIN,
United States Senate,
Washington, D. C.

DEAR SIR: Knowing of your good works and of your interest in the rights of property owners, we thought you might like to read the enclosed article on rents in politics.

All our lives we have been good little Democrats but since the Democratic Party is leaning heavily toward socialism, we, the De Leuws, are determined to be Republicans from here on in.

Sincerely,

HELEN M. DE LEUW.
ANDREW J. DE LEUW.

[From the Los Angeles Times of April 25, 1950]

RENTS IN POLITICS

Rent control is now out of the realm of economics and into that of demagogic politics. This is made evident by recent utterances by President Truman and his stooge and supporter, Governor Bowles of Connecticut.

Truman says that millions will suffer because of a wave of exorbitant rent increases if rent control dies June 30, while Bowles weeps for industry and business with the declaration that tenants will have at least $1,500,000,000 less to spend if rent controls expire.

Both are talking for Buncombe County, without the slightest sincerity or intention to be accurate.

Taking Bowles' statement first, if tenants will have $1,500,000,000 less to spend because rents go up, then landlords will have $1,500,000,000 more to spend and the net effect on the economy will be nil. Bowles must be aware of this enormous hole in his argument, but thinks the public is too dumb to see it.

As for H. S. T., he likewise knows better. The decontrols already put into effect in large areas have caused no appreciable hardship. There have been no, or at least very few, exorbitant rent boosts.

That there would be hardship to tenants is not a certainty but speculation; while the hardship to property owners who are losing money with rents frozen at depression levels, while taxes and all other costs have pyramided, is a certainty.

Meanwhile rent control, present and prospective, hangs over the rental building situation like a dark cloud. Even though new construction is not currently controlled, investors fear it may be.

The politicians want rent control for one reason: They think there are more tenant voters than landlord voters.

WILLIAM H. MAXANT,
ATTORNEY AT LAW,
Chicago, Ill., April 26, 1950.

Senator HARRY P. CAIN,
United States Senate,
Washington, D. C.

DEAR SENATOR CAIN: I understand that you are in favor of abolishing rent control, and I want to tell you that I appreciate it. I think that rent control was needed up to this time, but to continue it any longer is just political selfishness.

Many Senators and Congressmen are unable to face this issue honestly and do not mind stepping on the feet of some people and injuring them unjustly, just to help other people.

Run-away exploitation by landlords would have been possible a couple of years ago, but today there are places available in sufficient quantity to at least limit landlords from becoming foolish and cnarging exorbitant prices. But certainly you know that a landlord is entitled to 15 percent or 20 percent increase in view of the tremendous increase in taxes and other costs which have limited the income from rental units to a point where people dependent upon them are often in severe straits. And how shall they keep their buildings up to date?

Thank you for your cooperation.

Very truly yours,

WILLIAM H. MAXANT.

P. S.—Please balance the budget. And stop deficit spending. Defeat the President's Reorganization Plan No. 12. Don't surrender our freedom by spending us into slavery, please.

A. B. AYMARD,
Memphis, Tenn., April 17, 1950.

Senator HARRY P. CAIN,
Washington, D. C.

DEAR SENATOR CAIN: Along with several million other native-born decent American citizens, I want to congratulate and commend you for the efforts you are making to forever remove from our United States some of the communistic things that are fast destroying this grand Nation.

I am now 65 years of age. Over a period of 45 years I have pinched a few pennies from every dollar I have ever earned and placed these savings in a little rent property for my old age security.

Like millions of others who have followed this course, I now find my working capital liquidated, my property unsound physically due to inability to maintain it properly under this un-American, communistic, Socalist-labor rent control law.

People need roofs under which they may install the equipment for cooking these highly inflated potato and other farm products, but the people who have supplied these roofs have been sliced off from our economic structure, singled out for complete bankruptcy and destruction, discriminated against by our own Government and left to struggle single-handed and in despair at a time when the revenues from their properties is sorely needed.

The statements made by some of the housing expediters and broadcast over this Nation, that to remove this communistic rent control would upset the economy of this Nation, are grossly overstated and the scarecrow of economic chaos, broadcast in this same connection recently, are absurd and distasteful to the thinking people of this Nation. On the face of the fight being made to perpetuate these men in office and continue this needless waste of public money it is my personal opinion that a wedge is being driven into the solidarity of this Nation that will be far-flung unless immediate relief is had.

The property owners form the vertebras of this Nation's backbone. They realize that their wares will have to go through decent channels of competition and price.

More power to you.

Sincerely,

A. B. AYMARD.

ST. LOUIS, MO., *March 7, 1950.*

Senator CAIN,
Senate Building, Washington, D. C.

DEAR SENATOR: As small property holders, my husband and self appreciate and commend very highly the stand you are taking on rent control. We just happened to catch your radio talk last Friday night. We have a run-down 6-family apartment which represents 10 hard years of self-denial and sacrifice and with rents frozen at a depression level it seems impossible to make any headway. Last year we spent $1,400 more than our income on the place and when we asked for an increase, it was denied and the rent-board told us we made 20 percent. It is our understanding anyone that received a 15-percent increase will not be granted more.

How any fair-minded American can condone such actions is more than we can understand. Our tenants with their 1950 salaries can afford new cars, fur coats, and televisions, while we must continue to skimp to pay the coal bill which has almost tripled since we bought the place. Our place is becoming more and more run down and there is nothing left over to pay for more than just the absolute essentials.

Please keep up your good fight.

Sincerely yours,

MILDRED K. SCHALL.

DENVER, COLO., *March 10, 1950.*

Hon. HARRY P. CAIN,
United States Senate,
Washington, D. C.

DEAR SIR: Once again comes June 30, with its rent control extension problem, discriminating against property owners throughout these United States.

As owners of a small apartment, we desire to solicit your further efforts in behalf of freedom, by allowing the rent control law to expire this year on its expiration date, June 30. We appreciate your support in the past and know that you are right in trying to aid the property owners in their present struggle to regain the right to manage their own businesses, which they have built through the years by hard work and good judgment.

As taxpayers, we believe, that the expensive and expansive pay-roll set-up that the OPA rent control maintains in the cities in the United States and in Washington, D. C., is now a needless extravagance.

Ending rent controls would be an excellent way to start balancing the budget. It would be a boon to business in many ways. We hope that you will continue to do whatever possible to give the property owners of America the relief to which they are entitled, from a law that, in peacetimes, has no place in our American way of life.

Very respectfully,

JAMES G. PERISHO.
(Mrs. J. G.) MABEL H. PERISHO.

THE HURDS,
Williamsport, Md., March 3, 1950.

DEAR SENATOR CAIN: Just finished listening to Meet the Press. Several times I have heard you concerning rent control and I admire your courage. There are 20 families living in my various properties and although I have mortgages totaling $10,000 and notes totaling $3,000 I have lowered some rents and intend lowering others in near future because I want to be fair to my tenants.

I do dislike the Government telling me what to and what not to do with my properties which I labored so hard for 40 years to obtain. I am a retired retail merchant 58 years old and due to several permanent ailments cannot attend to daily routine of business.

I live on rent income and even though I am sending my son to college to secure the needed education in order to meet the world, I do not intend raising my rents one cent, control or no control. Just would like to attend to my own business.

True, I am not one of your constituents and I have never written or spoken one word concerning rents to my own Senators TYDINGS and O'CONOR or my Representative BEALL (Republican) for I did not wish to attempt to influence them but I think so very much of you for your "spunk" I just felt like letting you know it, for which I beg your pardon knowing you receive plenty correspondence due to the long distance from your State of Washington to Washington, D. C. I am a registered Democrat but it did not and will not do H. S. T. any good. My best to you and yours,

WILLIAM S. HURD.

VENTURA, CALIF., *April 14, 1950.*
Senator HARRY P. CAIN,
Washington, D. C.

DEAR SENATOR CAIN: I wish we, the people of America, had more men like you in Washington to represent us. If Congress could just realize what rent control has done to the morale of the landlord, and how hopeless our future seems since Truman and Congress have decided to go into the housing business.

I am 66 years old, a widow, and worked, saved, and put all my life savings in a few houses, trying to be self-supporting in my old age. But now you feel like the thing to do is sell everything you have, squander the money, and get on the old-age pension, and be under the Government support, as the present set-up wants to kill all free enterprise. All other price control has been canceled. Rent control now amounts to confiscation of the prosperity of a single class, landlord, for the benefit of another class, tenants, without any public purpose, and with no public benefit. The vast majority of the cases, the income of the tenants whose rents have been frozen, and are still frozen after war has been over 5 years, their incomes have doubled, and in many cases, trebled. They can well afford to pay higher rent. My income for 5 years on 6 houses, 4 and 5 rooms and furnished, has been $160. I did some repairs and leased them, and now get $180. My tenants all made three times that, but still they must have cheap rent. My taxes have doubled, all labor, paint, maintenance, every item has trebled in price. You vote subsidies to keep food prices up, and we pay taxes to pay Tighe Woods $22,000,000 a year to rule landlords as they see fit.

Give us back prosperity without any string tied to it. Give us home rule, our free enterprise. Get us out from this Communist principle. I do not see why there is so much fuss made in Washington about communism, and still keep rent control. May God help you to be heard.

Rent control must die.

Sincerely yours,

SARAH ELLEN GRAY.

FARGO, N. DAK., *April 14, 1950.*
Senator HARRY CAIN,
Washington, D. C.

DEAR SIR: Wish to thank you for stand you are taking for a fair deal to the landlords.

On April 1, 1949 the new law was drafted by Mr. Tighe E. Woods, to give the landlords a fair deal as those operating one to four rental dwelling units will be allowed rent increases if their net operating income is less than 25 percent of gross income in such cases rent will be hiked to a 30 percent.

Wish to have Mr. Tighe E. Woods, explain to you why he does not live up to his promise he drafted.

On January 1949 we put our saving in this house located at 703 Thirteenth Street, South Fargo, N. Dak., and made it into a 4-family apartment, a kitchen in each with city gas stoves and refrigerators.

My net income is $177.90 for the 12 months not including the $605 interest on this house, as this does not go on the expense. Your Fargo, N. Dak. area rent director, Mr. A. H. Kurth, orders me to refund to the tenants $400. I asked your director, Mr. Kurth, regards to the 30 percent I have the right to as drafted. His answer was that they are not going by the drafted law on net income percentage.

Your Mr. Tighe E. Woods stated you want more housing as there is a shortage.

Who wants to buy or build while the Federal rent lids are on when your Fargo, N. Dak. area rent director, Mr. A. H. Kurth, dictates without facts or figures for a test year, and force me to operate at a loss?

My gross income, etc., for the above from February 1, 1949 to January 31, 1950: Total income, $3,027.47; operating expense, $2,849.57; net income, $177.90.

You are free to use this letter as you see fit, I remain,

Yours sincerely,

L. W. JANSEN.

Senator Myers' Reports to the People of Pennsylvania—No. 23, No. 24, and No. 25

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three radio addresses by me to the people of Pennsylvania, the 23d, 24th, and 25th in the biweekly series, on April 3, April 17, and April 30, 1950.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

TEXT OF TRANSCRIPTION BY UNITED STATES SENATOR FRANCIS J. MYERS OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF MARCH 31-APRIL 2, INCLUSIVE—NO. 23 IN BIWEEKLY SERIES

Well, you're going to be counted.

But that's no real surprise to you, because for the last month or so, there's been a lot in the papers about the 1950 census. Probably most of you have read some of the stories or discussed this with your friends, and it's entirely possible that you know one or more of the 140,000 people who are going to help Uncle Sam tally our population.

What some of you may not know is the fact that this census of the American people is required by our Constitution. Actually, the original purpose of taking a census once every 10 years was to determine the number of Members each State was entitled to have in the House of Representatives.

Our founding fathers, in addition to the many other problems that confronted them, spent a long time working out a method for representing each of the Thirteen Colonies in our Legislature. The largest of the Colonies felt that each colony should be represented in proportion to its population. The smallest ones naturally objected to this on the grounds that the large States would simply snow them under if representation was based on population.

So the inevitable followed. A compromise was reached that satisfied everybody. It was decided to have two Houses in the Congress, as you know. In one of these two Houses, each State was to have two representatives, regardless of its population. This body became our Senate, and to this day each of our 48 States has two Senators.

The House of Representatives, on the other hand, answered the criticism of the larger States, by providing that the membership in the House would be apportioned according to population. Even here, however, there was one more qualification. The Constitution required that every State, however small, should have at least one Representative in the House.

So the census got started under a constitutional mandate to count our population once every 10 years in order to readjust things so that each State was properly represented in the House. The first United States census took place in 1790, just a year after the First Congress had assembled. By comparison with the elaborate affair that is planned for 1950, the census in 1790 was a pretty crude business. The census was conducted by 17 United States marshals, who were, in turn, assisted by 600 clerks and interviewers. They took their information down on little scraps of paper, and when the job was finished they found that the population of the Thirteen States had reached the magnificent total of 3,929,214 people. In 1940, just exactly 150 years later, the population of the United States was found to be 131,669,275. Based on that 1940 finding, the apportionment of the 435 Representatives among our 48 States was completed by 1944, when elections were held for the Seventy-ninth Congress, and thus the Seventy-ninth, the Eightieth, and the Eighty-first Congresses have been selected on the basis of the populations of the several States of 1940. New York, being our most populous State, has a total of 45 Members of the House of Representatives. In other words, more than a tenth of all our Congressmen come from New York alone. We in Pennsylvania have 33 Congressmen, since our State in 1940 was second largest. Four States, including our neighboring State of Delaware, have only one Representative each. For these 4 smallest States it is interesting to note that their representation of

2 Senators out of the 96 is overwhelmingly out of proportion with the ratio of 1 Congressman to 435. It is just such a result as this which caused our founding fathers to establish two Houses of Congress as a safeguard to the rights of people in every State.

I've already indicated that the 1950 census will be a very elaborate affair. We plan to do far more than count noses. The Bureau of Census has estimated that our 1950 population will be somewhere around 150,000,000 people, and in order to do the work of counting the number exactly the Government is hiring 140,000 people whose job it will be to call at your home to make sure you are counted.

It may interest you to know that we are going to count our population as of the 1st day of April 1950. Thus, a baby born on or before April 1 of this year will be counted, but if the child is born after that time he will not be counted, even though the census taker hasn't yet called at your home. By the same token, if a person dies before April 1 he will not be counted, but if he is alive on that day and dies April 2 he will nonetheless be counted in the census, regardless of whether or not the census taker has called by that time.

Now if the Census of 1950 were confined merely to counting noses, it certainly wouldn't be much of a job, and it certainly wouldn't require the services of 140,000 people. There has, over the past hundred years, been a steady change in the type of information acquired by the census-taker. Back in 1850, the census-takers were required to ask personal questions like "Are you a pauper?" "Are there any idiots in this household?" and "How many of your relatives are convicts?". I think you can understand why questions of this sort were resented and later dropped. By 1880, the census-takers were asking questions about our health; for example, determining the number of people who were crippled or disabled or ill, and for the first time there were some questions asked in that year of 1880 about unemployment. Still later, more questions were added to shed more light on our economic life. There were questions about the number of telephones, whether you owned or rented your home, how much you paid for rent, and in 1940 every person above the age of 14 who made less than $5,000 a year was asked to state the exact amount. Persons who made more than $5,000 annually in 1940 simply reported that their income was above that level, and let it go at that.

This year the census-takers are going to ask some more detailed questions about income. They don't intend, however, to ask everyone the income questions. One person in five over the age of 14 will be asked his income. If he makes over $10,000 a year, he will simply state that as a fact and he will not have to give the amount. Those who make less than $10,000 will be requested to list in detail the various sources of their incomes. However, there aren't any names involved in taking this income information, so you have absolutely nothing to worry about if you're afraid the information would be misused, or turned over to the neighbors for gossip purposes. The facts about your income, if you happen to be one of those asked, are reported separately on a confidential form, and if you like, you can even fill out the form after the census-taker leaves, and mail it in later, so long as you do mail it in.

Now why on earth is the Government going to ask you all these questions about the number of years you spent in school, the money you make, where you were living a year ago, whether you've ever been in the armed services, and so forth? Well, as a matter of fact, this information is being requested because the census provides us with the clearest picture of America that we have. Much of the information that will be collected in the census has been requested by businessmen to give them a better picture of their markets for various products in terms of the amounts of money the family has to spend. As an illustration of this, a manufacturer who discovered that almost no family under a certain income level bought the kind of product he made, might well decide to come out with a cheaper model in order to enlarge his business.

A great deal of the information that will be gathered in the 1950 census will prove extremely useful to State and local authorities interested in matters like building new schools, playgrounds, public-health facilities, etc. They will rely upon census information to give them a picture of the number of school-age children that they can expect 3 years or 5 years from now, basing their estimates on the local birth rate, and the increase in the number of children now below school age. These same local authorities will also be interested in the income information from the census, because it will give them a better knowledge of their community's resources compared with State and National averages.

So I think you can see the importance of giving the census-taker the most exact information possible. I know all of you, at one time or another, have got into discussions and arguments, comparing your section of the country with some other section. And about the only real source of information you have for settling them is by turning to the facts set forth in the census reports. In fact, a great many of the statistics that you see quoted every day in your newspapers are based directly on information found in the census reports—the average family size, the number of families, number of people living on farms, the number of women at work, the number of homes with electricity, etc.

So once all this census information is collected and published, as it will be by 1952, it will provide the foundation for all the economic and social studies that will be conducted in America for the next 10 years—studies that are useful alike to private industry, charitable organizations, farm and labor groups, and officials of all levels of Government carrying out their duties as public servants.

So your census-taker isn't being nosey in coming around and questioning you. He's gathering facts that will allow us to draw an accurate picture of America, and every one of us will benefit from this new knowledge. You and your family won't appear by name in any of the 50 volumes that will ultimately be published to summarize the 15,000,000,000 facts that will be collected in the census. You'll be in the census all right, but you'll appear there in the form of statistics that will describe your family and all the other 40,000,000 families of America.

The chances are the census taker who visits you will be a woman, but this isn't necessarily so. I might point out in connection with the census taker that he or she is under oath to keep in absolute confidence everything you tell him. In fact, if the census taker violates this oath, he is apt to spend up to 2 years in prison or might find himself subject to a $1,000 fine. This wasn't always the case, however, in the past, and for the first few times that the United States took a census, there were some pretty serious violations of confidence, but it's been many, many years now that the census taker has been required to treat as confidential the information he gathers.

As a matter of fact, it's illegal for anyone to refuse to answer the questions asked by the census taker, and anyone who does turn the enumerator away without answering the questions is liable for a $1,000 fine or a prison sentence. The truth of the matter is that this provision in the law is more or less meaningless, because people have always cooperated very well with the enumerators. Even when they are busy, most people seem to enjoy answering the questions and view census taking as being sort of a quiz that they're all prepared to answer. This is perfectly understandable, because after all, the questions you will be asked all concern the things you know about, and most of them are things that no one else is prepared to answer for you.

So sometime in the course of the next couple of weeks you'll have a visitor who has a lot of questions to ask. Perhaps if you're living on a farm, it may be as late as the end of April before the census taker gets around to you, but Dr. Peel, who is the Director of the Bureau of Census, estimates that most of the questionnaires will be completed by April 15. So I urge you to cooperate, as I know you will, because the census is really important to us all.

By the 4th of July the Census Bureau will give us a provisional estimate of our 1950 population, but when you stop to consider that 15,000,000,000 facts must be tabulated and compiled in different tables, you can readily appreciate why it will be late in 1952 before the job is finished.

Your part of that big job comes up within the next 2 weeks, and after that, we'll have to wait until 1952 to see what we look like.

TEXT OF TRANSCRIPTION BY UNITED STATES SENATOR FRANCIS J. MYERS OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF APRIL 15-17, INCLUSIVE—NO. 24 IN BIWEEKLY SERIES

I'd like to discuss on this broadcast two recent pieces of legislation which, though they haven't made big headlines, will mean a great deal to many Pennsylvanians.

Last week, the Eighty-first Congress completed action on its second major housing bill. Most of you are probably familiar with the public housing law passed last summer, but before going into the details of the 1950 law just passed, I'd like to summarize some of the developments under the 1949 act.

Thus far, as a result of the 1949 law, seven Pennsylvania communities have been allocated about $13,000,000 in direct grants for slum-clearance and urban-redevelopment projects. In addition, almost 23,000 low-rent public housing units are scheduled for construction by 35 local housing authorities in Pennsylvania by the middle of 1951, as part of the 6-year program to furnish adequate housing for 810,000 American families whose incomes are in the lowest-income brackets.

The farm home loan section established under the 1949 housing act has perhaps been the biggest success of all. To date, $2,000,000 have been distributed in Pennsylvania to farm owners in the form of long-term, low-interest loans and grants to enable farmers to rebuild run-down buildings, put up new structures, and in general, get their farms back into the black. I had the privilege, several months ago, to present the first of these farm-loan checks to a young veteran and his wife who lived near Lewisburg—and I know that he, and many others, are finding this farm-loan program of great value in getting their farms on a sound economic footing.

Now the new Housing Act, just passed last week, make comprehensive additions to our housing programs. For one thing, a number of changes have been made in the FHA mortgage-insurance program to encourage construction of housing for families who can afford to pay only $50 to $70 a month for a place to live. The new changes in the FHA program are designed to get on the market soundly constructed housing at costs that just aren't to be found today. For one thing, the new bill visualizes the construction of two-bedroom houses that can be purchased with down payments as low as $350, and with monthly payments of about $50.

The 1950 act just passed will also encourage construction of apartments with two

or three bedrooms—recognizing that in recent years there has been a tendency to build rental apartments entirely too small to house a family.

The new bill should also be a big help to many of the veterans who haven't thus far been able to get GI loans for their own homes. As of the end of this year, the veteran will no longer be required to get a combination of a GI loan and an FHA loan to build and buy his home. Henceforth, he will be able to get a single GI loan at 4 percent covering 100 percent of the value of his house up to $10,000. And if the veteran is unable to borrow the money at 4 percent from private sources, he will be able to get it in the form of a direct loan from the Government—though as a practical matter, I seriously doubt that the direct Government loan feature will be widely used, simply because I'm sure that our banks and other private lending organizations will make the money available under the new GI loan insurance program. And incidentally, widows of veterans who died from service-connected injuries will be able to participate in the GI home loan program. This is the first time in which the GI privileges have been extended to their widows, and is the result of an amendment which Senator McMahon, of Connecticut, and I submitted.

Another and very important new feature in the housing bill just enacted is the $300,000,000 housing loan program for colleges and universities. This is the first peacetime aid to education bill ever passed by Congress, and both State schools and private, nonprofit colleges and universities will be able to borrow direct from the Government for student and faculty housing construction. The loans to the schools may run for a period of 40 years at an interest rate of 2½ percent, and it is estimated that college students living in dormitories that will be constructed under this program will be able to save as much as $170 a year in school housing costs. So, as you can see, this should be a big help to families who plan to send their children on to college in the future.

If you want further details about the new housing act, I urge you to write me, Senator Francis J. Myers, Senate Office Building, Washington, D. C., and I shall be happy to send some additional information to you.

Well, so much for housing.

Perhaps some of you noticed that the Senate had a regular field day April 5 in voting on the displaced persons bill. I must confess that by midnight of the fifth, there wasn't a single Senator who could remember another day quite like it. But before telling you what happened between 2 p. m. and midnight on April 5, I'd like to tell you a bit about the background of the DP legislation.

The initials DP—standing for displaced persons—entered the world's vocabulary in the closing days of World War II. You will recall that Adolf Hitler developed, over the course of a dozen years or so, between 1933 and 1945, a number of methods for making people miserable—and it's pretty hard to say which of his many devices was the worst. Certainly he refined the art of operating concentration camps, and we're still shocked to remember his death camps like Belsen and Dachau where human beings were burned like firewood.

But another trick Hitler developed was in an effort to solve his wartime labor shortage by uprooting people from all of conquered Europe and dragging them off to Germany to work as slave laborers. These were among the first of the displaced persons, although there were other hundreds of thousands made homeless by the advancing armies of Germany and Russia.

Thus, by the termination of World War II there were more than a million DP's, exiled and homeless, floating around in Europe. The problem of resettling them was one of international importance if peace and stability were to be achieved in Europe.

To resettle this group of a million or so uprooted people, the International Refugee Organization was formed, and by 1947 the IRO had special camps established throughout central Europe in which, for the time being, the refugees were housed and fed until a way could be found for resettling them.

Of course, the resettlement job was badly complicated by the fact that the Communists were spreading their political control over the countries of eastern Europe, and pretty obviously, a tremendous number of the refugees from eastern Europe either could not return home, or did not wish to do so.

It was possible, however, for more than 100,000 DP's to return home—they being, for the most part, those who lived in the countries of western Europe that were still outside the Communist orbit. In addition to those who returned to their native countries, about 800,000 other DP's have immigrated to new lands, 140,000 have entered the United States under the Displaced Persons Act of 1948, and the rest have gone to Israel, Great Britain, Canada, Australia, France, Belgium, the Netherlands, and several of the South American countries.

In the postwar years, Communist activities behind the iron curtain has created another kind of DP—that is, people who were forced into exile by the Communists as a result of political and religious persecution. But these postwar DP's, like the wartime DP's before them were also victims of totalitarian oppression.

In the spring of 1948, Congress enacted the displaced persons law which has enabled America to play its role in settling the international refugee problem. There was a bitter controversy over the legislation at that time, particularly in the Senate. The opposition to the bill came from a handful of Senators who took the position that the DP was a European problem, and that America had no business opening its doors to a bunch of foreigners. To many other Senators, that attitude made no sense whatsoever, because America has traditionally been a home for the oppressed, and from our earliest colonial history, people have come to the New World to find hope and freedom denied them elsewhere.

But, as I say, there was a lot of controversy over this point, and the 1948 DP law was pretty much of a compromise that had many contradictions in it. Opponents of the legislation managed to insert into the law many restrictive provisions which made the act very difficult to administer, and which, furthermore, discriminated badly against many groups of people.

I will say, however, that despite the many discriminatory provisions, the 1948 DP law was made to work surprisingly well. The primary reasons for this lay in the fact that hundreds of thousands of Americans pitched in to help out in every way they could to bring DP's here, and private charitable groups—Catholic, Protestant, and Jewish alike—joined hands, and with the help of the Displaced Persons Commission itself, and the cooperation of State and local officials, a miracle was accomplished in bringing in 140,000 DP's under the 1948 act.

By the end of 1949, however, the restrictive provisions of the law hampered the operation of the DP program seriously. In a very short time, the number of incoming DP's dropped from 18,000 monthly to a third of that number. This situation had been foreseen, and the House of Representatives had, in June of last year, passed a new DP bill which corrected the bad mistakes in the existing law. In the Senate, though, the House bill bogged down. Opponents of the DP program charged that a great many undesirable people were coming in as DP's, and that there had been a great deal of fraud in the administration of the program.

Senate committee hearings dragged on and on, and by March of this year, the DP program was just about stalemated by the delay. Those of us who felt that the law had to be revised and made workable did everything we could to bring the DP bill to a vote and get the program back in operation.

As the evidence piled up in the Senate committee hearings, it became increasingly apparent that the charges of fraud were not supported by the facts, and that all the charges leveled at the DP program had been raised for no other purpose than to delay action on the bill.

It's true, of course, that the evidence did disclose a tiny handful of DP's who hadn't worked out. There were a few who were lazy, and a few who couldn't get along with the Americans who sponsored them—though it wasn't always clear whether the DP or the sponsor was at fault. Most significant of all was the fact that no evidence showed any basis for believing that potentially subversive people were coming in under the DP program.

So it was clear that the way to handle the very small group who hadn't got along well was to give them another chance, or deport them if they didn't work out. This was especially true when you consider that, except for this small group, the other 140,000 DP's were proving themselves to be splendid people.

Finally, on April 5, we were successful in bringing the DP bill to a vote in the Senate. Voting started at 2 p. m. Opponents of the bill had lined up an impressive array of crippling tactics—tactics designed either to delay passage, or to give us, once more an unworkable bill. Between 2 p. m. and midnight of April 5, the Senate voted on more than 120 separate amendments to the DP bill before it was finally passed.

I will say, however, that during this 10-hour period, almost the entire Senate stayed on hand for the voting. It was clear from the first vote at 2 p. m. that those of us who had fought so long to get a good DP law were in the majority, and our only problem was to stay at our job and beat off the amendments. The opponents, on the other hand, were counting on us to give up in disgust rather than sit for 10 hours or longer just to get a good bill.

Well, the result was a splendid bill as it left the Senate—and a real victory for international cooperation. All told, the bill as it passed the Senate authorized the admission of nearly 420,000 refugees in the period between 1948 and 1951. Among them, nearly 55,000 German ethnic expellees under the amendment submitted by Senator Douglas and myself, and 5,000 refugees from the Yugoslav sections of Venezia Giulia, as a result of an amendment submitted jointly by Senator Ives and myself.

The new DP bill owes its existence to the splendid bipartisan cooperation of the Republicans and Democrats who worked so closely together in getting a good bill through. And in the important business of winning the cold war—of preserving democracy and freedom on earth—every American should be proud, not only of this bill, but also of the fine bipartisan cooperation which its passage reflects.

Text of Transcription by United States Senator Francis J. Myers Over Pennsylvania Radio Stations, Week End of April 28–30, Inclusive—No. 25 in Biweekly Series

The Post Office Department has been in the headlines recently, and I thought I'd devote some of this broadcast to a bit of post-office history.

Benjamin Franklin, in addition to his many other accomplishments, became—as you know—the father of our postal system. This came about in 1775, the year before we declared our independence from Britain. A few years later, our founding fathers included the operation of the postal system

as one of the duties of the Federal Government, and spelled this out in the Constitution itself.

In the earliest days of our Republic, the Federal Government merely undertook to carry the mail from one State to another—and left to each State the task of distributing the mail. This didn't work out particularly well, and before 1800, Congress authorized the Post Office to distribute mail between communities within each State. It was about this time, too, that it was decided, as a mater of national policy, that mail should be delivered to people who lived out on the frontiers—and because the distances involved were frequently great, and the volume of mail was usually small, this proved to be rather expensive. As a result, Congress felt it would encourage the development of the country if postal rates were kept down, and thus it came about that things like the Pony Express—which operated at a loss—were supported directly by the Government as a matter of public interest.

So, almost from the start, the Post Office was never consciously intended to make a profit. On the other hand, it's always been our policy to keep postal losses at a minimum—and the question usually boils down to a determination of what phases of the postal operation should be continued at a loss.

As a matter of fact, the Post Office has actually made money in 15 of the past 100 years—not much—but a little bit. Recent years postal subsidies have grown larger for a number of reasons. For one thing, mail rates have stayed down much more than have prices generally—and for another, there has been a big increase in the use of certain classes of mail that are handled at a loss by the Post Office.

One of the big money-losers for more than 50 years now has been rural free delivery. RFD, as rural free delivery is known, was inaugurated in the Democratic administration of President Cleveland, back in 1896. Prior to that time, rural people were forced to go into to town for their mail—or hired someone to deliver it for them. RFD was certainly a good idea, because it gave the farm and other rural people the same opportunities that city people had where use of the mails were concerned.

Now here are some interesting facts about various kinds of mail, and some of the special things our postal service helps us provide. For one thing, the Post Office makes money on the ordinary 3-cent stamp—the so-called first-class mail. The profits on first-class mail last year amounted to more than $82,000,000.

The 6-cent air-mail service is a money-loser. On the other hand, air-mail subsidies have had a lot to do with the growth and development of our air lines. For years, when the commercial air lines first got their start, the air-mail subsidies were an important part of the revenue they received. It's true, of course, that many people have criticized the air-mail subsidies, but when we stop to consider today that the experience gathered by our commercial air lines in the 1930's gave us a tremendous advantage in developing our air power in World War II, the mail subsidy was a small price to pay.

Parcel post operates at a loss, too. Not a big loss, considering the volume of business handled, but it does come to $73,000,000. The biggest Post Office deficits are run up by our so-called second- and third- class mailing permits. These permits, you may recall, allow special rates to newspapers, magazines, periodicals, books, and so forth that are shipped through the mails. The question is frequently asked why Congress doesn't increase the rates on publications of various sorts.

The answer to that is pretty straightforward: It goes back to freedom of the press, as a matter of fact. Take newspapers as an example. A great many local papers are distributed through the mails. If the postal rates went up, that would simply be the last straw, and some of them—which make very little money now—would be driven out of business. Surprisingly, the importance of low mail rates for newspapers isn't confined to papers with small circulations. A great many of the larger papers don't make much money, and they, too, would be seriously affected if postal rates went up.

Congress has long felt—and I believe, wisely—that it is in the best interests of our country for people to get information easily and inexpensively. If rates on magazines, newspapers, books, and so on, were to rise, the prices would go up, fewer people would read them, and our democracy, which depends so heavily upon an informed public, would suffer.

I might point out, too, in connection with postal rates on books, that many libraries in rural areas circulate books to schools, and to others, by use of mail rates that are quite low. Here again, an increase in mail rates would have a serious effect.

There is a bill pending in Congress to raise the rates on certain classes of mail, and hearings are presently being conducted in the Senate on that bill. The Senate committee has not yet reached a decision as to what mail-rate increases, if any, it will recommend to the Senate—and I think you can understand why any such recommendations would have to be considered quite carefully in terms of the importance of having our people acquire good information at reasonable prices.

All told, the Post Office Department went in the red last year by more than half a billion dollars, and suggestions have been renewed that postal rates be increased to cut down the loss. The big question to be settled in a situation like that is to find where rate increases can be allowed without causing harm—and some savings could undoubtedly be achieved by reorganization of certain sections of the Post Office Department itself.

Most of you undoubtedly saw the stories in the papers 10 days or so ago that the Postmaster General had ordered home deliveries of mail cut to one trip daily. This order has been widely protested—and, I think, for good reasons. I don't believe the Postmaster General is altogether to blame for the order. Apparently, members of the Appropriations Committee in the House of Representatives told the Post Office Department recently that it would not appropriate as much money to make up the Post Office deficit next year—and told the Postmaster General to cut down on mail service, or else.

I think this was an ill-considered move—and most of the people I've talked with about the proposed cut in mail deliveries seem to agree. It's possible we don't need more than one home mail delivery in some parts of the Nation—but I feel we ought to get the facts before we move impulsively to cut service back to that level. As matters stand now, the order to reduce the number of deliveries comes before anyone has been given a chance to be heard. The Appropriations Committee doesn't know how many people actually need more than one delivery daily. Before making any arbitrary decision of that sort, people should have an opportunity to express their feelings on the matter.

I don't expect that the order will go through, and I am doing my level best to get the order rescinded.

Certainly one of the big objections to the proposed curtailment of mail services is found, as I've indicated, in the fact that a reduction in mail deliveries has never received any study. On the other hand, the Hoover Commission, in its broad study of the operating practices used by the executive branch of the Government, devoted almost 2 years to the organization and operation of the Post Office Department—and the commission made a comprehensive body of recommendations that would save money and generally put the Post Office on a sound basis.

The commission estimated that its recommendations would save about $200,000,000 annually if all of them were carried out, and furthermore, the commission felt its recommendations would improve mail service, rather than cut it back as the present order proposes to do. The Hoover Commission recommendations called for increases in some of the second- and third-class mail rates, and secondly, that a number of internal changes be made in the organization of the post office itself. I've already mentioned that a bill to increase mail rates is being considered by the Senate Post Office Committee, and it is also important to point out that certain of the reorganization changes submitted by the commission were carried out last year by the President and Congress.

Additional reorganization measures for the post office are included in the group of 21 reorganization plans recently submitted to Congress by the President, and further streamlining of the post office is contemplated by other legislation now in Congress.

These reorganization plans, based on long study, and on extensive hearings before Congress, are the sensible way to face the problem of postal deficits and the general efficiency of post-office operation. By and large, while there are undoubtedly some desirable changes that should be made in the postal system, it cannot be denied that the people of America have tremendous faith in the United States mail service. The mail does go through, and it is no answer to a $527,000,000 postal deficit to attempt a saving of a tiny fraction of this by curtailing mail service, especially when no study has been given the question.

In closing, I want to say a bit about the progress of the Hoover Commission recommendations. The Commission was established back in 1947 as a completely bipartisan investigation of the executive branch of Government. The members of the commission included equal numbers of Republican and Democratic Members of Congress, representatives of the executive branch of Government, and representatives of the public.

The purpose of the study was to determine ways of improving the efficiency of Government operation. The commission made the first exhaustive study of our executive branch that had ever been made. During the 160 years of our national life, the Government had gradually accumulated a vast and complex pyramid of agencies, bureaus, commissions, and so forth, that had been designed to meet particular problems. The commission's final report consisted of a 2,000,000-word blueprint for efficient government.

The recommendations in the Commission report were general in nature, and 60 percent of them required action by Congress to put them into effect. When you consider that our Government is the biggest business in the world, it is evident that all the changes suggested by the Commission will take a long time to carry out. To date, however, progress has been far above expectations. By the end of 1949, 20 percent of the recommendations were in effect, and it was estimated that those changes alone would save about a billion and a quarter dollars annually.

Naturally, there has been some disagreement over the various recommendations to reorganize various agencies of Government, because differences of opinion have arisen over what is, in fact, the best and most efficient way to carry out a given function. These objections have been raised by Republicans and Democrats alike, but I am proud to say that the efforts to carry forward the reorganization plans have continued on a broad, bipartisan basis, with

members of both major parties strongly behind the reorganization program.

Next Tuesday, by the way, there will be a ceremony at Independence Hall in Philadelphia which will mark the beginning of a Nation-wide program to promote interest in, and knowledge of, the reorganization program. A bipartisan group of private citizens, known as the Citizens Committee for the Hoover Report, is sponsoring what they are calling a Cracker Barrel Caravan that will tour the country telling people of the Commission's recommendations, and informing them of the progress that is being made. The caravan will tour eastern Pennsylvania in May—and later in the summer will visit the western part of the State. Dr. Robert Johnson, president of Temple University at Philadelphia is national chairman of the Citizens Committee, and he has invited me to speak at the Independence Hall ceremony. Unfortunately, I am so busy in the Senate just now that I won't be able to attend.

I do urge all of you, however, to watch for the Cracker Barrel Caravan in your own community, and to learn everything you can about this important task of promoting efficiency in Government. I have supported the Reorganization program from the start, and if you'd like some further details about the program, I urge you to write me for a copy of a recent news-letter I issued on the progress of the reorganization work. Just address me, United States Senator FRANCIS J. MYERS, Senate Office Building, Washington, D. C.

Business Week Magazine Commended on Editorial, Productivity: Promise and Problem

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. PATMAN. Mr. Speaker, one of the purposes of the Murray-Patman Employment Act of 1946 was to promote a fuller understanding of economic problems. A dramatic illustration of the fact that this purpose is at least in part being achieved is found in the editorial entitled "Productivity: Promise and Problem" in the magazine Business Week of March 18, 1950.

I commend this editorial to the businessmen of America, both small and large. I commend it to the attention of business organizations in the fields of both distribution and manufacture.

In this editorial Business Week commits itself to the idea of a steadily expanding economy.

Let me quote:

If we are to balance the Federal budget and end deficit spending, we need to expand the whole economy in the same way. A bigger national income, which would raise Government revenues, would be the painless solution to deficit financing.

This is the same position taken by President Truman and his distinguished Council of Economic Advisers in the Economic Report which was transmitted to the Congress on January 6 of this year.

As business conditions continue to improve—

Stated the President in this report—

we should bring Government receipts and expenditures into balance, and provide some surplus for debt reduction, at the earliest date consistent with the welfare of the country.

In the same report, the President also pointed out that—and I quote:

Within 5 years, we can achieve an annual output in excess of $300,000,000,000.

This goal also has now been taken over by the editors of Business Week. Let me quote once more from their editorial:

A real gain in production per man-hour—not the spectacular 10 percent a year that came after World War I, but a steady yearly climb of, say, 3 percent over the next 5 years—would add roughly $40,000,000,000 to the total of goods and services that the country is producing. That would leave room for moderate wage increases, a gradual but substantial increase in social services, and some tax reduction.

The Business Week editorial did not specifically say that we could reach a $300,000,000,000 national economy within 5 years; it merely said we could increase our total production of goods and services by forty billion. But since the present size of our national economy is just about $260,000,000,000, the simple addition of these two figures shows that Business Week has accepted the President's target.

To encourage the expansion of our economy, the editor of Business Week called for an expansion of domestic markets. Let me quote their exact words:

Our markets must be expanded to keep business expanding, and to provide enough jobs to maintain reasonably full employment. We need more customers and better-heeled customers to take our growing production.

This, of course, is only a more popular and somewhat less erudite way of saying what the Council of Economic Advisers has been saying for many years—namely, that an economy which is expanding at a healthy rate must be a high consumption economy.

As the national income grows—

States the Council in its annual economic review of January 1950—

a trend toward relatively greater increases in income for families in the lowest brackets of the income structure would therefore give an extra stimulus to demand of consumption goods.

The editors of Business Week also pointed out that as productivity increases, the people who may be hurt will need help.

They may need help—

The editorial states—

from their communities in the form of adequate unemployment compensation, and in finding new jobs.

On this point also their observation squares with the long-standing recommendations of the President and his economic advisers for a more adequate unemployment compensation system and a more effective employment service.

It is interesting to note that Business Week makes no mention of what the President and his Council of Economic Advisers have said on the same subject. Someone who had not read the Economic Reports transmitted to Congress under the Employment Act of 1946 might think that all these thoughts originated in the minds of the editors of Business Week.

Yet, I for one, am not interested merely in seeing that credit is given where credit is due. I am much more interested in seeing that sound thinking is done on the great economic problems that confront America.

I am, therefore, deeply gratified to know that such an important business magazine as Business Week can put forward such forward-looking and constructive ideas and that they are not afraid to do so merely because the President and others in Washington have said the same things. I hope that other business magazines and papers and journals will promptly address themselves to the same problem and in the same constructive spirit.

The editorial is as follows:

PRODUCTIVITY: PROMISE AND PROBLEM

Some of the best economic news we've carried since the war appeared in Business Week, March 4: The Nation's industrial productivity is climbing once more.

Most postwar news about productivity has been discouraging. Production per man-hour in a plant is difficult to measure at any time. With all the changes war brought in the economy, it has been impossible to get good figures on what happened to our national productivity. But even as late as 1948, the evidence seemed to show that the country's productivity was probably little if any higher than it had been in 1941.

Now, Business Week's spot-check of plants and of the opinions of a broad range of top-management men points to a sharp jump in industrial efficiency. It looks as if the long-awaited turn may have come.

This is good news because it means that the country is again getting the kind of progress that made it great—stronger and wealthier than any other nation, and with living standards higher than most of the world's people ever dreamed of.

PROMISE OF BETTER LIVING

Better productivity holds the promise of still better living. It is the way to make good on the things that people are talking about, and wanting, today: Better wages, pensions on a more secure level for all workers, better social services. The country can have better educational systems, better housing, more medical care, adequate unemployment insurance, and all the rest—if we will buckle down to improving our industrial efficiency.

If we are to balance the Federal budget and end deficit spending, we need to expand the whole economy in the same way. A bigger national income, which would raise Government revenues, would be the painless solution to deficit financing. It would make it possible to keep our big military establishment, and to continue to give economic aid to the nations that need it—without sinking our currency and national credit. It would open the way for sorely needed reductions in business and personal tax rates.

But, we can only have better living standards and a bigger national income in real terms—more goods and more services—if we increase our efficiency to produce more in each hour of work.

A real gain in production per man-hour—not the spectacular 10 percent a year that came after World War I, but a steady yearly climb of, say, 3 percent over the next 5 years—would add roughly $40,000,000,000 to the total

of goods and services that the country is producing. That would leave room for moderate wage increases, a gradual but substantial increase in social services, and some tax reduction.

This is a reasonable target for economic expansion—but even it cannot be reached without some growing pains. While better efficiency pays off for everyone in the long run, it is bound to hurt some people in the process.

In fact, better productivity can be a hazard to the economy if we go on as we did in 1949—producing only about the same amount of goods, with fewer and fewer workers.

NEEDED: BIGGER MARKETS

As we see it, two things are needed to encourage better efficiency, and to minimize dislocations:

1. Our markets must be expanded to keep business expanding, and to provide enough jobs to maintain reasonably full employment. We need more customers and better-heeled customers to take our growing production.

If we are to expand the markets, the dividends of rising productivity must be widely distributed. Workers must have a share in the form of wage increases. Business, itself, must have a share so that it will be able to buy the new plants and equipment that will increase efficiency. Owners and stockholders must have a share to give them the capacity and incentive to invest in new enterprises. Finally, the country must decide how much of a share it will set aside for Government, and to expand social services, pensions, and the like.

2. The people who will be hurt as productivity improves will need help. Some workers will lose jobs, because new machines will do them better. These people will need help from their companies in transferring them to other jobs, or in helping them get new jobs. They may need help from their communities in the form of adequate unemployment compensation, and in finding new jobs.

We may, too, have some of the trouble that we had in the thirties, during the great depression. Then the technocrats, and others, spread the idea that better industrial productivity was a ruthless destroyer of jobs and men.

To avoid that, the people who are hurt in the process will need to understand what has happened to them, and to have other people understand it. They will be in trouble, not because they fell down on their jobs, but because they are displaced by progress. They will be temporary casualties who deserve decent consideration and help.

Increasing productivity is not a new thing in this country. It has been the key to the whole history of our economic progress. But, in the years of the war and postwar expansion, when we had overfull employment, it lagged badly. We had prosperity but no progress toward better productivity.

That's why word of a gain now is good news.

Voluntary Health Insurance

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a recent guest editorial from the Rochester (N. Y.) Times-Union, supporting legislation which I introduced earlier this session to encourage participation in voluntary health insurance programs by providing for tax credits of a percentage of the premiums paid. The author, Sol M. Linowitz, now an able practicing attorney of that city, has made a careful study of the subject and was an early proponent of such a plan.

The need for some type of health insurance is undeniable. But to compel a man to subscribe to health insurance by forcing deductions from his weekly pay check is contrary to our American tradition of individual freedom of action. A compulsory system would, in the long run, be detrimental to the maintenance of both individual initiative and the standards of the medical profession.

In addition, the cost to the taxpayer involved in this incentive to subscription to voluntary plans would be incomparably less than the establishment and maintenance of a governmentally operated compulsory health insurance program. There would be no cost of Government administration and the loss of tax revenue to the Government under my bill (H. R. 6819) would be but a fraction of the estimated annual involvement of the Federal Government to the extent of about $6,000,000,000 for the compulsory system.

LET'S MAKE HEALTH INSURANCE TOO GOOD TO MISS

Early last year I set forth in this column a proposal for a national health insurance program based on the use of an income tax credit or allowance. The plan itself was simple: the Federal Government would provide that every person who insured himself and his family in an approved type of health insurance program, commercial or noncommercial would be entitled to a tax credit (directly against the payable tax) for a designated portion of the premium to be paid. The allowable tax credit would vary in the different brackets, offering the highest allowance to those in the lowest income groups and decreasing as the income increased. In short, the schedule of graduated income tax credits would be set up in such manner as to induce rather than compel Nation-wide health insurance.

On its face, the idea seemed to offer some fairly obvious advantages:

1. It would avoid the necessity for an involved and costly governmental regulatory agency contemplated by the administration compulsory program.

2. It would rely on existing commercial and noncommercial health insurance plans and groups established to handle just such programs.

3. Each State and community would be free to make its own voluntary arrangements to meet its own particular needs.

The proposal afforded a possible compromise program acceptable to the various factions, and quickly won support in a number of quarters. Men such as Bernard Baruch, Senator Ives, Dr. Paul Magnuson (Chief Medical Director of the Veterans' Administration), Dr. Paul Hawley, and others close to the health insurance problem, announced their endorsement of the plan.

The plan was not actually presented in the form of legislation until early this year. In January 1950 Representative KENNETH B. KEATING introduced a bill based on the proposal and providing a schedule of income-tax credits for premiums paid in private health insurance programs. Because of Representative KEATING's interest and support, Congress today has a real opportunity to consider the validity of the tax credit plan as an answer to the health insurance problem.

The real significance of the plan and the widespread support it has received lie in the fact that it undertakes to meet the national health problem on a wholly voluntary basis and without resort to compulsion.

During the past months the American people have been subjected to a high-powered hullabaloo about national health insurance. They have been dismayed and confused by the ferocity with which drums have been beat by both sides. One group has vied with the other in broad characterization, claims, charges, countercharges, high-pressure campaigns, and publicity build-ups.

As Mr. L. R. Blanchard recently pointed out in his address before the Orange County Medical Society, the medical profession, caught in the midst of the fray, has not always seen its responsibility clearly and has been trading punches with the best of them. None of this has been helpful to the American people who are entitled to an alternative program on a voluntary basis rather than merely an irate condemnation of the administration proposal.

Those who have been studying the income-tax allowance plan believe that it may offer the alternative which has been sought. First, because, when combined with appropriate provision for the nontaxpaying group (as under the Taft or Hill bills pending before Congress) it promises truly Nation-wide coverage. Secondly, the role of the Government, Federal or State, is cut to a minimum; the initiative is in each case left for the individual; and the goal of full-scale health insurance throughout the country becomes the personal concern of the private party.

Will the tax-allowance plan work? The only way to find out is to try it. If it operates to induce widespread health insurance, the need for a compulsory system will be obviated. If not, resort can always be had to the type of program the administration now seeks. The time is not yet, however, for plunging headlong into a far-reaching compulsory health program which is in so many respects beset with so many dangers. Experience abroad demonstrates that compulsory medical care is no panacea, and that once the step is taken there can be no turning back.

To the factions engaged in spirited battle on the health-insurance front, the tax-allowance plan seems to offer a simple, sensible middle road toward the common goal. To the American people, it holds out the real possibility that the fight against the ravaging cost of ill health can be won on a voluntary Nation-wide basis.

One Hundred and Fifty-ninth Anniversary of Signing of the Polish National Constitution

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared on the one hundred and fifty-ninth anniversary of the signing of the Polish National Constitution.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SCOTT W. LUCAS ON THE ANNIVERSARY OF THE POLISH CONSTITUTION

I think it is not at all irrelevant to pause in the midst of our debate on the European economic aid program to note that today is an important anniversary in the history of man's struggle for liberty. Today is the one hundred and fifty-ninth anniversary of the signing of the Polish National Constitution under which the Polish people obtained the bill of rights that now they are denied.

To note that fact is completely to the point for many reasons. We are engaged in the vital matter of exploring all aspects of the program of economic aid to strengthen and bring to full recovery the freedom-loving democracies of western Europe. These free nations, devastated by one form of totalitarianism, face the threat of another, more insidious, totalitarian regime. That recalls some important events of recent history.

On September 1, 1939, the Nazi hordes began to pour across the border into Poland. The brave Polish people, jealous of their freedom and willing to die for the rights they won in their constitution of May 3, 1791, chose to defend their beloved homeland in the face of hopeless odds. Their allies, Britain and France, with whom they were bound by mutual defense treaties, immediately responded with declarations of war against Germany. Britain and France joined Poland in living up to the highest traditions of national honor.

Less than 3 weeks later, in contrast, one of the low points in the history of honor among nations was reached. The Soviet Union, united with Germany under the infamous Molotov-Ribbentrop pact, stabbed Poland in the back with an invasion from the east.

Subsequent history is well remembered. Today through our economic aid we are seeking to strengthen in western Europe the kind of spirit the Polish people showed when their nation was submerged under the attacks of two ruthless, totalitarian war machines.

For the sake of the people of Poland who still remain under the heavy hands of one of those dictatorships let us regard our work here today as a measure to keep the light of freedom burning in Europe. Let us work to make it gleam as a beacon of hope to all those who are held captive against their will. Let us show the oppressed people of Poland that we are determined to keep the democratic spirit alive throughout the world. America's greatest chance for preserving peace in the world lies in keeping hope in the hearts of those held in Communist bondage and in providing material aid to those free people who are actively fighting the battle against communism.

Our ties with the Polish people extend back to the days when America was struggling for its freedom. Those great Polish soldiers, Kosciusko and Pulaski, came across the seas to join our fight. Count Pulaski laid down his life in our soil. Thaddeus Kosciusko carried back to Poland's fight for independent, the American ideal of liberty.

Brave Polish soldiers fought alongside Americans, among them thousands of Polish origin, in the bloody campaigns of the last war. The blood of the two nations has thus been blended together for nearly two centuries.

We are prevented at the moment from directly aiding the captive Polish people, but there is much that we can do indirectly. The United States can, as the Senate has recommended, admit some 18,000 Polish veterans under our displaced persons law. But, more important still, America can render real service to the Polish people by finishing well the task of restoring the strength and vitality of the free nations of Europe. Poland can become free again if the spirit of man's liberty and freedom is kept strong and vital throughout the world.

There is nothing more contageous than freedom. If we insure that western Europe remains free, the spirit of freedom will hurdle all Communist barricades and one day aid the Polish people to regain the rights set forth in their glorious constitution.

Gallup Poll on Dissemination of Information About America

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent Gallup poll as reported in the Washington Post of April 28, 1950. Here again, as so often in the past on other issues, the public seems to be ahead of the Government, including the Congress. By majorities which would be regarded as very substantial in election campaigns, the public approved stepped-up efforts and greater expenditures to offset the Russian propaganda and to strengthen the Voice of America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 28, 1950]

THE GALLUP POLL—VOTERS FAVOR WIDER SPREAD OF UNITED STATES INFORMATION ABROAD

(By George Gallup)

PRINCETON, N. J., April 27.—Even before President Truman's strong appeal before the American Society of Newspaper Editors for intensive efforts to spread information about America to the people of other countries, the weight of opinion throughout the United States was in favor of an expanded program along those lines.

This is shown in interviews conducted among a representative cross-section of American voters during the last week in March. These interviews show substantial popular sentiment for spending a great deal more money than we are now spending to offset Russian cold war propaganda throughout the world.

Voters who are aware of the work being done by the Voice of America in its broadcasts overseas are more in favor of an expanded program than the general public is.

Here is the national vote in the survey:

Some people believe the United States should spend a great deal more money than we are now spending to offset Russian propaganda (information) and to tell our side of the story to Europe and the world. Do you agree or disagree?

	Percent
In favor of more expenditures	47
Against	38
No opinion	15
Total	100

The survey also indicates that part of the job facing the State Department is to acquaint people here at home with the work being done by the Voice of America in bringing the American point of view before the people of foreign lands.

A total of 46 percent, or nearly half, of the persons questioned in the survey said they had not read about or been told anything about the Voice of America broadcasts. When each person was asked, "Have you ever read or been told anything about the Voice of America broadcasts to foreign countries?" here was the vote:

	Percent
Yes, have heard about VOA	54
No, have not	46
	100

The 54 percent who were aware of the Voice broadcasts voted as follows on the question of an expanded program overseas:

	Percent
In favor of more expenditures	58
Against	35
No opinion	7
	100

A resolution calling for a greatly expanded overseas program of information about the United States was introduced in the Senate last month by 11 Senators, with Senator WILLIAM BENTON, of Connecticut, acting as spokesman. The proposal included a network of long-wave, medium-wave, and short-wave radio stations capable of reaching every receiver in the world.

President Truman, in his speech to the newspaper editors on April 20, declared:

"Unless we get the real story across to people in other countries, we will lose the battle for men's minds by default. * * * We cannot run the risk that nations may be lost to the cause of freedom because their people do not know the facts."

The survey also brings out the fact that voters who have had the most education are the most in favor of expanding the work of publicizing the American point of view abroad.

Here is the vote by degree of education:

	College	High school	Grade school
	Percent	Percent	Percent
In favor of more expenditures	59	47	44
Against	34	40	37
No opinion	7	13	19
Total	100	100	100

Air Warfare and Morality

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to offer for insertion in the RECORD a very fine article by Maj. Gen. Orvil A. Anderson, the Commandant of the Air War College. I think that General Anderson has ably presented an argument for strategic bombing during time of war. It is well for us to discuss matters such as this so that we may be more fully prepared against any emergency.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR WARFARE AND MORALITY

(By Maj. Gen. Orvil A. Anderson)

Throughout recorded history, evolution in the nature of war has been associated with evolution in the technical and mechanical characteristics of weapons. Over a period of some thousands of years we have progressed from the stone and club age, through the spear, bow and arrow, crossbow, and gunpowder periods, finally to arrive at the atomic era. Each major advance in weapons has been marked either by an increase in the range of the weapon or by an increase in its destructive capacity, or by both. We have gone from the war capability of the club, the capacity to bruise or kill a single individual at a range of a few feet, to the war capability of modern air weapons, the capacity to destroy whole cities of key industrial systems at ranges of thousands of miles.

The frightening increase in the potential of weapons has been matched with an evolution in our social and economic structure which adds further hazard to modern existence. The simple agrarian life, with humanity living close to the soil, dispersed and largely independent, has been replaced with a complex social and economic fabric which is supervulnerable in many critical areas. As the power of weapons has increased, concentrations of population, industry, and transportation have developed which provide highly profitable targets for destruction by modern military weapons. Thus the evolution of our social order into a compact industrialized structure has placed us in double jeopardy: First, it has produced long-range weapons capable of great destruction. Second, it has created the targets for these weapons.

This observation has a singular significance to our problems of today, when the fate of America, the fate of world civilization itself, is primarily dependent upon the strategic concepts that guide the provisions we make for our sustained security. It is pertinent here to note that, as in most fields of human endeavor, the evolution of military strategy has not been completely abreast of the evolution in weapons.

Most military strategists—not being responsible for, and in some cases not familiar with scientific developments—have normally resisted new weapons. Strategic thinking generally has tended to retard the rapid development and exploitation of the full potential of new weapons because the new weapon tends to upset the familiar relationships that the strategist has been accustomed to employ in his thinking. The revolutionary potential of modern weapons so far exceeds the power of traditional weapons that it is questionable if there is much in common between past military objectives, and consequently military strategy to achieve these objectives, and the military objectives of a possible third world war.

Wars in the past, including the Second World War, have been fought basically to a surface strategy. By this is meant one in which surface-force operations dominated the grand strategy. Either a final assault and invasion of the enemy homeland by ground troops was visualized, or sea blockade, with its attendant economic and military strangulation, or both, was intended to be decisive.

For example, the strategy of World War II against Germany was a surface strategy. Its objective was invasion and occupation of Germany proper. In implementing this strategy air power was employed to prepare for the invasion and sea power was employed to project the invasion forces and their logistics across the sea. The strategy of the war against Japan, as implemented, was little more complex. The grand strategy still visualized final invasion of the Japanese home islands, but the economic vulnerability of Japan was such that she could have been defeated primarily by sea power exercising a technique of blockade and strangulation. The complexity of Pacific strategy was further compounded by a command structure which led to two major surface thrusts aimed at Japan and by the new weapons system—the long-range air force—which upset the intention of the planned invasion by forcing surrender before the final invasion could take place.

These examples from the Second World War point up the inherent tactical capabilities of land power, sea power, and air power, and show that the requirement for these various capabilities should be judged in relation to the potential of weapons currently available and in relation to the other factors in war.

The ultimate strategic objective of all three military forces is identical. It is the reduction or elimination of the power and power potential of the enemy in order to remove his capacity to threaten our security. The techniques employed by the three categories of military force are dictated by the capabilities and limitations of the weapons employed by these forces.

Land power, in order to accomplish the strategic objective, must invade and capture the territory of the opposing state. By occupying vital areas it deprives the enemy of the use of the resources of the area occupied. These resources may be raw material, communications, industry, or government institutions.

Sea power, by establishing control of the sea lines of communication, may strangle or starve the economic life of a nation, providing that nation is dependent on these lines of communication to a large extent for survival. Great Britain or Japan would be outstanding examples of insular nations which are wholly dependent on sea lines of communication for bare survival.

Similarly the strategic objective of air power is the elimination or reduction of the enemy's power and power potential. The technique employed by air power in accomplishing this objective is to attack directly the power and sources of power of the enemy state. The targets may be selected segments of his industrial establishment, his communications or transportation system, the source of his governmental or social control, or his military forces in being.

Land power, in invading and occupying, may have to fight land armies, but the destruction of those armies is not the ultimate strategic objective of land power. Sea power, in accomplishing sea blockade, may have to fight sea battles; but these battles, again, are not the ultimate strategic objectives of sea power. And air power, in neutralizing an enemy, may have to fight air battles, but victories in the air are not the ultimate strategic objectives of air power.

If these fundamentals were fully understood, thinking on the present security problem would be improved. The destruction of armies, navies, and air forces is not the ultimate strategic objective of the various components of our armed forces. At best, armies, navies, and air forces are but means to ends. If our present position is viewed in the light of the techniques appropriate to the three categories of military force (land, sea, and air) there is immediate indication of a solution. What should be the core of our strategy for a possible future war? Invasion and occupation—sea blockade and strangulation—or air neutralization?

If a possible military enemy in the forseeable future is a land-mass power, operating on interior land and river lines of communication, geographically and economically it is not particularly vulnerable to sea blockade and strangulation. Thus a strategy based primarily upon offensive sea power would not defeat that enemy.

If this potential enemy has a powerful land force-in-being backed up by a relatively secure and adequate logistic base, and if we want something near a numerical land-power equality with this potential foe, we then would be required to maintain constantly an army as large as the one we built for World War II. Further, even this force could be outnumbered very quickly by full mobilization of the enemy's potential land power. The continued maintenance of an army of this size would impose such a staggering load on our economy that our standard of living and our democratic way of life would be seriously affected. We know also that the projection of land power, in mass, across the seas requires control of those seas. At the same time a potential enemy nation—herself relatively invulnerable to sea power attack—through effective use of a modern submarine force could seriously interfere with and possibly defeat any opposing force requiring vast movement of logistics across the ocean. It would appear then that a strategy based upon land power would be costly, hazardous, and uncertain of success.

Logic, therefore, strongly supports the conclusion that a basic strategy which exploits the power potential of new weapons to the fullest is our soundest hope of successfully defending ourselves. The combination of air vehicles and atomic explosives represents, at present, our greatest power potential.

Such a strategy does not mean that land power and sea power are excluded from the operation. They would participate in roles appropriate to the support of that strategy. All our military forces would be integrated toward the one common strategic objective. This strategy would permit maximum utilization of our technological superiorities and maximum exploitation of enemy weaknesses. It would avoid the areas of greatest enemy strength. It would be most economical in American lives and resources. It would be designed to the geography of the situation, to our own strengths, and to the achievement of our postwar objectives.

This basic strategy in the foreseeable future involves what is commonly referred to as a strategic air offensive. Recently the concept of a strategic air offensive has come in for some rather violent criticism. It has been charged that a strategic air offensive cannot be carried out and that, even if it could be carried out, it would have no military effect or value. These criticisms are both transparent and senseless to a thinking person.

There is, however, one criticism against the strategic air offensive which, if properly nourished and expanded, could cost us a war. This argument attacks the concept of strategic bombing from a basis of morality. It has a certain attraction to people of western culture. Traditionally we have attempted to maintain a combatant and noncombatant status in our wars. The distinction between the two has, however, been more difficult to discern as wars have become more nearly total in scope. The difference between the citizen soldier and the factory worker who provides the tools of war is rather nebulous. The soldier and the worker are complementary in modern war.

It is naturally abhorrent to us to consider that war may be fought which will involve our homes and families. We want it to be fought at the greatest distance from them as possible. An aggressor is not concerned about these values.

In essence the argument from morality condemns strategic bombing as an effort aimed at women and children and the civil-

ian population. It alleges that strategic bombing kills the innocent population and is not directed against legitimate military objectives. Under analysis this argument is fallacious.

Before the airplane and the atomic bomb became significant instruments in the military arsenal, the same basic problem in humanity was present. During World War I and World War II, which were fought with traditional weapons on the surface of the earth, it was recognized that noncombatants in a combat zone were very likely to get hurt. Insofar as practicable, the problem was solved by evacuation. Women and children and noncombatants were cleared out of the combat areas. If the principle of evacuation was not or could not be employed—if the noncombatants happened to be in a village under artillery bombardment—the artillery shells did not differentiate between enemies in uniform and civilians that might be present. If the civilian happened to be in a foxhole, he could expect the fire of the battlefield.

During World War II, insofar as air action was concerned, this principle of evacuation was still employed. The French civilians living adjacent to the railroad marshaling yards which handled German army logistics were warned by leaflets that the marshaling yards were critical targets and that they should get out of the area. Likewise the residents of Japanese cities were warned that the cities were military targets because of the dispersed home industry which was so essential to the Japanese economy. Those who abandoned their homes lived. Those who did not, in effect, remained on the battlefield and took the chances of a battlefield.

The important point is that the categories of military targets appropriate to modern weapons have expanded the battlefield to include the industrial and economic sources of strength of a nation and that these critical elements of economy are legitimate military targets because they create and maintain the enemy's fighting forces. The principle of evacuation can still be applied, as it was applied by the British in World War II when thousands of women and children and noncombatants were removed from city areas.

In other words, nothing completely new in the field of ethics or morality has been added to the grim problems of war. No new issue of morality is involved. Only the degree of hazard has changed. There is no new principle.

It is significant to observe that aggressor nations normally do not like the idea of strategic bombing. It is not consistent with the philosophy of conquest and exploitation. Hence it may be expected that through established international agencies and by means of every known type of propaganda, the attempt will be made to discredit and to outlaw strategic bombing. Hitler himself spoke out against strategic bombing during the last war. Certainly he had no moral objections. A monster who would tolerate—in fact, encourage—such pestholes as Buchenwald, Dachau, and other concentration camps and mass-murder sites would not be deterred from killing citizens because of any moral issue involved. The reason for his efforts to outlaw the bombing of cities is quite evident. It stems logically from his war aims. Germany under Hitler was bent upon dominating the whole of Europe, if not the whole world. She was embarked upon a policy of expansion and aggression. It would not have served her purpose to destroy the economic plant which she wanted to control. She was not threatened by Holland, Belgium, France, Poland, or England. They were not attempting to take her over. The reverse was true. Thus Germany's war strategy was based upon an occupation of the other continental powers with ground forces, after a minimum destruction of the economy of those countries.

Germany also realized that the Allies were not prepared to take the war to Germany on the ground. However, from British bases the air war could be launched against Germany herself. Obviously, in a situation such as this, wherein Germany had nothing to gain and everything to lose, she would come out strongly against the weapon which could hurt her most—strategic bombing.

To rely, however, upon the belief that any possible enemy, because it is committed to a policy of aggression, might not use strategic bombing on the United States would be to take an unnecessary and unrealistic gamble. Hitler believed that he could take over Europe without involving the United States in war. If an enemy believes to the contrary, she could be perfectly willing to destroy Britain and the United States to gain the rest of the world—and, under another circumstance, could be willing to destroy Britain and the United States to prevent collapse from the inevitable internal corrosion associated with any dictatorship. In the meantime it would be distinctly to her advantage to outlaw strategic bombing and to convince the Western World that they are too moral and too humane to employ their best weapon in their fight for survival.

If we permit ourselves to become mesmerized with this humanity aspect, we can place ourselves in position to lose a war, because we will have failed to exploit the power of modern science in our own defense. A longer-term view of humanity would undoubtedly recognize that humanity is best served by the survival rather than by the destruction, of western civilization. An informed viewpoint will also recognize that the survival of western civilization will depend in large measure upon the utilization of those weapons in our arsenal in which we are superior—chief among which is our scientific and technological potential.

Those who condemn the strategic air offensive on morality grounds also maintain that the destruction incidental to such an attack ensures losing the peace even though we win the war: Germany, after World War II, is frequently cited as a case in point. Again this is a most superficial type of reasoning. It is a matter of record that the grim determination of the Allies, as they went to war with Germany in World War II, was so to reduce Germany that she would never again constitute a threat to the peace of the world. Our basic strategic thinking was founded on this tenet long before the power of the strategic air offensive was comprehended, and the extension of that national intention was found in the postwar application of parts of the Morgenthau plan. If strategic bombing so decimated Germany that it was not consistent with our national objectives, why then were German industrial plants dismantled and destroyed by the Allied occupying powers after the war ended? It is obvious, from the course of action which we followed, that strategic bombing—in spite of the great destruction wrought—had only partially satisfied Allied policy. The wrecking of Germany continued long after the last bomb fell.

The strategic air offensive had been designed to destroy only certain vital segments of the German war economy—such as oil. In this it succeeded, and the German war machine ground to a halt. However the strategic air offensive had not been designed to destroy the total industrial fabric of Germany, and the dismantling of German industry continued for some time after the war ended. Hence it becomes obvious that the destruction from the bombing was consistent with our national objectives, but being confined to certain segments of the German war economy, it was not sufficiently widespread to prevent the recuperation of German industry. Reduction of the recuperative power of the industry was apparently one of the objectives of the postwar dismantling program.

Actually, we did not come close to losing the peace in Europe because of the physical damage we did to our enemies in defeating them, but rather because of the unmasking of a former ally as another totalitarian aggressive power bent on world domination.

In visualizing the physical and material damage which might be heaped upon an enemy in a strategic air offensive, it is well to compare such damage with the disastrous losses to France and England of their young manhood during World War I. The cream of the manhood of both nations was lost, in traditional surface warfare, and the impact of this blood bath was one of much greater significance than the destruction of factories. Generations are required to rebuild a race. On the other hand our own casualties during World War II, in surface combat, were the lowest we have ever suffered, percentagewise. This was true in spite of the greatly increased killing power of surface weapons. Our World War II casualties were low simply because we partially exploited the power of an air offensive in preparing for our surface operations. We reduced the capability of the enemy for effective and sustained surface warfare prior to the time that we committed our forces to surface combat. United States military leaders would be derelict in their duty to the people of the United States and the western democracies if they did not fully exploit the power of the air offensive in a future war and so minimize the casualties which would be suffered by us and our friends.

The whole issue of morality as applied to warfare engaged in by peace-loving people must be considered against a background of war aims. Traditionally the United States will fight only if her security or the security of other peace-loving peoples is threatened. We have no aggressive intentions toward any other power. If we had such intentions, we would be subject to censure before world opinion as being unnecessarily brutal to use weapons of mass destruction in accomplishing our aims. If, however, our position as a champion of the dignity of man and human rights were threatened by a totalitarian power which has indicated it has no such standards, we would clearly be at fault if we did not use the key means at our disposal to defend ourselves. We are only defending ourselves, albeit we are doing it by taking the war to the enemy.

To summarize, fallible man, adhering to the pattern of past thinking, resists the evolution and change dictated by the power of science. He resents the threat to his established order and traditional patterns. These failings have been able to slow down but not stop progress. Such weaknesses can be sources of great danger when our security is threatened.

It has been pointed out that the strategic objectives of land, sea, and air warfare are similar. An objective analysis of the specific factors in the situation will logically dictate a certain course of action. Sea blockade and strangulation will not defeat an enemy who is not dependent on sea communications to a large extent for survival. Invasion and occupation in the face of heavy odds, if successful at all, would be terribly costly in American lives and resources. Utilization of strategic air power presents the soundest solution to our military problem. This will require the wisest balance and employment of our integrated land, sea, and air forces to attain maximum effectiveness.

The employment of weapons of mass destruction is not immoral. This propaganda line will probably be exploited by an enemy—as it was by Hitler—to suit his own purpose. He realizes that he has little to worry

about in a war with us fought according to traditional patterns. An enemy having nothing to fear will feel free to continue a policy of aggression and expansion until his aim of world domination is achieved. We are not only morally justified but morally obligated to develop our maximum strength to provide our own security.

A Report on Progress of Connecticut's Project for State Government Reorganization

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the current issue of the magazine State Government which describes the methods and procedures followed by the Connecticut Commission on State Government Organization. This article was written by Mr. Ralph P. Sollott, the able staff director of the Connecticut commission, and represents a unique and fundamental approach to the task of government reorganization. I understand that 20 other States and Territories are presently engaged in working out more efficient and manageable patterns. The Connecticut survey of government might well serve as a model for others to follow in the tremendous task of making our State governments more effective, responsible, and economical.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ALL THE FUNCTIONS OF STATE GOVERNMENT—A REPORT ON PROGRESS TO DATE IN CONNECTICUT'S PROJECT FOR STATE GOVERNMENT REORGANIZATION

(By Ralph P. Sollott, staff director, Connecticut Commission on State Government Organization)

As this is being read, the Connecticut General Assembly is in special session. Its purpose is action on the report of the Commission on State Government Organization.

Less than a year ago, Gov. Chester Bowles approved special act No. 28, 1949 session, creating this five-citizen commission. In a politically divided general assembly there was bipartisan agreement on the need for a thorough reconsideration of the State government.

Noteworthy in its charter was the legislative mandate that the commission shall study all the functions of State government. This direction obviated the key weakness of most other such studies—there was no limitation to the executive branch. The legislative and judicial branches, as well as the constitution, were made the subjects of study.

The principle of "one world" has found its way into government-organization studies. No single branch can be made more effective in vacuo. The interrelationships of executive, legislative, and judicial branches are here to stay.

FIVE CITIZEN COMMISSIONERS

Bipartisan agreement resulted directly from the caliber of the gubernatorial nominees. Each of the unpaid commissioners had a long record of nonpolitical experience and interest in governmental affairs.

Carter W. Atkins, chairman, is executive director of the Connecticut Public Expenditure Council; he has made a career of governmental research. James Lee Loomis is the retired chairman of the board of the Connecticut Mutual Life Insurance Co. Oliver B. Ellsworth is president of the Riverside Trust Co. G. Keith Funston is president of Trinity College and has a long background in business and government. James G. Rogers, Jr., is a management consultant with extensive prior experience in business and government.

The commissioners, all with other obligations, devoted upward of 15, and as many as 40, hours weekly to their deliberations.

THE WORKING PLAN

The commission selected as staff director the man who had been the Governor's consultant on budget and organization. His background has been in management engineering, law, business, and government—Federal, State, and municipal.

In the formulation of Connecticut's first consolidated executive budget, specific data had been developed to give the commission staff a running start into its work. With the executive budget and the State Register as its base, the commission divided the whole loaf of State government into 22 manageable slices.

Each of the existing agencies of government (then believed to number some 108, since determined to be 202) was allocated to one of the 22 organization survey units. Provision was made for the coordination of inevitable overlapping between horizontal (across all agencies) and vertical (within specified agencies) survey units.

A commission program and policy statement was prepared to define the commission's understanding of its charter. This same statement served as the basis for negotiations for technical staff.

Although less than 7 months were available to do the job, negotiations for staff extended over 3 months. The time was well spent. Each of the project directors was enabled, through the specific working plan, to submit a required outline prior to the contract commitment. The commission thus had early, competent estimates on unit work program, manpower, and budget requirements, as well as time accomplishment objectives.

Thus, from the outset, the entire technical staff, whenever and wherever acquired, originated and developed its thinking against a single frame of reference—the commission's program and policy statement.

THE SURVEY PROGRAM

Each department head was requested to designate an organization liaison officer and deputy. Their duties were to establish entrance communications directly to agency personnel best equipped to supply required information. Simultaneously, these officers provided a continuing agency awareness of our survey unit activities.

While negotiating for technical staff, we initiated the development of essential data for each survey unit. Binders were compiled for each project director containing all pertinent statutes, digest of all prior related studies, directory of agencies and officers, digest of current administrative reports and bibliography. Ten-year fiscal histories and other useful data was added. This process not only expedited the actual surveys, but also saved many more expensive and otherwise irreplaceable technician man-days.

Our operations were begun with an original appropriation of $50,000. The detailed, estimated requirements of our first survey units soon confirmed the inadequacy of this sum to accomplish even a minimum worth-while job. Governor Bowles promptly added another $75,000 from his contingent fund.

The 202 State agencies were allocated to survey units designated as follows: Executive, fiscal, education, health, highways, public works, industrial relations, agriculture, conservation and development, regulative, licensing and examining, State police, military, welfare, hospitals, corrections, purchasing and procurement, management of land, buildings, records and communications, research and statistics, legislative, judicial, constitution.

Some 120 specialists were engaged for nearly 3,000 man-days at approximately $70,000 in salaries. The project directors and their associates represented a diversity of skills, talents, and experience seldom gathered in a single venture. Several were former staff members of Hoover Commission studies. More than half had prior experience in government operations or surveys. Others had both specialized business and technical experience in the survey study areas.

The commission, having confirmed each survey unit work outline, knew the proposed direction and required coordination of all. Therefore, for the duration of each project, its director reported weekly to the staff director. The weekly reports covered days worked by each staff member, budget status, staff services or policy resolution required, accomplishment objectives, or any deviations.

Each commissioner was designated as subcommittee chairman of four or five survey projects for consideration, review, and conference with the project directors. By this means, over-all workload for each commissioner was reduced and, at the same time, a degree of specialization provided to assure the most effective results in review of the various reports.

As soon as the project director felt that the direction of thinking and fact development had taken concrete shape, he submitted a preliminary report. Its principal purpose was to keep the commission fully informed and call attention to any required modifications of original work plan. At this time, also, were confirmed the accomplishment objectives for interim and final reports.

The interim report, some time before termination of field work, provided a comprehensive statement of progress development and survey trend. Major policy questions were raised at this time. Significant areas of overlap were here identified and resolved. From detailed consideration at this time, such additional field work or coordination as required could be provided for.

At this stage, also, the commission held several round-table sessions with groups of project directors to get the advantages of the exchange of ideas on broad policy questions.

In most cases, it developed that the interim report represented 85 percent or more of completion.

In its final report, in addition to report substance along generally uniform lines, each survey unit outlined its recommendations in three groups—those which might be accomplished by executive authority; those which would require statutory enactment; and those which required constitutional change.

SYNTHESIS

From the outset of its work the commission recognized the distinctions between organization analysis and management audit. It resisted the temptation to follow traditional lines in attempting to achieve economies directly. No mere elimination of carbon copies or file cabinets could establish a

solid foundation for future governmental effectiveness. In one survey unit after another, the same factors were disclosed as fundamental causes of confusion, ineffectiveness, and waste.

1. The management of the functions of the State government is so decentralized and so illogically divided among nearly 200 separate departments, boards, commissions, and agencies, as to lead to uncontrolled State expenditures, without any means under this system of producing an efficient and economical government.

2. The citizens are not getting 100 cents worth of Government service for their dollar.

3. The best interests of the public are not being served under this system of government. Too often the agencies under this decentralized system respond to interests which are special and local rather than to the larger interests of the people of the State as a whole.

It became increasingly clear to the commission that a mere functional analysis of major departmental grouping would be insufficient. There were some obvious general principles applicable to all the functions. These principles the commission stated.

"1. We believe our Government is not an end in itself but a means * * * to assist free men and women to live their lives peaceably, securely, and prosperously, in a free society.

"2. We believe that our State government should be competent. It should do well the things it undertakes to do.

"3. We believe that our State government should be economical. The citizens have a right to expect that the State's affairs will be prudently managed, to yield full value for the dollars spent.

"4. We believe that better organization—for responsibility, competence, and economy—is essential to a better government.

"5. We believe, finally, that public office is a public trust, not merely a way of making a living, or of serving the interests of special groups."

By these standards, the Commission made its recommendations.

The frame of reference adopted by the Commission—fundamental issues and general principles—clearly indicated that its work could, at best, provide the foundation upon which progressive application of known management principles might perfect our State government structure.

1. The statutory mandate called for a report looking to the most economical method of furnishing "the present State services." The Commission straightforwardly concluded: "It follows from this that the results of our recommendations, if carried out, will show up principally in the form of better government with its resultant benefits to the people, rather than in wholesale cuts in State expenditures." This in spite of the fact that a probable $2,000,000 savings was apparent in one area alone. No price tag was placed on better organization.

2. Citing the truism that "we cannot make an omelette without breaking some eggs," the Commission bespoke the support even of those whose responsibilities might be altered.

3. Defining its task "to chart a pattern and a course of action" the Commission called for debate, understanding, approval, or modification. It emphasized that the third step of detailed application and installation must be shared by all agencies. Only with completion of installation can our task have successful outcome.

LIAISON

From the outset of its work the Commission met frequently with the leaders of both houses of the general assembly. These meetings not only accomplished an important exchange of views but also were requisite in clarifying Commission objectives and direction for our politically divided general assembly.

At an early date the Commission met with the publishers and editors of the State's major papers. Our working plan, survey program, and objectives were outlined. Subsequently, the Commission met from time to time with the press—the political reporters of those papers. These men understood and guided us objectively, as technicians rather than as representatives of any particular policy.

Both the legislators and the press were largely responsible for the Commission's decision to release its report chapter by chapter in advance of printing the text as a whole. In this manner, chapter mailings were made directly to each member of the general assembly and the Governor, simultaneously with release to the press and radio. Our coverage, therefore, was point-by-point and, as a result, far more extensive and effective than if the entire report had been released at one time.

As the commission came to the point of formulating its own report, a citizen's committee on State government was created. Its members sat frequently with the commission during discussions of its report. A nonpartisan group, they became wholly familiar with the commission's work and survey techniques. When, therefore, they set forth to explain our report to the people, it was of their own knowledge and conviction that they were enabled, through pamphlet, press, radio, and direct speech, to support our work.

THE COMMISSION'S REPORT

As its findings merged into fundamentals and principles previously set forth, the commission believed that the general assembly, the governor, and the people would be best served by brevity, simplicity, and cohesive pattern. The commission realized also that its report must be its own. The specialized technical studies had to be integrated and synthesized. The survey units could not have the over-all view. Their work, in many cases, was completed before other vital studies had resolved overlapping questions. Hence, although the survey units reports will be available for next analysis and installation stages, they were not published as part of the commission report.

Brevity and simplicity were served by confining the report to fundamental points of organization and major principles arising from findings which were generally applicable. The objectives of cohesiveness and "single pen" writing were believed essential. The commission engaged the services of Harvey C. Mansfield, now chairman of the political science department, Ohio State University, and a Connecticut resident for a dozen years before the war, as its editor-writer. The editor-writer sat throughout the final meetings of the commission, and having become saturated with the philosophy of the several commissioners, was able to translate their conclusions into language acceptable to each and all of them.

The 11 chapters, the last setting out the proposed legislative program, were released at intervals of 2 to 3 days. This provided chapter content coverage on the first day and analytic or speculative stories on the intervening day. The wire services of press and radio thus were enabled to give broader coverage to these stories as gradually released. Following this month-long chapter coverage, the entire report and legislative program were bound into the consolidated report for general circulation and use.

The chapter titles of the report, which follow, indicate its pattern. The first 10 chapters varied in length from 1,400 to 2,700 words. Chapter XI, containing the text of 10 acts to accomplish the program and including a proposed constitution, is approximately 14,000 words.

I. Principles.
II. Financial Management.
III. Personnel Management.
IV. Management in the Executive Branch.
V. Boards and Commissions.
VI. Elective Offices in the Executive Branch.
VII. Strengthening Local Government.
VIII. Strengthening the General Assembly.
IX. Strengthening the Courts.
X. Strengthening the Constitution.
XI. Ten Acts To Accomplish the Program.
1. An act to provide for the organization of the State government.
2. An act to provide for the organization and operation of the departments of the State government.
3. An act to provide for the reorganization of executive departments.
4. An act concerning administrative procedure of executive departments.
5. An act concerning the establishment of administrative adjudication boards for the executive departments.
6. An act concerning the revision of the Constitution of the State of Connecticut.
7. An act concerning compensation of the governor and lieutenant governor.
8. An act concerning the appointment, tenure, salary maxima of executive department commissioners, administrative adjudication board members, and executive officers of legislative and judicial departments.
9. An act concerning the appointment and tenure of executive and departmental assistants.
10. An act concerning the receipts and disbursements of State funds.

Following is a summary of consolidations of officers and departments which will be effective if the proposal covering such consolidations is approved.

New agency	Existing agencies from which it would assume functions	
	In full	In part
1. Executive Office of the Governor	5	1
2. Office of Personnel Services	3	1
3. Office of General Services	2	5
4. Office of Public Works Services	4	2
5. Finance Department	13	8
6. Labor Department	9	2
7. Commerce Department	9	0
8. Agriculture and Natural Resources Department	27	2
9. Highways Department	9	0
10. State Police Department	5	1
11. Motor Vehicles and Aeronautics Department	3	1
12. Military Department	7	0
13. Education Department	11	1
14. Health Department	30	6
15. Welfare Department	7	3
16. Mental Health Department	9	1
17. Corrections Department	12	0
18. Housing Authority	2	0
19. Judicial Department	9	0
20. Legislative Department	9	1
Subtotal, whole agencies	184	[1] (35) 18
Total	202	

[1] The 35 agencies from which functions would be assumed in part are equivalent to 18 full agencies.

NEXT STEPS

The commission recognized in Act No. 1 that there cannot be an intelligent detailing f plans and specifications until the basic arrangement of existing governmental functions is agreed upon.

In Act No. 2 the commission proposed the termination of its own existence—14 months before its statutory limit. The mission of stage one accomplished, the commission recommended its replacement by a temporary commission on organization and operation of the departments.

An appropriation of $500,000 was proposed for the job of detailing plans and specifications for operation of the consolidated departments. The commission noted that this

amount represented only one-fifth of 1 percent of appropriations for 1949–51. It further concluded that this amount monthly was viewed as a savings goal to follow complete installation.

Many commission proposals involved basic constitutional changes. These included short ballot (for financial and executive management); initiative, referendum and recall (for executive and party responsibility); and new means of constitutional change.

These constitutional changes being so fundamental, it was clear that mere amendment was not the means. The commission proposed an entirely revised constitution for submission to referendum in November 1950. No attempt was made to write an ideal document. The effort was limited to modernizing the language of the 132-year-old constitution, incorporating the proposals essential to accomplish the State organization plan, and adding other matter now partly covered by statute, which the commission believed should be included in a constitution written for 1950. Act No. 6 carries the text of the proposed constitution.

In Acts No. 4 and No. 5 the commission proposed the adoption of an administrative procedure act and the establishment of administrative adjudication boards for the executive departments.

In Acts Nos. 7, 8, and 9 provision was made for the appointment, without confirmation, of department commissioners, bureau directors, their executive assistants, and confidential assistants. Act No. 10 proposed the consolidation of all funds into the State general fund.

On March 9, 1950, the general assembly, convened in special session. It is now studying and debating the report, which is available upon request.

Attacks on Hon. Joseph R. McCarthy, of Wisconsin

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Red Defenders Smear Senator McCARTHY," from the Maynard News, Maynard, Minn., of April 7, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RED DEFENDERS SMEAR SENATOR McCARTHY

"To Senator McCARTHY:

"We are not deceived by the propaganda being used against you in your present exposé of communism. The 159 members of this organization feel that you are doing a great patriotic work. May God sustain you in this great effort. Signed Lutheran Men's Club, Silo Lutheran Church, Cottonwood, Minn."

This resolution was forwarded to Senator McCARTHY in Washington, D. C., and to the Minneapolis and St. Paul newspapers.

The propaganda against Senator McCARTHY has been more vicious than usual. Drew Pearson has been especially vociferous in his insinuations against the Senator from Wisconsin.

In its more academic style, the editors of the Minneapolis Star and Tribune have created the impression in the minds of their readers that McCARTHY is irresponsible, that his statements are groundless and false and that he is doing a great deal of damage to our State Department.

They have by innuendo and insinuation indicated that there is something not quite honorable about the fighting Senator from our neighboring State. At the same time, the Star-Tribune have published the malicious statements of Drew Pearson and Mrs. Roosevelt, who are notorious for their smear attacks against anyone who dares point a finger of suspicion at the radical "untouchables" in the Federal administration.

As a result of the one-sided reporting job being done by the Associated Press and the prejudiced editorial handling of the McCarthy incident, most people in Minnesota are of the opinion that McCARTHY made a lot of wild charges and then failed to produce the evidence.

As a matter of fact, McCARTHY has produced evidence of his charges.

This writer has just finished a careful study of a 24,000-word speech made by Senator McCARTHY on the floor of the Senate last week Thursday.

Included in this speech were dozens of affidavits, sworn statements, letters, and other documented material which prove conclusively that Owen Lattimore and John Service are poor security risks at the very least, and possible conspirators against the Government of the United States.

Senator McCARTHY did not accuse Judge Doris Kenyon of being a Communist and a traitor, but did say that she had an affinity for Communist fronts because she belonged to 28 of them. Judge Kenyon called McCARTHY a liar, and the newspapers played up that story. A few days later Mrs. Kenyon admitted to the Senate Investigating Committee that she had belonged to these organizations, declared by the FBI to be Communist fronts, but that she was not a Communist or even a Communist-fronter.

If a person belongs to the Baptist Church, he is a Baptist. If he belongs to the Lutheran Church he is a Lutheran. If he belongs to 28 Communist-fronts, then he must be a Communist-fronter. That makes sense, doesn't it?

The critics of Senator McCARTHY say that he should not have publicly exposed the names of the suspected reds in the State Department until proof could be established. That is exactly what McCARTHY asked of the Senate investigating committee, but because of the insistence of two Senators, LUCAS and WITHERS (both Democrats), Senator McCARTHY was eventually forced to testify at a public hearing instead of an executive session of the committee. McCARTHY showed more restraint and common sense than did the administration forces on the Senate committee. Yet, he is the only one criticized by the propagandists.

The Democratic members of the committee had been encouraged by the statement of President Truman that he would "cooperate with the committee" to disprove the accusations of Senator McCARTHY. Neither he nor the committee were open minded in their consideration of McCARTHY's charges.

Because Owen Lattimore is by far the most implicated in the Communist conspiracy, and because he is the brains behind some of the other figures in the controversy, Senator McCARTHY has decided to make his first fight on the one case. As he unveiled the affidavits and evidence last Thursday afternoon he handed the documents to an agent of the FBI with the request that the FBI follow up the leads and compile the evidence which will prove or disprove his charges. It is not hard to understand why he has bypassed the partisan Senate committee and is taking his case to the American people via the Senate floor.

The CONGRESSIONAL RECORD of March 30 details at considerable length, the long history of collaboration by Owen Lattimore with the Communists of this country and China. In fact, the evidence turned over by McCARTHY to an agent of the FBI who was in the Senate at the request of the Wisconsin Senator, was so conclusive that McCARTHY named him as a Soviet agent.

Here is a brief summary of the evidence McCARTHY turned over to the FBI:

A former top Communist will testify that Lattimore was known to him to be a member of the Communist Party, over whom they had disciplinary powers.

He presented an affidavit showing that Lattimore received instructions in Moscow from the Soviet Government as to the line which the Institute of Pacific Relations ought to follow.

He turned over an affidavit from a former general of the Russian Army, who agrees to testify also, that he had received information from a top Russian intelligence officer to the effect that the Russian Communists were having excellent success through the Institute of Pacific Relations and he particularly mentioned the name of Owen Lattimore.

Another affidavit tells of the six persons involved in the Amerasia case at the home of Lattimore where they were declassifying secret documents. The FBI arrested the six the next day, and charged them with stealing secret documents. They were indicted later, but in spite of what the FBI called an airtight case against them, only one was indicted and fined. John Service was fired by the State Department and then rehired and promoted when Dean Acheson became the new Secretary of State.

In a letter to Joseph Barnes, former head of the OWI, Owen Lattimore instructed him to fire all Chinese who were loyal to the Nationalist Government of China, and hire Chinese from the staff of the New China Daily News, which was a well-known Communist publication in New York. This was at a time when the United States was committed to all-out cooperation with the Nationalist Government which was helping us in our war against Japan.

McCARTHY turned over another affidavit from a man who lived with Lattimore in China, who declared that Lattimore was the leader of several pro-Russian student uprisings in China.

Throughout Senator McCARTHY's speech he was heckled by proadministration Senators, seeking to embarrass him and to confuse the issue. Our own Senator HUMPHREY was particularly loud in his abuse of McCARTHY, but the fighting Irishman from Wisconsin soon put him to rout, much to the amusement of the galleries and the other Senators.

In addition to the evidence briefly mentioned above, this writer has spent several hours reading excerpts from books written by Mr. Lattimore. They were filled with a great deal of pro-Russian, pro-Communist bias, and, on the other hand, the author was apologetic when he mentioned the United States, its foreign policy, and the capitalistic system.

Senator McCARTHY is doing his country a great service. In spite of what the so-called intellectuals of the country may think about his methods, this writer has observed that it takes a blast of dynamite to jar loose the little click of left-wingers, sly subversives, and radicals who infest our Nation's Capital.

We predict again that Senator JOSEPH McCARTHY will win his fight and that American democracy and our world prestige will gain, rather than lose, by the house cleaning that we hope will follow.

More power to you, Senator McCARTHY.

A Chinese newspaper summed up Senator McCARTHY's charges against alleged Communists in the State Department by a single line: "What do you know, Joe." The editor might have added, "Why be so wary, Harry."

Drew Pearson, hatchetman for the Frankfurter clique in the administration, tried to

make it appear that McCARTHY had committed some kind of a crime when he ran for the Senate without resigning his judgeship in Wisconsin. He also made insinuations about McCARTHY's income-tax squabble with the State of Wisconsin. Now who's making wild accusations? Drew Pearson is a regular contributor to the editorial page of the Minneapolis Star.

Spartanburg County, S. C.

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. BRYSON. Mr. Speaker, the county of Spartanburg, S. C., has been recognized as the greatest fresh-fruit producing county in the United States. Her orchardists have invested much labor and money in the cultivation of their trees. Occasionally late frosts destroy the crop, as is the case this year. Peaches valued at approximately $6,000,000 have been destroyed, but in spite of this unprecedented loss the farmers and orchardists of Spartanburg County have not despaired. They are carrying on with courage which has made them self-reliant.

In this connection, under unanimous consent, I insert in the RECORD the following statement recently issued about the outstanding accomplishments and productive capacity of both farmers and industrialists in Spartanburg County:

Spartanburg County has turned the mid-century point, riding the highest crest in her history. She has had her ups and downs during the past 50 years but today faces the future with confidence.

The picture, as it will look in the year 2000 A. D., will depend much on the courage, foresight, initiative, ability, faith, and hard work of her people. That, plus the intelligence with which the county's God-given assets are utilized.

Before we tackle the second half of the century it would be well if every citizen of Spartanburg County paused for a moment to take inventory to see just what it is that makes us tick.

A look at Spartanburg County's economy proves conclusively that her future is bound inescapably to the fortunes of her greatest industry, the textile industry.

The textile mills of the county provide the motor which makes our vehicle move. The direction in which we move—either forward or in reverse—pretty much depends on the driver.

If the motor is kept in good condition and enough fuel is available to keep it running, Spartanburg County can expect to continue to improve her lot.

You and I, the drivers, hold the key to the direction in which we move.

Forty and eight-tenths percent of Spartanburg County's white population, over 16 years of age, is employed today in one of the county's 43 textile mill units, operated by 23 companies.

Twenty thousand, three hundred and thirty Spartanburg County people are employed in the textile mills of the county—this number is 110 percent greater than the total of all farm owners, farm managers, farm foremen, paid farm laborers, and unpaid family farm laborers in the county.

Forty-four million, eight hundred thousand, nine hundred and fourteen dollars in wages were paid to Spartanburg County textile mill employees last year. That sum represents 85 percent of all of the industrial wages paid in the county during the year.

Twenty times more dollars in wages were paid to textile workers in Spartanburg County last year than the total cash value of the county's important peach crop during 1949.

Twelve times more dollars in wages were paid to textile workers in Spartanburg County last year than the total cash value of the county's important cotton crop during 1949.

Seven times more dollars in wages were paid to textile workers in our county last year than the combined value of the peach crop and cotton crop of the county during the year.

Two hundred and fifty-eight days was the average number of days worked by Spartanburg County's textile mills during 1949, thus providing stable year-round employment.

Agriculture and textiles are the basis of Spartanburg County's economy. The growth of each has been both tremendous and healthy during the past 50 years.

Today, when the farmer encounters difficulties other than weather, labor, or insects he can usually look to the Government for help in the form of price supports and Government purchase of surpluses.

When the operators of our textile mills meet with difficulties of any nature they must work out their problems for themselves. They are dependent on the stability of market, labor, and legislation for their survival.

Agriculture is important to all of us. It must be advanced and maintained in a healthy condition. And so, also, must we help to keep the textile industry healthy.

The continued successful operation of the textile mills in Spartanburg County is the greatest single guaranty for security for the individual man and woman of the county.

If our textile mills prosper we will all share in the benefits.

If our textile mills are allowed to become sick, the result will be the biggest calamity in the history of the South.

Such is our dependency upon the condition of the textile industry here in Spartanburg County.

Because it means so much to each of us and because it forms the basic economy of our county, the textile industry deserves the interest, cooperation, support, and sympathetic understanding of every citizen of Spartanburg County.

The Truth in Russia

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Washington Evening Star of May 1, 1950, entitled "The Truth in Russia":

THE TRUTH IN RUSSIA

The latest example of how truth is mutilated behind the iron curtain is furnished by Pravda's presentation to the Russian people of Secretary Acheson's recent address to the American Society of Newspaper Editors. Never has the Soviet propaganda machine done a more thorough job of making words mean the exact opposite of their real meaning. The distortions involved, the absolute butchery of fact, the deliberate transformation of white into black, and vice versa, can only be described as an almost perfect application of the totalitarian technique of telling lies so big, bold, and dazzling that the masses are mentally numbed and blinded into believing them.

Thus, in substance, Mr. Acheson's speech amounted merely to the outline of a peace policy calling for six lines of action: (1) That the American people keep alive a militant faith in freedom for themselves and the world; (2) that they join with like-minded peoples in letting mankind know what this faith is and what it has accomplished and can still accomplish for human betterment; (3) that the United States be strong and adequately prepared to preserve liberty wherever it now exists; (4) that present and future aid programs be used to improve the economic lot of free humanity; (5) that the non-Soviet, independent nations organize politically for common action through existing international machinery, and (6) that the idea of aggression be eliminated between these nations and Russia.

But how has Pravda—which, ironically enough, means "truth"—reported and interpreted all this to the people of Russia? Under the name of M. Marinin, one of its high-powered international commentators, it has summarized Mr. Acheson's program as follows: (1) "A further armament race, a greater orgy of militarism and an extension of the cold war"; (2) action to bring about the "economic enslavement of western Europe by the forcible creation of a single western European market under complete domination of American monopolies"; (3) placing all dependent and colonial countries under the mastery of the United States; and (4) enlargement of the Atlantic Pact bloc into "a kind of superstate of Wall Street."

Taken simply by itself, this complete misrepresentation of Mr. Acheson's address might be a source of amusement to people interested in the absurdities of totalitarian editorializing. But there is nothing really funny about it. It is tragic, poisonous, dangerous. It is all of these things because the Russian masses—sealed off as they are from the outside world—have access only to Moscow's version of the facts, the Voice of America being pretty much jammed out. In time, unless this condition can be corrected, the falsehoods they are hearing will become gospel truth to them, and the outlook for peace and understanding between their world and ours will be bleaker than ever.

Investigation of Subversive Activities

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 2 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Charges of 'Asset of the Kremlin' Boomerang" from Capper's Weekly of April 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHARGES OF "ASSET OF THE KREMLIN" BOOMERANG

(From a radio address broadcast by Arthur Capper, former Senator from Kansas, over WIBW, the Capper publications station at Topeka, April 2, 1950)

President Truman's scathing denunciation of Republican Senators for criticisms of the State Department, in a press conference in Key West last Thursday, centers attention on some vital developments affecting the foreign policy of the United States.

The President accused Senator MCCARTHY, of Wisconsin, and Senators associated with him of attempting to "sabotage the bipartisan foreign policy of the United States."

I had been of the opinion that the White House and the State Department, through concealing from Senator VANDENBERG and other Republicans on the Senate Foreign Relations Committee—as well as from Generalissimo Chiang Kai-shek—the promises to Stalin at the Tehran and Yalta Conferences that resulted in turning over China to the Communists, had pretty well sabotaged the bipartisan foreign policy some time ago.

SECRECY ON FOREIGN COMMITMENTS

A bipartisan foreign policy in which the administration makes secret commitments as far-reaching as those made at Yalta and other conferences, and then calls on the opposition party to support these regardless, is not much of a bipartisan foreign policy, according to my way of thinking.

It is more like calling for bipartisan support for a very partisan foreign policy of very dubious value to the United States. And when the President of the United States follows up that charge with the further direct charge that Senator MCCARTHY—and by implication also Senators WHERRY, of Nebraska and BRIDGES, of New Hampshire—are the Kremlin's greatest assets in this country, I think he is venturing rather far afield.

Now I do not hold any particular brief for Senator MCCARTHY in his specific charges as to how many and which persons in or connected with the State Department are, or have been in the past, promoting the interests of a foreign government. He says the evidence is in the loyalty files of the Department. And so far the contents of those files have been kept secret.

But I do happen to know this much about the matter. Neither Senator WHERRY, nor Senator BRIDGES, nor MCCARTHY, was present at the Yalta Conference where the Chinese National Government, our ally, was sold down the river and Stalin was given the go ahead signal for the conquest of China.

OTHER EXAMPLES OF AIDING RUSSIA

Nor were any of these three consulted when other commitments were made which gave eastern Germany, and most of central Europe, over to the control of Soviet Russia.

We do know that Alger Hiss sat in with President Roosevelt and Stalin at the Yalta Conference. And that Alger Hiss was a power at the San Francisco Conference which drew up the United Nations Charter, which contains provisions that turned out to be much more favorable to the interest of Soviet Russia than to the interests of the United States of America.

And through the work of the House Committee on Un-American Activities, and the activities of a Federal grand jury, and the action of two Federal trial juries, we have learned considerable as to Alger Hiss' extracurricular—if that is the right term—activities while he was in the State Department.

Also there is little real doubt in the minds of those who have been in touch with the results of our foreign policy, particularly our Far East foreign policy, that what has resulted from that program has been of more benefit to Soviet Russia than to the United States of America. Or to our ally, China.

AND WHO BETRAYED CHINA TO RUSSIA?

The tale of what various persons representing our State Department, and various organizations and persons which and who Secretary of State Dean Acheson says have no State Department ties, is a long tale, and does not redound to the credit of this country.

So I say it comes with a very poor grace for President Truman to charge that Republican Senators trying to clean up the State Department are the greatest asset of the Kremlin in this country, when the record of the past 4 or 5 years seems plain enough that it was the State Department's Far East policy which did so much to turn China over to the Communists.

I again call attention to the fact that no Republican Senator was present, or had anything to do with, or even had any knowledge at the time of the betrayal of our ally, Chiang Kai-shek, to Stalin at the Yalta Conference, but that Alger Hiss of the State Department was there, and was said at the time to be one of President Roosevelt's most trusted advisers.

On the record as disclosed to date, would you say that the Senators, WHERRY, BRIDGES, and MCCARTHY, or representatives of our State Department dealing with the Far East (specifically China) have been assets to the Kremlin?

WILL TRUMAN BLUFF AGAIN IN 1950?

I believe the answer is self-evident. And I hope the Republican leadership will stand by their guns, instead of running for cover as they did when President Truman, in 1948, made equally unjustified charges against the Republican Eightieth Congress. Harry S. Truman bluffed the Republican national leadership to a fare you well in 1948. Will he do it again in 1950?

I note also that on Friday Secretary of State Dean Acheson made two pronouncements concerning far-eastern affairs.

First, he announced that one Owen Lattimore, now just home from Afghanistan (where he had been investigating for the United Nations the prospects for the United States sending funds into that region under President Truman's point 4 program for developing backward countries) is not in the employ of the State Department. Also that so far as Secretary Acheson can learn, he never carried much weight in the State Department.

Senator MCCARTHY maintains differently. Perhaps some day we will get at the facts of this case.

Dr. Lattimore is said by his friends to be a recognized authority on Asia and Asiatics. He at one time was head of the Institute of Pacific Relations and editor of its official organ, Pacific Affairs. Also, he wrote a book, Solution in Asia, of which the publisher's announcement (1945) said, and I quote:

"He (Dr. Lattimore) shows that all the Asiatic people are more interested in actual democratic practices, such as the ones they see in action across the Russian border, than they are in the fine theories of Anglo-Saxon democracies which come coupled with ruthless imperialism."

Perhaps it is just as well, if Dr. Lattimore sees actual democratic practices across the Russian border, and contrasts these with the fine theories of Anglo-Saxon democracies—coupled with ruthless imperialism, that Dr. Lattimore wields little or no influence in our State Department. But in our dealings with Russia over China the past few years, our State Department seems to have held much the same views.

UNPUBLISHED PROVISIONS AT YALTA

But not now. Not anymore. For on Friday last Secretary Acheson's other pronouncement deal with the ruthless imperialism of Russia in grabbing half the oil and minerals produced in the far west province of Sinkiang in Communist China.

"It seems clear," he added, "that the effect of the unpublished agreements arrived at in Moscow last winter was to award to the U. S. S. R. preeminent rights in China's strategic western provinces."

Secretary Acheson said such exploitation has been witnessed in Manchuria and eastern Europe. But he said nothing about the unpublished provisions of the Tehran and Yalta agreements President Roosevelt and Mr. Hiss entered into with Mr. Stalin by which Russia was assured control of Manchuria, and as an end result of which she has taken over all the mainland of China.

Americans have little to brag about in the history of our Far East policies the past decade.

I doubt very much if President Truman can dispose of the charges of disloyalty in the State Department, by saddling on Senators who most emphatically have not been allowed even to know the inside of what has been going on there the responsibility of being the greatest assets of the Kremlin in this country.

You may remember he tried to dispose of the Whittaker Chambers charges that Alger Hiss furnished secret State Department information to Russian agents, by calling them a red herring.

CRYING "RED HERRING" NOT ENOUGH

Since that time Alger Hiss has been convicted of perjury for denying, under oath, the truth of these charges.

A Dr. Charles Fuchs, a refugee German scientist entrusted with top atomic secrets, has admitted in London to being a Soviet agent at the time he was under loan by Britain to the United States during the war.

A woman employee of the Department of Justice has been convicted of betraying official confidential material to a Soviet citizen, an employee of the United Nations.

A number of persons are reported to have been released from the State and Commerce Departments as being poor security risks. It is odd how many of these have shown up later on the pay rolls of the United Nations and its agencies.

I don't believe this situation can be cleared up by counter-charges of "red herrings" and assets of the Kremlin in this country.

Our German Policy

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. ROOSEVELT. Mr. Speaker, the fundamental reason for my joining in the sponsorship of this resolution for an over-all review of our German policy leaps from every newspaper, magazine, and book that deals with the future of Europe. Reporters of every political persuasion agree that the key to that future is Germany. Each day, skilled journalists, public officials, businessmen, scholars, and trade-union leaders remind us of this.

Here are some of the quotations from articles that I have seen within the last few days. The last issue of Time Magazine quotes John Cowles, president of the Minneapolis Star and Tribune, who is just back from Europe:

The German problem * * * is the vital factor.

The New York Herald Tribune carries a column by Joseph Alsop that begins:

This complex, fear-distorted German situation is the key to the European future.

The New Leader carries a provocative article by Irving Brown, AFL representative in Europe:

This symbolic demonstration of Russia's major concern with China in the east and Germany in the west sums up Soviet aspirations for eventual world domination.

The current issue of Congress' own Legislative Reference Service's Public Affairs Abstracts bears further witness to this. Writer after writer on the Problem of Germany makes the point that "Germany occupies a focal point in the current east-west conflict"; that "settlement of the German problem may well determine the future of Europe."

There is no need to belabor this fact. The success or failure of our occupation policy will be felt by unborn generations on every continent in the world. Our foreign-policy makers and administrators, on the whole, have possibly done the best that could be expected in the face of ominous, world-wide cold war. But German policy cannot be made effectively on a basis of moving from crisis to crisis; often of not moving until a little too late. It is time the very fundamentals of our German policy were reviewed, and our west German goals restated. It is time for a national, bipartisan audit of the net effect of the day-to-day decisions of the military and civilian leaders who deal with Germany.

We need the greatest clarity of purpose in Germany. We need continual assurance that our victory was not a vain one, that our expenditure of American treasure for that victory and for the occupation has not been a waste. We went to war in 1941 because we had no choice, because we were attacked. But we fought for more than survival, we fought for a peaceful world in which democratic freedom could flourish. I do not think that it is too much to say that Germany may well be the cradle or the grave of new freedom and a new peace. There are no higher stakes; there is no greater challenge.

We should not need the spur of Russian competition in this matter; but need it or not, we have it. Soviet leadership well understands the all-pervasive importance of the direction of Germany's development. Abundant evidence of that is in the opening portion of the report of the AFL's Irving Brown:

NEW GERMAN "DRANG NACH OSTEN" EXTENDS FROM RUHR TO SHANGHAI—MOSCOW, BETWEEN BOTH, HOPES THUS TO CONTROL ENTIRE WORLD

The new German "Drang nach Osten" is under way. This time the drive to the East extends to the very shores of the Pacific Ocean. For the Russians are now attempting to win the battle of the Ruhr via China and thus conquer all of Germany.

In addition to the markets of eastern Europe, Ruhr industrialists cannot but cast longing eyes on the great and vast areas of primitive, underdeveloped China now resting in Communist hands.

On December 21 the seventieth anniversary of Joseph Stalin's birth was celebrated in Moscow. At the side of Stalin were Mao Tse-tung, leader of the Chinese Communists, and Walter Ulbricht, president of the Soviet-dominated East German Republic.

This symbolic demonstration of Russia's major concern with China in the east and Germany in the west sums up Soviet aspirations for eventual world domination. This symbolic joining together of China and Germany via the U. S. S. R. became a little more concrete when, on February 9, Herr Ulbricht announced that his Minister of Trade, Herr Handke, had been taking part in trade negotiations with Mao during the latter's stay in Moscow. Ulbricht further revealed that Handke had been instructed in the negotiations to take into account export possibilities of the West German enterprises.

Thus the Soviets have advanced one step further in their drive to conquer the Ruhr and Western Germany through the bait of eastern markets—European and Asian. And as history has shown, such economic relationships with totalitarian nations give rise to eventual political pacts or traps.

What will the West do? What can it do to resist this growing menace of a new eastern orientation on the part of Germany? What markets in the West will be open to German industry which will permit some solution of the growing and disturbing mass unemployment, now reaching 2,000,000 out of a working force of 12,000,000 in Western Germany?

Can western Europe and the United States provide not only markets but an integration of the West German economy into the Occidental world? Many of the West's industries are competitive to Germany's and therefore do not easily permit the kind of complementary arrangements usually possible between industrial and nonindustrial areas.

The urgent need for west European integration in which Germany plays its part has become the order of the day. However, more than the mere offering of markets is necessary to prevent the threatening German-Russian alliance. No matter what the West does in the way of integration, expanding markets, and the opening of new market areas, the fact remains that Germany will still have to seek markets in the East.

Therefore we need political allies in Germany more than economic solutions. Reliable democratic forces in control of the German economic and political system can bar the way to any new German-Soviet political alliance. Integration into western Europe must be backed up by a policy of supporting the internal forces of German democracy, which are the only guaranty against this rising tide of the East. This can be found in the organized labor movement.

If the trade-unions are given a decisive voice in the control of the Ruhr coal, iron, and steel industries, no German nationalist deal with Stalin is possible. These pro-West forces can prevent the rise to power of a renascent and insurgent German nationalism and prevent entry into a pact with the Russians, who are now offering what appear to be juicy business contracts. But if unemployment continues to mount and no economic solution is forthcoming from the Western World, these growing economic relationships with the East will constitute the material foundations for a united Germany under Soviet domination.

Mr. Speaker, whether the colors of their flags are brown or red, totalitarians have a way of winding up together. We cannot risk, nor can the other peoples of the Western democracies, a union of Communist and reborn Nazi imperialism. Such a union would be a disastrous end to the cold war. Such a union would crush all hope for a lasting peace. The only sure way to prevent the emergence of such a union is to build a stable democracy in Western Germany, and then to cement it into a cooperative alliance of free peoples. If we can bring about that "situation of fact," our "total diplomacy" cannot fail.

We can lose nothing by a Presidential Commission such as is proposed here. If it makes the slightest contribution to strengthening our German policy, it will have justified itself. Compared with the billions of dollars we are spending, compared with the millions of men we have committed, this step is a tiny one. But there is, at the very least, a strong possibility that it would help us to make use of these billions and millions with greater wisdom and sharper effect.

Cotton

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. BRYSON. Mr. Speaker, Cotton Week is being observed throughout the country. The Maid of Cotton, Miss Elizabeth McGee, after an extended tour of Europe, has been fittingly welcomed to her home town of Spartanburg, S. C., in my district.

The importance of cotton is so well expressed in the accompanying statement, under unanimous consent, I include it as a part of my remarks:

COTTON AND YOU

As you read this, no matter where you are, you can reach out and touch cotton.

If it's daytime and you're fully dressed, you will find cotton in your clothing even to your shoes. If you're in bed you are lying on cotton. Even if you read this in the tub, you can reach out and touch a cotton wash cloth or towel.

Maybe you have thought of cotton as something growing in a field, as something they use in textile mills, or as all sorts of things in your favorite store. Cotton is all of that, but all of its leads to you. You and cotton depend on each other in hundreds of ways—so many ways, in fact, that if some devil-inspired magician should wave a wand and suddenly take cotton away from you—

Your first handicap and major embarrassment is the immediate disappearance of cotton from your clothing, even to the reinforcements in your hose, and the laces and linings in your shoes. You are up against it even to get home. If you walk, you have to go barefooted because your shoes have fallen apart for lack of cotton stitching. And you can't ride, because no buss, cab, bicycle, or railroad car runs without cotton in its electric wires, tires, seats, or other parts.

When you get to the living room, you find a drastic change. The malicious magician has removed the strong cotton tapes that held the venetian blinds or has taken out your cotton shades. The beautiful fresh curtains and drapes are gone from the windows. You

start for the easy chair to relax and pull yourself together, only to find that the handsome washable slip covers have been taken away and the soft cotton padding has vanished. The floor may seem more inviting than the naked frame and springs of the big chair, but gone is the cotton or cotton stitching from the rug and from the mat beneath it.

But the kitchen is having troubles, too, with no cottonseed oil shortening or salad dressing, and no meat from animals fed to tender perfection on cottonseed meal. The electric refrigerator has shortcircuited because of no cotton windings for the wires. And there is, in addition, the problem of dish cloths and towels and pot holders.

But dinner can be prepared, if there is a coal or gas stove in the house—no kerosene because of the cotton wicks, and no electric stove. You have to sit on the bare frame of the dining chair because the familiar cotton-covered seat has done a disappearing act. Snowy fresh table cloths and napkins are out unless you happen to have some pure linen ones around. (Don't forget to eat before dark, for the cotton wrappings are gone from the electric wires all over the place, and lamps and candles are no good without cotton wicks.)

A bath before bed—and what would be more soothing now than a hot bath and then a rub-down with a clean, fresh towel? But that's impossible * * * there are no towels, no wash cloths, no bath mats.

And so to bed. But how different your bedroom is tonight. The anticotton magic has left you no spread, sheets, or pillowcases. The mattress is bare of ticking and padding—you will probably want to discard the whole thing, because even the inner springs are no longer boxed in cotton. You can't even rest your weary head on your pillow—with no cotton ticking it is now only a pile of feathers.

You can't hop into the family car and get away from it all—you can't even use the car without the 65 pounds of cotton that should be in its various parts. To make matters still worse, you can't use the telephone or radio—they are both out of order. (It's those cotton-wound wires again.)

Minor medical care, much less an operation, is practically out of the question. A doctor's office or hospital where there is no gauze, absorbent cotton, adhesive tape, X-ray machine, table pads, sheets, mattresses, or ether applicators would be a dangerous place.

But no magician could do that. Cotton is with and around you day and night, from the time you start life in a cotton diaper to the time the undertaker lays you on cotton padding in a casket. From cradle to coffin, and every day of every year in between, cotton is serving you in dozens of ways you see and recognize, and in hundreds of ways you don't. Cotton's service, its certain comfort, its easy washability, its convenience and beauty are so ever present that they often come to be taken for granted.

Yes, cotton is important to you—so important that you use nearly four times as much of it as of all other fibers combined.

And you are important to cotton—tremendously important. Fifteen million workers on cotton farms, in cotton factories, and in processing plants are glad when you buy a spool of cotton thread, a cotton handkerchief, or cotton clothes for work or play or dress. They are glad when you buy flour or feed or sugar in cotton sacks, when you put on cotton socks or hang cotton drapes or curtains. Because you mean jobs and health and happiness to them.

You and cotton—you two have done, and can do, a mighty lot for each other.

Repeal of Excise Taxes on Distilled Spirits

EXTENSION OF REMARKS
OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. HELLER. Mr. Speaker, distilled spirits excises were imposed by the Federal Government from 1791 to 1802, again from the Civil War to the World War, and again after the repeal of prohibition. During the whole history of such taxes it has been argued that taxation restricts drinking of the beverages on which levied; and that if drinking is not stopped by taxation, at least those who drink must be patriotic about it. Their beverage must help pay for the war—civil war, world war, or cold war—and they must drink down the national debt—1791 and post-World War II. The first of the purposes, to restrict consumption, is not valid other than in wartime, as it constitutes a discriminatory burden on a necessity and an unwarranted infringement of personal liberty. The excise is not justifiable at any conceivable schedule of rates, other than as a means of picking up revenue for immediate war purposes when no other revenue resource is available. But even if the purposes of the tax were accepted, the rates have been so immoderate as often to result in a confusion of purposes and to thwart their accomplishment.

Repeal of the excise on distilled spirits is urgent now, as is apparent from a review of the character of the tax when in operation. First, excise rates on distilled spirits have been so high as to cut into the yield of the tax. In recognition of this effect, the tax was repealed in 1802, and rates were sharply reduced after the Civil War. Following the reduction in rates after the Civil War, this excise became the principal source of Federal internal revenue, from 1873 to 1915. Current tax rates, established during the Second World War, subject this commodity to higher excises than are applicable to any other commodity affected by wartime excises. As a result, the yield of the tax has fallen during a period of expanding adult population, higher incomes, and availability of materials of manufacture. Second, the tax has been, at whatever rates levied, an infringement of the liberty of consumers and of the liberty of business to pursue and develop a line of manufacture and sale. In recent years the excise, levied on a commodity which always has been more a necessity than a luxury, has tended to lower standards of living, and to bring business difficulties to the retail and manufacturing firms engaged in the industry. Diminishing returns to the Government have been accompanied by loss to consumers and to the producing interests. Third, this excise, urged on the pretext of reforming the public morals to suit certain conceptions which never in any place have been universally accepted or even long accepted by a majority, has always contributed to lawlessness. It led to the whisky rebellion in its earliest days, and in later periods has led to moonshining and bootlegging. It contributes toward intemperate use of the beverages on which it is levied.

These characteristics of the excise are discussed in more detail in the following paragraphs:

First. The rate of tax established by the Revenue Act of 1943 is $9 per proof gallon. This rate is about 42 cents out of every dollar of the price to the consumer—a rate more than twice as high as the highest rate—20 cents—levied on any other commodity subject to the wartime excise taxes. The rate, in addition, is heaviest on the workingman or workingwoman who buys less expensive brands; the rate does not go up or down with the price per bottle. The repressive effects of the tax are clear in the following figures showing reductions in revenues, whisky withdrawn, and purchases as percent of spendable income:

Fiscal year	Receipts from distilled-spirits tax	Whisky withdrawn, tax-paid
		Tax gallons
1950 (6 months)	$788, 958, 000	
1949	1, 431, 741, 000	52, 674, 964
1948	1, 471, 209, 000	53, 903, 209
1947	1, 728, 854, 000	58, 822, 676
1946	1, 788, 460, 000	63, 228, 912
1945	1, 516, 855, 000	63, 891, 224
1944	918, 311, 000	58, 832, 992
1943		87, 913, 792
1942		84, 709, 171

Distilled spirits purchases as percent of disposable income

Fiscal year:	Percent
1949	2.0
1948	2.0
1947	2.6
1946	3.2
1945	2.9
1944	2.6
1943	2.4
1942	2.3

Losses of revenue are apparent in the years since the end of the war. Tax rates have gone beyond the point of diminishing returns. In a period when the adult population was increased by more than 8 percent, total consumption of taxed spirits declined, and in a period of rising incomes, the portion spent on spirits fell. The tax has been discriminatory against the manufacture and consumption of distilled spirits. The war portion of the excise rate was intentionally discriminatory, and consequently is peculiarly unjustifiable at the present time. The cost of excises exceeds the cost of manufacture by 7 or 8 times, following the Civil War pattern of immoderate rates. At that earlier period, rates were 10 times the cost of manufacture. At the present, as at the earlier time, the rates exceed the point of diminishing returns.

Second. As result of discriminatory taxation, the purchase and production of whisky and like beverages is not regulated by a balancing of consumers' desires and purchasing power against business costs, but by arbitrary legislation. The tax limits the operation of the forces

of a free market, of the very foundation of economic liberty. As has been remarked of the tax since first levied in 1791, it contravenes individual liberty. It operates in the same direction and under the same animus, as the prohibition amendment. But, unlike prohibition, it is in such form as not to be referrable to popular vote, where it would be rejected. Its infringement of personal liberty, like that of prohibition, has brought resistance by consumers. Consumer resistance, as is obvious from data already quoted, has caused a loss of revenues and has become burdensome to the distilling and to the retailing industries. The excise makes the industry incapable of free and effective competition with other industries for the consumer's dollars.

The depressive effects on an important industry must be taken into account in a period of growing unemployment. The distilled-spirits industry directly employs 800,000 persons. There are 773 producing and processing units in 26 different States, and 184,000 retail outlets, principally small businesses—in 47 States and the District of Columbia. These retail outlets have hundreds of thousands of owners and employees. The purchases made by the distilling industry provide indirect employment for hundreds of thousands of workers in other industries. Overtaxation of distilled spirits jeopardizes the markets and the employment of all these industries and workers. The tax is oppressive to those arts and industries which require distilled spirits as a material in manufacturing. This always is characteristic of such excises. Today, as in Civil War times, the tax exceeds the manufacturing cost of the alcohol which goes into drug items.

Repeal of the excise would free purchasing power, now taken by the Government, for consumer purchases of distilled spirits in additional volume. More than that, it would make available purchasing power which would move into all consumer spending channels, benefiting the entire economic system. Low-income groups in particular would be benefited, because 85 percent of all distilled spirits are purchased by consumers with incomes of less than $5,000 per year. It is obvious that the substantial cut in liquor prices would permit a fuller enjoyment of leisure time, enabling many people to entertain more frequently and at less sacrifice. A substantial contribution to improved business and to higher standards of living would be made possible by the repeal of the distilled-spirits excise.

Third. An excise, which, together with State taxes, amounts to about $2.05 on the average per fifth of liquor, is so high that temperate drinking is almost prohibitively expensive for many working men and women. The excessive cost makes it possible to drink only occasionally and irregularly. An immoderate use of the beverages becomes more likely as use becomes more irregular and longer postponed.

Excessive cost has another obvious and more readily measurable consequence. It increases moonshining and bootlegging. Evidence of this is found in the increase by 46.4 percent from 1946 to 1949 in the producing capacity of illicit stills seized by the Federal Government. The stills seized in 1949 by the Federal Government's agents alone, not including State seizures, had a daily capacity of 240,809 gallons. This represents a potential daily loss of $2,167,281 in revenues to the Federal Government in excise taxes alone. Further losses of income and other taxes would be involved. The high taxes make illicit operations extremely profitable, to the injury of legitimate business and to the detriment of the consumer who gets a lower-grade product.

Mr. Speaker, repeal of the excises would benefit consumers in terms of higher standards of living and greater individual liberty, would be beneficial to industry generally, would reduce lawlessness by making it unprofitable, and would not involve commensurate loss of revenue to the Federal Government.

Winning the Peace

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. VORYS. Mr. Speaker, under the leave given me to extend my remarks in the RECORD, I include my opening statement in a panel discussion this morning with Mr. Walter Lippmann, newspaper columnist, Mr. Paul Hoffman, ECA Administrator, and Mr. Eugene Holman, president of the Standard Oil Co. of New Jersey, before the thirty-eighth annual meeting of the United States Chamber of Commerce in the National Chamber Building here in Washington on the subject Winning the Peace:

WINNING THE PEACE

STATEMENT BY REPRESENTATIVE JOHN M. VORYS, MAY 2, 1950

As a mere Member of the House, my viewpoint on our foreign affairs is probably very limited. I have no inside, advance information. We House Members never hear officially about any American foreign policy until it is time to pay; then it is presented as a commitment we must carry out—or else.

On the other hand, our policy makers know very little about the House. For instance, the President said last Thursday that he hoped the Foreign Affairs Committee of the House would see fit to adopt the Connally plan of area subcommittees to bring about greater understanding and confidence between the State Department and the House. Well, we have had such area subcommittees in the House Foreign Affairs Committee for the last 5 years, and the President didn't know it. Apparently these subcommittees did not bring about very much Presidential understanding. As for confidence, we might have more of it in the President and the State Department, if they would, just once in a while, take us into their confidence.

To arrive at policies for winning the peace, we need, first of all, a reform in some policies and politics right here in Washington.

We are hearing a good bit these days about a bipartisan foreign policy, whether we have one or ought to have one. I wish we had a real bipartisan foreign policy, but this will require three things: first, bipartisan consultation before the policy is determined and the country committed; second, cooperation during the committee and floor consideration of legislation, and third, proper credit given both parties for the formulation and implementation of the policies. In order to have a working bipartisan foreign policy, politics must stop at the water's edge not only in the spring when bills are on Capitol Hill, but in the fall during presidential and congressional campaigns.

As to the need for unity in foreign policy; in this perilous period between peace and war, I believe it is more important for our country to be right than to be united. History is strewn with the wrecks of nations whose people were united in the wrong course.

But foreign policies on which we can safely unite should not only be bipartisan, but bicameral. There are two Houses of Congress and as our foreign policies have become more and more expensive, action by the so-called lower House has become more and more important, and its Members are becoming less and less inclined to furnish whatever the administration wants, merely because it has been approved in advance by a few Senators of both parties. At present, diplomatic relations are strained not only between Capitol Hill and "Foggy Bottom," where the State Department is located, but also between the two Chambers on the Hill. One step toward developing policies that will win the peace, would be for not only the Republicans and Democrats, but the State Department, the Senate, and the House, to get together. I am sure the House is willing.

Under the circumstances, I can only present my own ideas on the cold war from a limited viewpoint and based on such information as you all have. For 4 years I have felt that in this deadly struggle between communism and freedom war is inevitable unless there is revolution over here or over there; but peace is inevitable some day, before or after war, and this time we want to win the peace.

How will we know we have won the peace? From my limited viewpoint, it will be when we can safely reduce our military expenditures to police force size; when we will not have to cope with spying, sabotage, and subversive activities in Government and other key spots, directed from abroad and designed to overthrow our Government.

Even if we win the peace, we will still have problems to solve, economic, military, political, and moral. We may have inflation or depressions or bad government; we are sure to have arguments and crime and cussedness. Eternal vigilance will continue to be the price of liberty. But when we can safely reduce our armaments and safely reduce our loyalty checks here at home, we will have won the cold war.

That day looks a long way off right now. I have voted for all of the administration's cold-war measures before the House to date: Voice of America, Greek-Turkish aid, Marshall plan, arms aid, point 4, increased national defense, and they have not won the cold war. Instead, we need more arms and more loyalty checks here at home and we are on the way to bleeding ourselves white through the insidious, temporarily painless, method of inflation through an unbalanced budget.

Things have gone wrong in Asia and in Europe.

Asia is being overrun by the Communists. We could have prevented it. In spite of the

defeatist attitude of Messrs. Acheson and Jessup, who follow the Lattimore line, we might still change the result in China, but only if our policy makers change their minds or if we change policy makers. We have had a bipartisan China policy on Capitol Hill since 1947 and it is written into law in the China Aid Act of 1948 and that act is still the law, but it has not been carried out by the Executive. Instead it has been evaded and misconstrued and action delayed by those charged with making it effective. I have seen recent letters from Formosa from reliable military and governmental people, showing how the furnishing of aid now authorized by law to the Chinese Government we recognize might even yet be effective to stop Soviet Russia in its conquest of Asia, but our policy is still to relax and enjoy it. I feel certain that we cannot win the peace while Asia is going Communist.

In western Europe we have done our part, but the nations of Europe have failed to achieve the unity, economically and politically, that is their only salvation in war or peace. Paul Hoffman has done his part. There is a propaganda of ridicule against him for carrying out the mandate of Congress encouraging unification of Europe. It is becoming the style in certain quarters to sneer at his attempts to break down the age-old rivalries, hatreds, and jealousies that these nations can no longer afford. Right now isolationism in Europe, particularly in Britain, is more damaging in the cold war than any isolationism in the United States. We cannot win the peace with 17 separate, independent, feeble allies in Europe.

We even have columnists who preach isolation, neutrality, as a policy we should encourage for Japan, Germany, and China. I believed in neutrality once. I thought we could remain neutral. I found out, however, after 2 wars, that this country was with neutrality as with prohibition; they could take it or leave it, but they always left it. In this present deadly struggle we will find out that those who are not for us, for the side of freedom, will soon be lined up against us, whether they want to be or not. We cannot win the peace with a neutrality belt around Russia.

Point 4 will not win the peace. Technical assistance and encouragement of investments are fine ideas, but neither of them is bold or new. I know of nothing in recent years that has been more thoroughly oversold, here and abroad, than point 4. I was present in the United Nations when their point 4 program was adopted, last November, by unanimous vote, with no abstentions. This vote caused great joy in UN circles, because the Soviet and its satellites joined in the vote for the first time since the early days of the UN, but it aroused my suspicions. Coming as I do from the House committee that picks up the check on our foreign aid commitments, I naturally looked into their resolution to see what the unanimous arrangements were for paying for this United Nations program. I found there was no provision for payment at all. Who do you think those 59 nations think is going to pay the biggest part of the cost? What are 58 of those 59 nations going to say, especially the Soviets and their satellites, if we flinch when we are handed a statement for the total dollar cost of their program? Point 4 is still very fuzzy in UN and United States thinking. If it is cleared up and carried on sensibly, it can mean a better world some day, but it won't win the peace.

We now have the ITO charter before our committee. It is probably the most exceptional document in world history. While it is supposed to set up a code of fair practice for all international trade, over 90 percent of world trade, except our own, will come under the exceptions for a period of from 2 to possibly 15 years. The pressing present problems of recovery, balance of payments, outworn historic trade preference and undeveloped countries are not solved, but merely excepted and accepted. The ITO proposal is 5 years old, the charter is 2 years old, and the only nation in the world that has unconditionally approved it is Liberia. ITO will not win the peace.

Perhaps all of this sounds depressing. It ought to; it seems so to me. Perhaps, even though no single one of these policies will win the peace alone, a combination of them will help. I hope so. Do we have any chance to win the peace? I think so.

I am still for a policy of containment of Russia. No more territory must be yielded by the free people to Russian aggression or infiltration, and when free people are threatened, we must help. This policy has worked in Greece, and Turkey, and Trieste, and western Europe. Where it was not tried, as in China, we have lost. It has been an expensive policy. We must reduce the cost as postwar recovery progresses. We must insist upon mutual aid; other nations must help themselves and each other and us. There are two great risks in this policy: First, we may overstretch our resources, and second, we may get into war. Both of these dangers threaten if we abandon containment and try neutrality, appeasement, or isolation. We can bleed ourselves white arming to the teeth here at home and if we finally stand alone, we will have war. I have seen war-devastated countries; I believe our policy should be based on having our wars away from home if possible. This policy is not as selfish as it sounds. None of the other free nations want to be overrun again, because they know how little will be left next time for liberation. We give them their chance, too, when we arrange to start to fight alongside their forces, on their borders, and plan together to hold the arsenal of democracy intact.

But we need to take the offensive on the ideological front. We must do more than tell how good we are and how bad the Communists are. What is the greatest need of the world today? Better world government. We have world government now, but it is not very good. A United Nations paralyzed by vetoes and walk-outs, international law as set forth in treaties and in books, plus 34 other international organizations, 7 semi-autonomous under the United Nations, 10 inter-American, and 16 miscellaneous, plus ECA; these constitute world government now. These organizations, including the United Nations, cost the United States three or four million dollars a year. The failure of all of them to give us military security costs us about $14,000,000,000 a year in addition. Our part in all of these international organizations is carried on by the State Department, which costs us over $100,000,000 a year. This is called total diplomacy. I think we need less diplomacy and more government in international affairs. We should try to strengthen the United Nations and seek its development into some sort of world organization open to all nations, with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law. Note that I say "open to all nations"; the organization might not include all nations at the start; I do not see how it could include Soviet Russia on a basis that would be satisfactory to us without a revolutionary change in that country, but such an organization should leave its doors open for nations to join who can and will comply with its membership requirements.

The principal foes of improved-world government are:

1. Communists.
2. Certain patriotic organizations.
3. The diplomats.

The Communists are for world government, but it must be a dictatorship of the proletariat ruled from Moscow and anything else is capitalist imperialism.

Certain patriotic groups in our country are expressing opposition to anything that surrenders any of our sovereignty. They are too late. What we need is something that will regain for us a little more sovereignty. What we need is some organization where our vote counts for more than Luxemburg or Yemen. The highest attribute of sovereignty is to decide when to go to war. Actions of other powers over which we have no control at all, not even a vote, have thrust us, unwillingly, I think, into two world wars. We want at least a vote next time and we want a vote equal to our population or to our contribution. We do not want to be relegated, by European ideas of national sovereignty that are only about 300 years old and already outworn, to a one-sixtieth vote in the affairs of the world.

The diplomats like our present kind of world government. The United Nations at present is only a council of ambassadors. The United States delegation is chosen and instructed by the President. If there is to be any representation of the minority, the opposition party, the President selects the representative and instructs him. That is the diplomatic way of life. Running the world that way is total diplomacy. I think we want decisions on world questions to be made by representatives of people, not diplomatic representatives. We need more of law and less of the fencing of diplomats, to win the peace.

These are generalities. To work out the details of better world government is going to take a lot of work. A number of voluntary groups are trying it now and they disagree among themselves, are misunderstood by the public, and are ridiculed by the old-fashioned diplomats whose work has always ended up in war. What is needed is some Yankee ingenuity and some American know-how and resourcefulness and inventiveness, applied to international political problems. The Government will not do it. The Council of Europe, launched at Strasburg, was the work primarily of European statesmen out of power. Those in power like the diplomatic way.

Our work for better world government should be the spearhead of our ideological offensive, when we talk over the Voice of America. In our discussions we might even feel that the new United Nations should guarantee to every state, as our Constitution does, a republican form of government. This may have astounding results. Remember, the most revolutionary document in history is not the Communist manifesto of 1848, but the Declaration of Independence of 1776, which declares that when people are threatened with "absolute despotism it is their right, it is their duty, to throw off such government."

At the outset, I said war is inevitable unless there is revolution here or behind the iron curtain. We want a revolutionary change in Russia. To obtain it, we must never again, in peace or war, make the mistake of demanding unconditional surrender. We must remember that peace, not war, is inevitable. Holding out the mailed fist, and at the same time, the right hand of Christian fellowship, is difficult, but we must learn to do it.

Force will rule the world, but we must depend more on moral force, spiritual force. Humanity is still incorrigibly religious and we must be on God's side in the struggle for the minds and hearts of men against godless, ruthless communism. To win the peace, we must first of all deserve to win.

Panama Canal Reorganization

EXTENSION OF REMARKS
OF

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. ALLEN of California. Mr. Speaker, the subject of legislation regarding the organizational aspects of the Panama Canal is being considered as indicated by the recommendations of the Special Subcommittee on Panama Canal Tolls, as set forth in House Report 1304, Eighty-first Congress, and the recommendations for legislation set forth in House Document 460, Eighty-first Congress, in which was transmitted a report of the Director of the Bureau of the Budget.

A short time ago a former colleague, the Honorable Willis W. Bradley, sent to me an editorial published in the March 1950 issue of Marine Progress, setting forth the viewpoint of the merchant marine, as understood by that publication, in order that I might have the benefit of the views expressed. In order that the Members of the House may be familiar with the article, I include it as a part of these remarks.

The article is as follows:

PANAMA CANAL REORGANIZATION

Less than 5 years ago the first moves were made in respect to the modernization of the Panama Canal, and the maritime industry was first apprised of the tense controversy that subsequently became known as the Battle of the Levels, waged by the proponents of the sea-level canal and the lock type with the added feature of a terminal lake at the Pacific end similar in function to that of Gatun Lake at the Atlantic end.

In the subsequent studies it was reestablished that the tolls received by the Canal authorities were expected to pay for whatever reconstruction or modification that was to be attempted. An alerted shipping industry watched developments carefully, and later, when President Truman, on the advice of Canal officials, ordered an 11-percent increase in tolls, the protests were both immediate and forceful. The toll increase was progressively postponed until it now stands at April 1, but with every likelihood that it will be either rescinded or indefinitely postponed until the entire Panama Canal situation is clarified, not only as to the proper rate of tolls but also as to modification so as to get the best canal possible.

CHANGING VALUES

Since the atomic bomb was developed and with a hydrogen bomb in the making, the question of defending the Canal has been relegated to a position considerably behind other factors affecting the operation. If a successfully placed bomb of atomic or hydogen power was detonated in the Canal area there would be a deactivated canal, no matter whether it was a sea-level waterway or a lock canal. That leaves the marine operating factor high on the list of desirable characteristics of whatever waterway is to be developed.

The emphasis on the costs of the canal modernization brought attention to the question of what burden the tolls now carried, in other words what did commercial shipping pay for aside from being taken from one ocean to another? I developed that tolls were paying for practically all expenses of operating the Canal Zone, such as schools, administration expenses of all kinds, maintenance of cemeteries, transit of Government vessels, highways, garbage disposal, police and fire departments, and many others. It is the contention of the shipping industry that these expenses should be borne by the departments responsible and not charged against the transits of the waterways.

As a result of the interest the tolls question has stirred up, plus the ever-present question of adequate modernization, the President transmitted to the Congress the report of the Bureau of the Budget on the organization and operation of the Panama Canal.

In his letter of transmittal the President informed the Speaker of the House that he had issued two Executive orders, one delegating to the Governor of the Panama Canal the authority to determine the internal organization of the Panama Canal and the second which transfers certain business operations from the Panama Canal to the Panama Railroad Company. The object of this last is to facilitate future transfer of all business operations to the Company. These moves were in accordance with the recommendations of the Bureau of the Budget but the President said that there were others that required congressional action.

The first of these is the authority to transfer the Panama Canal to the Panama Railroad Company. The second is for the change of the name of the Panama Railroad Company to the Panama Canal Company. Third, to authorize the Company's board of directors to establish toll rates, subject to the President's approval. Fourth, permit the company to retain and utilize toll revenues and, fifth, to authorize appropriations to the company to cover losses which might result from changes in economic conditions.

The President recommended legislation to bring about these changes.

INVESTIGATIONS

Last August the President ordered the Bureau of the Budget to make a study of the Canal's organizational aspects and this study has recently been completed and the report to the President made. In its study the Bureau uncovered a number of factors that have tended to stand in the way of a more flexible operation of the Canal. As a matter of fact it discovered that the executive order issued by President Wilson in 1914 outlining how the Canal should be operated is still the only order in force in the Canal Zone.

The Bureau also informed the President that the Panama Railroad Company, as a corporation owned by the Government, was on a self-supporting basis, was run on a businesslike basis, had control of its revenues insofar as operation, maintenance, and expansion were considered and paid into the Treasury such surplus as was earned in the form of a dividend. The Panama Canal, on the other hand, is a Government agency, its revenues are turned over to the general fund of the Treasury and the money for its operation, etc., comes from an appropriation by the Congress.

TOLLS POLICY

The controversial tolls situation was studied by the Bureau and the report made on this phase of its studies was as follows:

"The treatment of the Panama Railroad Company and the Panama Canal as separate entities for financial and accounting purposes has not provided a clear basis for a sound tolls policy. Although the 1937 Special Committee on Panama Canal Tolls and Vessel Measurement recommended that in considering expenses and revenues the Canal and its adjuncts, including the corporation, should be regarded as a single enterprise, this practice has not been followed.

"Under the existing formula, revenues from tolls, together with profits from the Canal's business operations and miscellaneous revenues from licenses, fines, etc., are expected to produce an amount sufficient to cover operating expenses of the Panama Canal (including civil government, health, and sanitation) and a 3 percent return on the capital investment. Neither the revenues nor the expenses of the corporation are included in the tolls base. Consequently, the Canal would now automatically lose the benefit of the profits of any business activity transferred from it to the corporation. This fact has naturally led to opposition by the shipping industry to any such transfers.

"No uniform pattern has been established for allocating to the corporation its share of the civil government, health, and sanitation. The corporation is required to pay for hospitalization of its employees (but not outpatient care and dispensary service), garbage collection, police and fire protection of its own facilities, but it contributes nothing toward the upkeep of municipal police and fire protection, the Canal Zone school system, cemeteries, streets, highways, and sewers. The cost of the latter services is borne entirely by the Panama Canal. The corporation does bear its full share of the costs of overhead administration, such as the Governor's office, accounting department, and so forth.

"The most controversial aspects of tolls policy are (1) the interest charge on the capital investment; and (2) the question of whether any of the costs of constructing, operating, and maintaining the Canal should be allocated to national defense.

"The principle that Federal business enterprises should pay a rate of return on the Government's investment equal to the cost of the money to the Treasury is now well settled. The President recommended in his 1948 budget message that 'Corporations should be required to reimburse the Treasury for the full cost of the money advanced to the corporation.' There is no reason why the Panama Canal and its adjuncts should be exempted from payment of interest since they are essentially Federal business enterprises. However, at current average long-term rates the Panama Canal would be required to pay interest at the rate of approximately 2.3 rather than 3 percent.

"Whether any part of the capital costs of the Canal should be allocated to national defense presents a problem to which there is no positive answer. The Canal admittedly does serve a dual purpose—defense and commerce. However, any attempt to establish which purpose was primary at the time the Canal was built would be an utterly fruitless undertaking. An equal number of statements on either side can be found, often by the same individual, to support whatever conclusion one wants to reach.

"Studies made by the Bureau of Efficiency in 1931, and by the special committee in 1937 determined that no major part of the capital costs of the Panama Canal should be allocated to national defense. The only additional feature of the Canal which might not have been included if it had been constructed exclusively for commercial use is the increase in the width of the locks from 100 to 110 feet. Actually the additional width has been an important factor in facilitating the approach to, and handling of, commercial vessels in the locks. There would appear to be no significant added costs in the construction of the Canal attributable solely to national defense.

"The subsidy to national defense comes not from a failure to allocate capital costs but from the fact that military and other Government vessels do not pay tolls. While a record is maintained of such free transits, no allowance is made for them in the tolls base. This policy stems from an interpretation of an Attorney General's opinion in 1915. That interpretation need not be controlling for, while the Attorney General did hold that free transits would not constitute a treaty violation, he did not rule that it would be

illegal either to require the payment of tolls by Government vessels, or to credit them in the tolls base.

"The cost of transiting a military vessel through the Canal is just as much a national-defense cost as the cost of operation of the vessel itself. It is in no sense an essential part of the cost of operating and maintaining the Canal. Yet, the cost of free transits is now included with the other costs which the commercial user of the Canal is expected to meet by the payment of tolls. While during the period from 1921 to 1939, free transits have averaged 4.1 percent of total Canal tolls, during what may be considered the war years (1940–45) the volume of free transits averaged 26.2 percent, and in 1945 reached 64.5 percent. The total amount of free tolls from 1921 to 1949 amounted to $64,194,574.

"The military pay for most of the other services which they obtain from the Panama Canal, such as hospitalization, water, electricity, garbage collection, etc. The only major item of this type for which the military do not pay is the school facilities for children of military personnel and civilian personnel employed by the military. Over 45 percent of the school population of the United States rate schools at the present time consists of children whose parents are members of the armed forces or employed by the Army, Navy, or Air Force.

"The Coast Guard reimburses the Panama Canal for the maintenance of two of the most distant offshore lighthouses, but the Canal meets the cost of the other offshore lighthouses.

"To look at the other side of the picture, the Canal receives certain services from the military without reimbursement. These consist principally of Army and Navy personnel assigned to duty with the Canal. Salaries paid by the military to such employees of the Canal amount to approximately $430,000 per annum."

TRANSFER OF THE CANAL

There has been considerable opposition to the Hoover Commission recommendation that, "There be established in the Department of Commerce a grouping of all major nonregulatory transportation activities of the Federal Government." This means, according to some officials the inclusion of the Panama Canal, while to others it means nothing of the kind. The Budget Bureau report agrees with the Hoover Commission and stated that the Canal would clearly come under the definition of a transportation activity. The Bureau also sees that some of the disputes that arise could be easily settled by such a change. It reported to the President, "The Governor under existing arrangements operates at a serious disadvantage when he attempts to persuade the Secretary of the Army to overrule his military advisers. Often the best he can hope for is no action. Some of these questions could undoubtedly be settled more expeditiously by across-the-board discussions between the Secretary of Commerce and the Secretary of Defense. It would only be on rare occasions that unresolved issues would have to be taken to the President."

The New Isolationism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. MULTER. Mr. Speaker, in his usual clear and penetrating way of thinking and expressing his thoughts, the noted columnist Walter Lippmann analyzes the recent address of Herbert Hoover, particularly that part of his address in which the former President advocates a reorganization of the United Nations. The effect this would have on our foreign policy and the inescapable meaning of such a step is clearly indicated by Mr. Lippmann as a withdrawal to isolation. I believe every Member of this House should give thought to this matter, and for that reason I am placing Mr. Lippmann's column from the New York Herald Tribune of May 1, 1950, in the RECORD:

TODAY AND TOMORROW

(By Walter Lippmann)

COMMUNISM AND THE ISOLATIONISTS

Mr. Hoover's address to the American Newspaper Publishers Association will help many who have been trying to understand the views and the intentions of the old-guard Republicans. The main puzzle has been how to reconcile their warlike and crusading fervor against communism and Soviet Russia with their growing opposition to ERP, military aid, point 4, and all the other measures of that sort. The old-guard Republicans in the Senate talk as if they were about to advocate a declaration of war. But increasingly they are disposed to vote as isolationists.

Mr. Hoover's speech provides the key to this paradox. It is that the old-guard Republicans wish us to retire into isolation during a great roar of anti-Communist noises.

"The world needs," said Mr. Hoover, "mobilization against this creeping Red imperialism. The United States needs to know who are with us in the cold war against these practices and whom we can depend on." With these bold, brave, and resounding words, Mr. Hoover declared: "Therefore I have a proposal to make."

And what was the proposal he had to make? It was that if the United Nations cannot be reorganized without the Communist nations, if, in other words the Soviet Union and its satellites cannot be expelled, then a definite new united front should be organized of those people who disavow communism. In plain English Mr. Hoover is advising us to withdraw from the United Nations and therefore to break it up, and then to form a new united front of those who disavow communism. In his view, apparently any nation which does not vote to expel the Soviet Union and its satellites from the United Nations has not disavowed communism.

Mr. Hoover's new united front, which he would organize after withdrawing from the United Nations, is, he says, "specifically not a proposed extension of a military alliance or any color of it. It is a proposal based solely upon moral, spiritual, and defense (sic) foundations." Mr. Hoover made it quite plain elsewhere in his speech that he means it when he says that the united front is not to have the color of an alliance. For at every opportunity in his address he sneered at the idea of helping countries which, when they oppose Soviet Russia, run risks and need support. Thus, of military aid, Mr. Hoover could say only "in persistence of an old habit we are taking up the check."

So the new united front, if Mr. Hoover has his way, will consist of the United States plus those nations which, without costs to the United States, feel able unaided to take such a vital stand. Thus, Mr. Hoover's new united front against communism is not very new. It is certainly not very united. It is not much of a front. It is a proposal to scuttle the United Nations, and—though Mr. Hoover does not quite say so—the existing western framework of collaboration through the security pact and the Marshall plan.

The new united front against communism, as Mr. Hoover virtually admitted, is the new isolationism. "It may be," he said, "that the non-Communist world is not willing to take such a vital stand"—not willing, that is to say, to wreck the United Nations, not willing to challenge the Soviet imperial power without guarantees, alliances, and support. Mr. Hoover is prepared to see the new united front come to nothing. Indeed, he expects it to come to nothing, saying that "it may be the non-Communist world is not willing" to follow him. What then? "At least it would clarify what we have to do." What do we have to do? Mr. Hoover never quite clarified that. But what he means oozes out of every phrase in his address. He proposes to live alone, associated only with those who are as purely and perfectly anti-Communist as he feels he is. If the American people would follow him, they would then have repudiated the whole foreign policy of the United States, and indeed the history of the world, as it has developed since Mr. Hoover left the White House. Again we would withdraw into isolation—there to brood once again upon our own moral superiority.

Thus we see how the new isolationism works: how with the drums and the trumpets of an anti-Communist crusade the old guard is beating a retreat from what Mr. Hoover calls, truly enough, "an expensive and dangerous cold war." Mr. Hoover has made it all much plainer, and that, in a way, was a public service.

World Government

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include an article on World Government, by Thomas L. Stokes, which appeared in the May 1, 1950, issue of the Worcester (Mass.) Evening Gazette.

Mr. Stokes' comments on and review of this important subject are timely, thought provoking, and very interesting. They illustrate quite vividly that "hope springs eternal in the human heart," especially for peace in this modern, troubled world.

The article follows:

WASHINGTON, May 1.—When things look discouraging, as they do now in the world, it is helpful—without being pollyannish about it—to look at the constructive efforts being made for peace and to recognize the real vigor they possess despite all distractions.

More than ever is there reason for redoubling those efforts through organized activity.

Cold war tension is perhaps at its peak as we observe this week the fifth anniversary of the opening of that meeting in San Francisco that created the United Nations.

The United Nations still is a going institution. It is doing lots of good throughout the world through various of its agencies, slowly spreading understanding and good will in many ways, even though it is handicapped in tackling some of the major dilemmas that confront the world because of the impasse between us and Russia.

Last week, simultaneously, there were also observances up and down our land, for which governors of States and mayors of cities had issued proclamations, to campaign anew for the next step—for a world federal government with world law. This is the only way, in the end, to check the recurring violators of peace, the aggressors who seem to rise periodically through history, a manifestation of distorted human nature and greed for power that we probably always will have with us, human nature being what it is.

FOR WORLD GOVERNMENT

The vigor of this movement in our Nation was being exhibited last week in earnest men and women who, in increasing numbers, gathered together in public meetings, including church meetings and other specially arranged functions, to rededicate themselves to peace under world law.

They turned aside from the disturbing news of the day to look hopefully forward and to intensify their activity before it is too late.

How effective these people have been—and there are millions of them supporting plans for strengthening union among nations of the world—is revealed in checking over achievements, which it is well to do at this time.

Pending in Congress are several proposals looking toward this objective which are publicly supported, in one form or another, by more than a third of the membership of the House and Senate. Twenty-one State legislatures have passed resolutions endorsing the idea of world federation, which shows the grass-roots pressure behind it. Five of these States—Connecticut, Florida, Maine, New Jersey, and North Carolina—have adopted resolutions asking Congress to call a convention to propose a constitutional amendment to "expedite and insure American participation in a world federal government open to all nations."

SAYS OPPOSITION COMMUNIST

Supporters of the various proposals include persons from all walks of life and of all ranks, high and low—a great middle group. The noisy opposition is agitated by Communists on the extreme left and by groups of the extreme right, a familiar combination.

Nor is the world federation movement confined to this country. It is active and growing in strength all around the globe. There are live and alert world federation groups now in Canada, China, Denmark, England, Finland, France, Germany, Greece, India, Italy, Japan, Luxemburg, the Netherlands, New Zealand, Norway, the Philippines, and Poland. Significant is the fact that France, Italy, and West Germany have causes in their new constitutions enabling them to participate in a world federation when other nations agree to create it, so that no further authority is needed in those cases.

All of this has real meaning, which it is hopeful to consider now in the flood of depressing news. It shows that millions of people all over the world are thinking, speaking out for themselves, and working.

Hon. Hyman Rayfiel

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. MULTER. Mr. Speaker, all of the borough of Brooklyn was grieved several weeks ago at the loss of one of its finest and most-beloved citizens, former Judge Hyman Rayfiel, who died at the ripe age of 89. He was the father of our former colleague in this House, Leo F. Rayfiel, who now graces the United States District Court for the Eastern District of New York.

Hyman Rayfiel was a great scholar of the old school, one who was as well versed in modern law as in the ancient treatises of the Hebrew Talmud. He was a man of deep religious convictions, yet tolerant of men of all faiths; he was a man of high ethical character. He never forgot the humble beginnings from which he stemmed. A penniless immigrant from eastern Europe, he found much for which to be thankful in this country. He loved his adopted land with unbounded devotion. His service to his community was attested to by the throngs who attended his funeral. They came from every walk of life, public and private.

I had known Hyman Rayfiel for many years. All who knew him loved him. As humble worker or merchant, as court interpreter or clerk, as lawyer, magistrate or special sessions justice, he was the genial philosopher always teaching brotherly love. He will be missed by all.

The following tribute appeared in the Brooklyn Eagle of April 30, 1950:

HYMAN RAYFIEL, FRIEND TO EVERY LIVING THING THAT CROSSED HIS PATH

(By Katherine Dangerfield)

Easter Sunday I went to a funeral home in Church Avenue for a last look at Hyman Rayfiel. I shall not call him former Magistrate Rayfiel nor former Special Sessions Justice Rayfiel because I did not know him, never saw him after he had achieved these distinctions. It was in the New Jersey Avenue police court that I knew him, beginning when that court opened in 1907 and he became chief clerk. He was new to his job and I was not old in mine—court clerk and petticoat cub reporter.

In my mind's eye I can see him now seated at his desk in the complaint room on the second floor of what was once the home of the Brighton Athletic Club. He is scattering kernels of corn to a dozen pigeons which flock through the open windows. It is 3 in the afternoon and there is a lull in the sordid grind of the police court. The pigeons are his friends and he is theirs. They perch on his shoulders and feed from his hands. When he calls to them they answer with a cooing that can be heard out in the reporter's room—the only blessed sound to drown out the court's babble of tears, prayers, oaths, and bitter laughter.

His desk is the common roll-top piece of office furniture, but there are several things about it which make it of more than passing interest. You discover there a few things never found on any other business desk. First there is that dish of corn from which the pigeons help themselves when the chief clerk is busy with complaints. Then there is a brass coiled snake, a sly-looking thing with venomous cunning in its eyes, and a forked tongue ready to strike. The chief clerk tells me he would not be without that coiled snake on his desk. It serves a good purpose when he finds in a complainant the same sly look, the same venomous cunning in the eye, and the same forked tongue ready to strike.

SEE NOT, HEAR NOT, SPEAK NOT

Above the snake hangs a small bronze tablet of Hebrew characters; the same to be found on the doorpost of any Jewish home. Beside it, where his eyes rest upon it every time he lifts his head, Kipling's poem, "If you can keep your head when all around you are losing theirs, and blaming it on you." Under the poem a book written in ancient Hebrew, its contents old when Christianity began, and close by two antique Arabic figures, a philosopher and a warrior. There, too, are the three little monkeys of the Chinese—See Not, Hear Not, Speak Not.

All of these things are not just ornaments or knickknacks on a man's desk. To the chief clerk of the New Jersey Avenue police court they are fingers pointing out the way. Between that hoary little volume on his desk and the complaints which he makes out there is a long road running through centuries, but the sinful and the sorrowful who wear a beaten track up the courthouse steps to the complaint room have reason to know that between the two there is a very close communion; for many a wound has been healed, many a shame kept hidden from the world, many a life redeemed, because Hyman Rayfiel regulates his life by those yellowed pages, every line of which breathes kindness, charity, justice, and the brotherhood of man.

In the New Jersey Avenue police court, as a petticoat cub I am often up against it. There I am competing with seasoned newsmen from all Brooklyn and New York papers, some of them veterans from headquarters and city hall. My big worry is my job. I have to make good or lose it. I cannot afford to lose it. I need the job, need it desperately, and the money it pays. Sometimes I do not sleep nights thinking about it. This especially when copy falls down, city editors wax cantankerous, and the whole world seems to go wrong. Then I betake myself to the complaint room and unburden myself to Hyman Rayfiel. He hears me with infinite patience, a quiet smile in his deep gray eyes.

COARSE FARE, EMPTY PURSE

After I have exhausted myself with petty complainings, he tells me of his own early struggles, of the hard road he has traveled; the early misfortunes which dogged his steps; the obstacles he had to overcome; the difficulties he had to surmount; the hod he carried; the horsecar he drove; the coarse fare and the empty purse. He winds up by reading to me a little from Moses, from Buddha and Christ, until I feel that I am a weak, dissatisfied creature unworthy of many blessings and opportunities enjoyed. And then when he leaves his desk to lend a supporting arm to tottering steps, maybe those of fishmonger or a charwoman; when I note him lift his hat to an aged beggar woman who smells of salt herring; and when I see him give of his substance to white and black, Jew and Gentile, to Catholic and Protestant; see him pay small fines to keep small offenders out of jail, I deny that the chief clerk of the New Jersey Avenue police court belongs to any special race or creed. I hold him God's gift to a troubled world.

He was in his forties when he came to the New Jersey Avenue police court. He was born in Austria. When he came to this country he carried his earthly possessions in a small bundle. He was poor, so poor in fact that later he wondered how he ever got by Ellis Island. An Irish contractor, one Patrick Mooney, of New Brunswick, Canada, gave him his first job as a hod carrier. He carried with him to New Jersey Avenue—and maybe to his grave—the envelope in which he received his first pay for that hod-carrier's stint, and the calloused shoulder which the hod left to him. Under that hod his health broke down, and then he took a job in Meyerbeer's silk mills at Hoboken, N. J., and later became a conductor on the Second Avenue trolley line in New York.

Hyman Rayfiel was 30 years old and had eight children when he began to study law. Long before, while working in mills and factories, he had studied at night, keeping himself awake by attaching a pin to the candle which lighted his books, the pin jabbing him in the forehead and bringing him back to life

whenever he fell prostrate across the table, worn out in body and mind. While studying for the bar he took the civil-service examination for court interpreter, passing first on the list with 98.30 in German, 96.70 in Hebrew and English. He was appointed a court interpreter in the fourth municipal court and was holding that office when Magistrate John F. Hylan named him chief clerk of the newly opened New Jersey Avenue police court.

GALL AND WORMWOOD

Meanwhile the political star of Hyman Rayfiel had risen and he became a figure in Brooklyn politics. His activities centered in the Twenty-third Assembly District. Here the Irish and the Jews held common ground and were friends or enemies as the fortunes of the political situation decided. Politics made enemies as well as friends for Hyman Rayfiel. The humble, penniless Jews who had loved him through years of tribulation and had trusted him above all men, began to have doubts when the rich Jews and the Irish began advancing him for public office.

"He has used us for his own purpose and now he delivers us into the hands of the enemy," they said.

To be mistrusted by his own, the poor with whom he had broken bread, with whom he had sat so often in the light of Sabbath candles, with whom he had smiled and wept, was gall and wormwood to the soul of Hyman Rayfiel. Honors are but empty if they find you without the gates, a stranger to your own. And so the heart of the chief clerk of the New Jersey Avenue police court was troubled; and this troubled heart he laid bare to me so many times, just as I had gone to him with my own burdens.

Meantime, the rich Jews of Brownsville would have wined and dined him, clothed him in royal purple, but he would have none of it. And this while the poor ones did not understand. All he wanted out of politics were better housing conditions, cleaner streets, modern schools, libraries, sanitary workshops, and a fighting chance for Brownsville tenements.

AFTER 40 YEARS

I left the New Jersey Avenue police court before he did, going to newspapers up-State and over in Jersey. From odd paragraphs here and there I heard of his appointment as a city magistrate and later as a special sessions justice, but with a silent "good luck to you." I let it go at that. You see, when the friend or neighbor you have known moves up in the procession, should you not wish to have your motives misjudged, perhaps, you will quietly withdraw to the sidelines and from there keep the old regard in kind and enduring remembrance.

But Easter Sunday, after 40 years, I went down to that funeral home in Church Avenue for one last look and a Godspeed to Hyman Rayfiel on his long journey into the sunset. Before starting out I set out on a table two small Arabic figures, one a philosopher, the other a warrior, which he gave me from his desk 40 years ago, telling me then what the world might well heed today—the philosopher is a better guide than the warrior.

Of this, I feel certain: Some day when Brownsville in the Borough of Brooklyn shall raise a monument to its pioneers who laid the foundation of what it is today, that monument will carry the name of Hyman Rayfiel, the humble Canadian hodcarrier who went to the bench of the court of special sessions, and who left behind him, besides the tinsel of life's small honors, the truly golden nuggets of kindly deeds that will live forever in the hearts of the poor, the unhappy, the sinful and the downtrodden. Brownsville owes him a lot. Like me, it may remember him, not as he was on the bench as magistrate of justice but as the chief clerk of the New Jersey Avenue police court, a friend to every living thing that crossed his path

Presidential Commission of Inquiry on Germany

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. JAVITS. Mr. Speaker, the resolution for a Presidential Commission of Inquiry on Germany introduced in the Senate on April 17, 1950, by Senator GILLETTE, for himself and Senators PEPPER, HENDRICKSON, IVES, LEHMAN, KILGORE, DOUGLAS, and CHAVEZ, was today introduced in the House of Representatives on a bipartisan basis by the following members: Representatives JOHN A. BLATNIK, Democrat, Minnesota; EMANUEL CELLER, Democrat, New York; HERMAN P. EBERHARTER, Democrat, Pennsylvania; FOSTER FURCOLO, Democrat, Massachusetts; WALT HORAN, Representative, Washington; HENRY M. JACKSON, Democrat, Washington; JACOB K. JAVITS, Republican-Liberal, New York; HUGH B. MITCHELL, Democrat, Washington; BARRATT O'HARA, Democrat, Illinois; FRANKLIN D. ROOSEVELT, JR., Democrat-Liberal, New York; and CHASE GOING WOODHOUSE, Democrat, Connecticut. It was also endorsed at the same time in a statement by four additional Members.

In introducing the resolution, the sponsors in the House made the following statement:

We are convinced that Germany remains the principal front of the cold war and that as she goes Europe is likely to go. In the European-recovery program, $552,900,000 is provided for western Germany, and through our aid to Great Britain and France (which are also occupying Germany) and the maintenance of our occupation establishment we estimate that the aggregate cost of the German occupation will be not less than $1,000,000,000 for the fiscal year 1950–51. In voting funds for the continuation of our occupation of western Germany, we feel that the House of Representatives has a serious joint responsibility in respect of such occupation policy with the Senate.

It has been charged that the dismantling of industrial plants, particularly in the Ruhr, and that economic restrictions are hampering western Germany and therefore western European recovery. At a time when economy in government is the order of the day, the uncritical acceptance of these arguments could lead to a premature turn-over of full control to the Germans themselves with the gravest consequences to Germany and to Europe. If at this stage full German control should lead to unification of the eastern and western zones of Germany, remilitarization and a new Soviet-German alliance, open or covert, a new and even graver threat of aggression than the world has ever known would be presented. The drive toward German unification which is gaining so much ground today could well make of Germany a new Soviet satellite, for the Soviet under present conditions has everything to trade with—the eastern provinces from which come the 9,000,000 expellees who are Germany's great problem, and eastern markets. A Germany, unified on Soviet terms, would in the minds of most Europeans seal their fate.

A full development of all the facts with regard to any community of interest between ultranationalists and ex-Nazis in the western zone and Communist elements in the eastern zone as well as a complete exposition of how the effort to bring democracy to western Germany has fared is essential information for the American people. A vigorous United States policy along permanent lines is essential. The opinion is fairly general that the political and economic federation of Europe is vital to European security and is an essential framework within which to attain the full economic revival and even ultimate unification of Germany. If we are to continue heavy expenditures and responsibility in the occupation of Germany it must be with our eyes open and with an understanding of the reasons and the objective.

We believe that High Commissioner McCloy, whose impressive talents and record we value, will welcome this inquiry and that the support which it will marshal among the American people will be invaluable to him in the firm and unalterable resistance to Communist pressure in Berlin and elsewhere in Germany which he has already shown.

The four Members endorsing the introduction of this resolution in the House are Representatives CLIFFORD P. CASE, Representative, New Jersey; T. MILLET HAND, Representative, New Jersey; ROBERT W. KEAN, Representative, New Jersey; and JOHN W. HESELTON, Representative, Massachusetts. Their statement follows:

The resolution reflects the acute anxiety which the American people feel as to the future of Germany in relation to world peace. A thorough review of the specific problems with which the resolution deals, as well as of our over-all policy in regard to Germany is most desirable.

The text of the resolution follows:

Whereas, in common with the other free nations, the United States has a vital interest in the maintenance of democratic institutions in Germany; and

Whereas the United States has a vital interest in the development of such economic, social, and cultural conditions in Germany as will further the growth of democratic institutions; and

Whereas the United States has a vital interest in preventing any alliance between Nazi, militarist, or other antidemocratic elements in western Germany, and the totalitarian communism of the east: Therefore be it

Resolved, That the President of the United States is requested to appoint at his earliest convenience a bipartisan commission composed of six (or eight) members and to direct such commission to conduct a study of all matters relating to the conduct and status of American policy in Germany and its coordination with American foreign policy, and to determine—

(a) whether political parties or groups based on antidemocratic ideologies exist and are obstructing American objectives as stated above;

(b) whether German cartels and trusts have reemerged contrary to Allied policy and constitute a threat to German political democracy and world peace;

(c) whether the present German educational system has successfully developed means to further the dissemination of democratic ideas and information about democratic institutions and practices;

(d) whether there is significant evidence of militaristic, ultranationalist, anti-Semitic or other antidemocratic propaganda in the present German press, periodicals, and cinema and over the German radio;

(e) whether the German war potential is being restored to an unwarranted extent and whether German military or paramilitary organizations have appeared;

(f) whether and to what extent persons with prior Nazi affiliation or antidemocratic convictions have penetrated into the political, judicial, economic, educational and cultural life, and the civil service of Germany;

(g) whether prodemocratic elements have been deterred or discouraged from active participation in building postwar Germany;

(h) whether the German people are being encouraged to look beyond purely nationalistic aims toward participation in a broader association of free nations;

(i) whether economic power in Germany has shifted into new hands or is again gravitating to or has been regained by the same individuals, families, or groups who held that power before the outbreak of war;

(j) whether Economic Cooperation Administration funds have been utilized to strengthen prodemocratic elements and tendencies in western Germany; and be it further

Resolved, That the President is requested to direct the commission to make a preliminary report to him, for transmittal to Congress, within 90 days of its appointment, and to report to him, for transmittal to Congress, on or before December 31, 1950, the final results of its study, together with specific recommendations for the future conduct of American policy in Germany.

Housing Act of 1950 Liberalizes GI Loan Privileges

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article from the April issue of the magazine the Gold Star, which sets forth in a brief and concise manner the provisions of the so-called Housing Act of 1950 as they apply to our veterans, their widows, and dependents.

The article is as follows:

Widows of men who died in service or as a result of direct service-connected disabilities are now eligible to apply for Government-guaranteed loans for the purchase of homes or small businesses. This new amendment to the Servicemen's Readjustment Act went into effect with the passage this month of the Housing Act of 1950.

HOUSING BILL PROVIDES DIRECT LOANS TO VETERANS

In addition to the inclusion of the widows in the program, the act greatly facilitates the procurement of loans and authorizes the Administrator of Veterans' Affairs to make direct loans to those eligible for the purchase or construction of houses or for the construction or improvement of farmhouses.

New regulations would provide that, upon application by a veteran or widow eligible for the benefits who has not previously used his guaranty entitlement, the Administrator may make a direct loan upon two conditions. The first condition is that the Administrator must have found that in the area in which the dwelling or farmhouse is located or is to be constructed private capital is not available to finance the purchase or construction of dwellings, or the construction or improvement of farmhouses.

The second condition is that the veteran must show (1) that he is a satisfactory credit risk; (2) that the monthly payments under the loan bear a proper relation to his present and anticipated income and expense; (3) that he is unable to obtain from private lending sources in such area at an interest rate not in excess of 4 percent a loan for such purpose for which he is qualified; and (4) that he is unable to obtain a loan for such purpose from the Secretary of Agriculture under the Bankhead-Jones Farm Tenant Act or the Housing Act of 1949.

A loan under this provision would bear interest at 4 percent, could not exceed $10,000, and would be subject to applicable requirements or limitations prescribed under the existing regulations of the Servicemen's Readjustment Act. The total amount of these loans could not exceed $150,000,000 and the authority to make them would expire June 30, 1951.

California's Indian Funds

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to bring to the attention of this body, which is at present debating the Interior Department appropriations bill for 1951, communications that have come to my office protesting against the failure to include in the committee bill any appropriations to California for services on account of Indians.

As a result of what appears now to have been highly questionable information by certain persons before a subcommittee of our body in February last, on the wishes of the Indians and the needs of the State, California alone was singled out to be deprived of Federal Indian funds. Not only would California's education and health programs be seriously affected by this unjustified cutting off of much needed funds from the Indian Bureau in California and in consequence from the State of California itself, but also our entire social security, construction and irrigation programs, of which our Indian work is an integral part.

While it may be true that the country's entire Indian policy and procedure may need reevaluation, this drastic curtailment of funds from California alone does not seem to me to be appropriate, either in time or in method, to a solution of our Indian problems.

A telegram from the California Teacher's Association, representing 56,000 teachers, and a factual letter from the superintendent of public instruction of California's State Department of Education, are given below:

SAN FRANCISCO, CALIF., *April 11, 1950.*
Congresswoman HELEN GAHAGAN DOUGLAS,
House Office Building,
Washington, D. C.:

California Teacher's Association comprising 56,000 teachers by official action protests discrimination against California by failure to include California in appropriations of Indian funds. Education and health programs will be seriously affected. We strongly urge your support in restoring the California Indian appropriations.

ARTHUR F. COREY,
Executive Secretary, California Teacher's Association.

STATE OF CALIFORNIA,
DEPARTMENT OF EDUCATION,
Sacramento, April 10, 1950.
Hon. HELEN GAHAGAN DOUGLAS,
Member, House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN DOUGLAS: It has come to our attention that Purl Willis, who represents himself as a counselor for certain Indians in California; Norman M. Littell, who represents himself as an attorney employed by certain identifiable groups of Indians in California; Adam Castillo, president of the Organization of Mission Indians; and five Mission Indians from the Mission Reservation in southern California, testified before the Subcommittee on Interior Appropriations on February 28, 1950. According to our information this testimony resulted in the deletion of all of the proposed appropriations to California for services on account of Indians. Included in this appropriation are the funds for the contract between the Indian Bureau and the State Department of Education of California for assistance to school districts which have serious problems resulting from unusual needs for Indians who live within the boundaries of the school districts, and a capital outlay item to provide school facilities in the Hoopa Valley Unified School District which is entirely within the Hoopa Indian Reservation. Other funds included assistance to the health department, policing, Sherman Institute, and other facilities which have been recognized as a responsibility of the Federal Government on account of the Indians living in California.

We are particularly concerned with the deletion of those funds which represent aid and assistance to the Indians of California, particularly in view of the fact that this deletion was made only in the case of the State of California.

The funds for the Indian contract represent $322,000, and the Hoopa Valley school buildings which have been approved by the Congress of the United States in the amount of $800,000. The funds made available to the Department of Education under the Indian contract were allocated to 130 separate school districts in 27 counties in California during the current year and provided assistance to approximately 2,300 Indian children. This assistance in no way whatsoever is a part of the regular funds accruing to school districts on account of the average daily attendance in the districts. All Indian children in California are permitted and are required to attend the regular schools of California. However, Indian lands, if publicly owned, represent no valuation for taxing purposes. Our State apportionment plan provides that a large share of the support for the public schools is derived from local property. School districts which contain any substantial amount of Indian reservation property provide little or no local resources. Consequently, the children in these districts are deprived of their full share of educational opportunity unless assistance is made available. The funds are used in every instance to benefit the Indian children themselves. Much of it is used for school lunches, trahsportation, physical welfare services, and providing additional teachers who otherwise could not be employed by the districts.

The school estimated to cost $300,000 has been authorized to be constructed in the Hoopa Valley Unified School District. This school district is located entirely within an Indian reservation. Consequently, there is no assessable property, as has been indicated

above. The Hoopa Valley Unified School District has a tax rate of $1.55 per $100 of assessed valuation and this tax produces only $560 per year, resulting from taxes on personal property. It is the only high school available for approximately one hundred persons scattered throughout the valley. The enrollment for elementary and high school has increased from 207 to 335 in the past 3 years. Seventy-five percent of this number are Indian children.

The laws in California provide that a school district must provide its own buildings and many do so by voting bonds on the assessable real property of the district. Since there is no assessable real property in the Hoopa Valley School District, it is impossible for this district to provide buildings of any kind. The present buildings are extremely inadequate and were originally built by Federal funds. The fact that the school is located on Federal property presents a very serious problem in connection with any State assistance which may be available to the school district. It is true California recently voted to expend $250,000,000 of state funds to assist distressed school districts with their building problems. The question arises as to whether these State funds may be used for buildings to be located on Federal property. We have many similar situations in California which involve military installations. So far the State has not found it possible to provide buildings on Federal installations and in the case of the military installations, the Federal Government has assumed much of the responsibility for housing. The fact that the Congress approved the construction of the buildings on the Hoopa Indian Reservation is in complete harmony with the practice and policy which has been carried on in California for a number of years regarding Federal property.

The Hoopa Valley Unified School District is a regular school district established under the laws of California which all children living in the district may and must attend. The school is not limited to Indian children, nor are they excluded. In fact, this is true in every school district in California. The statement has been made that since all children, including Indian children, are eligible to attend the State school system, there can be no justification for the building of a school in the Hoopa Valley Unified School District, notwithstanding it has been expressly authorized by an act of Congress.

In answer to the statement that the schools of California are available to all Indian children, it should be pointed out that while this is true in the particular instance at Hoopa, the district is without resources to construct a school and it was on this basis that the Congress of the United States authorized the building in order to provide education for all of the children living within the boundaries of the Hoopa Valley Unified School District. The fact that a small proportion of the children are non-Indian is without importance because the building was planned primarily to provide education for the Indian children.

It has been reported that California was able and willing to provide all school facilities, including school buildings, for all of the Indian children in the State of California. From the statements in the preceding paragraphs it should be clear that while California is willing to do its full share toward the education of all its citizens, nevertheless, it is unable to meet the requirements of the Indian children who reside on property belonging to the Federal Government or on property which has such low assessed valuation that local funds are not available to the public schools.

It has been reported that testimony was given to the effect that $882,000 for the education of Indians in California is a waste of money. It has been reported further that with this money Indian children are actually prevented from going to the public schools and securing an education. Since 1933 Indian education in California has been under the jurisdiction of the State of California with the same prescribed course of study and standards as are required in any other public school in the State. Some of the schools are located on the reservations merely for the convenience of the Indian and non-Indian children who attend the schools. The testimony apparently attempts to give the impression that any assistance given to the schools on behalf of the Indians of California is preventing them from getting an education and is preventing them from going to the public schools. As a matter of fact, every school in California, with the exception of Sherman Institute which is operated by the Federal Government for Arizona tribes, which Indians attend is a public school open to the attendance of all children within the district, whether they be Indian or non-Indian.

On page 24 of the hearings before the Subcommittee of the Committee on Appropriations, Purl Willis is quoted as stating that the Hoopa Indians are wealthy people and they tried last year to take the cost of the construction of the proposed school out of the $6,000,000 judgment fund. We have no knowledge whatever that the Hoopa Indians at any time advocated taking the cost of the Hoopa School out of the judgment fund. As a matter of fact, every transaction having to do with the construction of school buildings in the Hoopa Valley Unified School District has been conducted on its own merits without reference whatever to any other funds. We also are unable to understand who Mr. Willis means by "they." Mr. Willis further states, or at least gives the impression, that children from the Mesa Grande Reservation would be a part of the student body which would attend the school in the Hoopa Valley Unified School District and that this school would be treated as an Indian school. This absolutely is untrue because the Mesar Grande Reservation is in southern California and the Hoopa Valley Unified School District is in northern California. They are separated by a distance of between 800 and 900 miles. I have pointed out before that the Hoopa Valley Unified School District is a regular school district and there has been no attempt in the past, at the present time, or contemplated in the future, to consider it in any manner other than as a public-school district.

We hope it has been made clear that either the direct testimony of Mr. Willis and his associates is incorrect, or his statements have been such as to give the subcommittee incorrect impressions. Mr. Willis, on page 30 of the record, reportedly made the statement that the Indian Bureau staff in California is controlling the expenditure of whatever is paid the State under the Johnson-O'Malley Act and that the Indian Bureau has set up its own State-wide school staff with the result that the Indian Bureau actually is interfering with the State's free public schools.

The Bureau of Indian Education is a part of the Division of Public School Administration of the California State Department of Education and the Federal Indian Bureau does not in any way interfere with the operation of the free public schools of this State. The funds are allocated to the schools for the benefit of the Indian children and decisions in regard to these allocations are fully in the hands of the officials of the California State Department of Education.

It is further understood that the proposed appropriations for the entire United States were approved by the subcommittee with the single exception of California, and that all of the proposed appropriations for this State were completely eliminated, chiefly due to the testimony of Purl Willis and his associates. To single out California alone and remove the appropriations for this State, leaving all others intact, purely upon the word of irresponsible persons who neither represent the Indians, the facts, nor any official body of the State of California, would indeed be a miscarriage of justice.

It is our hope that the subcommittee or other official bodies of the Congress of the United States will see fit to restore these appropriations so that the Indian children of California will not be discriminated against.

In conclusion, it should be pointed out that inasmuch as the Indian children are a part of the regular school system of California, any injustice done to these children has its effect not only upon them but upon all other children attending the public schools.

Sincerely yours,

ROY E. SIMPSON,
Superintendent of Public Instruction and Director of Education.

To a Good Friend

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. KING. Mr. Speaker, I have on several occasions been asked by Mr. Liynhart to place his poem, To a Good Friend, in the CONGRESSIONAL RECORD. I therefore, under unanimous consent, extend my remarks and include therein Mr. Liynhart's poem:

TO A GOOD FRIEND

Humane and kind he was, but if
You found by pure coincidence
He had a heart, he made out gruff
And barked at you on small pretense.

So fierce in love of life he stood
And in concern for who was nigh
His strength, his kin and every friend,
He found no time to slowly die.

—*R. T. Liynhart.*

Thoughts on Beating Communism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. MULTER. Mr. Speaker, some timely thoughts on a problem that is giving nightmares to many, are expressed in the May 1 issue of New Republic by Michael Straight. His article, The Right Way to Beat Communism, is food for thought on this subject. He asks: "Why, at the peak of our power, should we be afraid?" That great president, the late Franklin D. Roosevelt, at a time of national emergency, told the people of this country that the only thing we had to fear was fear itself. Should another emergency arise, the American people will not be afraid to rise to the situation. Our problem is how to avoid that emergency, how to stave off disintegration from within and destruction of our freedom from without. I am certain many

of my colleagues will find this article absorbing reading:

THE RIGHT WAY TO BEAT COMMUNISM
(By Michael Straight)

A major debate on America's world policy is inevitable and necessary. The alternative for our democracy is continued drift and ultimate defeat.

This debate will take place within the framework of an attitude common to all save extremists of left and right which recognizes that Soviet communism is today the greatest organized evil in the world.

Within this area of agreement there are profound differences concerning the size and nature of the effort required of the free nations. These differences have been concealed by the fears engendered by hysteria, the sparring for strategic gains in partisan politics, and the belief among all people of good will that as long as negotiation seemed possible with Russia, our task was to preserve fluidity in world politics.

There are no longer many opportunities for America to cooperate with Soviet communism. But there are major choices to be made in the means of opposing communism and of strengthening the non-Communist world. The survival of democracy depends quite substantially on the clarity and honesty with which these choices are placed before the American people.

As the choices are unraveled, two basic approaches may emerge. They cross the shifting lines of party, class and faith as these lines have formed to meet traditional problems of the past. Yet ultimately they correspond to the classical definitions of conservatism and liberalism as these attitudes have expressed themselves in the past.

The first approach stresses institutions; the second, human values. The first sees in power the means of combating communism, the second stresses progress.

As further illustration, take five aspects of the present struggle and contrast in each the conservative and liberal points of view. We find on the liberal side bold men such as Paul Hoffman and George Marshall, and on the conservative side "leftists" whose intent seems to be the division of society into the damned and the condemned: those consigned to the outer darkness as "fellow travelers" and those who accept the inevitability of war.

THE BASIS OF WORLD COMMUNISM

In analyzing the basis and appeal of world communism, the conservative begins by a defense of the status quo. He may concede that two-thirds of the world's people's live in hunger and poverty caused by low productivity and exploitation. He does not concede that these millions are demanding rapid improvement in their lives with a force that cannot be denied. For the same reason he does not concede that communism, which agitates for rapid change, has any mass appeal. Consequently the conservative is compelled by his original premise consistently to underestimate the appeal and the threat of world communism.

Yet, the threat is only too clear. The conservative undertakes to explain it in terms of the power of Russia as a police state, backed by its agents and by its armies.

James Burnham, the arch conservative in the sense in which the term is defined here, is totally indifferent to the conditions that give rise to communism, and largely unconcerned with economic programs to alleviate those conditions. In his new book, the Coming Defeat of Communism, he is concerned solely with power, and not at all with the purposes for which power is used. Russia to him is a national power, opposed by the national power of the United States. The task is to destroy Soviet power by the extensive use of Soviet techniques. Since his program is devoid of all social principles and concerned only with the destruction and the creation of power, it appeals equally to the amorality of the ex-Communist and the reactionary.

In contrast, the liberal approach to communism has been a humanist approach. Its first premise has been the insistence that for two-thirds of the world's people the status quo is intolerable and demands rapid change. Therefore it has acknowledged the potential of the Communist appeal.

A classical statement of this approach was made 30 years ago by Lord Keynes:

"Whatever the content of Russian communism may be, it represents a gigantic human enterprise. In it men have resolutely embraced a purpose of reform and live tensely under the discipline that faith instills in them. It is simply a misunderstanding of the European to expect that he can hear unmoved that call to new action when he has no standard of a cause as great to unfurl in opposition."

That high point of respect for the Communist appeal was maintained in the thirties by the contrasts of capitalist depression and the need for a common front to Fascist aggression. It was maintained in the war years by the Soviet military effort.

Since the war Soviet communism has emerged as an aggressive dictatorship. Consequently the liberal attitude to Russia has moved swiftly toward the conservative interpretation. Yet the liberal still insists that for poverty-stricken peoples to whom democracy means foreign exploitation and Moscow is a vague name, the potential of communism still remains. An indifference to that potential, a decision to oppose communism on the military front alone, while communism is fighting on economic, social, political, cultural, and psychological fronts, is to guarantee the destruction of the free world.

THE OPPOSITION TO COMMUNISM

The opposition of American democracy to Soviet communism requires a program, and it requires allies.

A program in turn requires Government action and Government funds.

Since they are committed to cutting taxes and reducing the role of the Federal Government in our economy, the conservatives are compelled to minimize all programs. They hesitate on rearmament; they resist endeavors to aid world economic reconstruction by the public investment of American resources.

Both major parties, for example, are committed to full support of the United Nations, both are committed to the point 4 program as a means of strengthening the United Nations and of preventing further Communist encroachment in backward areas. This year the conservatives in Congress have sent the point 4 program off to a flying start with appropriations cut down to one-hundredth of 1 cent in every dollar of our national income.

Burnham once again rationalizes the opposition of the conservatives to the expense and effort of world economic reconstruction by explaining that in the absence of a political "offensive" these efforts are doomed to fail. "The Marshall plan," he explains, "can have no more than a negative success; it cannot produce positive gains." The real problem is "the shattering of the iron curtain," "the smashing of communism" and "the alteration of the power balance." Brave words!

Second, a policy of opposing communism requires allies.

The American conservative lacks allies in today's world. His loneliness tends to reinforce his natural reliance on his inheritance of America's nationalist and isolationist past. Once again Burnham, the philosopher of the conservative approach, rationalizes this deep-seated prejudice. "World politics," he explains, "is * * * the field of struggle between the United States as representative of western civilization * * * and communism with its primary base in the Soviet Union." This argument, absolving other peoples of their responsibilities, like Burnham's further assertion that there is no real distinction between cold war and shooting war, plays right into the Communists' hands.

Where alliances are necessary, the conservative, fearful of positive programs, seeks allies among those who profess anticommunism.

Our best allies, Burnham, explains, are those "who can be relied on to resist communism to the end." General de Gaulle qualifies at once, since he alone in France is firm. Franco, presumably, is such another. A united front with the Vatican is a first priority; the supposed argument that the Catholic Church is * * * a totalitarian movement is, quite apart from its abstract truth or falsity, simply irrelevant.

To the liberal, in contrast, democracy is not a relic, to be paraded on ceremonial occasions, but a principal weapon and means of salvation.

America's first task to the liberal is to raise the living standards of the world to the minimum level at which democratic government becomes feasible. The method is by strengthening the existing and potential forces of democracy, if necessary in opposition to their rulers where these rulers represent a feudal past or a contemporary police state.

The point 4 program is one example of this conflict which remains unresolved. The majority of the backward areas for which technical assistance and capital investment are proposed are governed by unrepresentative and reactionary rulers. These rulers are also our present allies in the cold war. To be effective, technical assistance to these regions will lead directly to social reform and therefore to social upheaval.

Faced with these alternatives, the conservatives will choose to keep the areas backward for reasons of short-term strategic advantage; the liberal will seek long-term security by the promotion of social reform. There is no guiding rule in every case. The decision may often be a matter of pace and degree. Yet the choice is present and pressing on a world scale. Land reform in Italy, tax reform in France, the destruction of cartels in Germany are social issues implicit in our present economic programs, which we have refused to face and yet cannot for long ignore.

THE HANDLING OF COMMUNISTS

Neither liberal nor conservative has a final answer to the perplexing contrast between constitutional principles and Communist practices. Yet a contrast in views is clear.

The Communist works away among lower income groups and within progressive organizations, often calling for the same short-term objectives as those of non-Communist left. The conservative lacks understanding and sympathy for the non-Communist left, its objectives and its organizations. With faith in its ability to defeat the Communists, and no belief in progress as the alternative to communism, he turns toward repression by legislation.

For Burnham, outlawing the Communist Party in all free nations is simply the first step. The objective is liquidation. De Gaulle is favored in the belief that he alone is willing to line up the 100,000 hard-core French Communists against a wall and execute them.

The liberal, in contrast, has assumed that once suppression starts, it has no end. He has worked with Communists in the belief that disagreement on ultimate aims did not preclude cooperation on short-term objectives.

That policy was clearly wrong. Ultimate aims and short-term aims can never be separated, and in the case of Communists and

liberals are in basic conflict. Nor are there good and bad Communists. The Communist Party is a recruiting ground for subversion and espionage. Whoever joins it, either through guilty conscience or idealism, ends by losing all conscience and all ideals.

Yet for the liberal suppression is no answer. Instead, it breeds a totally false sense of security. For America's front lines in this struggle are not on Times Square but in the jungles of Indochina and the streets of Berlin. In addition, Russia is so far superior to America in matters of suppression that once we decide to fight with her weapons we are lost.

"The search for truth cannot go forward in the absence of heresy and opposition. * * * When the unity of a democratic society is maintained through arbitrary imposition even over a very small area, it ceases to be the kind of unity that is appropriate to a truth-seeking society. * * * Error is always the result of a defeat suffered by truth on its own territory. Every attempt to fight error as if it were born beyond the frontiers of truth * * * not only fails as a matter of course but prevents the application of the only effective remedy. * * * We can liquidate error only as we absorb and transcend it."

These are the words, not of a sentimental liberal but of A. Rossi, a one-time executive committee member of the Comintern. In his book, A Communist Party in Action, Rossi concludes:

"The citizens must confront the Communists in the factories, in the streets, in the villages. * * * The state should step in only when Communist action takes a form that private citizens simply cannot cope with.

THE DEFEAT OF COMMUNISM

With great precision Burnham analyzes the weaknesses of world communism. With equal force he argues that our policy makes sense only if it foresees communism's ultimate defeat. He recommends measures of psychological warfare that are valuable. But none begins to add up to defeat.

And no wonder.

For the truth is that concentrating on the cold war will never permit a solution to the underlying conflict.

The Russians know this. Their program is to achieve world conquest by exploiting the inner weaknesses of democracy. To the extent that we concentrate on the cold war and ignore the developing imbalances within our society, we play into Soviet hands.

America's strength in the Berlin airlift startled the Russians. Yet it was entirely within their frame of reference. America's failure to collapse in a postwar depression really shook the Russians. It was a development outside their realm of discourse and in defiance of their theology.

The cold war was largely a fight over the breakup and division of the world. Today the world is more or less divided. A shift in concentration from the cold war to the strengthening of the non-Communist world is our first task in defeating Communism.

The elements of strength for the non-Communist world include its military power, its economic stability, its solidarity and the faith of its peoples.

On each of these issues choices are developing that cannot be ignored.

Gen. Omar Bradley has indicated that the military power of the non-Communist world can be increased only by the abandonment of nationally balanced armed forces in favor of a unified western force, Paul Hoffman has added that Europe's economic stability can be obtained only if the economies of western Europe and America advance toward unification. John McCloy has declared that the solidarity of the non-Communist world can be preserved only if western Europe is federated, in close association with America and with the British Commonwealth. All these endeavors rest, as soldiers and statesmen know, on continued full employment in the United States. And they need to be joined under a concept and a flag that peoples can recognize and understand.

These are the next steps that the defeat of world communism requires us to take. Far from moving ahead to these solutions, we have yet to recognize that these are problems that require solution.

Even if agreement were achieved on the size and nature of the effort required to defeat communism, conflicts concerning time and emphasis would need to be resolved.

But there is not yet any agreement on the effort itself.

The liberals are largely silent on these issues in this campaign year. The conservatives are seeking reelection not by challenging new undertakings in prospect, but by attacking present programs already inadequate and close to conclusion.

Our election, which should be the occasion of a debate on America's future, is more likely to be an irrelevant sideshow featuring slander and stories dug up from a past that is dead and gone.

The decisions that we face cannot be taken without recourse to public opinion. There is no short cut to public enlightenment through frank debate. As time passes, and we drift, imbalances accumulate and solutions become more drastic and harder to achieve.

THE POWER OF IDEAS

Prevalent in high circles is the enervating conviction that the American people are weary of major international endeavors and hostile to new ideas.

If this is true then we are in danger, even if we continue economically to progress. Thirty years ago Keynes noted that the appeal of communism was not primarily economic and could not be countered by economic action alone; it consisted not of the substance but of the fervor of Communist faith.

"If the Communists win power in France [adds Rossi today], it will be because France is a country in which the bonds of community have grown weak; a country in which almost everyone is ready, at a moment's notice, to call into question the moral foundations of national unity. For where unity can be had on no other terms, men finally seek it in some political movement that is able and willing to impose it."

In this context, the central threat of conservatism is its complacency and its resistance to new ideas. Liberalism, on the contrary, welcomes new ideas and thrives on impatience.

America was born in rebellion against colonial oppression. We fought a civil war to resolve a moral issue. We inspired the League of Nations and the United Nations. We lifted ourselves from depression by the New Deal. We said in depression that we had nothing to fear. Why, at the peak of our power, should we be afraid?

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1950

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an address on Federal aid to education given by Mr. Aloysius J. Maickel, Friday, April 21, 1950, before St. Anne's Council 2429, Knights of Columbus, Queens Village, N. Y.:

FEDERAL AID TO EDUCATION

In the building of our country's future, the education of our youth should come first. The war has reminded us of many virtues and ideals that we had forgotten. One of them is the duty we owe to our children in the provision of their education; not education merely in terms of books, credits, diplomas, and degrees, but education also in terms of living and of preparation for future living.

There are two important facts to remember about all American youth. First, there are about 11,000,000 of them between the sixteenth and twenty-first birthdays, the group who will be the immediate leaders of our Nation in the future. Secondly, no two of the 11,000,000 are identical in intelligence and aptitude, in occupational interests and outlooks, in social and economic status, in mental health, and in physical well-being. The aforesaid are only the principal points of difference existing among all American youth.

The common qualities of youth are fully as important to education as their differences. All American youth are citizens now; all will be qualified voters in the future; all require education for civic responsibility and competence. All American youth are members of family groups now, and will become members of other family groups in the future; all require an understanding of family relationships. All American youth are now living in the American culture; all require an understanding of the main elements in that culture. All American youth need to maintain their mental and physical health now and in the future; all require instruction to develop habits of healthful living, understanding of conditions which foster health, and knowledge of ways of preventing disease, avoiding injuries, and using medical services. All American youth will be expected to engage in useful work and will need to work to sustain themselves and others; all therefore require occupational guidance and training, and orientation to current economic conditions. All American youth have the capacity to think rationally; all need to develop this capacity, and with it, an appreciation of the significance of truth as arrived at by the rational process. All American youth must make decisions and take actions which involve choices of values; all therefore need insight into moral values. Particularly do they need to grow in understanding the basic tenet of democracy, that the individual human being is of surpassing worth and dignity.

When we refer confidently and inclusively to "education for all American youth" we mean just that. We mean that all youth, with their human similarities and their equally human differences, shall have educational services and opportunities suited to their personal needs and sufficient for the successful operation of a free and democratic society. All these youth are children of God and equal citizens of our Nation whether male or female, black or white, halt or hale, Jew, Catholic, or Protestant. Birth and environment have tended to make some of them more alert or more shrewd or more bold than others. Environment and education have made them rich or poor, law-abiding or delinquent, employed or idle. Yet they are Americans all. Their names are Dumbrowski, Cohen, Ryan, MacGregor, Romanelli, Schmidt, Smith, and Smythe. These youth—all of them—are creatures of the same Divine Fatherhood and members in the same brotherhood of man in American society. They are to be the heirs and trustees for all that is good or bad in our civilization. What humanity will achieve a generation hence depends largely on them and on their education

now. Each of them is a human being created by God, more precious than material goods or systems of philosophy. Not one of them is to be carelessly wasted. All of them are to be given equal opportunities to live and learn. Education of all American youth has created a fundamental educational problem in modern American society. Simply stated, the problem is based upon equalization of educational opportunity for all our youth. Suffice it to say, equalization of education is impossible without equalization of fiscal assistance. Educational systems cannot exist without a financial basis. How much money we spend on education shall always determine the quality of education and the caliber of its product—the American youth. Properly financed, the school system can flourish well; improperly financed, it can never meet the needs of the community and all American youth. Money spent for education is an investment.

There are two opposing points of view regarding expenditures for education. One, discredited but unfortunately still persisting, holds that education is a luxury—and an expensive one at that. The money spent is largely wasted. For the great mass of people, it is enough that they learn to read, write, and keep simple accounts. They will be the hewers of wood and the drawers of water. Let them get on the farms, in the factories, or begin to learn a trade as soon as possible. A favored few should go on for advanced training to supply necessary technical service and leadership, but these few only who may not be your children. Accordingly, say those who hold this view, cut out the "frills," keep school expenditures down, and stop trying to make silk purses out of sows' ears. No intelligent person today can take such a position when he has facts laid before him. An accumulating mass of evidence shows more and more clearly that expenditures for education are a good investment. If children are our most precious resource, where can we invest our money to better advantage? Their proper development returns untold values to the society which nourishes them. That a sound educational program has far-reaching, beneficial effects is part of our American faith. Our people believe that through education, their lot and the lot of their children can be improved.

Respectable research is supporting our people's faith. In the first place, studies of delinquency, crime, and other forms of antisocial behavior, show that far more offenders come from the ranks of the uneducated, or poorly educated, than from among the well educated. A number of school systems have won increased fiscal and public support merely by delving into the records of children who, over a period of years, quit school, and comparing them with the records of those who remained until graduation. The "drop-outs" invariably show a much higher percentage of subsequent delinquents, charity cases, criminals, and undesirable citizens. It is apparent that sound education in good schools, properly financed, develops desirable character traits and moral standards in our children.

Secondly, several investigations, including an extensive one promoted by the United States Chamber of Commerce in 1945, have pointed out the close agreement between the level of education of a country and its standard of living. This study has shown that among the various nations of the world, a high standard of living is always accompanied by a fine educational system, generously financed. By way of contrast, the report showed that Colombia and Rumania, each possessing immense resources of minerals, forests, water power, and rich soil, have poorly educated peoples, a poor educational system inadequately financed, and a resultant low standard of living.

The economic argument can be pushed further. It has been shown that within our own Nation, variations in the level of educational financing from region to region are accompanied, in general, by corresponding variations in economic well-being. In other words, a high level of education and a high standard of living go together even within the boundaries of our own Nation. It is evident that only through spending to educate the minds and to stimulate the imaginations of men, can resources be developed, can people want more goods, become better producers, and thereby furnish expanded markets and higher standards of living for all. Clearly, the self-interest of the businessmen is not promoted by dilapidated, one-room, rural schools with poorly clad, undernourished, and poorly taught youngsters.

By now the question must be in your minds, "How much does it cost to provide a good educational program?" Educators estimate that the expenditure necessary to support a good educational program is $200 per pupil per annum. Below this level on the financial scale, the educational program appears to be stunted and lacking in both breadth and depth. Above this level are found our better, more wholesome schools.

How near we are in the United States to realizing a minimum expenditure of $200 per pupil is indicated by the figures for 1947. In that year, the range in expenditure per pupil was from about $18 to well above $300. The average expenditure was $99. In other words, half of the pupils in our schools in the entire Nation in 1947 attended schools financed at the $99 level or below. Less than 10 percent of our pupils benefited from studying in schools costing $200 or more per pupil. Over 90 percent were attending schools costing less than $200 per pupil, where it is unlikely that a full flowering of the educational program can result. Although there was a slight upward revision of these figures since 1947, there is much ground to be gained before the battle for adequate, effectively free education for all is won in our Nation.

Our public schools are supported almost exclusively by money derived from taxation. Local, State and Federal levels of government have each been charged by the people with the responsibility for levying and collecting taxes for schools. The bulk of the burden thus far has been borne by the local property tax, with State taxes second, and Federal taxes a poor third. The typical pattern of school support is for more than half of local school costs to be raised by taxes on local property, almost all the rest comes from State sources, with a very small percentage, if any, from the Federal Government.

As the cost of formal education has increased, a perennial problem has been that of how to spread the burden equitably. So long as a fair measure of each man's wealth was the amount of property he owned, the local property tax served rather well as the base for school support. But the farther we have progressed into the twentieth century, the more evident it has become that real property holdings can no longer be relied upon as an index of wealth. With the increasing industrialization of our country, the rise of giant corporations employing tens of thousands of wage earners, and the tremendous increase in the number of public employees, it became apparent early in the century that an income tax was necessary if governmental services were to be financed. The income tax, as history shows, is an excellent revenue producer. The lion's share of the income tax revenues goes to the Federal Government.

With each level of Government more or less specializing in certain forms of taxation, it would at first glance seem as if the problem of financing their activities had been solved. Actually, it was not; incomes and expenditures did not vary proportionately at the three levels. Local governmental costs, including school costs, have risen greatly almost without interruption. But the income from the local property tax has not risen proportionately. Local school districts, then, have had to seek funds from the other governmental levels which possessed a broader tax base.

The first source of school funds to supplement those raised locally, was the State treasury. In effect, the people of the State, speaking through their legislators, instructed the State officials to raise some money for schools on a State basis and distribute it to the local school districts. The movement for State support of local schools has been under way for about a century in this country. With the result that all States have some plan or other for so doing. That practice is well established and accepted.

During the last 25 years, a growing group of people has been realizing that if formal education is to be adequately financed, the immense taxing power of the Federal Government must assist. Many of our States, with their present resources, are too poor to be able to finance their school system at an acceptable level and to equalize educational opportunity and services for all our American youth on a national basis of agreement, without outside help. We now face the consequences of accepting Federal aid plans so that the burden may be shared three ways.

It is not that we have had no Federal aid for education already. Actually, according to a tabulation made by the National Education Association in 1946, 160 Federal-aid laws have been passed by Congress since 1785. No consideration of a national role in education could be complete without an examination of education in a national historic perspective.

The historic development of American society has set the ideas, aspirations, knowledge, and working rules which prevail today, and set the task of American education. The past, distant and near, has given us our society, including all the material, intellectual, and moral manifestations with which education must work.

American independence was secured through revolution and war, accompanied by intellectual concentration, storm, and stress. America had broken with the past in many respects and had founded government on a new base—social purpose as distinguished from the prescriptive rights of class. The leaders of the infant Republic were set upon realizing a better life for the free members of American society. The Republic's founders were concerned with more than the material aspects of life. They were public personages, imbued with a deep sense of social and moral responsibility. They had staked their lives and their fortunes on independence and the welfare of the Republic. Having used their all in the creation of a nation, the ablest among them gave unremitting attention to the study of public affairs and the methods calculated to preserve and improve the independent society which their labors had brought forth. In the long run, the founding fathers established a government that came to rest on a wide popular base; and with the passing of time, that base was broadened by constitutional enactments and political practices. The fate of American Government and society was increasingly entrusted to the wisdom and knowledge of an ever-widening mass of people. This pattern of popular government was greeted by many as a fulfillment of the principles proclaimed in the Declaration of Independence, and as marking a humane departure from the despotisms of Europe. Lucidly, the declaratory principles, that all men are created equal, and endowed by their Creator with

certain inalienable rights, including life, liberty, and the pursuit of happiness; that goverments derive their just powers from the consent of the governed; and that people have the right to alter or abolish any form of government which becomes destructive of these ends, had been enmeshed in the operational pattern of American Government. The future was to decide whether any government so conceived and so dedicated could long endure.

Having committed themselves to government by popular verdict, to a government with high social and moral responsibilities, many founders of the Republic turned to education as a guaranty that a government of this type would endure. The founders were especially concerned with political education, with the preparation of the people for self-government. Knowledge and a moral sense were required to sustain democratic processes and to make them constructive, rather than destructive. George Washington, in his Farewell Address, wrote: "In proportion as the structure of government gives force to public opinion, it is essential that public opinion should be enlightened. * * * Promote, then, as our object of primary importance, institutions for the geneal diffusion of knowledge." Undoubtedly, such promotion was to come from a national level.

In the Constitutional Convention we find James Madison, Charles Pinckney, Gouverneur Morris, and Thomas Jefferson promoting for the fostering of education by the introduction of specific motions for action. Unfortunately, the motions were lost. Madison had proposed that Congress be empowered "to establish a university," and Charles Pinckney urged a broader provision: "To establish seminaries for the promotion of literature and the arts and sciences." At a later time in the Convention, Madison and Pinckney joined in moving for the creation of a university. Upon their project, Gouverneur Morris remarked: "It is not necessary. The exclusive power at the seat of government will reach the object." The motion was lost. Nevertheless, no express provisions were made in the Constitution for the promotion of education, but leaders among the men who framed that document certainly believed that the power to perform this national service was certainly implied. The framers of the Constitution had set an impressive example to all those of succeeding generations that education is an enterprise forever linked with the destiny of the Nation.

That George Washington advocated Federal aids to education, was made evident in his first annual address to Congress: "Nor am I less persuaded that you will agree with me in opinion that there is nothing which can better deserve your patronage than the promotion of science and literature. Knowledge is in every country the surest basis of public happiness. In one in which the measures of government receive their impressions so immediately from the sense of the community as in ours, it is proportionately essential. To the security of a free constitution it contributes in various ways. * * * Whether this desirable object will be best promoted by affording aids to seminaries of learning already established, by the institution of a national university, or by any other expedients, will be well worthy of a place in the deliberations of the legislature." Washington had a broad view on education from the basis of aid.

The periods following the birth of the American Republic marked an intense reaction to the educational outlook of the founders. This reaction in our historical development was fostered by internal political struggles in our country. A national role in education was completely hamstrung by emphasis on the sovereignty of individual States, by laissez faire in Federal policy, by the march of egalitarian democracy, and by a passionate sense of rugged individualism. These forces stimulated action opposed to a national concept of education. Formal popular education found its origins in State and local enterprise for over 150 years. The concept of George Washington that the promotion of education be urged by national action disappeared from educational practice and theory.

By a strange fate, while American education became a matter of individual and local enterprise, other contrary forces were at work in our national history. The energies of individual enterprise trained under State and local auspices linked all parts of our country together by systems of transportation, communication, and bound its sections and industries into a homogeneous national economy. So it has come about that public education, as in 1789, is once more linked with national economy and interests. Through the influence of common ideals, methods and associations, popular mass education itself draws into a unity of thought and purpose which is national in its reach. Recent years show an increasing tendency on the part of the Federal Government to engage in the fostering of national education. The Federal Government is now spending three and one-half billions of dollars annually for educational purposes, with the largest proportion relegated to funds for individual education benefits to our veteran population.

The Congress has been increasingly concerned with the fundamental problem of equalization of educational opportunity for our citizenry. Educational and political leaders are strongly aware that the inequalities in American educational opportunity constitute a threat to the whole fabric of American democratic institutions. Thus the question of Federal aid to education has become an issue of primary concern to congressional leaders. The current controversy has centered around the method of distribution and who should benefit from the Federal funds. This controversy is in truth violating and inciting others to violate the very rights and freedoms upon which our democratic government was founded. It is a controversy that holds primary import to every American Catholic.

President Truman's Fair Deal plan for Federal aid to education has been engulfed in the House Committee on Labor and Education by a flow of bigotry, ignorance, and malice. The anti-Catholic apostles of bigotry, intolerance, and discrimination have triumphed in the spawning of a monstrous fabrication plan for Federal aid known as the Barden bill. Advocates of the Barden bill, pitting American religious groups against American religious groups, seeking votes to sustain and enforce it, are today conducting a craven crusade of religious prejudice against Catholic children and their inalienable rights. The Barden bill justifies and urges unjust, unAmerican discrimination against our parochial-school children. The southern Congressmen, lead by Congresman GRAHAM A. BARDEN, have virtually killed Federal aid to education. Within a few pages, the Barden bill seeks to perpetrate a monstrosity of injustices. Its unjust provisions forbid the States to use any of the $300,000,000 in Federal funds for non-public-school children, even for such public-welfare purposes as school-bus transportation, nonreligious textbooks, and common health aids. The Supreme Court has upheld the right of the States to make such use of public funds. The Senate's $300,000,000 Thomas bill allowed disbursements "for any current expenditure * * * for which educational revenues derived from State or local sources may legally and constitutionally be expended in each State."

Before discussing the provisions of the Thomas general aid-to-education bill (S. 246), let us distinguish it clearly from two other bills involved in the Federal-aid controversy. These other bills deal only with specific areas of aid to education—school lunches and health services. They are hence very limited in purpose, are not general aid-to-education measures and, though involved in the debate, are not nearly so controversial as the general-aid bills.

The School Lunch Act has been in force since 1946. The relevance of this law resides in one all-important provision—the way its benefits are made available to all American school children, not merely those attending public schools. This is the famous withholding provision of the School Lunch Act. According to this provision the Federal Administrator is required to inquire of State authorities whether they may disburse the school-lunch funds for the benefit of public- and non-public-school pupils. If they can, as happens in about one-half of the 48 States, the Federal Administrator allots the State its full share. If the State officials declare that under the State's laws they cannot disburse Federal funds in favor of non-public-school children, the Federal Administrator is required by the School Lunch Act to withhold Federal allotments in an amount proportional to the number of children in nonpublic schools.

The share of Federal funds thus withheld is then used to reimburse nonpublic schools for part of their expense incurred in serving lunches to their pupils. This law has been in effect for 3 years and was so manifestly fair that few voices have ever been raised demanding that American pupils in nonpublic schools be deprived of their daily bottle of milk and hot lunch, simply because they were carrying out their parents' conscientious belief in religious education.

The Senate also passed a school-health-services bill (S. 1411) on April 29, 1949, by a voice vote. This bill, like the Senate's general Federal-aid bill, was also introduced by Senator THOMAS and consequently bears his name. There are therefore two Thomas Senate bills in the field of Federal aid to education. Fortunately, the school-health-services measure includes the same withholding formula which has made the School Lunch Act a model of fairness. So far, the House has taken no action on the bill. The health and lunch bills have embodied the nondiscrimination principle for auxiliary services for all American youth. We now come to the piece of legislation over which the country became exicited last summer. This is general Federal aid to education.

The term requires definition. Aid to education is general if the funds are made available for the over-all support of education, instead of being earmarked for very specific uses such as lunches or health services. Actually, the various general-aid proposals presented to Congress in recent years have restricted the use of such funds to current expenditures. This restriction rules out capital outlays for new buildings but includes expenditures for teachers' salaries, heating, lighting, general maintenance, free textbooks, and bus transportation.

The general-aid measures also differ somewhat from the specific-aid measures in the way they apportion Federal funds among the several States.

Suffice it to say that the Thomas general aid, in effect, divides the States into two categories—the 30 wealthy States, nearly all Northern, and the 18 needy States, mostly Southern, Southwestern, or border States. The professed aim of the bill is to raise the current expenditures for education in each State to at least $50 per child annually. Since the wealthy States spend more than that sum, they will receive only the minimum amount of Federal aid, $5

for every child of school age (5 to 17 years) under their jurisdiction.

The amount of Federal aid per child granted to each of the needy States, on the other hand, will vary according to the amount required in each State to bring the annual current expenditures for education up to the minimum of $50 per child annually. In Mississippi, for example, about $29.18 in Federal aid per child will be required to reach this standard. In North Dakota, one of the four Northern States, to qualify for more than the minimum, only $5.97 would be required.

It should be made clear that no needy State will qualify for any Federal aid at all unless that State is already spending and continues to spend what is considered to be a properly proportionate share of its per capita annual income on publicly supported education.

The most controversial issue in regard to the Thomas bill is this: "It leaves with each State the option of whether it will or will not use a very small fraction of the Federal funds it will receive for bus transportation for children attending nonpublic schools." In other words, it allows the States to discriminate against sectarian-school children when expending Federal funds.

It seems strange that the people of New York State allow public funds for education to be used to transport children attending parochial schools, while the people of Wisconsin in 1946 voted by a majority of 100,000 to deny such service to parochial school children. You would think that an American child is an American child in Wisconsin as in New York. You would think that it would be heartless to deny a warm, dry ride to a little child on a cold or wet day in Wisconsin as in New York. I wonder how the Wisconsin school-bus driver feels when he picks up four children standing in the rain on a corner and leaves two others standing in the downpour, simply because they are Catholic-school children. If this is "equal protection of the laws," then democracy is hypocrisy.

Unfortunately, the discriminatory technique of the State of Wisconsin is repeated in a number of other American States. The Thomas bill would permit the continuance of this crazy-quilt of discrimination against American children. The Thomas bill excuses itself from doing justice to Catholic-school children on the score that it "leaves it up to the States" to decide who should have bus transportation. The result could only be the outbreak of vicious discrimination and bigotry in the 48 States. The Thomas bill properly offers no such excuse regarding Negro school children. It is ready to take issue with anti-Negro feeling in the South, but not with anti-Catholic feeling in the country as a whole. To this extent, the Thomas bill is not only unjust but dishonest.

This "leave it to the States" to decide who should receive Federal funds for education, spells the abdication of Congress' responsibility in the field of justice and turns our constitutional system upside down. No one can believe that equalization of educational opportunity is guaranteed to all American school children unless Federal laws grant fiscal aid to all school children on an equal, impartial level. Help must be guaranteed for all needy children, including Catholic needy children.

All the inequities of the Thomas bill were to be further expanded by the Barden bill. This bill makes a mockery of the alleged purposes of all Federal-aid measures—to more nearly equalize educational opportunities. The Barden bill, unlike the Thomas bill, does not even insure to Negro school children a proportionate share in Federal aid. To make sure that no parochial-school children receive a dime of Federal-aid funds, the Barden bill set up a procedure whereby any taxpayer could get an injunction against any school board accused of permitting what the United States Constitution and many State constitutions now permit—the use of public funds for at least incidental public-welfare expenditures for parochial-school children. What the Senate's Thomas bill allowed and the Thomas school-lunch and school-health measures made mandatory, the Barden bill made illegal and subject to injunctive action. This last provision showed Mr. Barden's attitude. He was determined to make his bill a new weapon in the hands of anti-Catholic bigots. Barden devised a means of putting Catholics in a Federal strait-jacket by using a bill to equalize educational opportunities as a device for bribing the States into completely excluding parochial-school children from even incidental public educational funds.

The Barden bill shows the depth of its malevolent prejudice and bigotry in its disbursing of Federal aid funds method. The bill awards the 29 wealthy States a minimum of $5 for every child of school age in each State, including those attending nonpublic schools, which means our parochial-school children also. But in the disbursing of funds, the bill limits the beneficiaries, for all practical purposes, to public school children only. For example, if New York State has 200,000 school children 5 to 17 years of age, and of the total, 50,000 are attending parochial schools, New York would get $5 times 200,000 in Federal funds or $1,000,000, of which $250,000, would be awarded by counting in the pupils at Catholic schools. When it came to disbursing the total of $1,000,000 however, New York would turn around and count out the 50,000 Catholic children, and every dollar of the money it received to equalize their education would go to the public schools only. Catholics in New York State would be taxed by the Federal Government on the basis of the educational needs of all the children of the State, only to have the needs of 50,000 of their own children ignored in the disbursing of funds. Such a disbursing plan is rank with injustice, pitted with illogical operation, and reflecting un-American plans of equality.

Clearly, from analysis of the various plans of Federal aid to education, our Catholic school children are maliciously reduced to second-class citizenry status. They are being deprived of equalized opportunity and assistance in every particular instance of legislation. Congress in considering a bill to aid education in the States must be considering the educational opportunities of citizens of all the United States. The responsibilities of the Congress are to the citizens of the United States on an equal basis. Congress, in granting Federal funds in aid of education to the States, cannot allow some States to discriminate against a certain class of citizens in the United States.

We, as Catholics, are not asking the Government to build our schools. What we justly demand is this: When the Government, National or State, is appropriating public funds to give extracurricular benefits, such as bus rides, health service, free lunches to school children, and general aid, we want our children and all American children of school age to be included. This is just. This is American and democratic.

What distant relation has the separation of church and State principle to the examination of Johnny's tonsils in a parochial school, or giving a free glass of milk, when the Government decides to grant these auxiliary benefits to all its school children? None of logic, yet bigots, spreaders of dissension, and fanatics, violently charge we are violating the first amendment and planning the creation of an established church in the United States. Such charges can only emanate from ignorance and passionate prejudice.

Our Catholic parents actually are required to pay double school taxes. We voluntarily and independently contribute to the support of our parochial schools while simultaneously paying school taxes for public schools which some of our children do not use. Catholic taxpayers do not demand to be excused from paying school taxes for the support of public schools which some of their children do not use, but some consideration must be given to the sectarian schools their children do use. Catholic taxpayers save others of the Nation's taxpayers half a billion dollars yearly through voluntary support of parochial schools in addition to the capital expense of the buildings. We do not expect others to take up this fiscal burden, but we cannot sanction the spending of $300,000,000 yearly in accordance with legislation that would be unjust and discriminating against millions of our American children. Catholic schools are as much in the public interest as public schools. To deny general aids to parochial schools is to imply that their graduates are second-class citizens undeserving of equal rights. To condone taxation without Catholic participation in its benefits for our parochial school children is tantamount to repudiation of the equality of American citizenship.

Fearlessly, forcefully, we must unite to demand equal rights for all American children, and in Christian justice must we oppose unequivocally any bill which refuses to grant, or denies, at least nonreligious textbooks, bus transportation, and health services for all the children of all Americans. The parochial school is as truly an American school as the public school, and our Catholic school children are as entitled to their equal constitutional rights as public school children. Justice and equality to all is the American formula and practice. Prejudice, discrimination, bigotry, and intolerance, have no role in the American way of life.

Our Catholic schools are under attack right here in the United States. When we resist the effort of bigots to discriminate against our Catholic school children in Federal aid to education, we are resisting what we believe will bring great harm to our Nation. We are fighting for freedom of religion and freedom of education. Our cause in upholding the rights of religious education is the only sure defense of the democratic ideal and the defense of our religious faith.

Public Health and Welfare

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. KEEFE. Mr. Speaker, on May 9, 1949, I introduced House Resolution 207, which had for its basic purpose the appointment of a special committee to investigate and study the economic and public-health aspects of the introduction of chemicals into the food supplies of the Nation and to investigate and study the whole fertilizer question. A short hearing was held before the Rules Committee, and the gentleman from Wisconsin was permitted to make a short statement in support of the resolution. The many witnesses who were present and prepared to testify in support of the resolution have never as yet been given an opportunity to be heard. The chairman of the Rules Committee has himself introduced a similar resolution and has

repeatedly promised to give to the proponents of this resolution an opportunity to be heard. Up to date, and for more than 1 year, these resolutions have languished in the files of the Rules Committee without any action thereon.

It is of the utmost importance to the people of this country that this matter be thoroughly investigated with a view to the suggestion of legislative action in this field.

A recent article prepared by Mr. William G. Holman, of the city of Washington, throws considerable light on the necessity for the adoption of this resolution, and I desire to incorporate it as part of these remarks:

LEGISLATION NEEDED TO PROTECT HEALTH AND WELFARE OF THE PEOPLE

A Federal Trade Commission report shows how a few fertilizer manufacturers acquired a monopolistic control of the phosphate rock and acid phosphate market in this country, and Federal court records show how they have used this control to criminally exploit the farmers and endanger the health of the people.

Eight Members of the United States Senate introduced a resolution on July 20, 1949, requesting an investigation of the monopolistic practices of the fertilizer industry.

This resolution told of the leasing of public lands on which are found the principal potash deposits to a few corporations, and of how this had enabled them to acquire a control of 80 to 90 percent of the potash in this country.

Thus we see monopoly in the saddle—all booted and spurred—and the farmers completely at the mercy of these predatory corporations.

There is another phase of this matter that is far more shocking in its implications.

Fertilizer money is being used to subsidize the research work of the Bureau of Plant Industry, and these gifts of money have resulted in keeping the people in the dark as to the harmful effects of present methods of fertilizer manufacture on the health and welfare of the people.

Is the corruption of public officials today less shocking in its implications than it was at the time of the Teapot Dome scandal?

House resolution 207, introduced by Congressman FRANK B. KEEFE on May 9, 1949, requested the appointment of a special committee to study the economic and health phases of this matter, and report its findings and recommendations to Congress, and on August 10, 1949, the dean of the House, Hon. ADOLPH J. SABATH introduced a similar resolution. Both of these resolutions are now resting securely in the House Rules Committee.

Five years ago I wrote, and Congressman WILLIAM LEMKE introduced, a truth about fertilizer bill, and he has introduced this bill at each session of the Congress since that time. It is still in a pigeonhole of the House Committee on Agriculture.

The farmers need a truth about fertilizer law.

This law should require the manufacturer to tell the farmers what materials have been used in making fertilizer, the number of pounds of each material, and the number of pounds of sand or other useless filler. The law should forbid the shipment of fertilizer in interstate commerce that contains more than 50 percent of water-soluble nitrogen.

The enactment of this law would make it possible for farmers to grow better crops with 50 percent less fertilizer per acre, help to prevent plant diseases, and injury to the health of human beings.

It has been known for a long time that an excess of soluble nitrogen in fertilizers makes all plants more susceptible and less resistant to disease, but only in recent years has there been any suggestion that food crops grown with an excess of soluble nitrogen are poisonous to farm stock, and injurious to the health of the people.

Men of such eminence as Lyon and Buckman, of Cornell University, have said that: "Of the three common fertilizer elements, (meaning, of course, nitrogen, phosphoric acid, and potash), soluble nitrogen is the only one which, added in excess, will result in harmful effects on the crops. It may decrease resistance to disease."

Sir A. D. Hall, a man who achieved such eminence in the field of agriculture that he was knighted by the British Government, has told the public in a widely read textbook that, "The association of high nitrogenous manuring with susceptibility to disease may be seen in all plants."

In spite of the warnings of these eminent scientists, State fertilizer laws were amended and these amendments permitted the manufacturers, (1) to increase the nitrogen content of all fertilizers 21 percent; (2) to remove from the fertilizer bags what were known as source tags which told the farmers what materials had been used in making the fertilizer; and (3) to use almost unlimited proportions of the cheap, water-soluble sources of nitrogen without letting the farmers know that this was being done.

The use of so much of the water soluble nitrogen was soon followed by a scourge of destructive plant diseases that had never given the farmers any trouble prior to the time these radical formula changes were made.

The use of so little of the organic sources of nitrogen forced the farmers to use at least 50 percent more fertilizer per acre in order to get enough organic nitrogen to feed the crops to maturity.

Forcing the farmers to use 50 percent more fertilizer per acre costs them $250,000,000 a year more than would have been necessary if the fertilizer had contained the right proportions of soluble and organic nitrogen, and the ravages of tobacco, potato, and tomato plant diseases cause the farmers to suffer additional losses running into millions of dollars.

These facts should be sufficient to incline the Congress to put an end to a racket of which the farmers have long been helpless victims, but there are other reasons which place a greater obligation on the shoulders of Congress.

Not until recently has there been any suggestion that food crops grown with an excess of soluble nitrogen are injurious to the health of human beings and poisonous to farm stock.

Dr. James Asa Shield, an eminent medical scientist of Richmond, Va., says that people whose food crops are grown with nature's plant food—organic nitrogen—do not have sclerosis of their nerves, their blood vessels, blockage of their veins, or high blood pressure, or kidney or gall stones. He also says that: "People whose food comes from soils fertilized with chemicals appear to have more vascular diseases and more degenerative diseases."

Dr. Max Gerson, of the Gotham Hospital, New York, says that: "The human body lost part of its resistance and healing power as man left the way of natural nutrition for generations. The fundamental damage starts with the use of artificial fertilizer for vegetables and fruits."

Dr. William A. Albrecht, Ph. D., College of Agriculture, University of Missouri, emphasizes the relationship between food and health in the following words: "Our health comes to us, after all, via our food."

Then comes the Yearbook of Agriculture, 1948, page 288, with the startling statement: "More than 1 or 2 percent of nitrates in plants as a result of very heavy fertilization or of excessive amounts in soils is known to be poisonous to stock."

A survey conducted by experts of the United States Department of Agriculture indicates that highly fertilized pastufe lands may be the cause of the X-disease that has killed so many cattle, and forced some cattlemen to give up the cattle raising business.

The Spectator (London), October 17, 1941, said that rabbits have died after eating cabbage grown with an excess of nitrates.

Common sense tells us that anything that poisons cattle and kills rabbits is undoubtedly harmful to the health of human beings, and may be the cause of the great increase in the number of diseases that are taking the lives of our people.

Two fertilizer labeling bills introduced early in the first session of the Eighty-first Congress are still in a pigeonhole of the House Committee on Agriculture.

These bills are intended to give the farmers information as to the contents of a bag of fertilizer that State laws do not now give them.

One of these bills, H. R. 3045, introduced by Congressman FRANK B. KEEFE, puts a limit on the soluble nitrogen content of fertilizer shipped in interstate commerce, a necessary provision.

The enactment of this bill will make it easier for State enforcement agencies to see that the farmer gets an honestly made fertilizer.

I think the public is entitled to know how a few manufacturers acquired a monopolistic control of the fertilizer industry, and to what extent they have exerted an influence on officials of the State and Federal Governments.

An act of Congress, approved April 10, 1918, entitled "An act to promote export trade and for other purposes," permitted a few fertilizer manufacturers to form a selling agency combine which controlled practically all of the phosphate rock shipped from this country to Europe. (See United States Statutes at Large 40, p. 516.)

This combine first secured control of the prices and terms of sale of all phosphate rock sold in Europe by threatening to dump 200,000 tons of Florida phosphate rock on that market each year at reduced prices. (See Federal Trade Commission Report, May 1, 1946.)

The almost complete control of such basic fertilizer materials as phosphate rock and acid phosphate enabled this small group of manufacturers to compel other manufacturers in this country to obey their wishes not only as to how fertilizer should be made, but as to what the selling price should be.

Having established a ruthless control of the fertilizer industry, these manufacturers then set to work to have the State laws amended to suit their notions, and their activities in this direction resulted in their being indicted and fined in a Federal court in North Carolina for having exerted an illegal influence on State lawmakers.

However, the amendments to the State laws that they succeeded in having enacted are still plaguing the farmers, and endangering the health of the people.

With a view to protecting the farmers and the health of all the people, I undertook to do two things: (1) prove with properly conducted experiments that an excess of soluble nitrogen was the cause of plant diseases, and (2) secure the enactment of a truth-about-fertilizer law that would put a reasonable limit on the water-soluble nitrogen content of fertilizer, and let the farmers know the number of pounds of each material used in making it, as well as the number of pounds of sand or other useless filler.

I knew that if I could prove that an excess of soluble nitrogen was the cause of plant diseases, it would be easy to convince the Congress of the need of the legislation I advocated.

Twenty-six of my experiments conducted in nine counties in North Carolina resulted in the growth of healthy tobacco plants free of disease.

Dr. Earl H. Hall, professor of botany of the greater university system of North Carolina, expressed the opinion that my theory was physiologically as well as logically sound.

Dr. A. L. Grizzard, associate agronomist, Virginia experimental station, had said that an excess of nitrogen "may cause over-stimulation and a weak, watery growth which is susceptible to disease," and the Yearbook of Agriculture, 1939, page 413, had said that plants relatively high in water content are generally low in some of the carbohydrates, and are particularly susceptible to attack by fungus and bacterial disease.

I knew that starch was the form in which carbohydrates are usually stored in plants, and I was trying to prove that more organic nitrogen in fertilizers would increase the carbohydrate content of the plant and make it more resistant to disease.

Sir Albert Howard, a man who had achieved such eminence in the field of agriculture that he was knighted by the British Government, expressed the opinion in a letter to me that I had hit the nail squarely on the head, and he was in entire agreement with me.

Senators Barkley, Byrd, George, Tydings, and Reynolds, and three southern governors requested the Department of Agriculture to give its approval to a Federal grant to me for the completion of my experiments, and a bill was introduced in Congress to accomplish this purpose.

Mr. R. M. Salter, Chief, Bureau of Plant Industry, opposed this bill, and the statements made by him to the chairman of a Senate subcommittee resulted in an adverse report.

Mr. Salter told the subcommittee that fertilizer had nothing to do with the cause or control of blue mold, and then stultified himself by saying that he had tried to get me to let him conduct tests with my fertilizer formula for the control of blue mold.

Mr. Salter then made two surprising statements to the subcommittee, one of them refuting the other. He said that "several effective and inexpensive control measures have been developed," and then added that "at present $18,000 is allotted to blue mold investigations."

The control measures referred to by Mr. Salter would have cost the farmers of one State $765,000, and to show that they were not effective I need only to assert that they are not even recommended today, and the ravages of blue mold are still resulting in enormous losses to the farmers.

Furthermore, if Mr. Salter had found an effective control measure, why did he want to spend any more of the public funds on blue mold investigations?

The statement made by Mr. Salter in a speech that he delivered at the fertilizer convention at Hot Springs, Va., on June 25, 1946, indicates that he was already under financial obligations to the fertilizer people, and was appealing to them for additional funds.

This is what he said: "Probably you can spend a little more money advantageously in subsidizing research on special problems through fellowships and grants to States. A little financial oil applied to the squeaks in the research machinery often produces surprisingly good results."

The record shows that Mr. Salter's statements helped to delay the day when the truth would be known that an excess of soluble nitrogen was the cause of plant diseases, and of injury to the health of the people.

Mr. Salter must have known that my theory was logically and physiologically sound, or he would not have admitted in a letter to Congressman REID F. MURRAY that "Tobacco plants grown with organic nitrogen can be expected to be higher in starch."

If that be true, then Mr. Salter cannot explain away his efforts to keep me from proving it, and the Congress should undoubtedly inquire into his motives.

Could any problem be raised of more importance to the people than one that involves the corruption of public officials, the criminal exploitation of the farmers, and trade practices that endanger the health of both man and animals?

WILLIAM G. HOLMAN.

WASHINGTON, D. C.

Majority Rule

EXTENSION OF REMARKS
OF
HON. TOM PICKETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. PICKETT. Mr. Speaker, there recently appeared on the front page of the Malakoff, Tex., newspaper some observations by the editor concerning majority rule by the people who would be affected if certain programs sponsored by the administration are put into effect. The editor's comments are pertinent and well worthy of serious consideration by all Members of Congress. They are as follows:

BILL'S MILL
(By Bill Scholl)

We noticed in a city paper the other day that a poll of farmers throughout the country showed a heavy majority as definitely opposed to the proposed Brannan farm plan, one which the President has repeatedly tried to "strong arm" Congress into passing.

And, too, we have noticed all along, as have most people, that the country's doctors are definitely opposed to the plan of health insurance, a nice name for socialized medicine, or any other plan that would subordinate the country's doctors to Federal red tape.

And thirdly, we have heard and read of many noted educators throughout the country who are in dead earnest in their opposition to Federal aid to education of any type; men who firmly believe the task of education is up to the individual States.

WHY THE LEGISLATION, THEN?

Why, then should the administration in Washington, under the leadership of Mr. Truman, insist in attempting to put through these proposals that are so opposed by the people who would be affected? Why is the Government insisting on harnassing these groups with more red tape, less efficiency, and Federal control when the people do not want them. Think it over. Do you want them?

Mr. Truman seems to think it is his Godgiven task to make the people of the United States succumb to his theories of government. There are thousands of people all over the world who think that their ideas of government are the best and no other will suffice. But does that make it true?

We also have definite ideas of government, what the government should take as its obligation and what it should not. But we don't insist that everyone agree with us. We believe that the majority of the people are the ones to decide what we should have in the Government, not the ones who run on the Democratic ticket to get elected and then veer off to a red-fringed socialistic program. The Democratic Party (the real one) does not stand for socialism, so why should its leaders propose to harness us with socialism?

We contend that it is not up to them to tell us what to do, but that it is up to us, you and me, to tell our leaders what we want. We still contend that to be a good leader you have to be a follower and in the democratic way of life the leaders are supposed to follow the people's wishes. True or false?

Off the Cuff

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. JENSEN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Shenandoah (Iowa) Evening Sentinel of Thursday, April 27, 1950:

OFF THE CUFF
(By David Archie)

It may be old stuff or I may be seeing ghosts, but I've become acutely conscious lately of what amounts to a growing anti-farmer campaign in the Nation's press. If I were to piece together all of the references to farmers I've seen recently, I believe the picture would run something like this.

"Soybean Maize, the average American farmer, has been having a hard time finding a place to keep all his Buicks lately because his buildings are filled with his fortune in corn. Soybean and Mrs. Maize had a tough time in the early thirties—but didn't we all. Now that he has been able to buy his farm (with Government gifts), make it the most efficient possible, send his children to college with a convertible apiece and get his bank account in figures that he can't even add—now isn't it about time we stopped all this subsidy nonsense. The whole thing is a complete mess and he doesn't need it anyway. Besides old Soy is just putting land into production that isn't needed."

Mr. and Mrs. Maize seem like strange characters to Iowans, but after you've been out of the Midwest for a while, you begin to realize how closely they resemble the conception many people have of farmers these days. I imagine a boy going away to school in an earlier time would have had to convince people his father wasn't a "hick" farmer. Now he has to convince them the old man isn't wallowing in hogs, corn, and green acres of dollar bills.

I'm glad that the estimation of the farmer has risen so greatly, but I'm afraid there is more danger than good in the situation. I honestly believe that the Mr. Soybean Maize type of attitude may eventually help to destroy our farm price support programs. The recent potato scandals have made people think more about the Government farm program than ever before in its history. This thinking is good if properly routed. The trouble lies in the gross misconception of the lot of the average farmer that has been generated in the city mind.

This misconception tends to color whatever thinking there is on this very complicated and difficult subject. Most newspapers and magazines prefer to present the more glamorous and interesting stories of "rich" farmers through Government subsidies rather than explore the whole, and rather hard subject. In giving this one-sided response to the growing interest to the farm problem, they are rendering a distinct disservice to the country as a whole. But it is the farmers

themselves and the people who depend immediately on the farm trade who will suffer most if the present trend develops into a current of antifarmer resentment. I should not be at all surprised to see us facing an antiagrarian problem in the near future if present trends continue.

It is a problem of which every midwesterner should be acutely aware. More intelligent and farsighted leadership in Congress can do much to alleviate the problem. But if the ball is already rolling, as I fear it is, then farmers and farmers' friends should be alerted so that they can promote better public relations for the agrarian population.

Mr. Speaker, here are some excerpts from a letter to an old friend in my home county setting out my reasons for supporting 90 percent of parity for farm products, which I trust will answer those who are advocating the abolition of our support program for farmers:

DEAR FRIEND: Let us not forget that farm prices were 66 percent of parity on an average in 1931–32 and 1933, and that during those times not only the farmer, but the businessman, the laboring man and everybody in America were in a serious predicament. I need not remind you of this, I am sure, for I know you are old enough to remember it. There was on an average of 14,000,000 American people who were unable to find work during that era, for the very simple reason that the farmer's buying power was almost nil. Now certainly that should be a lesson we dare not forget, regardless of our politics, faith, or vocation.

Ever since my first year in Congress I have cooperated very closely with commonsense economic analysts and many Congressmen, most of whom are from farm States, in search of facts and figures to guide us in the right direction to avoid, if humanly possible, another depression, and possibly the complete destruction of our system of government and everything worth while in our blessed land.

Here is what these many years of research have brought to light. For the past 20 years the records of the Department of Commerce, which are compiled from the records of the Departments of Agriculture, Labor, and from other accurate sources in Government records, show that whether it be periods of peace, depression, war, postwar, or prosperity such as we now have, the national income has been and is now approximately seven times the farm income. The postwar prosperity which we have enjoyed since World War II has held up mainly because we have had a high farm income due to the fact that basic farm commodities have been supported by our 90-percent parity law.

If you will remember, it was less than 2 years after the close of World War I that farm prices took such a terrific drop which brought about a national depression in 1920. And during the several years thereafter many farmers lost their farms and a lot of business houses closed their doors for the very simple reason that the farmer's buying power was almost nil. I remember that era only too well, as I was at that time running a lumber yard in Exira, Iowa, dealing with farmers almost exclusively. Certainly that horrible experience should be a lesson to all of us. It must not happen again. I am thoroughly convinced, after much study, that a slide-down support scale on basic farm prices will bring about a repetition of a like condition during the era which I have just described.

Doubtless you have heard the argument it is necessary to reduce the price on farm commodities to avoid great surpluses from piling up, which the Government would have to buy and store in greater quantities than would be possible for the Government finances to stand. That argument falls flat with those who have made a deep study of what causes surpluses to pile up, which is, when the buying power of the people is not sufficient to purchase the goods they need for the high standard of living we Americans want and expect. The facts are that a greatly reduced American standard of living will very surely be brought about by a great reduction in prices of farm commodities, since all wealth springs from Mother Earth, and because as I said before, the national income each year is approximately seven times the farm income; so, unless we maintain a high farm income sufficient to generate a high national income, and thereby securing high consumption of all goods, Americans will be in serious trouble, and you can bank on that.

Here is something else to think about. Who in America would expect the good Lord to continue to bless us with such abundant crops as we have enjoyed the past 8 years? I am sure, you, like I, will agree that that would be too much to expect of Him who runs nature's business. We are bound to have crop failures in some degrees most any year now, and should it become our lot to suffer, say even a 25-percent crop reduction on an average for a period of 2, 3, or 4 years all over America, below the average of the past 8 years; how I ask in all sincerity would we feed and clothe the American people the way the like to be fed and clad.

You will also hear the argument that unless the Secretary of Agriculture is given the authority to reduce support prices, that surpluses will pile up to such a degree that acreage control will again be necessary. That argument also falls flat when we know that it was cheap farm prices that brought about acreage control in the AAA bill of the early thirties. And the result of that program was that the farmers so fertilized and mined their allotted cash crop-producing acres, that they produced more than ever, and were obliged to do so as to meet their bills.

The 90-percent support-price program on basic farm products, corn, wheat, tobacco, cotton, peanuts, and rice, has not cost the American taxpayer one thin dime to date. It has actually made a profit to the United States Treasury, to say nothing about the great benefits to the farmers of America and to our whole economy, and for these reasons I certainly will not be a party to a program which I honestly believe will be destructive to not only the prosperity of our Nation, but also to the peace and progress of our Nation and the world.

You no doubt also have heard the argument about the potato situation. I agree that potatoes which are perishable and cannot be stored for any definite period should not be supported at the full 90 percent of parity. The facts are that the Potato Growers Association of America suggested to Congress that the support price on potatoes be materially reduced.

If our national income is drastically reduced the American market, which is the only stable and good market of the world today, will lose its buying power, and when that time comes we will neither be able to pay our own way, nor help foreign nations with loans or free dollars with which to buy our goods or other nations' goods, or to ward off communistic aggression any place in the world, America included.

Records of the past 20 years also prove that for each dollar of gross farm income, labor (which includes all kinds, blue denim, white collar, and professional) receives an income of over $4, so the laboring people have a mighty big stake in keeping the farmer's income on a high level, the source of all wealth. Regarding the businessman's interest in this proposition, I am sure I need not explain to them the need of keeping a high farm income, for they know that is the only thing which will insure good profitable trade for them.

A $42,000,000,000 annual Federal tax take from the American people means that each American family pays on an average of over $1,000 per year in direct and indirect Federal taxes. Add to this around $300 which each family is paying per year in local, county, and State taxes, it makes a total outlay in taxes per year for each family of over $1,300. That being a fact, we must surely do two things, keep our national income at the highest possible figure and stop wasting the taxpayers' dollars.

I hope this will explain my reason for opposing any law which will reduce farm income.

Sincerely yours,

BEN F. JENSEN.

The American People Have a Vital Part To Play in the Attainment of the Goals of the Foreign Policy of the United States

---

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. EVINS. Mr. Speaker, the recent war, I feel sure we will all agree, could not have reached ultimate victory without the united and concerted efforts of every citizen of this country—whether in the armed services or on the home front. It was, in every way a total war which required complete unity of purpose and determination to gain the victory. I do not believe that our ultimate victory in what we call today the cold war or total diplomacy can be realized without the same unity of spirit and purpose—and the same determination which made military victory possible. Every citizen of every free nation remaining in the world today has a duty to perform in the interest of peace and lasting stability that is as vital as it was during the war. In this connection, I should like to have included with my remarks in the Appendix of the RECORD an address by Mr. Edward W. Barrett, Assistant Secretary of State for Public Affairs, entitled "The American People's Part in United States Foreign Policy," and which was recently delivered.

The address is as follows:

THE AMERICAN PEOPLE'S PART IN UNITED STATES FOREIGN POLICY

(By Edward W. Barrett, Assistant Secretary of State for Public Affairs)

I would like to recall some facts about American foreign policy with which you are already familiar. I think that this is worth doing, because I believe that it is only a continuing examination of the obvious and the familiar that we arrive at what is useful and new. Consider the atom: It was familiar to us—or so we thought—for a long, long time. But by dint of persistent study of a familiar impasse—which was that the atom could not be split—we finally came up with the discovery that it could be split. And we split it.

I think that there is a real possibility that if we keep on examining the familiar obstacles to peace and security, someone may yet discover something that no one else has

noticed—a way to split them, a way to overcome them.

A main source of our difficulties in seeking world peace and security is the refusal of the Soviet Union and its satellites to cooperate with the free nations, and the insistence of the Soviet Union in pursuing an expansionist, aggressive policy.

The Berlin airlift showed us a possible way of expanding the area of workable agreements with the Soviet Union—that of giving the U. S. S. R. no practicable alternative but to abide by its agreements. It is a way, however, which can be pursued only by the direct action of the United States Government and other free governments working together. It is not an approach to the solution of east-west tensions which offers opportunity for direct action by the United States National Commission or by UNESCO itself.

Communist policies, however, are by no means the only obstacle between us and our goal of putting the United Nations Charter into fuller operation.

LACK OF UNITY

There is not enough unity within the non-Communist world. This world includes a group of strong, democratic nations which are pulling together; others which are weaker and less convinced of the need to bear down in a common cause; and still others with hardly better than a neutral attitude toward the struggle between the advocates of a totalitarian way of life and the advocates of a free, democratic way of life. There are many non-Communist countries so burdened with domestic and regional difficulties that the issue of a totalitarian versus a free world society seems very remote. They do not realize that they are part of the battleground on which the struggle for the allegiance of man is going forward.

Even among the leading nations of the free world, we still do not have nearly the unity of purpose and action which is needed.

We must come to closer agreement on policies and programs for the solution of world problems and mobilize more power in carrying them out. We must work together to increase mutual understanding with the marginal countries—those not yet convinced of their own stake in the world contest between oppression and freedom—and convince them that their own good lies on the side of freedom. In the words of Prime Minister Nehru, we must convince these other nations that democracy is the way of life that will deliver the goods, both materially and spiritually. And we must make them understand the accompanying need for them to collaborate in establishing a democratic world society.

Here lies a great opportunity for the national commission and for UNESCO—that of winning the informed suport of the American and of other peoples and mobilizing their support more effectively behind policies and programs which can bring peace and security nearer. If we are to get where we all want to get in carrying out the purposes of the United Nations, the member nations must have the backing of their peoples. To get that backing, and the necessary determination to make the United Nations succeed, requires a mass education program which will tax the abilities of governments, of international agencies, and of private organizations put together. We must face the fact that the United Nations and its aims still seem remote to most of the world's peoples. The United Nations has hardly begun to reach them in terms of their own daily lives. We must all work together to establish that vital contact between the United Nations and the peoples of the world. I would like to comment on some ways in which the United States is approaching these needs and some new trends which we are developing in our methods of working.

AFFIRMATIVE PROGRAM FOR FREE WORLD

Such actions as in the Berlin blockade and aid to Turkey and Greece are intended to remove immediate threats to peace and to contain and prevent the development of other threats, thus prolonging the "breathing space" in which to solidify security and international cooperation.

We are also joining in activities of an entirely different order. These measures, as in our support of the United Nations, and our cooperation with other countries as in the European recovery program and in point 4, are not a reply to Communist policies and propaganda but an affirmative program offered to the free world. The success of this program of construction will ultimately put a final crimp in Communist schemes of ruling the world, but that will be a byproduct; that is not the single objective of what we are doing. If the Soviet bloc should miraculously alter overnight into free, democratic, cooperative nations, we should not change what we are doing, except to expand our cooperation and our aid to include them also. Indeed, we have already made that offer, in good faith, only to see the iron curtain pinned down more anxiously. This is an important fact for us to keep in mind and to impress on the rest of the world. We are doing what we are doing in order to preserve a climate of freedom and opportunity in the world for others and for ourselves. We are convinced that the only way to keep that climate is by building a new kind of world society, democratic in spirit and practice.

We want the American people and all other peoples of the non-Communist world to catch the vision of themselves as the fellow citizens of a truly free world, cooperating with each other in peace and friendship. In the United Nations, we already have the organization through which to carry out the affairs of that kind of world. If we succeed in establishing that kind of world—and we shall succeed—totalitarianism will be by-passed and left to collapse far behind the line of battle against the true enemies of man—disease, poverty, ignorance, and injustice. With increased understanding of the reasons for our policies and the nature of our goals, the American people will act with unity to support them.

It is equally imperative to give other peoples a better understanding of the United States and for us to have better understanding of them. This is the reason for the world-wide information programs which we conduct through the radio Voice of America, our wireless information services, our exchange of persons, and other cultural exchange programs. We are going among other peoples and bringing many of them here so that they may get to know us as we really are, and we may get to know them. Out of this kind of mutual understanding, grows mutual trust and a greater capacity to work together.

STRENGTHENING UNESCO'S WORK

In this matter of gaining the understanding and support of the American and of other peoples in the needs and purposes of the free world, it is wholly fitting and necessary that the United States should do everything in its power to strengthen UNESCO's work. We are in the happy position of knowing that UNESCO's services in improving international understanding will also serve to advance the national interests of all members of the free community of nations, including the United States. The aims of the UNESCO constitution exactly express our aspirations for the world.

There are additional reasons for our interest in seeing an expansion in the work of the National Commission and of UNESCO in the fields of cultural exchange and circulation of information. First, such exchanges offer one of the most immediate ways in which the American people can take an active part in carrying out our foreign policy. To the extent that the National Commission can step up such activities, they will broaden this opportunity for participation by individual American citizens.

Second, we place a great value on a factual exchange with other peoples, and let me stress that word "factual." We want other peoples to get an undistorted picture of us and we want to get an undistorted picture of them. We are willing to settle for the kind of factual exchange of information that UNESCO can provide as an objective, impartial international body following the principles laid down in its constitution.

I repeat, therefore, that the United States has strong reasons for giving strong support to the broadening of UNESCO's work in cultural exchange, in education, in the exchange of accurate information between the free peoples of the world. Naturally, the United States has important work of this sort to do on its own, and we are doing it.

In fact, we are now preparing major proposals in this field for submission to the responsible authorities. They will embrace important new steps for increasing the effectiveness of the Voice of America, of our international information operation, and of our educational program.

NEED FOR WIDER UNESCO PROGRAM

My deep interest in UNESCO, my faith in its ideals, my conviction that it can play a vital role in the world today—all these are known. But I say to you frankly that I do not think UNESCO has thus far measured up to what Director General Torres Bodet called "its noble mission." I hope the delegations of the free community of nations which will assemble at the UNESCO conference at Florence will determine that UNESCO shall make this noble mission into much more than a phrase.

To carry out this mission, UNESCO must have a program and a plan of action looking, not only to the distant peace, but also to the immediate problems which divide the world and threaten the rights and freedoms which give meaning to the UNESCO constitution.

Unfortunately, UNESCO cannot reach all the people of the world. In some countries the door is closed to its message, and its voice is altogether too weak to reach effectively the masses of the people. Therefore, its voice must be strengthened. I hope an important and constructive feature of the forthcoming general conference will be to strengthen very greatly the means by which UNESCO transmits its message to the world.

Here in the United States we are witnessing the benefits of UNESCO's influence. We recognize the value of the educational activities which the National Commission is sponsoring here. It is of both practical and historical importance that today, in primary and secondary schools, colleges, and universities, millions of American students are studying the United Nations, getting to know something of international relations and seriously undertaking the job of understanding the traditions and ways of life of other people. The similar studies being conducted by organizations, clubs, and community groups are of equal importance. Out of this education we are bound to derive more unity among the American people in support of policies and programs for the strengthening of the free world. We can expect the American people to take a more active interest and a more active part in our foreign policy.

PUBLIC PARTICIPATION IN FOREIGN POLICY

The importance of this public participation is clear enough when we realize that, in the total aspect of our diplomacy, the whole United States is acting before the world as its own representative. People abroad look at everything we say and do, in trying to understand us and to anticipate our probable attitudes. We need to demonstrate to the rest of the world, therefore—

That we are united behind a generous policy toward others;

That we are in earnest about building international cooperation;

That we have at home the strong democracy which we advocate for others.

That we will work, in cooperation with every nation willing to join in a common effort, for the removal of barriers to the interchange of ideas, of persons, of materials, of goods, and services. Yes; that we genuinely seek full and free communication and exchange with all peoples of good will, in whatever part of the world they live—as we move forward in our effort to build a peaceful world.

Effects of Imports on Employment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF O. R. STRACKBEIN, CHAIRMAN OF THE NATIONAL LABOR-MANAGEMENT COUNCIL ON FOREIGN TRADE POLICY, BEFORE THE STEED SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR ON THE EFFECTS OF IMPORTS ON EMPLOYMENT, MAY 2, 1950

This hearing represents the first congressional inquiry that has been addressed specifically to the effects of imports on employment and also represents recognition of the import problem in a new light.

Mr. Chairman, your committee is to be congratulated for providing this opportunity for a fresh approach to an old question. The import problem has become so submerged in threadbare arguments, pro and con, that it has until this moment become almost impossible to inject a new thought. We have repeatedly called attention to the fact that while the tariff argument has proceeded in its traditional channels, the very grounds have shifted beneath our feet and thrown old views out of focus. Nevertheless, the old ideas and views stubbornly persist. This hearing should go far to substitute present-day realities for these obsolete hold-overs of years gone by.

The traditional view of protectionism has been that it stifles competition and therefore contributes to the growth of monopoly and trusts. It has been looked upon as the instrument of the robber barons, enabling them to exact high prices from consumers and thus to grow rich and powerful. Lack of competition, moreover, it was said, led to inefficiency and to indifference to public convenience and welfare. Altogether the protectionist was pictured as a sinister character, quite devoid of any sense of social responsibility.

This picture may or may not have been an accurate reflection of the facts in the past. In any event it no longer represents the facts today. Those who are most interested in protection today are those who face the loss of employment, the reduction of wages, and the prospect of curtailing output or even closing down as a result of foreign competition.

It is not the huge mass-production industries, not the monopolies, or near monopolies, that fear the increasing competition induced by additional tariff reductions. Such industries have the advantages of assembly-line production, automatic or semiautomatic machinery and many economies that come from the installation of extensive and costly processes. Their man-hour productivity is generally sufficiently high to offset the relatively high wages that prevail in this country. In other words, they enjoy a relatively low unit cost of production and can generally outproduce their foreign competitors.

It is rather the smaller industries, producers of a wide variety of goods that are consumed throughout the country, that do feel and will feel yet more the impact of foreign competition if tariffs are further reduced. These industries are scattered over the whole country, from coast to coast, and represent the source of livelihood of thousands of communities and hundreds of thousands of workers.

Such industries and producers are not properly represented as plutocratic groups, harboring sinister motives, bent on plundering the public and lining their own pockets. Nor are they inefficient or obsolete industries, as measured by any reasonable standards. They are industries dedicated to the production of goods for which there is a public demand and a public need. Their employees are similar to those found in any other industries, possessed of the necessary skill and animated by the same sound and healthy desires to retain their employment in sound enterprises.

It is a libel against these people to classify them as greedy or inefficient. It is wrong to look upon operations that retain a greater element of artisanship than is present in production lines, as backward or obsolete. Such work is psychologically preferable to the monotonous, fractionalized and impersonalized stint on the moving lines of mass production. There is nothing to apologize for on behalf of the smaller industries of this country. At the core they may be more sound than the giants. They certainly hold a vital place in our national economy; and anything that threatens them is a threat to that economy and to the political system supported by it.

To identify their efforts to prevent unfair foreign competition with the old symbols, typically set forth in the form of corpulent, greedy, wealthy, and sinister figures, always in silk hats, is not only wholly unjustified but a false representation. If such figures are still on the scene, they are no doubt singing the praises of tariff reductions, for that is where their interests lie today. They have not found it necessary in recent years to do so since the liberals who are the avowed foes of monopoly and who profess their friendship for small business, are very efficiently doing the work of the giant industries for them in this field.

They once learned in college that trusts and combinations favored protective tariffs and they have not awakened to the new facts since. While these liberals are baying at the base of the old tree, the fox is doing very well somewhere else. Recently he has been found more and more frequently running with the hounds. Today he is having considerable success in having the hounds chase themselves around.

It is possible that this committee may be able to bring this picture into a new perspective. The opportunity is enhanced because the committee is taking a new approach. This will give it a new view, at a different angle from the old. It will look at the problem from its bearing on employment and relative wage and living standards. The import duty or other form of import control thus becomes a different instrument from the obsolete one condemned by Woodrow Wilson and Cordell Hull. It will be accpted as complementary to other economic supporting devices to which as a nation we have subscribed, such as national minimum wages and parity prices for farm products; not as a device fashioned for the enrichment of a favored segment of the economy.

The purpose of minimum wage legislation is to make it possible for the employers who pay fair wages to continue to do so without exposing themselves to destructive competition from those who would adhere to lower standards. The object of parity prices for farm products is to prevent one very important producing group from falling below other groups with respect to living standards and as buyers of industrial products.

The object of the tariff is to prevent our wage and labor standards from crumbling under the onslaught of foreign competition which finds its advantage in lower wages and poorer working conditions.

What has this objective to do with building of trusts and monopolies? What has it to do with creating inefficiency? What is the difference in principle between this kind of protection and that provided by minimum wages or price parity for farm products? There is no difference. Justification of the one carries justification for the other.

How, on the other hand, reconcile the maintenance of minimum wages and parity farm prices with the open exposure of our workers to unfair competition from across the border or from abroad, where our minimum wage laws do not penetrate and where our labor organizations cannot through their own efforts establish higher standards? The need for protection of the American producer against unfair foreign competition is therefore, if anything, more urgent than protecting one employer in this country from the unfair competition of other domestic employers who pay less than the prevailing wages.

Obviously there is nothing in the present demand for protection of labor standards against erosion from imports that can be placed in the same category as the old protective tariff grants that were described rightly or wrongly as "grabs." There is little possibility today that the employer groups would retain for themselves the major advantages gained from protection. In fact we do not ask that any margin of advantage be conferred upon the American producer. The request is simply for competitive parity with imports, no more, no less. This would provide no margin for consumer gouging or for extra profit returns or for inefficiency.

Needless to say, the problem before us is both complex and perplexing. Because of the special conditions brought about by two world wars we face internationally certain pressing effects of the economic dislocations produced by the two conflicts. Specifically, we are faced with the dollar-gap problem at the very time when it is imperative, if we ourselves would remain solvent, that this country maintain an unusually high level of national income and that it do not countenance deflation.

We need to maintain a very high level of employment, a high level of wages, and a high level of production. This alone will maintain for us the high level of national income which is necessary to carry the heavy tax burden, which in turn is necessary to meet our high national obligations. These are now somewhat above the $40,000,000,000 level per year, and considering the interest payments on the national debt, benefits to veterans and outlays for national defense, not to mention foreign aid, there is no immediate prospect of any very appreciable reduction in the budget.

It appears, therefore, that we are committed, whether we like it or not, to a high level of prices. There is no possibility this side of economic disaster of going back to the 1939 price level or anywhere near it. In other words, we are not in the same position with respect to foreign competition as before the war. We are highly vulnerable to the onslaught of deflation. We are on an economic plateau and must stay there for some time to come. If we come down, the descent must be gradual.

The claim of consumers to the lower prices that imports would bring if they were admitted without any impediment or under lower ones than now exist, loses its force under the circumstances. We cannot have

much lower prices than the present ones and maintain the national income at its necessary high level.

Those who consider methods of meeting the stubborn dollar-gap problem almost uniformly conclude that this country must increase its imports. Otherwise Europe cannot earn the necessary dollars. Therefore, it is concluded, we should open up our market to a greater flow of imports. Also, it is said that unless we do this our exports will dry up and workers will be thrown out of jobs.

This is all true—as far as it goes.

What, on the other hand, will happen if imported goods, flowing inward more freely because of lower barriers, take a greater share of the consumer dollar in a buyer's market? Imports never affect employment adversely in a seller's market. That is because a seller's market by its very nature means a shortage of goods in relation to demand. Imports superimposed upon a buyer's market represent something quite different.

What then if several hundred million or a billion dollars of additional goods are to come in from Europe? Our productive processes as it is are today not absorbing the additional hundreds of thousands who come from the schools and colleges into the labor market every year. Under such conditions what will be the effect of increased imports? What, especially will these impacts be if the goods come in, duty paid, at prices that our producers cannot meet?

Obviously, the impact will create pressure on employment and wages. Both will decline. This decline will be reflected in the national income and this lower income in turn will show up in lower tax collections. Shall we then raise taxes? That would hardly put workers back on the pay roll.

One of the sources looked to for greater employment lies in outlays for plant expansion, new investments in capital goods, etc. When a wide variety of industries face the prospect of keener foreign competition in the home market, enthusiasm for plant expansion and capital investment is dampened on a wide front. Thus another avenue of worker absorption is narrowed by imports.

To date the Economic Cooperation Administration has played the spotlight upon imports from Europe. But this is only half the problem. The other part is Japan. The threat to wage and labor standards from the Far East is even more perilous to our economy than from Europe. There is no evidence that the Economic Cooperation Administration problem has been integrated with the Japanese problem so far as the import question is concerned. Yet it is highly important that this be done.

Altogether the import flow, under present levels of the tariff and quite apart from proposed additional reductions, presents a deflationary threat of high magnitude. The Secretary of State, Mr. Acheson, has conceded public responsibility for the workers who may be displaced as well as for industry that may be driven out of business by increased imports fostered as a means of bridging the dollar gap.

The problem is not as simple as that.

The type of foreign competition that will close factories in our smaller miscellaneous industries will also have sufficient power to put in motion a deflationary spiral. It is assumed that other industries would be in a position to absorb the retrained workers. This is a gratuitous assumption.

Those displaced by imports would be added to those who are already unemployed. Where would the openings for reabsorption occur? Would the pottery or glass or hat workers, or fishermen, or wallpaper craftsmen, or oil workers, or workers in watch or shoe factories, who had been displaced by imports, go to Detroit and knock on the doors of the automobile industry, or to Pittsburgh to be taken into employment in the steel industry? How far would they get?

What would the personnel officers in those centers say to these clamoring applicants for jobs, assuming that the displaced persons had the funds to make the trip or that the Government had provided them with transportation? Would they receive them with open arms? Obviously a number of difficult and embarrassing questions would arise.

The disruption of industry in its accustomed form creates problems that require something more for their solution than an exercise in some mental chess game. Simply to reduce the dollar-gap problem to a syllogism and then to proceed as if the solution to the problem had been found will not dispose of the stubborn facts. Nor does it help to minimize these difficulties as merely local or to dispose of them by reducing them to a flat percentage of the whole economy. What will be the answer when the error of these glib assumptions comes crashing down on our heads? Who will stand up then and say that those who protested were merely spokesmen of selfish interests? Or, worse yet, merely sectional groups?

Thus simply to say that unless we increase our imports, our exports will decline and with it will come unemployment, is not even stating the whole problem, much less offering a solution. It does raise the question whether the export interests are endowed with some particular quality that raises them above producers for the domestic market. In other words, why are the export interests on the side of the angels? What bestows a halo upon them?

It has been said that there is a greater labor content in products made for export than in those that are imported. This is a half-truth cunningly put forward to convince the unwary and the layman. The statement is based on the fact that a heavy portion of our imports consist of raw products and semimanufactures while our exports are principally in the form of manufactured goods.

In 1948, for example, 48.2 percent of our imports consisted of crude materials and crude foodstuffs and 23 percent consisted of semimanufactures, bringing the total for these classes to 71 percent of our total imports. Finished manufactures represented only 18.4 percent of our imports and manufactured foodstuffs only 10.3 percent or a total of 28.7 percent for the two classes.

On the other hand, 56.5 percent of our exports in 1948 consisted of finished manufactures and an additional 10.5 percent was in the form of manufactured foodstuffs. This made a total of 67 percent of our exports in manufactured products. Only 22 percent were in the form of raw materials and crude foodstuffs. Semimanufactures amounted to 10.9 percent.

This is quite impressive. More work is expended on manufactured products, which we predominantly export, than on raw materials, which we predominantly import.

However, from 60 to 65 percent of our imports are free of duty and therefore do not enter into the discussion. Among these duty-free items are an important array of raw materials such as crude rubber, coffee, bananas, cocoa beans, raw furs, wood pulp, tin, tea, etc.

Now, it is notoriously true that these products come principally from Latin America and Asia. Imports from Europe, exclusive of Russia, on the other hand, normally consist principally of manufactured products. From 1936-40 over half of our imports from Europe consisted of such products, or 51.6 percent. If semimanufactures are included the percentage rises to 80.6.

Obviously, the labor content in imports from Europe is as high as it is in our exports; and it is principally the manufactured items such as we import from Europe, that are dutiable, as contrasted with the raw materials that we import principally from South America and Asia, which are principally duty free.

Therefore, the assertion that our exports have a higher labor content than our imports is true; but it would be false to say the same thing about those of our imports that are dutiable; and only if it could truthfully be said of them, would the statement have any meaning.

On this score there is nothing then that sets the export interests apart as deserving of special governmental solicitude.

The fact is that our postwar exports have been maintained at swollen levels because (1) the war-torn nations were dependent upon us for survival and reconstruction and (2) during the war we undertook to supply markets vacated by Japan, England, Germany, and other exporting countries.

Now, as these nations are recovering, two expected results are emerging: (1) They do not need as large a volume of our goods as before and (2) they are resuming shipments to their prewar export markets. All this adds up to reduced exports from this country.

Postwar readjustments would normally be expected to follow a course of this kind, and when they do the trend should not be the cause of surprise. On the other hand, our exporters would like to retain the war-gained markets. In order to do so they want their associate producers in this country to move over and make way for a greater market here for European goods than the latter enjoyed before the war. This increased market is to be offered as a substitute, in part at least, for the prewar markets that Europe enjoyed elsewhere and that we now continue to hold precariously. The purpose is to keep the shrinkage of exports to a minimum.

And our Government is giving full support to this strange act of brotherly love. It is marshaling all the arguments in support thereof that can be found. The giant mass-producing and exporting interests are the presumed beneficiaries of the policy; but of substantive proof of the so-called over-all benefits of this program there is none.

It is a mystery why, as a matter of national policy, we should strain to attain a dependency on exports such as other nations would give a kingdom to be rid of.

What are the alternatives?

Assuming that imports were permitted simply to take their course, without further stimulation, what trend would they be expected to take? Undoubtedly they would increase, so long as our national income remains at its present high level. Imports from Europe would be expected to gravitate toward their prewar share of this market.

From 1921 to 1935, averaged by 5-year periods (1921–25; 1926–30; 1931–35) Europe supplied 30 percent of our imports (30.4, 29.9, 30.1 percent, respectively, for the 5-year periods given above). During the 1936–40 5-year period this dropped to 25.3 percent. Thereafter a decline set in until the low point of 7.1 percent was reached in 1943.

By 1946 this had climbed back to 16.3 percent, after which a slight decline set in. In 1948 it was 15.7 percent and in 1949 it fell to 13.9 percent.

On the other hand, more of our imports have come from Canada and South America. Fourteen and eight-tenths percent of our imports came from Canada in the 1936–40 period. In 1949 this percentage stood at 23.4 percent. In the case of South America the respective percentages were 13.6 percent and 22.6 percent.

How much of this shift is permanent is not known. Before 1910 over 50 percent of our imports came from Europe. During the First World War (1915–20) this share fell to 29.3 percent. Europe was more resilient after that war, and in the 1921–25 period Europe rose to 30.4 percent as a source of our imports. Despite this springback, Europe never recaptured her pre-War I share of our market. In fact, the 1921–25 share was the highest 5-year percentage attained since then.

Perhaps Europe has lost further to Canada and South America on a permanent basis.

However, it should be expected that she would regain a greater share of our market in the next 5 years than in the past 5.

The over-riding question is not how big a share of the market but rather how large a share of how large a market. In other words, the prime consideration is the continued prosperity of the United States.

The question then arises what line of action, in this field, will be most conducive to continued properity and which would have the greatest influence in the opposite direction. Would, for example, the reduction of tariffs in order to increase imports give greater assurance of continued high employment and a high national income than the alternative of continuing financial aid to Europe without stimulating imports by further tariff reductions?

There is little question that the discontinuance of aid would check exports even more than they are due to decline in any event. In other words, discontinuance of aid would shrink the market for American products. This would spell unemployment in the export industries.

Would it be more conducive then to continued prosperity, so far as this is dependent upon action in this field, to stimulate imports by tariff concessions as a means of sustaining exports at a lesser reduced rate, than it would be to let the imports alone and make up the dollar-gap by grants and loans?

Reduced tariffs would cause unemployment in a wide variety of industries in this country. This would perhaps cost the Treasury as much as European aid. If so, nothing would be saved and, in fact, much greater unemployment would be risked through the onset of deflation.

Continued cash outlays for Europe would spread the burden equally over the country. Europe would continue to buy here. Exports would be subsidized to the extent of the dollar-gap, as has been done under the Economic Cooperation Administration. If Europe can regain a share of our market approaching her prewar share, without specific stimulation, she will earn a considerably greater number of dollars than in recent years, provided our economic level has not declined. Our tariffs are already appreciably lower than in 1939. Two multilateral trade agreements have been negotiated since then, as well as several bilateral agreements.

This course would avoid the grave risk of driving the smaller miscellaneous industries in this country to the wall, throwing hundreds of thousands of the workers out of employment and pressing heavily upon the labor market in the mass-production industries.

In conclusion, Mr. Chairman, let me say that the present investigation is pointed in the right direction. It is pointed at the phase of the import problem that most concerns the workers in this country: namely, the effect of imports on employment and labor standards. As indicated at the beginning, there has been a great need of a new approach to the import question. This new approach has the supreme virtue of addressing itself to the most important phase of import competition, i. e., the effect on our workers and their living standards.

No Appeasement

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial by William Green, of the American Federation of Labor, appearing in the April issue of the American Federationist.

This article should be read by every Member of the House. Our attitude as a Nation toward the Kremlin, having been one of appeasement, has undoubtedly encouraged the Moscow Government in its policy of irritation, obstruction, and opposition to world peace.

NO APPEASEMENT

(By William Green)

The crucial fact that blocks world peace is the existence of an aggressive nation which at every important turn in national events reiterates its dogma that capitalism and communism cannot exist together in the same world. This dogma ignores the fact that they did exist together until the U. S. S. R. set out to execute its plans for aggression after the Second World War. Looking back, we can clearly see that at every strategic phase of the war the conditions insisted on by the Kremlin were in accord with its blueprint for later aggression.

The Communist political commissars accompanied the Russian Army with the secret police as camp followers. Trained Communists moved in as the military lines moved west. The essential conquest took place before the West awakened to the implications of the Soviet possession of the Balkans. Likewise with Asia, where under secret terms of treaties we reversed pledges to our ally, China, while the U. S. S. R. made ready to move into North China and into the heartland of Asia.

In a period of a few brief years, without formal war declaration but by strategy, trickery, and invention of nonmilitary methods of securing the fruits of military aggression, the U. S. S. R. now dominates eastern Europe to the Elbe, more than half of Asia, and has increased the number of people under Moscow's rule from 200,000,000 to 800,000,000. The Kremlin is poised now in Berlin, where weeks ago the Soviet agents announced a youth demonstration to take over the former capital. The Communists have mobilized east German police forces and are said to have numbers of Asian divisions either in Prussia or Poland. The U. S. S. R. is also hovering over southeast Asia in the hope of obtaining control of the almost unlimited resources of that region. Turkey and Iran are also in danger as well as the dissident Tito of Yugoslavia.

We are in a serious situation which the diplomats of the democratic world failed to avert. Our own Government and many of our people failed at first to understand Communist purposes and methods.

There is yet time to prevent the iron curtain from shutting in if we move promptly and effectively. Many in the Soviet Union and in eastern Europe do not have the faintest idea of what democracy is or what it means. But evidence of resistant groups still fighting against arbitrary tyranny, still trying to have a decent life proves that human detestation of tyranny has not been killed. The frequent purges in the U. S. S. R. and controlled areas, wiping out all who have liberal tendencies and who do not servilely follow each new twist of the politburo, indicate that the Kremlin seeks security at home for some new aggression.

The American Federation of Labor is one organizatiozn that has never trusted the Kremlin. We were long a voice in the wilderness, calling for an international trade-union federation free from Stalin's orders. At last such an organization has been established. The International Confederation of Free Trade Unions is now ready to function. It will be ably supported by the International Transport Workers Federation, the heroic organization which rescued workers in Axis territory from Hitler's fury during the war and furnished aid to free trade-unions and to the resistance movements in many countries. This is the organization that will rally freedom-loving seamen and longshoremen to land defense equipment in Europe under the North Atlantic Treaty. These two great organizations of free labor should have the active support of our Government.

But this is not enough. All organized groups of democratic citizens in this and other countries should band together to get aid to the underground forces courageously fighting the cause of democracy for us. Employers, technicians, professional groups, religious organizations should make their contributions early and work steadily for the cause of liberty until totalitarian despotism is defeated.

This is not an easy undertaking. It will require sacrifice and devotion to carry it through, but each age develops those to do its distinctive work. Every segment of society should assume its responsibility for winning the cold war which the Communists initiated and are directing at our whole Nation.

We have many citizens who are familiar with foreign countries and can serve our Nation and the cause of human liberty by helping to organize and maintain resistance in the nations grabbed by Stalin. These resistance groups would provide the best possible intelligence sources to guide all our efforts in the cold war.

This is one contribution all groups and all exiles can make for achieving lasting peace.

Three Extremely Interesting News Items

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. WHITE of Idaho. Mr. Speaker, there appeared on the front page of the April 28 issue of the Washington Star a brief news item about ECA purchase of Canadian wheat for England, which should be of considerable interest to United States taxpayers. Then in looking through my files I came to another news item printed in the Star of February 23 reporting ECA purchases, grants, and importations which I am sure must be of interest to the American people. For fear that these news items might refer to the same transaction I conferred with the ECA to ascertain just how much wheat we were buying with our money from one part of the British Empire to give to another part of the Empire with the result that I learned that in the month of September 1949 that a British delegation above the ministerial level came to this country and reported to our Government the rapid deterioration of the United Kingdom's dollar and gold reserves and that a conference was had with the upper echelons within our Departments of State, Treasury, Agriculture, and the ECA, with the result that an arrangement was made for the ECA to purchase $175,000,000 worth of Canadian wheat to be given to the United Kingdom. It now develops that commitments for the entire $175,000,000 to purchase Canadian wheat

have been issued as well as $30,000,000 to procure United States wheat for the United Kingdom have also been issued.

In view of this situation and these transactions financed by the United States taxpayers it is of interest to read the third news item concerning recent gold discoveries and mining development in South Africa taken from the May 3 issue of the Pathfinder.

[From the Washington Star of April 28, 1950]

BRITAIN GETS ECA WHEAT

Great Britain was granted $35,000,000 today to buy Canadian wheat under the Marshall plan. The Economic Cooperation Administration said the grain-buying will begin immediately and continue until June 30. Delivery must be made by August 31.

[From the Washington Star of April 23, 1950]

BRITISH GET $45,000,000 IN ECA FUNDS FOR WHEAT FROM UNITED STATES AND CANADA

Great Britain today received authority to buy $45,000,000 worth of American and Canadian wheat under the Marshall plan.

The Economic Cooperation Administration announced the recovery spending approval in new foreign-aid allotments to seven European countries.

ECA said the British funds will be used to buy $30,000,000 of Canadian wheat. The remaining $15,000,000 is earmarked for wheat and flour from the United States.

The Agency set a May 31 deadline for completion of contracts for the wheat shipments. It said deliveries of the Canadian grain must be made by July 31 and the American deliveries by June 30.

NORWAY REQUEST APPROVED

It was the first big grain purchase by Britain approved this year by ECA.

Buying of the Canadian grain was okayed, ECA officials said, to enable Britain to meet its commitments under the international wheat agreement.

ECA also granted Norway $2,150,000 to buy United States wheat and wheat flour. Delivery specifications were the same as for the British purchases in this country.

OTHER COMMITMENTS

The day's transactions brought total Marshall-plan recovery commitments to $8,374,444,000 since start of the European recovery program nearly 2 years ago.

Included in the latest grants were:

France, $1,275,000 to buy crude oil and petroleum from the United States, the Middle East, and Latin America as well as $300,000 worth of nonferrous ores from Canada; Sweden, $730,000 to pay for industrial metals, chemicals, and professional equipment from the United States and Canada; Holland, $300,000 worth of nonferrous ores from Latin America and naval stores from the United States; Portugal, $220,000 to pay ocean-transportation costs; and Ireland, $148,000 worth of United States motor vehicles.

[From Pathfinder of May 3, 1950]

AFRICAN GOLD RUSH

In April 1946, near the little South African village of Odendaalsrust, 150 miles southwest of Johannesburg, a drill crew looking for gold cut a reef about three-fourths of a mile deep. Anxiously, they pulled up a sample piece of the rock.

Assayers found the sample had enough gold, at $35 an ounce, to make a ton of similar ore worth $2,000—275 times richer than the average grade of ore from the Rand.[1]

[1] Witwatersrand (Ridge of White Waters) is the famous gold field near Johannesburg and, until the Odendaalsrust strike, the greatest known concentration of gold.

GOLD

Unlike the rush of '86, the rush of '46 was to the London and Johannesburg stock markets, not to the open fields. The open fields were controlled by five big Johannesburg mining companies. By last week they were spending £200,000,000 developing 13 mines—all within a 14-mile radius of a fast-growing boom town called Welkom.

Four years ago on Welkom's present site there wasn't a single hut. Today there are 500 houses and 500 more are going up—most of them with electricity and hot water.

Like New York City, Welkom's biggest problem is water. The miners strike plenty of it but it's either salty or brackish. To get good water they had to build a pipe line from the Vaal River which is now pumping in about 500,000 gallons a day. By 1958—when all 13 mines will be operating—47,000,000 gallons a day will be needed.

The man with the biggest stake in the Welkom gold mines is Sir Ernest Oppenheimer, a modern Cecil Rhodes. As a multimillionaire head of the Anglo-American Corp. of South Africa, Sir Ernest owns 7 of the 13 mines in the Welkom area. But that isn't all the property Oppie owns.

Born in Friedberg, Germany, in 1880, the son of a Jewish cigar merchant, Sir Ernest went in 1902 to head a London diamond concern's South African office. In 1917 he got the break that helped make him one of the richest men in the world.

Oppie heard of some gold fields in what is now known as the Rand, that seemed promising. Unable to get his firm to bid for them, he went to London and got an introduction to Herbert Hoover, who in turn introduced him to J. P. Morgan. He persuaded Morgan to back him with £100,000,000 in United States credits, formed the Anglo-American Corp., and bought the gold fields.

DIAMONDS

Within a few years, and with the help of the South African Government, he got control of some diamond mines. After forcing himself into the tight London diamond syndicate, he started after the famous De Beers House. Quietly he bought 200,000 shares of De Beers stock and in 1926 told the directors that he wanted to be made a member of the board. Three years later he was chairman.

He brought his mining companies through the crash of 1929 and the depression. Today, besides his gold interests, Oppie controls 9 percent of the world's copper, 45 percent of South Africa's coal, 50 percent of its iron and steel production, and he sits on top of the diamond monopoly by controlling 95 percent of the world's yearly output.

From the 13 Welkom mines, when they reach full production, South Africa and Sir Ernest are expecting an annual flow of ore worth £50,000,000. Says Oppie, and he certainly ought to know, "It's the most extensive mining development the world has ever known."

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the eighth article by Mr. Frank Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

The Washington, D. C., housewife who put her laundry in the home washer yesterday may not know it but she is a figure of scandal before the Communists of the world, from the Kremlin in Moscow to the State Department in this city.

They have to see her in that light or else deny their own story of the world. And that no Communist dares to do.

Just the same, she does in fact explode the politics and philosophy of the man who organized the Communist view of things, Karl Heinrich Marx, of Trier, Germany.

Marx happened to live in a moment when the world was just learning what can be done with machinery.

But he was crazy, so he spent the years of his life, 1818 to 1862, in a personal war against civilization, which he hated because it outwitted him.

Civilization itself, in those years, learned how to make machinery produce and move goods at a rate and volume unimaginable to the world before.

There were disasters as well as triumphs. But just the same civilization was on the rise, wealth and light were growing.

But not for Marx. The machine, to his mind, was being used to depress and destroy. And he laid it down as inevitable that as machinery increased its grip on civilization, violent revolts would follow.

Such is the starting point for the doctrine of scientific Marxism, which holds that as a nation becomes increasingly industrial the contradictions of capitalism make revolt automatic, inevitable, and irresistible.

The chief industrial nations of Marx's time were England, France, and Germany. And so Marx died convinced that the laws of his science would, as sure as the sunrise, establish a dictatorship of the proletariat over the machines through revolution generated in their great manufacturing cities.

He could not imagine a condition such as we have in modern America, in which machinery has been made the household drudge, and luxuries beyond the reach of kings are made for one-room apartments and prefabricated cottages.

If Marx could ride on the Pennsylvania Railroad between New York and Washington, today, and see the television aerials sticking out of even the shabbiest slums, he would have to declare either his eyes or his science a lie.

But the basic idiocy of Marx's story of the world was proved long before the arrival of television and automatic washing machines.

Marx, in his ignorance, laid down the rule that the more industrialized a nation, the sooner its downfall and overturn to the scientific socialism of his design.

That is why the embarrassment of facts strains scientific Marxism so hard today that Communists all over the world live under the most rigid and brutal discipline. They do not dare look at the world as others do, or let anybody under their rule do so.

For the world of fact nowhere has obeyed the dictates of scientific Marxism.

For example, when a handful of Communists actually captured a nation, they did so, not in the most industrial part of the world, as Marx had said must follow in accord with his law of behavior, but in a land that had hardly emerged from the forest primeval.

Of all the states on the continent of Europe, Russia in 1900 was the least industrial and the most devoted to farm life.

Such a nation, according to the science of Marxism would be the last to arrive in the Socialist wonderland.

And so it came about that the last pretensions of truth in scientific Marxism were blown to bits by World War I.

The great industrial powers were in terrible collision, then. Civilization itself was

put to mortal stress. Yet the Communists failed to capture a single one of the industrial centers.

Indeed, not to this very day have the mass of the people behaved in a single country of this world as Marx had predicted they must.

Marx's philosophy of a Socialist society run on Communist lines is just a ragbag of generalities, as full of holes as a Swiss cheese.

It can be made to seem a rule that fits a case only by throwing away the whole of human knowledge and experience.

Even then it passes only with people held down by the most cruel discipline of mind and body.

Marxism is no success as a scientific explanation of the world. And it would not be a bother to anybody, today, if its early believers had been treated with intelligence.

From here on in, this series deals mainly with men who gambled on Marx being right, and how they fared.

A False Picture

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, which appeared in the Sioux City Sunday Journal of April 30, 1950:

WASHINGTON.—Mr. Truman's contention that a splendid prosperity still prevails in our country and that everything is lovely in our domestic situation is not easy to sustain unless you ignore some pretty pregnant facts and do not care what you say anyhow. Yet, undoubtedly it is the Truman intention to make this his basic appeal to the people on the "nonpolitical" tour of the country which with a great fanfare of administration trumpets he begins this week.

The fact is that recent developments in Washington have made it clear that this assumption is completely fraudulent. The chief of these, of course, is the official revelation that the Truman estimates of the Federal deficit for the fiscal year ending July 1, 1950, is $1,200,000,000 short, which means a net deficit for the current year of $6,100,000,000 instead of $4,900,000,000. And for the year ending July 1, 1951, Senator GEORGE, chairman of the Senate Finance Committee, estimates a deficit of $7,300,000,000.

In brief, from democratic sources it is officially estimated that in 14 months the net deficit will exceed $14,000,000. This is so far beyond the administration estimates as to make them seem absurd.

Now, what this really means is that the Federal finances are altogether out of control. When the President and his financial advisers misguess revenues and receipts by $3,000,000,000 (which is an understatement of what they have done) it means that they have lost all sense of the fiscal realities and have no real conception of actual conditions.

When to this you add Senator BYRD's incontrovertible figures showing that excluding interest on the national debt, money appropriated for national defense, the Marshall plan and foreign aid and social security, our expenditures for purely domestic purposes has increased nearly 30 percent since 1948. Few clear headed persons will dispute the statement that our Federal finances are in a run-away condition—and that our fiscal situation is a perilous one.

Considering all these things, it is certainly pertinent to inquire what is this prosperity for which Mr. Truman claims full credit? Is it solid or is it fictitious? Is the breast-beating statement of Leon Keyserling, acting chairman of the council of economic advisers, that "no matter how you measure it, the situation is very, very good" justified or is it just the outgiving of a New Deal-Fair Deal job holder who calls himself an economist without any clearly recognized title to do so?

There is a very strong argument to be made that the sort of prosperity for which Mr. Truman claims credit and to which he intends to point on his nonpolitical trip starting next week is in fact a thoroughly false prosperity. To take this sort of prosperity seriously is to expose ourselves to a shock from which it will be hard to recover.

For the truth is, the prosperity about which the President boasts comes from the fact that the Government is annually spending $6,000,000,000 more than it takes in in taxes. This is a tremendous sum. With it, huge subsidies for the farmers, maintenance for the indigent, idle, and thriftless, provision for countless unnecessary jobholders, and for numerous unnecessary purposes are supplied. All of this money is put into circulation. Along with the vast sums spent on foreign aid and in prosecution of the cold war, it bolsters salaries and incomes of individuals and, satisfying our immediate appetite, gives us a false sense of security.

The fact is that every day the national debt gets larger and the national finances more deplorably unmanageable. This isn't real prosperity. It is about as perilous a state of affairs as well can be imagined. Actually, we are living off the fat of America and it is pretty close to criminal, under these circumstances, to tell us that all is well with the country and that no one need worry about our strength and soundness because wages are up and money is plentiful.

In the war period from 1940 to 1945, we had prosperity which came just in time to rescue us from a disastrous slump as the New Deal spending policies had begun to peter out. Everybody had a job. Factories were working overtime. Ships were being built by the hundreds. Wages were shooting up. Individually, we were all prosperous then but it was a war prosperity founded on huge war expenditures and a debt which now exceeds $250,000,000,000.

The Truman administration has not curtailed domestic expenditures since 1945. On the contrary, it has vastly increased expenditures and further piled up the debt instead of reducing it. The prosperity which we now have is partly due to the tremendous demand for goods following a destructive war, and partly to the continued pouring out of Government money from the Treasury spigots. It is a prosperity fraught with grave danger, and it is the worst sort of demagogery to capitalize it for political purposes, deluding the people into believing that everything is lovely and the goose hangs high. Even those of rudimentary intelligence should know better.

Point 4

EXTENSION OF REMARKS
OF
HON. TOM PICKETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. PICKETT. Mr. Speaker, on Tuesday afternoon, April 18, there appeared an editorial in the Palestine, Tex., newspaper which deals very pointedly with reasons why the point 4 program should not be adopted. Having opposed the adoption of the point 4 title of the bill extending the ECA when it was before the House recently, I offer the editor's observations for consideration of all Members of Congress, should the matter again become an issue.

The editorial follows:

POINT 4 HEADACHE

President Truman, exponent of a point 4 program which he believes would set backward nations off on a spree of development, has received some pointed advice from the representative of one of the backward nations.

George Hakim, counselor for the legation of Lebanon, says the plan to pour private capital into countries like Lebanon isn't big enough to do any good, that it would not inspire in underfed peoples an enthusiasm for democracy, and that it is but another move for exploitation on the part of the demons of private enterprise.

We are not in agreement with Hakim. We can't agree that investment by private enterprise necessarily means exploitation. But we do think Hakim's opinions give this country something to think about.

In more detail, Hakim said the masses of the poor nations are not interested in concepts of free enterprise, free competition, democracy, and human rights. He said before such abstract ideas can get any attention it is necessary first to live and not to starve.

He added: "Point 4 is based on the assumption that the old imperialism, exploitation for foreign profit, will not take place. Is it not likely that private capital in search of higher profits will exploit the workers in the underdeveloped countries?"

Let's think these things over, Mr. Truman.

Let's get out of our heads the fallacy that all the world admires the United States. It does not. And the undernourished millions of people of many lands, who make up about two-thirds of the world's population, don't even know anything about the United States.

As Hakim says, they also don't care.

We are not going to sell them on democracy until they have gained enough education to think about things more abstract than where they are going to find a suitable batch of roots to boil for their dinners.

We are not going to convince them of values of free enterprise until they have learned first that there can be more to life than a place to sleep and food enough to fill the voids in their stomachs.

Hungry people will follow a leader who promises to give them more than the last authority they had. We can't expect them to put much stock in a system of government which depends on the ability of people to take care of themselves.

And let's be honest with ourselves to this extent:

We must admit, if we are honest, that the backward peoples of the world suspect those of any country whose citizens are better off. They have a good reason to be suspect. They have been exploited by great nations for hundreds of years. They expect no great nation to move in on them without exploiting them again.

That fear is explicit in Hakim's warning. It makes point 4 look like a quixotic proposition indeed, instead of like the "bold new program" as envisioned by President Truman.

We can't win the world with the dollar, Mr. Truman, any more than we can borrow our way into prosperity at home.

Mr. Hakim has made that clear.

The Late Generoso Pope

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. CLEMENTE. Mr. Speaker, it was with great sorrow that I learned of the death of Generoso Pope, who served for many years as a publisher of Italian-language newspapers. Continuously for over 20 years he served the interests of Americans. To Americans of Italian extraction he became a tradition. Generoso Pope was a friend of the little man. He never became too important to listen to the plea of the humblest citizen, and thousands in the country can testify to his helpful personal assistance.

Born in Italy in 1891, Generoso Pope left his family when he was 12 to come to the United States. He was an outstanding example of an immigrant who made good in America.

At his death he was president and chief stockholder of the Colonial Sand and Stone Co., Inc., the largest supplier of sand, gravel, concrete, stone and cinders to the city's construction industry; owner and publisher of Il Progresso Italo-Americano, oldest and largest Italian-language newspaper in the United States, and president and chief stockholder of the Atlantic Broadcasting Co., operators of Station WHOM.

Many observers credit him with a decisive role in saving Italy from a Communist government in the last Italian election campaign. When reports from abroad indicated that, discouraged and dispirited, the Italian people were looking with favor on the Communist cause, he organized a letters-to-Italy campaign among the readers of his newspapers. This resulted in the dispatch of thousands of letters from Americans of Italian origin in the United States to kinfolk and friends in Italy urging them to reject Russian blandishments.

Men of his caliber are few. He has made every sacrifice through work entailing inexhaustible demands of energy and virtually almost limitless patience. In the passing of Generoso Pope I feel a distinct personal loss.

Aid for School Districts Affected by Federal Activities

EXTENSION OF REMARKS
OF
HON. LEONARD IRVING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. IRVING. Mr. Speaker, as a member of the House Education and Labor Committee and also a member of the subcommittee of this important committee, which has made a very extensive study of the subject and the proposed legislation pertaining thereto, it is my desire to call to the attention of the Members of the House of Representatives the grave need for such legislation, and also the Nation-wide interest in it, by inserting a speech, which, because the speaker was also presiding over the meeting, will necessarily include remarks relative to other speakers and phases of the program:

ADDRESS BY MRS. EUGENE MEYER AT MEETING OF METROPOLITAN AREA CITIZENS COMMITTEE FOR THE PUBLIC SCHOOLS FOR FINANCIAL ASSISTANCE FOR SCHOOL DISTRICTS AFFECTED BY FEDERAL ACTIVITIES, TUESDAY, APRIL 25, 1950, AT WESTERN HIGH SCHOOL

Honored guests, fellow Americans from near and far, this is an inspiring crowd.

Let me welcome you to this meeting on behalf of the Metropolitan Area Citizens Committee for the Public Schools. The very size of this audience and the great distance some of you have traveled proves the deep interest of the American people in public education. And we can be sure of one thing—American public schools will be just as good as the people want them to be.

I should like to emphasize one point at the outset. We have not come together to discuss Federal aid to education in general. We are here to discuss only two bills, H. R. 7940 and H. R. 8113, both introduced by the Honorable CLEVELAND M. BAILEY. These bills are to provide Federal aid for the operation and construction of schools in almost a thousand localities where the activities of the Federal Government have created a sudden and often an overwhelming increase in the population. Thirty-four such communities from sixteen different States—from the east to the west coast—are represented here tonight with delegations.

The hosts tonight are twelve governmental units around the Nation's Capital, who have formed the Metropolitan Area Citizens Committee for the Public Schools. All of them are struggling to build schools for a rapidly mounting child population, most of them children of Federal workers.

These local areas are: Anne Arundel County, Calvert County, Charles County, Harford County, Montgomery County, Prince George's County and St. Mary's County—all of Maryland—and from Virginia, Alexandria, Arlington, Fairfax County, Falls Church, and Prince William County.

Those of us who live in the District of Columbia regret that the exclusion of the Nation's Capital from the benefits of these bills was unavoidable. But we are accustomed to being the step-children of Congress. And we know this—if you people who have votes can get help in this crisis, the District schools will eventually derive direct and indirect benefit from the alleviation of the school problems in the surrounding area. Though a resident of the District myself, I have tried to show my interest in the children of the nearby counties by describing the terrible conditions with which their school systems are struggling. I only regret that I could not be in two places at once and accept the invitations I received from some of you in various parts of the country to do the same kind of studies.

But we must express our gratitude tonight to nine hard-working Congressmen who devoted two solid months to making just such studies throughout the country. During October and November of last year they made 23 stops in 17 States and held hearings of from 2 to 5 days in each place. They often put in days from 9 a. m. to 11 p. m. As we all have good reason to be grateful to these men, I am going to call their names and ask them to rise: Representative CLEVELAND M. BAILEY, of West Virginia; Representative TOM STEED, of Oklahoma; Representative LEONARD IRVING, of Missouri; Representative THRUSTON BALLARD MORTON, of Kentucky; Representative THOMAS H. BURKE, of Ohio; Representative ROY W. WIER, of Minnesota; Representative CARL D. PERKINS, of Kentucky; Representative SAMUEL K. MCCONNELL, JR., of Pennsylvania; Representative THOMAS H. WERDEL, of California. And last but not least, we wish to thank Representative JOHN LESINSKI, of Michigan, who appointed the committees and made the money available for their Nation-wide study.

We must not forget that a Senate committee under Senator HUMPHREY also held similar hearings at the last congressional session and reported out a bill which passed the Senate.

I am sure this audience will be glad to know that many other Congressmen are with us tonight. We are profoundly grateful for their interest and their presence. Their names are: Senator ELMER THOMAS, of Oklahoma; Representative L. MENDEL RIVERS, of South Carolina; Representative HENDERSON LANHAM, of Georgia; Representative WINFIELD K. DENTON, of Indiana; Representative JOHN MURDOCK, of Arizona; Representative J. M. COMBS, of Texas; Representative WILLIAM M. COLMER, of Mississippi; Representative TOBY MORRIS, of Oklahoma; and Representative JAMES F. LIND, of Pennsylvania.

Among our other distinguished guests are Mr. Willard E. Givens, executive secretary of the National Education Association, with some of his associates.

In your name I wish to thank all of these busy men for coming here tonight. What a truly American assemblage this is when the people and their representatives get together to discuss a question of Nation-wide importance. I say "of Nation-wide importance" though the bills in question are limited to critical areas because the people whose interests are involved are serving their Government whether in a civil or a military capacity.

What we are trying to do here tonight is simply this. We are trying to convince the Congress as a whole that the Federal Government must help to solve certain problems created by the activities of the Federal Government. We well know that the social problems in these areas are not confined to the need for schools. But we learned during the war that the most stable communities—the ones that stood up best under the immigration of a flood of war workers—were those that had the best public-school system. Therefore by improving the schools for the children of our military and civilian personnel throughout the country, we do far more than appears on the surface. We not only do justice to the children of these Federal workers; we bring order to the whole community. We shall make the parents more content to remain in Government service instead of resigning, as they are now doing in large numbers. In a moment of great peril, we shall strengthen immeasurably the Nation's striking power and its defenses, whether military or civilian.

We are aware that the Federal Government needs to economize in the face of its huge financial responsibilities at home and abroad. But this trend toward economy implies, above all things, choice and discrimination. Where will our available financial resources do the most good? I can imagine no measures which with the expenditure of a modest amount of Federal funds will be more far reaching in effect than H. R. 7940 and H. R. 8113.

And now to our program. For the first half hour we shall listen to each other's troubles in order that we may all feel less isolated, helpless, and overwhelmed by our own troubles.

Having looked the evils with which you are all contending in the face, we shall cheer ourselves up by analyzing what these two bills will do to conquer our common tribulations.

The first person I shall introduce to you is Mr. William A. Early, the vigorous superintendent of schools in Arlington, Va. By this time the citizens of Arlington are famous throughout the country for their battle to improve their school system. Mr. Early had earned a reputation as one of his State's foremost educators before he came to Arlington. He is president of the Virginia Education Association. He is also known to you because he has kept in touch with your problems and knows them at first-hand. Therefore, I am going to ask him to give a broad outline of the educational difficulties in localities affected by activities of the Federal Government. Thereupon he will introduce to you all of our out-of-town guests and the representatives from six different communities, who will speak for their communities.

Mr. EARLY. (Remarks of Mr. Early, as well as those of the several others from various parts of the country called upon to explain their problems are not available.)

Now we must inform ourselves on the two bills before the Congress which touch your lives so closely.

The two men I am going to introduce to you are appearing here as private citizens. But nobody is more familiar with these bills, as both are consultants to the two subcommittees that have studied these problems. They are willing to answer questions, but these questions should be written and sent to the speakers.

Let me present Mr. B. Alden Lillywhite and Mr. Henry F. Alves. (Analyses, etc., not available.)

Our final speaker who will sum up for us the significance of this meeting, is the president of a great State university. But he is more than that. He is a friend of the people, whose human interests go beyond his academic walls. He knows, as few university presidents do, the importance of good elementary and secondary education to college and university teaching.

You can judge the quality of his interest in your problems and the kindness of his heart when I tell you that he broke an important speaking engagement to be with us tonight. I give you a real statesman, administrator and scholar—the president of the University of Maryland, the Honorable Harry C. Byrd.

(Address of Dr. Byrd not available at this time.)

Thank you, Dr. Byrd.

Now, my friends, you who have worked so long on these bills know our work is not over. Wonderful as this meeting has been, the real work has only begun. I wish to assure all of you who have traveled from the four corners of our Nation, that our Metropolitan Area Citizens Committee for the Public Schools will cooperate with you in this battle until it is won.

Let me end with the words I used at the opening of the meeting: "Our American public schools will be just as good as we, the people, want them to be."

The following resolution offered by Mr. Ray McCullough, of Lavonia Township, Mich., was adopted at this meeting:

"RESOLUTION TO BE OFFERED TO THE NATION-WIDE CITIZENS MASS MEETING SPONSORED BY THE METROPOLITAN AREA CITIZENS COMMITTEE FOR THE PUBLIC SCHOOLS

"Whereas activities of the Federal Government have imposed serious financial burdens on certain local school districts through acquisition of taxable land, and by causing very large and sudden increases in school enrollment; and

"Whereas the severe financial hardship imposed by these Federal activities has deprived many children living in the affected areas of normal educational opportunities; and

"Whereas some of these Federal activities will continue for some time in the future to impair seriously the ability of certain local school agencies to finance normal educational services: Now, therefore, be it

"*Resolved*, That this Nation-wide citizens mass meeting go on record as urging the Federal Government to establish as a policy the provision of financial assistance to school districts affected by its activities commensurate with the financial burden it has placed on them; and be it further

"*Resolved*, That this meeting go on record as urging the immediate passage of H. R. 7940 and H. R. 8113, proposals now before the House Education and Labor Committee which have as their purpose effectuating the above stated policy; and be it further

"*Resolved*, That copies of this resolution be sent to every Member of Congress."

Americanism Versus Communism

REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. MASON. Mr. Speaker, the two questions being asked by the American people today are, "What about Senator MCCARTHY and his spy charges? Will he be able to make them stick?" My answer to the last question is, "He will if the Government records are made available."

JOE MCCARTHY is a fighting Irishman. He fought with the Marines. He is a red-blooded, two-fisted American, in the best sense of those adjectives. He has a keen legal mind and has had experience as a judge. He is not a man to make charges without having facts to back up his charges.

Senator MCCARTHY has already accomplished the following:

First. He has forced the State Department to fire 91 sex perverts, who because of their habits were subject to blackmail by their Communist friends. The spotlight of publicity has also been turned upon a list compiled by the Washington police of 4,000 homosexuals, a major portion of whom work for the Federal Government in various departments, and who because of their perverted sex habits are poor security risks. We hope these will eventually be dropped from the Federal pay rolls.

Second. He has reopened the Amerasia case, an incident that was hushed up and glossed over by the administration several years ago. It deals with espionage in the State and Treasury Departments and in the Army and Navy.

Third. He has publicized the fact—I have had first-hand knowledge of the same for 10 years—that the administration has been protecting Communists and fellow travelers in Government departments, and has been doing everything possible to cover up their subversive activities—Alger Hiss, Judith Coplon, and Dr. Fuchs are a few samples in evidence.

The Senator has assured me personally that he has just begun his fight to expose the espionage agents and spies in the State Department, and that he is confident of success in his efforts.

SOUNDS GOOD, BUT NOT A TRUE PICTURE

Mr. Speaker, on April 24, 1950, President Truman made an address to the American Bar Association. In that address the President said:

No known instance of Communist subversion—

In the Government—

has gone uninvestigated and no case where the facts warranted has gone unprosecuted.

He also said:

The agency loyalty boards and the Loyalty Review Board have quietly and effectively carried out their job of protecting the integrity and security of our Government.

These statements by the President sound good, but do they present the true picture? They do not. The fact is that despite these assurances, the loyalty boards have in many cases cleared individuals with questionable loyalty records who were afterward proven disloyal. This demonstrates that the screening process used by these loyalty boards is very carelessly or superficially carried out. So we must look behind the President's nice-sounding statements to get the true facts in the picture.

Mr. Speaker, I cite the following cases as evidence that the picture is not as painted by the President. These cases are just a few of the many that are on record:

First. Alger Hiss. Our agency loyalty boards passed Hiss as a good security risk before he was convicted of lying, which conviction, in effect, proved Hiss to have been a traitor. Even so, Secretary Acheson still claimed Hiss as a friend.

Second. Judith Coplon. She was given a clean bill of health by the loyalty board, and afterward convicted of stealing secret Federal documents. She is now under indictment for conspiracy to give away vital secrets to Russia.

Third. Julian Wadleigh. He was named by Elizabeth Bentley as a fellow traveler. He got out of the Government when things got too hot. The loyalty board approved Wadleigh as a good security risk.

Fourth. George Shaw Wheeler. This man held the position of Chief of the Denazification Section of the American Military Government in Germany. He recently issued a statement from Prague defouncing the American Government and renouncing his citizenship. He was repeatedly cleared by Government loyalty boards. He was first employed by the Government in 1934 and remained on the pay roll until 1947, a period of 13 years.

Fifth. Carl Aldo Marzani. He was an employee of the Office of Strategic Services, a highly sensitive Government intelligence agency. At the end of World War II he was transferred to the Intelligence Division of the State Department. After repeated clearances by the loyalty board he was finally convicted of disloyalty and fired on December 20, 1946.

Sixth. Russell Nixon. A former director of the Division of Investigation of Cartels and External Assets in the American Military Government in Germany. He had a long record of Communist affiliations and had been ousted from the

faculty of Harvard University because of his pro-Communist activities. Yet he was accepted as an employee of the Government and placed in a position of trust and responsibility. He was finally forced to resign in January 1946, after issuing a denunciation of the United States Government.

Seventh. Nathan Gregory Silvermaster. This man was cited by Elizabeth Bentley as a member of the underground cell of the Communist Party. He began his service with the Government in 1935 as an employee in the Department of Agriculture. He remained with the Government until November 1947, when he resigned from the War Assets Administration. He had been repeatedly cleared by the loyalty boards and given a clean bill of health.

Mr. Speaker, it would seem from these and many other instances that might be cited that the Government loyalty boards lock the stable door after the horse is stolen. Their real job is to prevent Communists and pro-Communists from entering Government service; not to wait for years while these rats are doing their damage from within, and then fire them after some court of law has convicted them of disloyalty, and public clamor makes it necessary for them to be removed from the Government pay roll. The real job of these loyalty boards is to uncover the Communist patronage network that secured jobs in the Government for these rats. In this respect these loyalty boards have fallen down on their jobs and have failed miserably.

IRRESPONSIBLE STATEMENTS BY RESPONSIBLE MEN

Mr. Speaker, in referring to Senator McCARTHY, you said, "It is unfair for a man in a responsible position to make irresponsible statements." I am in complete agreement with that statement and I believe every real American feels the same way. However, as yet, we do not know whether Senator McCARTHY has made irresponsible statements. That still remains to be determined. Now, "what is sauce for the goose should be sauce for the gander." President Truman occupies "a most terribly responsible position." He said so himself. Those are his words. Yet the President has made the following irresponsible statements:

First. Speaking of the congressional investigation of the Hiss case, President Truman called it a "red herring." He repeated his red-herring statement nine different times in nine different places. The red-herring statements were made 3 years after the President had been supplied with secret information of the spy ring in Canada and notified that the Russians had an agent in the United States who was an assistant to the Secretary of State.

Second. On September 22, 1948, en route to California, President Truman said the House Un-American Activities Committee "is more un-American than the activities it is investigating." This definitely is an irresponsible statement made by a man in a "terribly responsible position." I served 6 years on that committee myself.

Third. President Truman said on September 12, 1946, that he had read and approved in its entirety the famous foreign-policy speech of Henry Wallace, the speech that yanked the rug from under Secretary of State James Byrnes at the Paris conference. That statement was an irresponsible statement that later proved very embarrassing to the President.

Fourth. On July 11, 1948, Mr. Truman told an Oregon audience:

> I like old Joe (Stalin). He is a decent fellow, but he is a prisoner of the Politburo. He would make certain agreements, and he would keep those agreements, but they won't let him keep them.

I ask, what is this but an irresponsible statement by a responsible man?

Fifth. In a letter to Governor Earle, of Pennsylvania, February 28, 1947, President Truman said:

> People are much wrought up about the Communist bugaboo. * * * I am of the opinion that the country is perfectly safe as far as communism is concerned.

The famous pumpkin papers, the Hiss conviction, Dr. Fuchs' conviction in an English court, Judith Coplon's conviction, have all happened since then, proving that statement to Governor Earle an irresponsible statement.

Mr. Speaker, Communists do not walk around carrying signs lettered, "Look! I am a Communist!" Communists can best serve the party by masquerading as orthodox loyal Americans—and that is what most of them do. Judging the strength of the Communists in America by their known number is a very stupid thing to do. When the Communists took over Russia they numbered less than 1 percent of the population. To boast about the fact that there are but few Communists in the Government today is like a banker boasting that only two of his bank tellers are dishonest. It is a stupid thing to do, yet President Truman and Secretary Acheson are doing it almost every day.

Communists in the Government are almost invariably found in strategic positions of influence, where hundreds of loyal Americans who work under them must bend to their will or suffer unduly in many subtle ways. Alger Hiss was not a minor Government official. He was Assistant Secretary of State, the second man in importance in the most powerful Cabinet post in our Government. He was the chief adviser to our sick President at Yalta, when Poland and all of eastern Europe was turned over to Stalin. Alger Hiss engineered the Bretton Woods Financial Conference, at which Uncle Sam agreed to underwrite the credit of most of the countries of the world. Alger Hiss organized the San Francisco Conference, presided over its preliminary conferences, and did most of the work on the United Nations Charter at San Francisco. Alger Hiss was playing on Stalin's team at Bretton Woods, at San Francisco, and again at Yalta. Alger Hiss is only one man, yet he did more damage from an important position on the inside of our Government than 1,000,000 Communists on the outside could have done. The $15,000,000,000 appropriation each year for national defense—to carry on the "cold war"—and the $5,000,000,000 appropriation each year for international relief are needed largely as the result of the damage Hiss did at Yalta.

Mr. Speaker, until President Truman and Secretary of State Acheson come to realize that one enemy in an important Government position on the inside can do more harm to the Nation than 1,000,000 enemies on the outside can do; until President Truman and the Secretary of State stop making excuses for the known subversive elements that are in Government positions, and start cleaning them out of the Government Departments; we need more Senator McCARTHYs to expose the covering up and the glossing over of subversive elements in our Government.

Mr. Speaker, this Nation needs to revive Gen. George Washington's historic order: "Put none but Americans on guard." We need today to take to heart the warning uttered by Abraham Lincoln in an address to the Illinois Legislature in Springfield, Ill., on January 27, 1837, when he said:

> At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step across the ocean and crush us at a blow?
>
> Never. All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth in their military chest, with a Bonaparte for a commander, could not, by force, take a drink from the Ohio or make a track on the Blue Ridge, in a trial of a thousand years.
>
> At what point, then, is the approach of danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a Nation of free men, we must live through all time, or die by suicide.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD and include extraneous material, I offer for the reading of Members, a very fine article on the Hoover Commission by the very able and distinguished president of the University of Washington, Mr. Raymond B. Allen, who himself was a member of the Hoover Commission. The article appeared on the "Pacific Northwest Industry" published by the Bureau of Business Research by the University of Washington.

President Allen's article follows:

GOVERNMENT REORGANIZATION: A CHALLENGE TO BUSINESS

(By Raymond B. Allen, president, University of Washington; chairman, Washington Committee on Federal Reorganization)

Businessmen have not only a legitimate interest but a very real stake in the Federal tax picture—as, indeed, every citizen has

today. Just as the American consumer quite properly expects full value for his dollar in purchasing the products and services of private enterprise, so too he has a right to know that his Government will use wisely and efficiently the money he spends in taxes.

Upon the effective functioning of the Federal Government depend many things affecting business—a stable economy, peaceful international conditions, and sound labor-management relations, to name a few. Beyond these specifics, the American business system as a whole has a major stake in the maintenance of an American Government which operates efficiently.

We in the Pacific Northwest are perhaps more alert to the size and importance of the Federal establishment than are a good many other parts of the country, for we have the opportunity to observe its operations first-hand in numerous spheres. Military defense construction contracts, foreign-trade policies, development of such natural resources as rivers and forests, and, of course, such major governmental projects as the atomic plant at Richland, all affect directly the health of our regional economy.

It is not my intention in this statement to suggest what our Government's policies should be on these and other matters of national concern. Yet, I submit that there is tremendous room for improvement in the structure and management of our Federal Government (entirely apart from policy considerations), which would promote the sound business principle of full return for every dollar spent.

I refer, of course, to the findings of the Commission on Organization of the Executive Branch of the Federal Government. Commonly referred to as the Hoover Commission, this group of nationally prominent and distinguished citizens has submitted to the Congress a thorough and searching analysis of our Government structure, accompanied by hundreds of specific recommendations for modernizing the machinery of the greatest, wealthiest, and, in some respects, most archaic government on earth.

BIG GOVERNMENT CAN BE EFFICIENT

Americans today realize that they have (and are paying for) big government. Yet this is not bad in itself. The United States is no longer, as it was 160 years ago, a loose affiliation of ex-colonies, clustered on the eastern seaboard, with a population of some three million and an economy largely agricultural. Today, with 150,000,000 people, spread across 3,000,000 square miles and engaged in a highly diversified as well as a highly mechanized economy, we need big government. Our Nation's domestic problems, to say nothing of its responsibility in world affairs, would stagger Paul Bunyan; and it requires a government of equal proportions to cope with these problems.

Big government, however, need not be inefficient government, and here is the nub of the Hoover Commission studies. The Commission was authorized by unanimous vote of Congress in 1947 to study the organization of the Federal Government with a view to improving and modernizing governmental machinery in the interest of serving the people more effectively. Four members were selected by the Senate, four by the House of Representatives, and four by the President. In each case the Republican and Democratic Parties were equally represented.

At the suggestion of President Truman, former President Hoover was named Chairman of the Commission; and Dean Acheson, now United States Secretary of State, became Vice Chairman. The Commission then selected some 300 distinguished citizens from all parts of the country, all of them expert in some phase of Government operations. These men were assembled into 24 research committees, or task forces, which studied their specialized problems and reported in detail to the Commission. The task force reports and recommendations ran to 2,000,000 words of solidly packed analysis.

The Commission then studied the findings and reached its own conclusions. A number of the resulting recommendations are controversial, to be sure. In fact, the Commission itself was divided in some of its thinking. The basic principle is sound however: That the Federal Government is sorely in need of intelligent reorganization pointing toward efficiency and the economies which will result. As the Commission phrased it: "The Nation is paying heavily for a lack of order, a lack of clear lines of authority and responsibility, and a lack of effective organization in the executive branch."

Broadly speaking, this finding is not new. Attempts to reorganize the executive branch had been made by virtually every President from Taft to Franklin Roosevelt. The promising development is that now, for the first time, the citizens of our country have a thoroughgoing analysis of our Government structure, plus the prospect that something will be done about it.

HOOVER REPORT THEMES

Three major themes may be discerned in the Hoover report. If these principles are acted upon, our Government can be made more truly the servant of the people. They are:

1. To make the Federal Government more responsible, through a clear chain of command and a strengthening of the Executive Office of the President. This is necessary, regardless of who occupies the White House in any year.

2. To establish a scheme of "coherent missions," defining the area of responsibility of the various Government agencies and bureaus. Too often, heretofore, there have been overlapping, duplication, and in some cases actual conflict between units of our Federal Government. A noteworthy example is the running fight between the Army Corps of Engineers and the Bureau of Reclamation, resulting in disservice to the American people.

3. To improve the managerial operations, notably in audit and accounting and in budgetary classification. Here is an area where the application of business principles can be of major value, and an important step was taken with the presentation of a "performance budget" last January for the fiscal year 1951.

I believe the immediate future must bring some clarification of the matter of Federal-State relationships—especially in the field of intergovernmental relations and taxation. Adequate financing of State operations may be jeopardized if funds are drawn off too rapidly or too carelessly for Federal purposes. The Hoover Commission unanimously recommended that a new commission be appointed to study the difficult problem of intergovernmental Federal-State relationships, especially as they affect fiscal health.

GRATIFYING PROGRESS

Visionary as some of the recommendations may seem, considerable progress has already been made toward putting into effect the principles emphasized by the Hoover Commission. In the 1949 session of Congress, within 6 months after the Hoover report was submitted, five major and several minor bills were enacted, with a potential saving of at least a billion dollars a year. The principal enactments included:

Establishment of the National Defense Department, unifying the armed services under one Cabinet officer.

Creation of the General Services Administration, combining purchasing functions, records, building management, and war assets.

Authorization of an overhauling of the State Department, paving the way for amalgamation of the Foreign Service and the Washington, D. C., staffs of the Department.

Approval of pay raises for Government employees and improvement of the Civil Service Classification Act to reduce the wasteful turn-over in Government personnel and to promote more efficient service.

Reorganization Act of 1949, empowering the President to submit plans for realinment of executive agencies, subject to congressional veto. Under this authorization, the President last year offered seven reorganization plans, of which only one was turned down.

Progress has indeed been made. At a national reorganization conference held in Washington, D. C., last December, it was estimated that one-fourth of the Hoover Commission's proposals were already in effect.

Much remains to be done, however, and, from the standpoint of effective action, 1950 is the crucial year. The President and many Members of Congress have indicated their eagerness to reform the Government structure, and in an election year they will be particularly responsive to expressions of public sentiment on the issue. Unless the people make their support known, however, the great opportunity may be lost.

In the Hoover Commission report—and, equally, in the vast public response thus far—there is real hope that our Federal Government may at last be brought up to date. If public interest continues, and if it finds expression in the Nation's Capital, we can meet the challenge.

To facilitate wider public understanding in our own State of the issues raised by the Hoover report, there has been established the Washington Committee on Federal Reorganization, with headquarters in the 905 Second Avenue Building, Seattle 4. The program of this group, directed by an executive committee of distinguished citizens from all parts of the State, is primarily educational. Through speakers, study groups, press releases, radio broadcasts, and the distribution of informative literature, the objective is to promote an expression of public opinion based on genuine understanding. The Washington committtee urges every citizen to "study the issues; make up your own mind; tell your Congressman what you think." This threefold goal can make all the difference between the results of the Hoover report and those earlier studies which now lie dormant in the files.

It is my earnest hope that the businessmen of the Pacific Northwest will familiarize themselves with the subject of Federal reorganization and, further, will help disseminate the information to their employees, stockholders, customers, and business associates. Contributions to finance the educational program of the Washington committee are certainly welcome, but equally important is cooperation in helping bring the story to all the people.

This can be a great patriotic service, which will produce a better—and, incidentally, a more economical—Government for us all.

Interest in World Government Declines

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article that appeared in the Washington Times-Herald on last Fri-

day containing a report from Lake Success which states that the movement for world government has passed its crest. It is encouraging for those of us who maintain that under no circumstances must world government replace our own Constitution. The one-worlders would submerge and substitute our Constitution for one of questionable value.

STATES' SUPPORT OF ONE WORLDERS BEGINS TO DROOP

LAKE SUCCESS, April 27.—The tidal wave of world government agitation which threatened for a time to engulf the Republic apparently has passed its crest, although the legislatures of 20 States still stand committed to some form of international organization with supernational law-making authority.

Rhode Island recently became the third State to rescind a world federation resolution previously adopted by its legislature. The Legislatures of California and Georgia had previously repealed similar resolutions. Attempts to repeal world federation resolutions have been defeated in Virginia, Maine, and Maryland.

STILL COMMITTED

The States still committed to some form of supernational government are Alabama, Arkansas, Colorado, Connecticut, Florida, North Carolina, Oklahoma, Tennessee, Utah, Virginia, Washington, Louisiana, Oregon, Kentucky, Maine, Maryland, Massachusetts, Missouri, New Hampshire, and New Jersey.

The popularity of world government proposals in the legislatures of Eastern, Southern and Far Western States is widely attributed to organized propaganda campaigns, disappointment with the United Nations and fear that the present armaments race and so-called cold war will result in another world conflict.

The world government movement received a major set-back last February 15 when the State Department strongly opposed a group of resolutions seeking to put Congress on record for some form of international organization with power to make and enforce law.

Whether or not the State Department's opposition to these proposals was inspired by a conviction that public opinion is turning against world government, it could hardly have been expressed more forcibly.

RUSK QUESTIONS MOTIVE

Testifying before a Senate Foreign Relations Subcommittee, Dean Rusk, Deputy Under Secretary, questioned whether the one-worlders were acting from sober reflection or from hysteria.

Assistant Secretary John D. Hickerson remarked that two-thirds of the world's people live on an inadequate diet, one-half are illiterate and only a minority live under democratic governments. He asked whether the American people would be willing to pay the cost of a world federation and whether they would be willing to compromise their way of life and institutions.

Flood Control

EXTENSION OF REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. PICKETT. Mr. Speaker, on last Tuesday, April 25, I introduced the bill H. R. 8188, the purpose of which is to amend section 13 of the Flood Control Act of December 22, 1944, and authorize the Department of Agriculture to give consideration of and treatment to the so-called "no man's land" between where its work now stops in the uplands and where the Corps of Engineers program ends on the main-stem of the rivers.

A brief general statement of the background information and what this bill will and will not do, if enacted into law, follows:

1. BACKGROUND INFORMATION

The work of the Department of Agriculture under the flood-control legislation is directed toward the treatment of watershed lands so as to slow down waterflow and run-off, to prevent erosion and sedimentation and other works to prevent damage to agricultural crops on the watershed and improvements along the tributary streams. The Department of the Army is charged with flood-control works on rivers and other waterways to provide immediate protection to high-damage areas including bottom lands, cities, towns, etc.

The policy of the Congress, as expressed in sections 1 and 2 of the Flood Control Act of 1936, is that the improvement of rivers and waterways, including watersheds thereof, for flood-control purposes is a proper activity of the Federal Government and it is believed that the intent is complete control of floodwater and thus prevent agriculture and urban damage and the loss of life. The only practicable method of carrying out the established policy is to give consideration to all water-and-sediment control measures required to manage the water from the source on watershed lands down to the control projects under the jurisdiction of the Corps of Engineers.

An important consideration now is the need for installation of such necessary work projects as will effectively close the gap between the conservation treatment of watershed lands and the flood-control works on major streams by the Corps of Engineers.

The watershed[1] surveys which served as the basis for the recommended programs for run-off and water-flow retardation and soil-erosion prevention which were approved by the Congress in section 13 of the Flood Control Act of 1944 were made before World War II.

Conditions in the watersheds affecting the movement of floodwater and sediment have changed materially in the past 10 years. Erosion has become more serious, run-off accelerated, and waterways deteriorated in many parts of each of these watersheds. Also during the past 10 years significant advancements have been made in techniques for treatment of watershed lands to retard run-off and water flow and to prevent erosion.

2. WHAT THIS BILL WOULD DO

This bill would authorize the Secretary of Agriculture to substitute vegetative and structural measures which have proved to be more effective and efficient in controlling the movement of floodwater and sediment from watershed lands to meet present-day conditions and needs.

It would make it possible to install such necessary work projects as structural control of gullies, stream-bank control, upstream floodwater retarding structures, channel improvement, and other sediment and water-control measures, which would result in alleviation of the extensive damages now being suffered recurringly on the fertile bottom lands in the tributary creek bottoms.

It would also provide immediate results in preventing damage to highways, railroads, other public utilities, and reservoirs which because of their location are not protected by the major control works along the main streams.

3. WHAT THIS BILL WOULD NOT DO

This bill would not authorize the Secretary of Agriculture to undertake projects which properly belong under the jurisdiction of the Corps of Engineers or other major construction agencies of the Government, as designated in the Flood Control Act of 1936, as amended and supplemented.

This bill would not change the fundamental concept expressed in the 1936 omnibus flood-control act that the benefits to whomsoever they may accrue are in excess of the estimated costs. It is not intended to change over-all ratio between benefits and costs described in the original survey reports.

The bill would not change the policy of Congress that improvements of rivers and other waterways for flood control and allied purposes shall be under the jurisdiction of and shall be prosecuted by the War Department under the direction of the Secretary of War and supervision of the Chief of Engineers, and * * * measures for run-off and water-flow retardation and soil-erosion prevention on watersheds shall be under the jurisdiction of and prosecuted by the Department of Agriculture under the direction of the Secretary of Agriculture.

Nor does the bill change the need for both general types of treatment, viz, watershed treatment and major river-control works to alleviate flood damages to the extent feasible and practicable in the localities, rivers, and other waterways, including watersheds thereof designated by the Congress.

This bill will not authorize the Secretary of Agriculture to undertake works of improvement beyond the cost estimated in each of the approved survey reports based on the unit costs prevailing at the time the reports were prepared. If, during the installation period estimated in the respective reports to vary from 10 to 24 years, it appears that there will be any substantial change in the over-all cost, this matter will be brought to the attention of the Congress as soon as it becomes apparent.

[1] Buffalo Creek watershed, New York; Potomac River watershed, Virginia, West Virginia, Maryland, and Pennsylvania; Little Tallahatchie River watershed, Mississippi; Yazoo River watershed, Mississippi; Coosa River watershed, Georgia and Tennessee; Little Sioux River watershed, Iowa; Middle Colorado River watershed, Texas; Trinity River watershed, Texas; Washita River watershed, Oklahoma and Texas; Santa Ynez River watershed, California, and Los Angeles River watershed, California.

Government by Consent

EXTENSION OF REMARKS

OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1950

Mr. FERNÓS-ISERN. Mr. Speaker, under leave to revise and extend my remarks, including extraneous matters, I offer an editorial from the Washington Post, April 25, 1950, dealing with a subject concerning which I hope each Member of the Congress will soon have an opportunity to participate. The editorial to which I refer endorses H. R. 7674 which I had the honor of introducing on March 13 and which would provide for the organization of a constitutional government by the people of Puerto Rico, under an act of Congress,

to be accepted by the people of Puerto Rico in the nature of a compact. I consider the editorial as an expression of true and real American thinking, and I commend it to my colleagues with my sincerest thanks to the editor of the Washington Post.

The editorial follows:

GOVERNMENT BY CONSENT

The exemplary course followed by the United States in dealing with the Territory of Puerto Rico needs for its fulfillment only a grant of authority to the island to adopt its own constitution. It is governed now under an organic act which permits complete home rule and which was amended 2 years ago to provide for popular election of the Territorial Governor. A locally adopted constitution would not change Puerto Rico's status in any material way. It would not alter its relation to the United States or its voteless representation in Congress. It would simply give the people of the island an opportunity to embrace by right what is now given them as a gratuity—to apply, in other words, the vital American principle of government by the consent of the governed.

The bill to authorize adoption of a constitution by Puerto Rico, introduced by Dr. FERNÓS-ISERN, Resident Commissioner of the Territory, would provide for continued application of all Federal laws and operation of Federal agencies in the island. It would require adherence in the Puerto Rican constitution to the Bill of Rights. Its principal effect would be to raise the status and dignity of the Territory. As Dr. FERNÓS-ISERN put it, "We adopt our local laws, but we haven't adopted our local law of laws—our constitution. This is what we want to do now." To permit the people of Puerto Rico to do this would be to bind them closer to us by the ties of affection and to present to the world a splendid example of responsibility in trusteeship.

Work of Some Kind Keeps Old People Interested in Life

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. BURDICK. Mr. Speaker, just because the custom of business says that they do not want men and women over the age of 60 years, and some places it is less than that, is no reason why these old people cannot fill many places of employment to the complete satisfaction of the employer. The fact is many jobs they can do as well as they ever could.

Even where they have a retirement annuity sufficient to keep or living from day to day, there is something lacking and that is by mere living they are not interested in affairs—and seem to be waiting for one thing—the undertaker.

To live, people must be interested in life and the affairs around them. When the world passes right on past them and all they have to live for is merely to keep on breathing, such a condition is the most unhappy state one could imagine. When, however, they see that day by day their efforts are appreciated and of value to the world, life takes on a different hue and living becomes interesting. They forget their age; forget that they are not wanted, and realize that they are making a contribution to society.

An organization for this very purpose has been organized here in Washington and is meeting with marked success. Mr. Speaker, I desire to quote a statement from the Pittsburgh Press:

MATURE AMERICANS, INC.

(By Fred W. Perkins)

WASHINGTON.—The following classified ad appeared recently in Baltimore newspapers:

"Men wanted—retired, educated and honest men, to attend a meeting to consider means of becoming occupied. No charge."

It brought 59 replies to a box number. The meeting is being arranged for next week in Baltimore.

Thus Mature Americans, Inc., a nonprofit organization of overage citizens which was founded in this city about 6 months ago, is starting to expand. Other cities, including Pittsburgh, will be tried if the Baltimore experiment turns out well.

Otis J. Bouma, a former newspaper publisher who at 71 is active in operation of three tourist lodging houses here, is the originator and spark plug of this body of elderly people who refuse to quit. He tells the story in this way:

"Last September several of us who are over 60 got together to see what we could do about bolstering the morale of men and women who had been forced into retirement because of their age.

"Today our group, Mature Americans, Inc., numbers more than 240 persons here in Washington."

JOBS FOR 45

"We have succeeded in getting jobs for some 45 retired men and women. We have found that by joining hands we have increased our strength—that when one of us intercedes for another member of the group it is easier to get useful employment for him.

"But most important, we have been able to combat the frustration that too often comes with retirement. We have been able to prove to our members that age is no barrier to happy living—that simply because a factory or a store makes rules against working after 65 is no reason for curling up and wasting away.

"Today everyone talks about pensions for security. But human beings must have more than security in their old age. They must be made to feel that they have a place in society, that their experience and skills are needed.

"Our organization slowly, but surely I think, is attempting to fill this void in the lives of men and women over retirement age. We must break down the all too common belief that retirement means discard."

Leaders with Mr. Bouma in this undertaking are four men in their late sixties or early seventies. They are still actively at work. One is a tax accountant, another a lawyer, and a third is in Government work.

The first difficulty, Mr. Bouma says, is that "everybody assumes this is some new kind of money-making racket."

"Our only payment," he says, "comes in the joy and satisfaction we get out of changing frustration into contentment among older people. It is easy enough if you can get them something useful to do."

Three cases in which older persons have been made happier:

A writer, a woman, confined by illness to her room, has been placed in profitable contact with a new magazine.

A former college professor, holder of degrees from three universities, has been helped to a new teaching position in a Washington institution.

A former New York City policeman, unable to get along on his pension because of family demands, has been encouraged to get a job as a hotel detective.

MORE OLDSTERS

All the official statistics show the number and proportion of older people is increasing in this country. The problem of what must be done for the aged is regarded as one of the most important of the future.

One phase of the problem is how to get employment for them—so they can support or help support themselves. Beyond that is the aim of helping these older people to make adjustments in their living plans when retirement puts a period to their accustomed work.

That adjustment period, according to medical authorities, is extremely difficult.

"Our hope," says Mr. Bouma, "is that other groups of mature Americans, under that or some other name, will be formed in other cities and towns throughout the Nation."

That Airtight Budget

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorials from the Richmond News Leader, Richmond, Va., entitled "That Airtight Budget":

It daily becomes more evident that Congress is baffled and almost helpless in dealing with remorselessly increasing Federal expenditures. By far the largest single cut the House Appropriations Committee was able to make in the President's budget was in the so-called independent offices, that congeries of more than 30 commissions and committees, offices, boards, agencies, administrations, and authorities that, beginning with the American Battle Monuments Commission goes straight down the alphabet to TVA. Each year these independent offices ask more money and justify it stolidly down to the last penny. They now account for some $8,500,000,000 in the 1951 budget. After hearings that lasted 7 weeks (and when published filled five volumes of 2,311 pages) the House Committee was able to cut only $433,271,000 from the $8,478,148,000 that was requested by the President for these lavishly prodigal bureaus that have grown up outside the regular departments of the Government.

Even this sounds better than it is, for most of the cuts were in places where expenditures are not entirely limited by appropriations. Almost exactly half of it was in the Veterans' Administration, and the VA itself does not know how much money it will require—it can only guess at how many veterans will demand how much of their almost unlimited benefits in any given year. With 3 months of the current fiscal year still to go, VA has already spent nearly a billion dollars more than was appropriated for it last August. The House Committee was not even fooling itself when it cut $200,000,000 out of the 1951 VA appropriation; it knows better than anyone else that this will mean nothing but a larger supplemental appropriation for VA next year.

The committee was not able to cut most of the other independent offices back even to the 1950 level—an all-time high. But let the committee's report speak for itself.

American Battle Monuments Commission: "The committee recommends $695,000 for salaries and expenses, which is $385,000 less than the budget estimate and an increase of $50,700 over 1950 requirements."

Federal Power Commission: "The committee has allowed a total of $3,939,300 for this purpose, which is $238,300 in excess of the current appropriation and $157,400 less than the budget estimate."

Federal Trade Commission: "For this activity the committee recommends $3,866,695, which is a reduction of $358,305 in the budget estimate and $216,695 more than the 1950 appropriation."

General Accounting Office: "The committee has included a total of $36,250,000 for all expenses of this office. This sum is $696,800 less than the budget estimate." (It is also $1,180,000 more than the 1950 appropriation.)

General Services Administration: "The amount recommended in the bill is $155,969,830 in excess of the 1950 appropriation available for similar purposes."

Housing and Home Finance Agency: "The bill contains $4,200,000 for salaries and expenses of this office, which is $1,800,000 less than the budget estimate and $225,000 in excess of the 1950 appropriation."

Interstate Commerce Commission: "The bill contains $9,889,600 for this purpose, which is $289,600 in excess of the 1950 appropriation and $113,000 less than the budget estimate."

TVA, which spent some $30,000,000 in 1949, received $49,000,000 in 1950 (and has already overspent it by nearly $12,000,000). It was given $102,714,000 by the committee for 1951. Out of the lot, the Civil Service Commission did get a cut under 1950, which surprisingly enough was concurred in by the Commission during the hearings. But in the whole swarm of agencies, only the Commission on Renovating the Executive Mansion was cut to the bone. This particular Commission already has had $100,000 and its work has never been anything but advisory—all the actual work, architects' plans, and engineers' drawings are done by other departments. With little left to advise about except disposition of White House materials, it wanted another $100,000 for the salary and expenses of two paid commissioners (at $50 a day), an executive director (at $15,000 a year), a consulting architect (at $1,000 a month), two consulting engineers (also at $1,000 a month), three assistant engineers, two secretaries, a clerical worker, an Army officer, and a messenger. Committeemen decided this was expensive advice and cut it down to $20,000. And it may well be the only cut in the whole independent-offices appropriation that will stick.

Representative CLARENCE CANNON, chairman of the House Appropriations Committee, has asked for suggestions on where his $29,000,000 omnibus appropriations bill might be trimmed. Today's suggestion: $107,000 for the Indian Claims Commission.

This quasi-judicial agency, created in 1947, has three commissioners with salaries of $14,000 each. In the past 3 years, only 151 claim cases have been filed with the Commission. Eleven of these have been disposed of. The commission expects that a total of 300 claims will be put on record before the deadline next August. To handle this flyweight legal burden, the commission requires 7 employees with salaries of more than $37,000. This agency's life is supposed to be limited to a 10-year period dating from passage of the act. During hearings on the commission's request, this colloquy ensued:

"Mr. PHILLIPS. Do you think that you are going to get through before 1957?

"JUDGE WITT. Well, I just couldn't say about that, I just don't know what will happen between now and then.

"Mr. PHILLIPS. With three commissioners working on it, and the staff that you have, and less than 300 claims, you are not going to take until 1957?

"Judge WITT. Well, as far as I am personally concerned, I hope that we do not."

While the Government is providing $107,000 a year to an agency which fears it cannot dispose of 300 cases in 10 years, the Federal debt currently stands at $255,841,918,602.68.

Representative CLARENCE CANNON, asserting that the $29,000,000,000 appropriations bill was airtight as it emerged from his Appropriations Committee, has suggested that critics of Federal spending be specific in their objections. Today's needless extravagance is taken from page 216 of the bill, lines 8 and 9. There it is proposed that the taxpayers provide for necessary expenses of the office of the Secretary of the Interior, for purchase of one passenged motor vehicle only, not to exceed $4,500.

We raise the suggestion that a nation with a debt of $258,000,000,000, contemplating a deficit in the current fiscal year of more than $5,000,000,000, could put Mr. Chapman in a Ford or Chevvie. It strikes us that $4,500 cars are air bubbles that could be squeezed out of any budget without hurting it at all.

Today's observation in how a government can spend $43,000,000,000 a year is taken from the House Appropriations Committee hearings on the American Battle Monuments Commission, which prior to World War II spent $150,000 a year, spent $233,000 in 1947, $362,000 in 1948, $1,078,000 in 1949, $9,750,000 in 1950, and asked for $10,168,000 in 1951–52.

"General NORTH. Then there is a project for memorializing in some form places like Iwo Jima, Guadalcanal, Tarawa, all of those places which are relatively remote, yet are much more significant than mere little strips of sand. Our commission * * * proposes to take a rough boulder, carve on it a brief inscription which would read something like this: 'Erected by the United States of America to those 6,000 soldiers, sailors, and marines who died in the liberation of the Solomon Islands.' We would drag these big boulders to the same beaches where the troops went ashore and place them on concrete bases where they would require no maintenance.

"Mr. PHILIPS. What do you estimate it will cost?

"General NORTH. We set a top figure at $30,000.

* * * * *

"General NORTH. Finally, in certain places such as Eisenhower's headquarters and MacArthur's headquarters and so forth, we propose to put a bronze tablet to commemorate that it was at this place that General Eisenhower had headquarters directing so many men. We estimate there will be 18 of these, to cost $3,000 apiece."

Sometimes congressional chickens come home to roost in the administration's airtight budget. Last year when Congress decided to assist Alaska in a 5-year construction program of essential public works, the $70,000,000 bill passed almost unnoticed in the spate of billion-dollar authorizations and appropriations that were pouring over the congressional dam. In the bill, Congress obligated itself to undertake the whole construction program, collecting as it could 50 percent from the Territorial government or other public Alaskan bodies. When the House Appropriations Committee was called upon to consider the first year's result of this impulsive generosity it found Alaska had already submitted essential public-works projects costing a total of $54,035,000.

Looking over the list, their startled eyes encountered items such as the proposal of Auke Bay, 300 population, for a $200,000 school, $150,000 worth of sewers, and a $750,000 power supply. Sitka, with a population of 2,000, wanted $800,000 worth of schools, and $800,000 hospital, and streets, a small boat harbor and a power supply that would bring the total to $4,300,000. Klawock, with 485 population, was asking for a school, power supply, sewers, and a health center costing $720,000.

When the committee had recovered its breath, it slashed the President's $25,000,000 request for this year's construction to $9,000,000 and set forth in its report to Congress that it had grave doubts that many of the communities will be able to meet the obligations which they may assume under the construction program as submitted in the departmental justification. A comparison with any American city's bonded debt shows that it may well say so. Richmond's public debt is now $32,000,000 and it views with considerable dismay the addition of $5,000,000 during the coming fiscal year. If Richmond's essential public works had been constructed on the Sitka scale and half of it paid by the Federal Government, her public debt would be $215,000,000; on the Auke Bay scale, her public debt, after the Government had paid half of it, would amount to $368,600,000.

The Bureau of Entomology and Plant Quarantine, Department of Agriculture, operates 519 laboratories with some 2,500 full-time employees. It requested $13,891,000 for 1950–51, up nearly a million dollars from the current year. Among other pressing necessities listed by the Bureau were 63 new automobiles and other equipment. At the hearings before a subcommittee of the House Appropriations Committee, the following statement from the chairman indicated that if there is one thing the Bureau of Entomology and Plant Quarantine does not need it is automobiles.

"Mr. WHITTEN. In the Denver office it was disclosed that you had 217 automobiles and for the first 4 months of 1949, 194 of them were not used at all. * * * The Northwest regional office of blister rust control had 20 1½-ton trucks that were not used in 1949. * * * The white fringed beetle control project at Gulfport, Miss., had 18 stake-body trucks equipped with spray rigs that have not been used for some time. Two were last used in 1944, 11 in 1945, 3 in 1946, and 2 in 1947. * * * The North Central regional office of blister rust control acquired three new Ford stake-body trucks in 1947 for use in Minnesota. Before these trucks were actually delivered, the use intended for them did not develop. As a result the average total mileage on these three trucks is only 2,752 and they have been in storage most of the time. * * *

"Out of 18 cars and trucks owned by the blister rust control project in Minnesota, six of them have been idle since September 1948. In August 1948, while the blister rust control project at Spokane, the blister rust control project in Minneapolis and the white fringed beetle control project at Gulfport had so many 1½-ton stake-body trucks idle, the division of pink bollworm control acquired five new 1½-ton stake-body trucks at a total cost of $9,287. * * * The division of pink bollworm control has a tractor and trailer, which combination was used to haul water in the wild-cotton eradication program in Florida. Appropriations for this project were discontinued for the fiscal year 1947–48 so * * * the tractor was driven from Florida to San Antonio, Tex., and stored in the warehouse there. The trailer was left in Florida with the admitted intention of separating the two pieces of equipment so no one in another division would ask for them. * * * There is just page after page in this report of this same kind of thing. * * * We are running $5,000,000,000 behind in paying the costs of this Government. If this sort of thing goes on throughout much of the Government, you can clearly see why."

When the House of Representatives comes back in session, and renews its search for bubbles in Mr. CANNON'S airtight budget, it might take a critical look at pages 341–344 of the $29,000,000,000 appropriation bill. These items provide $21,825,000 for running the Panama Canal and the Canal Zone in the next fiscal year. The hearings indicate that these figures cover such doubtfully urgent matters as (1) the maintenance of an 88-man personnel office to look after 21,000 employees (the Commonwealth of Virginia has 21 personnel workers and 25,000 State employees), (2) the construction of a gasoline station at a cost of $60,300, (3) the removal of a certain wooden porch, 120 feet long and 8 feet wide, from a schoolhouse—estimated at $41,200, and (4) the erection of a monument to Maj. Gen. George W. Goethals at a total cost of $296,000. What business this Nation has in spending $300,000 on a Goethals monument, at a time when the Federal debt exceeds $258,000,000,000 and this year's deficit is placed at $5,000,000,000, is wholly beyond us. Perhaps Mr. CANNON can explain.

That airtight budget has a lot of paper in it too. Most persons are familiar with the infinite variety of Government publications and perhaps no one but a first-term Congressman now thinks the only thing the Government publishes is the CONGRESSIONAL RECORD. There is almost literally nothing on earth in which the Government is not perfectly competent to instruct its citizens by return mail. Detailed information on mist netting for birds in Japan, the synoptic principle of cyclones in Texas, the schedule for mail routes in Nevada, canning beef stew or baking an upsidedown cake, growing artichokes or petunias, estimating muskrat populations by house counts or cooling engines in supersonic flight can be had for the asking, or call it a nickel or a dime, no stamps accepted. The Government turns out these handy compendiums of all human knowledge by the tens and hundreds of thousands; after it does so, if nobody wants the things they are stored until the space is needed and then sold for wastepaper. A couple of years ago the Government Printing Office condemned over 10,000,000 copies of publications. Congressional investigators found as many as 500,000 copies of some of them on hand.

But this is only the beginning of Government printing. Congressman REES, during the House debate on the current appropriation bill, stated that the Federal Government operates the biggest printing and publishing business in the world. There is no doubt of it, but we question Mr. REES' estimate of the annual cost of all this printing as being some $50,000,000. The Army alone will spend $10,804,601 on printing next year; the Navy and Air Force, a little less bookishly enclined, will spend $11,838,370 between them, and that great economizer, Secretary Johnson, says he needs $649,000 for printing in his office. Curious readers, wanting to know what the Defense Department does with more than $23,000,000 worth of printing a year—not counting the cost of research, writing, typing, editing, reviewing and checking—are referred to the list and index of Department of the Army publications which lists the more recent publications of the Army; this list runs over 500 pages, two columns to a page.

It is not only the Defense Department that thinks the printing presses were invented to be used around the clock. Congressman REES recalls that a House Appropriations Committee disclosed one year that the Bureau of Internal Revenue printed 500,000,000 tax forms and 114,000,000 instructions sheets to supply 47,000,000 taxpayers. Later it developed that the bureau was leasing a whole building some place to store hundreds of millions of obsolete forms. A Senate Appropriations Committee was momentarily embarrassed in 1948 when it asked the various Federal agencies to submit one copy each of their publications during the past year; after 83,723 different publications arrived at the committee room, Senators hastily called off the exhibit. One bureau that was called off, fortunately in time, had ready a stack of publications of one copy each, 52 feet high.

(The national deficit next year is now estimated at $7,300,000,000.)

Misuse of a Gift

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the people, through their Representatives in Congress, in 1935 enacted legislation known as the Wagner Act, which made it possible for employees to organize, form labor unions and, through those unions, bargain collectively and effectively with employers.

In 1947, because of public demand, the Wagner Act was amended by the adoption of the Taft-Hartley Act. That act gave employers certain rights, enlarged the benefits granted union members and attempted, in a small degree, to protect the public against strikes which injuriously affected the public health, safety, and welfare.

Under the Taft-Hartley Act, the unions, with the assistance of the Labor Department, the purpose of which was—and I quote from the statute which created it—"to foster, promote, and develop the welfare of wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment," are now able to call and continue strikes which throw hundreds of thousands of union as well as nonunion men out of employment, interfere with interstate commerce, deplete unemployment funds, and at times threaten the welfare of the public.

That is a broad statement, but to realize its truth one need but recall current events.

The coal strike of last winter, when one man, John L. Lewis, successfully defied the Federal Government, caused more than 200,000 workers to lose their jobs and impose hardship and suffering upon the people of the northern half of the United States, has not been forgotten. Nor have we any assurance that a similar situation will not recur next winter.

There is the present Chrysler strike which was called on January 25 for one purpose, with the issue now entirely different. Some 89,000 Chrysler employees have been out of work for more than 90 days. These strikers have lost more than an estimated $126,000,000 in wages. Just how many other employees in supplier plants have lost their jobs, how many dealers have suffered financial loss, and to what extent, is not known. The Chrysler Corp. loss can conservatively be put at not less than $600,000,000.

It is reported that the union has collected around $7,000,000 in strike benefits from union members. It is charged that no more than $2,000,000 of that sum has been paid out in strike benefits by the union; that approximately $5,000,000 will be held in a kitty for political campaign purposes.

From my own district have come letters from members of the UAW-CIO, protesting the dollar-a-week assessment for strike benefits. Some write me that they just cannot understand why they should aid in paying for a strike in which they are not interested.

The press of April 25 stated there was a surprise strike by studio engineers in the American and National Broadcasting Co.'s in New York, which took the two systems off the air for some 2 hours, although their contract with the company does not expire until April 30.

Railroad employees threatened to tie up two of the country's largest railways because—and apparently only because—the railroads would not grant the union's demand for a third and unneeded man on Diesel locomotives. That demand was twice declared unwarranted by a President's fact-finding board—once in 1934 by a board appointed by President Roosevelt and again in 1949 by President Truman's board—although such boards are usually sympathetic toward all demands by the unions.

Sixty-three hundred phone workers here in Washington were ready to go on strike, and according to the press, threatened to jam Washington's telephone service.

Nor are some unions respecters of either charity or the grave.

Many remember when, in an eastern city, the grave diggers union called a strike, and not until a priest and his assistants volunteered to dig the graves were the dead buried.

Only recently here in Washington a radio station offered, without charge, to televise, for the benefit of crippled children the show produced by the Shriners, but the Associated Guild of Variety Artists insisted that circus hands, though they took no part in the performance, be paid for the video performance. Result? The crippled children were deprived of the funds which they would have otherwise received through the joint efforts of the Shrine and the station.

Under our system of government, no individual, no organization, unless it be a taxing body created by law, has the right to deprive you of your money or property. Yet, amazing as it may seem, in addition to a lawful tax burden which takes from each individual at least one-fourth of what he earns, millions of dollars are every year, by the unions, exacted from taxpayers who must pay if they desire to hold a job. In many industries employing hundreds of thousands of individuals a job can neither be obtained nor held unless the demands of the union be met—an initiation fee, all regular and special assessments be paid.

That condition, that is, the ability of any organization to compel a man to pay

tribute for a job which he must have if he would feed and clothe his family or himself, is un-American, and if permitted to grow, will ultimately ruin us all.

That condition exists because, and only because, a majority of our people having sympathy for the man who must work—do manual labor—insisted that the Congress make a gift of legislation which created special privileges, gave special benefits to employees.

But that special legislation which, I repeat, was a gift of the American people to workers, has been misused and abused by organized labor until today powerful unions—more accurately, the leaders of those unions—are not only exacting tribute from their own members but are making it extremely difficult for the unorganized worker to obtain and hold a job.

In addition, unions are arbitrarily collecting millions of dollars which they have, in part, used in the past—do not forget that John L. Lewis, of the UMW, contributed $750,000 to the Roosevelt campaign fund—which they will use in the future, for political purposes to advance their own political ambitions—to establish a labor government similar to that of England, which exists only because we contribute our dollars.

Unions and union members are not the only organizations, the only workers, in this land of ours. In fact, they are in the minority. When hundreds of thousands of people are thrown out of their jobs, on relief, by a strike, or when the public welfare is threatened because of a strike, there must be a remedy.

No group, to advance its own interests, can be permitted to threaten the welfare of the rest of the people, tie up completely and indefinitely transportation, communications, or any other business activity which affects all of us.

To remedy the situation, I have proposed a bill which, while preserving the right of employees to organize, bargain collectively, and to strike, will, if enforced, prevent union and nonunion men being deprived of their much needed jobs through strikes which they do not approve, have not authorized. Men who must work if they would eat should not be deprived by any individual or organization of the opportunity to earn a livelihood.

When unions misuse the special privileges granted them by the Taft-Hartley and other laws, they should automatically lose the special benefits conferred upon them by those laws designed to give them special benefits and privileges.

Former Under Secretary of State Clayton Urges Approval of the ITO Charter

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. COOPER. Mr. Speaker, under leave to extend my remarks, I am including the following letter from former Under Secretary of State W. L. Clayton, appearing in the Washington Post today, stressing the importance of prompt approval of the ITO Charter:

CLAYTON URGES ITO CHARTER APPROVAL

(By W. L. Clayton, former Under Secretary of State)

I am sorry to see from your editorial of April 21 on the International Trade Organization that you favor deferring a decision on the Habana Charter.

You say that the charter contains too many escape clauses and qualifications; that it does not remove all trade discriminations; that it will have little effect on international trade so long as ECA continues to provide aid for western Europe. You add that there is divided opinion in business groups, trade and civic organizations about the charter.

May I remind you that the charter was completed 2 years ago; that it took more than 3 years and several international conferences to reach agreement on it.

After all this labor and waiting, if now we postpone decision on adoption of the charter, the other fifty-odd countries who joined us in writing it will probably conclude that we are no longer interested in creating this mechanism of the United Nations for promoting multilateral trade throughout the world. Further delay now probably means there will be no International Trade Organization.

It is true that the Charter grants certain exemptions and escapes but far from giving any nation any rights it does not already have, it has secured agreement on many vital principles of multilateral trade. Some of the stated objectives of the Charter are:

"To increase the production, consumption, and exchange of goods, and thus to contribute to a balanced and expanding world economy; to further the enjoyment by all countries on equal terms of access to markets, products, and productive facilities needed for their economic prosperity and development; to promote on a reciprocal and mutually advantageous basis the reduction of tariffs and other barriers to trade and the elimination of discriminatory treatment in international commerce."

To aid in the accomplishment of these purposes the Charter would establish the International Trade Organization as an agency of the United Nations. This organization would at once become a forum where representatives of member governments could meet and discuss their trade problems just as they meet in the Assembly and Security Council of the United Nations to discuss their political and security problems.

Mr. Paul Hoffman's recent speeches have emphasized the urgent need of economic integration and the lowering of trade barriers. He has repeatedly called attention to the urgent need for the United States to greatly increase its imports from Europe.

The ITO would provide a forum where such matters could be discussed and dealt with day by day instead of by occasional speeches. Let me mention only one or two of the other numerous benefits which would promptly flow from adoption of this Charter:

Take the question of customs red tape, arbitrary rulings, absence of any impartial tribunal to which to appeal, lack of information about what regulations actually are—all these things make it so difficult for people in various countries to do business with each other that some informed people have said they are a greater barrier to imports than tariffs themselves. The Charter provides for a widespread adjustment, simplification, and publication of customs procedures all over the world. Would you say that this would have little effect upon the character of international trade?

We read much about private cartels—how they hold up prices and otherwise interfere with recovery abroad. The prompt establishment of international machinery for dealing with the harmful effects of cartels, which the charter provides, should prove of great benefit to international trade.

I believe that the rules of the charter are basically good rules. I believe that it is most important that they be made effective at once in order to establish the direction of policy which the member governments will pursue. The fact that governments have agreed to follow the principles embodied in the charter will affect trade policy decisions which member government make every day. In that way the charter should have a very real and immediate effect upon international trade. In fact, anticipation of the establishment of the ITO has already had its influence in a number of cases; for example, one of the reasons advanced to the British Parliament by the Government in support of the monopoly law recently passed was that it would enable the United Kingdom to carry out its commitments under the ITO Charter.

Finally, may I say that I am surprised at the suggestion that one reason for postponing action on the Charter is th· fact that there are conflicting views about the ITO. Have there not always been conflicting views in the United States on international trade? Do you think all our people will agree with Mr. Hoffman that the United States should greatly step up its purchases of European goods? Don't you know that we have powerful interests in our country who would rather see us give away $3,000,000,000 worth of goods annually than to accept goods in payment which might in some small measure interfere with their own business?

One of the most important and beneficial steps taken by the United States in the field of international trade policy was the enactment of the Trade Agreements Act in 1934. This act never would have been passed, or renewed, as it has been on several occasions, if its consideration by the Congress had been deferred until opinion about it had ceased to be divided. Indeed, opinion on it has been so divided that on one occasion, the act was seriously weakened, by amendment, in renewal.

HOUSTON, TEX.

Economic Cooperation Administration

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following article from the Boston Sunday Herald, Boston, Mass., April 30, 1950:

EUROPEAN RECOVERY CASH NOW RETURNING TO AID NEW ENGLAND INDUSTRY

(By Lawrence G. Weiss)

A good dollar, like a bad penny, has a way of turning up again.

That's what's been happening to the dollars the United States has invested in European recovery. They've been turning up in the cash registers of American businessmen, and New Englanders are getting their share.

Our friends in Europe are using our dollars to buy our goods. It means more orders for New England factories, more jobs for New England workers, and more traffic for the port of Boston. It means a $10,000,000,000 investment is paying dividends.

Wide-awake Yankee businessmen, never the ones to sit idle when there were dollars to be spent, have been selling everything

from can openers to textile machinery to customers in Europe.

They have salesmen making the rounds in countries like France, Italy, Belgium, and Britain drumming up business in tires and ice-cream freezers, needles, and eyeglass frames. And the sales are coming in.

The dollars we've supplied to Europe are now paying for about 45 percent of the goods that are being shipped from the port of Boston. They've been the major factor behind the port's gains in export business during the last year.

SPREAD IS WIDE

In 1 month, last year, when the dollars were coming in at a trickle instead of a stream, more than 191 New England firms got some of them. The total number of dollars for these firms exceeded ten million.

The month was June 1949. It's an old month, but there are no statistics available for a later one. The smallest sale in that month was $215 for abrasive wheels. The largest was $2,279,000 for coal.

Since then the flow of dollars to New England has increased.

When the United States first made its dollars available to western Europe in the spring of 1948, the Europeans wanted food, fuel, and agricultural implements. They bought these things from the Midwest and from areas outside the United States.

These aren't the kind of commodities that New England produces. And so, in 1948, New England got only a small amount of the dollars. Most of the dollars we did get came from the sale of coal, which was produced outside New England.

By the end of January 1949, New England had received only about 1 percent of the total number of dollars that were spent throughout the world. But even that 1 percent came to $22,000,000.

After European farms began to produce again and our friends in Europe were less hungry and cold, the United States set out to convince them that they'd have to use our dollars for some long-range objectives.

NEW ENGLAND BOON

We wanted them to buy machinery to build up their industries. In that way, we said, they could become self-sufficient and we would not have to go on supporting them. Most of the Europeans agreed.

They began to put their dollars into machinery, machine tools, and electrical equipment. And that's where New England came in. Those things are our meat. The dollars began pouring in. By June of 1949—the month we have figures for—our percentage of the dollars had more than tripled. It's been going up ever since.

Europeans are buying more and more of the things New England makes. They're making the purchases with dollars supplied by the Economic Cooperation Administration, the ECA. The ECA program is a complicated one, but here's a simple version of how it works.

A customer in France wants to buy something useful from an American factory. He tells his government about it, and asks permission to use up some of the dollars France has had allocated to it by ECA.

If the government says yes and ECA approves, the French customer pays his government in his own currency for the thing he wants to buy. Then ECA pays the American manufacturer in dollars.

ECA PAYS BILL

The American seller and the French buyer do business in pretty much their own way. But ECA, which means you, pays the bill.

The money the Frenchman pays to his government is put into a fund called the Counterpart Fund. This fund can be used to pay for productive improvements in France, like railroad improvements. Or it can be used to pay off some of France's debt. In either case, the money can only be spent with ECA approval.

If it weren't for ECA, countries in western Europe simply wouldn't have the dollars to buy what we have to sell. We'd have had to do without the greater part of six billion dollars' worth of export business in the last year and a half.

That's a lot of business, and it means a lot of jobs. But when you come right down to it, the dividends the United States expects to get from the billions it has invested in Europe have to be measured in something larger than business and jobs.

We're sending western Europe our dollars so that it will be strong enough to resist communism. The men who thought up the idea feared Europe would be overrun by Communists if it weren't helped. And if Europe were overrun, they thought, it would mean war between Russia and the United States.

And they figured that, in terms of dollars and cents alone, a war would cost American taxpayers a great deal more than they've had to pay for ECA. So even if we weren't getting our dollars back, ECA, in their view, would still be a good investment.

The McCarthy Record

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in today's Washington Post, May 2, 1950, entitled "The McCarthy Record":

THE MCCARTHY RECORD

Dr. Owen Lattimore's clearly deserved rebuttal appearance before the Tydings subcommittee today should bring to an end the public, or circus, phase of the inquiry into Senator MCCARTHY's charges. Thereafter, we hope, the subcommittee will retire into the closed sessions with which it should have undertaken its task from the beginning. Perhaps, then, this is a suitable juncture to recall the original McCarthy charges, although the Senator seems anxious to have them forgotten.

The initial charge came in a speech at Wheeling, W. Va., on February 9. "I have here in my hand," Mr. MCCARTHY was quoted as saying, "a list of 205 that were known to the Secretary of State as being members of the Communist Party and who nevertheless are still working and shaping the policy of the State Department." This was followed by a telegram to President Truman asserting, "I have in my possession the names of 57 Communists who are in the State Department at present." Then, in a 4-hour speech to the Senate, February 20, Senator MCCARTHY declared: "I have approximately 81 cases * * * the names are here." On that occasion, he outlined the cases without disclosing the names, insisting that he had all the data necessary to support his charges. "I shall be willing, happy, and eager," he said, "to go before any committee and give the names and all the information available. I shall refuse to give the source of the information, however."

It can scarcely be recalled too frequently, moreover, that in the same Senate speech, Mr. MCCARTHY made the following categorical statement: "I will not say anything on the Senate floor which I will not say off the floor. On the day when I take advantage of the security we have on the Senate floor, on that day I will resign from the Senate. Anything I say on the floor of the Senate at any time will be repeated off the floor." Since then, he has named individuals and accused them of atrocious crimes, taking advantage of the security of the Senate. But he has conspicuously failed to repeat the accusations outside the Senate's immunity. And he has not yet resigned.

In his appearances before the Tydings subcommittee, Senator MCCARTHY did not provide the information to support his indictment of the 205 or the 57 or the 81. He pleaded that he could not prove his charges unless the FBI would prove them for him by surrendering the confidential investigative records which the President had previously forbidden the agency to surrender. And at last he said he would let his whole case stand or fall on the validity of his accusations concerning Dr. Lattimore whom he called at first the "top espionage agent" in this country and ended by describing as a "bad policy risk."

Dr. Lattimore, it should be remembered, is not and never has been an employee of the State Department. He is a private citizen, recognized throughout the academic profession as one of the foremost authorities on the Far East, who has occasionally submitted memoranda, in response to State Department requests, concerning policy in the area of his experience. Senator MCCARTHY's case against him rests primarily on the opinions Dr. Lattimore expressed—opinions with which the Senator happens to disagree, although many of them have been abundantly vindicated by events.

Two facts appear to be plain concerning the Lattimore case. One is that it can prove nothing whatever about the validity of Senator MCCARTHY's charges that there are 205 or 57 or 81 Communists in the State Department. The other is that the Senate of the United States has no business conducting a trial and passing judgment on the "loyalty" of a private citizen. Of course, if this involves the crime of espionage, then such a case should be referred to a grand jury. However, Senator MCCARTHY has apparently abandoned this charge.

In view of the misrepresentation of Dr. Lattimore as a State Department employee and extravagance of the charges made against him under the Senate's immunity, the Tydings subcommittee was under an obvious obligation to allow him the opportunity to reply in public. It is now under obligation, as a matter of elementary justice, we think, to give Dr. Lattimore a speedy and unequivocal vindication, and in view of the wide mischief and alarm that have been caused, to make a ringing declaration in behalf of the freedom of inquiry which has been gravely threatened by the Lattimore case.

State Law Overruled by United Nations Charter

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, certainly something new has been added when a California court rules that the United Nations Charter takes precedence over State law. Here is a challenge to every loyal citizen of the United

States. I am including as part of my remarks a news article that appeared in the Washington Daily News on April 25 which tells the whole story. This case should be appealed to the highest court in our land so the people may know which way we are going.

The article follows:

LOS ANGELES, April 25.—A California court, in what was believed an unprecedented ruling, overruled a State law which banned Japanese from owning land because the statute conflicted with the UN Charter.

The District Court of Appeals said yesterday the Federal Constitution provides that treaties take precedence over State laws. The decision written by Justice Emmet H. Wilson said the UN Charter is a treaty between the United States and other UN members.

"The Charter guarantees universal respect for human rights and fundamental freedoms for all, without regard to race, color, or religion. Because the alien land law discriminates against Japanese concerning the ownership of land, its restrictions are untenable and indefensible," the decision said.

Lower courts had ruled that under California's alien land law Sei Fujii, native of Japan, could not keep property he bought more than 40 years ago because he was ineligible for citizenship.

Whither the Railroads?

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, a great segment of the national economy is dependent upon the well-being of the great railroad systems of our country. Unless they prosper and progress the adverse effects are felt throughout the length and breadth of the land.

Among the most progressive railroads of the country, the Pennsylvania Railroad system is typical of the most progressive systems with regard to its approach to the problems of the day. Its former president, now chairman of the board, M. W. Clement, has been a recognized authority in the field of railroad development and enterprise.

Few railroad officials have had better opportunity to view comprehensively the problems facing the industry, certainly few such officials have brought to the task a more sound knowledge of matters that affect railroading in large or small degree.

In an address delivered recently before the chamber of commerce at San Francisco, Calif., Mr. Clement voiced the conviction, based on his long experience, that sensible regulation permitting greater freedom of operations is an essential not only to the progress of the industry, but, indeed, to its very survival.

The importance of the railroads to the economy of our country is such that Mr. Clement's views and proposals deserve to be brought to the attention of as great a proportion of our people as possible. I ask unanimous consent, therefore, that the address be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHITHER THE RAILROADS?—SENSIBLE REGULATION, GREATER FREEDOM WOULD AID INDUSTRY'S SURVIVAL

The best way I know to indicate my appreciation of your invitation to come here is to talk with you frankly.

If ever there were a day when men should face frankly the facts of life, it is today. No man should fear to be regarded as a Jeremiah if he becomes thoughtful about what he sees going on and expresses himself accordingly. Nor should he be deterred from using what have been derided as scare words if he believes they are the kind of words that accurately describe what he observes.

It is only natural for businessmen to look at things—social, political, and economic—through the eyes of their own particular enterprise. It is also very easy to see ghosts; it is tempting to argue from the particular to the general. It is human nature to think that what is important to ourselves should be important to others.

These observations occurred to me in connection with what I proposed to say here because it starts with the railroad industry. And I mention them so that you may apply whatever discount you think appropriate in view of my interest in railroads.

No thoughtful, responsible citizen—whether businessman or not—who is interested in keeping alive for his children and his grandchildren the freedoms that he himself inherited, can avoid wondering at least whether there is really any more important issue before the American people than the very form of our Government itself. Are we to continue as a Republic or are we going to have a centralized state—by default?

I say "thoughtful" and "responsible" because there is altogether too little responsible thought being given to the subject, in whatever state one finds himself; too little sense of individual responsibility. Too many are inclined to forget or disregard the principles of freedom in favor of temporary self-interest. Too many do not know their own coin or cannot detect the counterfeit coin of others.

Right now and for some years we have been in the midst of inflation, but who doesn't like a little inflation? On every side there are subsidies, but who believes in private enterprise enough to refuse a little subsidy for himself?

ABILITY TO EARN EXPENSES SIGN OF SOUND BUSINESS

We are gliding into state socialism, which is the easy and alluring path from freedom to absolutism. This path is lined with attractive signs and deceptive words that do not mean what they say; that are meant to disguise and conceal, and to fool the unwary and gullible.

What, you may ask, have the railroads to do with all this? I believe it is the railroads—perhaps more particularly the railroads in the East—whose situation suggests some of the processes which those interested in state socialism find it advantageous to use.

Any business, any endeavor, to continue to exist must be economically sound. Any business to be sound must earn not only its operating and maintenance costs but also its interest and depreciation and its taxes—social security, income, and ad valorem. That the railroad transportation business (which is the most overtaxed and overregulated industry in the United States) does this, is an outstanding tribute to the men who operate the American railroads.

EXCESSIVE REGULATION LEADS TO STATISM

We are not opposed to taxes, but they should be equitable and should not be used to subsidize, particularly our competitors. We are not opposed to regulation, but it should be by law and not by emotion. Many of us in the transportation business realize full well that without regulation the railroads would have been government-owned long ago. It is my own belief that the Interstate Commerce Act of 1887 and the Sherman Antitrust Act of 1890 are the two most important statutes of our time. These two acts properly administered are, in my judgment, staunch bulwarks of the freedoms our Republic was founded to preserve.

Without the Sherman Act a few large rail systems, possibly just one system, would have developed and eventually it would have become government-owned. Without regulation under the Interstate Commerce Act we would likewise have had government ownership. And government ownership is socialism.

If it was important in the past to protect the public and the railroads by regulation, it is equally important now to protect them from regulation. Regulation is gradually ceasing to be what it was intended to be. It is becoming a supermanagement (a form of centralized state operation, if you please) enforcing its own business judgment—or political judgment—upon railroad rates and practices, gradually undermining the capacity of the railroads to provide the quality of transportation under just and reasonable rates that managerial initiative, unhampered, can provide.

The whole approach to the problem of the after-war economy of the railroads has been devious. Procedural delay on the part of the regulatory authorities has cost the railroads vast sums of money—some $250,000,000 after taxes on the Pennsylvania Railroad in the last 5 years—yet prompt action, on the basis of the obvious, would have been beneficial all around. It would have meant no higher rates. It would have improved the economy of the railroads. It would have hastened the decrease in rates that always follows reconstruction after a period of economic upheaval and inflation such as we have been going through.

GOVERNMENT OWNERSHIP MAY BE ULTIMATE STEP

If regulation under the law is important to the railroads, it is even more important to the shippers at large and to the public as a whole that regulation shall adjust itself to the law. Today's paradox is that while without regulation we would have had Government ownership years ago, now—as a result of regulation itself—Government ownership is being made to seem inevitable.

GROWTH OF SUBSIDIZATION IS BLOW AT SELF-RELIANCE

I mentioned subsidy. This is another big factor in the transportation situation that has its significance to the thoughtful and responsible businessman who sees beyond his day's work.

It is almost impossible to find any large segment of the voting public today that does not enjoy some form of subsidy. Subsidy is gradually extending itself into all the ramifications of business by one means or another. It is one of the insidious influences that is attacking the self-reliance of all the people.

The upper and nether millstones between which the railroads are caught are the services which are performed at less than cost and the services which are performed at a profit but which are subject to inroads by subsidized competition. It is within these limits of the economy of the railroads that whether we shall have private ownership or the alternative of socialization will be determined.

The commuter believes in the free enterprise system for everyone but the railroads.

The airlines should exist without subsidy. Now they enjoy tax-built, tax-free airports, tax-maintained airways, and a big mail subsidy—many millions a year. In connection with this mail subsidy to the

airlines, it is interesting to note that the Pennsylvania Railroad and the New York Central Railroad together, in 1949, lost about $40,000,000 in handling the United States mail—enough to pay the airmail subsidy.

The railroads, in other words, subsidize the Government and the Government subsidizes our competition. Then, under subsidy, our competitors charge less for their service, and the railroads lose business.

The private automobile owner pays more than he should in gas taxes so that the big trucker can pay much less than he should.

The railroads want no subsidy. A rail subsidy could only mean Government control. Government control means Government ownership, and that is socialism.

The railroads have a constructive problem of their own. It is to reduce the cost of their production and thus to reduce the cost of their service. The upper limit of rail rates is fixed, not only by competition but more so by another condition—the decentralization of industry to avoid transportation charges. The railroads produce nothing but service. They grew great through providing mass transportation in volume at low rates. Their future usefulness depends on the same thing.

THREE PERIODS OF INFLATION POSE PROBLEMS IN TRANSPORTATION

Personally, I have been through three periods of inflation. The first was at the turn of the century. It was one of even progress—spread over quite a few years; a period of expansion and inflation that was generally wholesome in its effect. The Pennsylvania Railroad through that period made large capital expenditures for road and equipment. Mountain grades became low grades; sharp curves became easy curves or straight lines; engines and cars grew in size. Costs were generally held down and there were but slight rate increases. Combined with it there came a general improvement in service and in wages and working conditions. Then it was that the short-haul package traffic became unprofitable and the struggle with regulation commenced.

The next period of inflation was during and after World War I—a period probably all of you remember. Under Government administration railroad rates and expenses doubled. The director general of the railroads was unencumbered then by the delays of regulation and rate increases paralleled increased expenses—so that as the peak of inflation was reached, the peak of rates was reached. During the next decade the railroads of the country spent over $15,000,000,000 in improving their plant and equipment, and the period of the twenties and early thirties saw improvement in service, reduction in rates, and considerable diversion to the truck—particularly in the short haul. But, with the growth of the country, rail traffic—as measured by ton miles and passenger miles—grew during the twenties to exceed anything the country had known before.

RATE CONTROLS PUT BRAKE ON FREE FUNCTION OF RAILROADS

Following the depression came World War II and the temporary period of partial price control; then inflation on a wide scale. That period is too close to need any review. While manufacturing and other industry, in the free economy in which they operate, moved their prices with their costs—and labor moved its rates at will, the railroads were prevented by regulation from functioning as they should under the free enterprise system and from changing their charges as their costs changed. Regulatory processes just could not keep up with economic events.

Unfortunately, the processes of rate regulation do not operate on a business basis. Regulation reflects the emotion of businessmen and their representatives—shippers, producers, traffic leagues, chambers of commerce; and, while all these men in business make their own prices on a business basis, they object to the railroads pricing their services on the same basis. Each and every one of these groups or sections of the country wish to maintain some advantage over other groups or sections through their rate structure. So any attempt on the part of the railroads to make their rates on a business basis, here in the midst of the only free enterprise country of the world, makes slow progress.

The only approach available is the one that we have taken—to raise all rates to get up the unprofitable and then eventually bring down the ones that are too high—and, through changes of practices or methods, keep them profitable.

OPPORTUNITY TO MOVE FREELY IS TODAY'S GREAT NEED

The railroads are going to have to spend as many or even more billions after World War II as they did after World War I. We will need greater capacity motive power; long trains of large capacity, light-weight high-earning capacity cars, with relative low rates for the long haul. Therein lies our salvation and industry's salvation, and we need the help of each other if we are to make progress and preserve a free economy.

The country has doubled in size since any additional railroads have been built. The people consume more transportation every day. With the constant growth of transportation we feel confident that to take the place of that unprofitable business which the railroads lose, there will come more profitable business. It will come if the country continues to progress, and we—the railroads—will be restored to prosperity and will perform to the benefit of the people as a whole if we are permitted to move in the free economy in which you all live and have your business being.

If we don't get that opportunity, then we will move right along with the socialistic drift of the day and become a creature of the state, supported by additional taxation which you will have to pay—if, of course, you manage to stay free yourselves.

PROFIT MOTIVE IS SPARK PLUG OF THE AMERICAN SYSTEM

As you watch developments in this country, note how many people talk against communism and against socialism. If it were not so tragic, it really would be amusing to observe these people in all walks of life denouncing socialism, denouncing Government ownership, while at the same time they are fostering policies that are hastening the advent of the very thing they talk against.

Capital is the product of effort in a free society. The greatest aggregation of capitalists the world has ever known are the American workmen, and as they have become capitalists they have promoted prosperity. Only where the mass of the people have the courage to have capital have they the courage to love freedom. The citizen of the totalitarian state has no property, he is property—state owned. He is a slave. Only the profit motive made us what we are. And the right to, and maintenance of, the profit motive in business or industry, or any other form of capitalist enterprise, is the only way we can maintain our freedom.

AMERICANS CANNOT SUPPORT HALF-SLAVE, HALF-FREE ECONOMY

At the time of the signing of the Constitution someone asked Benjamin Franklin, "What have we got?" and he replied, "You have a Republic if you can keep it." That was the Republic we kept for about a hundred years, and it was the Republic which subsequently a Minister of the United States to England said, "* * * will endure so long as the ideas of the men who made it continue to be dominant." Those are ideas that, in our time, are gradually disappearing or being circumscribed with other ways of thinking as we gradually slide from a republic to a democracy and then to the socialistic state.

One of the country's really great men, Illinois' greatest, said that this country could not remain half slave and half free. If that were true in the agricultural economy of his day, it is just as true of the industrial economy today. We just cannot continue to have America survive with part of its industry operating in a free economy and part operating in a slave economy. Neither can we have any line of competitive endeavor, such as in the transportation field, half subsidized and half taxed, without eventually destroying it.

The world suffers more from those whose intentions are good but whose thinking is warped than it does from those of bad purposes. The Government should not guarantee people an income from their occupation, but the right to pursue it unmolested by unwarranted intrusions of Government and regulation. The theory behind the Republic was that Government should mind its own business as long as the people minded theirs. It was the fear of want and the ambition to excel that brought the human race up from ignorance to intelligence, from barbarism to civilization; that was the compelling urge that brought this country from a wilderness to its high state of prosperity in so short a time.

PROGRESS WAS GREATEST IN ERA OF FREEDOM

Your forebears and mine, after the Revolution, when this country was at its lowest ebb, did not have anyone to guarantee them a price for their crop. There was no handout from any other country to keep them from going communistic. Nobody sent them food to bring up their caloric ration or to improve their vitamin intake. None of those things had ever been heard of. They went out into the far reaches of this country and survived or did not survive as they were able to make a living out of the soil they tilled.

The Republic, in the very beginning, recognized that one of the ruling guides of human association was to guarantee to everyone the free exercise of his industry and the possession of its products, and that agriculture, manufacture, commerce, and transportation—the foundation of prosperity—are the most thriving when left most free to individual enterprise.

Grover Cleveland, one of the strong Americans of my youth—"Tell the Truth" Cleveland—in his second inaugural address stated: "Paternalism is the bane of republican institutions; it undermines the self-reliance of our people and substitutes in its place dependence upon governmental favoritism; it stifles the spirit of true Americanism and stupefies every ennobling trait of American citizenship."

AS THE RAILROADS GO—SO GOES THE COUNTRY

Few people realize that the sixteenth amendment—the income-tax amendment—made over to the Government the whole power of an autocrat to take from one individual and not from another as it will, and to take in different proportion from different individuals as it will. People did not realize when it was adopted that it was not a power of constitutional taxation, but was—and still is—the power of confiscation. The power to tax is the power to destroy.

The evils of subsidy are the taxes it requires. They help the drift of the country toward the socialistic state, and the fact that the railroads and not your business may be involved is no lasting consolation to you. The country will go as the railroads go. And it is in your own interest to see that the railroads continue as free enterprise under sensible regulation, for if they do not survive—no other business will.

We want no Government subsidy, no Government aid. No government is strong enough for everybody to lean on, nor rich enough for everybody to live on. Within the limits of the Sherman Antitrust Act and the Interstate Commerce Act we want only economic freedom to develop and prosper to operate in the best interests of the free industry and the free people that we serve.

The Road to Socialism

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very fine address made by the attorney general of Virginia, the Honorable J. Lindsay Almond, at Madison College, Harrisburg, Va., on April 19.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROAD TO SOCIALISM

I would like to discuss with you some vital issues which confront all who are concerned with the survival of the institution of American representative democracy. That loyalty and devotion to our country which lies dormant and cankers in lethargy, to awaken in the stupor of drowsiness under the impact only of an international emergency, is a virus which saps the energizing vitality of a Nation rendering it impotent to respond to the call of survival when the dark days of armed conflict descend upon us. Eternal vigilance is the price of liberty in peace as well as in war. "The ramparts we watch" are a challenge to our patriotism in the pursuit of a sane and constructive course in domestic as well as in foreign policy. In the world of today domestic and international issues are interwoven in breadth of scope and depth of importance.

The enduring character of every structure, moral, spiritual, physical, ideological, is commensurate with the stability of the foundation upon which it rests. The architect and builder dare not defy the laws of gravity, nature and nature's God. He will subscribe to, adhere to and follow tried, tested, known, proven, and practical fundamental principles and formulae. Whatever deviation there may be in his commendable reach for progress and improvement he will not overreach, abandon, or undermine the foundation upon which the superstructure must rest. When he does so he knows that there lies ahead the inevitable crash of calamity and catastrophe.

I wonder how many of you realize that our country is reaching, or may have reached, and is enmeshed in the turning point of its history and that the decisions relating to domestic policy now being made, and those that will follow as an inevitable consequence, will determine the character of our political and economic life for a long time to come.

We are at the fateful crossroads of our national development and destiny. Until recently the political and economic roads that we traveled gave ample opportunity for the successful exercise of the proven and tested virtues of individual initiative, self reliance, independence, and responsibility. The paths we are now taking lead only to emphasis upon self security, governmental ownership of basic industry, regimentation of the people through collectivist controls, abrogation of the free market principle, sabotage of the law of supply and demand and the death knell of the free enterprise system. They are the deep and devastating inroads of socialism upon the American way of life. They are the paths to the authoritarian and welfare state. We are at grips with socialism under the fraudulent and deceptive guise of national planning. Socialism is the intervening and deviating step between capitalism and that antithetical and hideous ideology known as communism.

Beckoned by the siren call of the false assumption that we are getting something for nothing, we are bartering our most precious heritage of liberty.

Anyone who dares warn his fellow citizens of our mad and reckless rush into the embrace of socialism is called a reactionary. He is told that he is refusing to face the real issues and is resorting to bugaboo and scare procedures. But let us see who is facing the genuine issues. Certainly, not the welfare state boys. Not the indolent, the idle carefree crowd who seek a redistribution of the national wealth, those who would penalize the frugality and industry of those who have, to reward the indolence, indifference and inertia of those who have not, simply because they seek not to improve their own condition by the exercise of ambition, initiative, and enterprise. Can it be those who seek to create a centralized government in Washington strong enough for everybody to lean on and big enough for everybody to live on, not realizing that the vitality of the entire social and economic structure is sapped in proportion to the increase of the political powers of such a government? Can it be those who seek to destroy the individual zest and initiative, the inventive genius and progressiveness of those who invest their energies, substance, and resources in the stability, growth, and expansion of technology, science, industry, commerce, business, and agriculture, under the impetus of free enterprise, thereby creating the fiber of life and sustenance for the entire body politic, augmenting the strength of the Nation and meeting in full the increasing demands of employment and individual security? The answer is so obvious as to render its statement unnecessary.

That which we now witness springs from the inherent nature of man. Humankind is innately selfish and grasping. Areas, sects, and classes organize to seek advantages limited to their own special groups. The impact upon the commonweal is a matter of no concern. Special privilege with its inevitable encroachments upon the relative rights of others has become the order of the day. Political and economic philosophy has changed to political and economic strategy. We are losing the glorious democratic trinity of "government of the people, by the people, and for the people." Through the welded, compact response of minority pressure groups to the dangling bait of political promises we are descending into government of the many by the few. We are rapidly contaminating and distorting the virtue of another basic and fundamental trinity, "life, liberty, and the pursuit of happiness." We are eschewing the essence of the democratic concept of life, bartering liberty and placing profligate emphasis upon a reckless and costly pursuit of happiness. Instead of improving, securing, and transmitting untarnished to posterity the heritage which came to us through blood and sacrifice we are consuming it in riotous living. The flames on the altar of socialism, unless we reverse the trend, will be its funeral pyre.

From days of old men have yearned to be rid of the uncertainties of a world characterized by change, risk, and want. Faced by the uncertainty of his food supply because of vagaries of weather conditions primitive man resorted to magic to propitiate the gods. Modern man is the counterpart of his cave-dwelling brother. Confronted by limitations on the supply of goods and services modern men dream of utopias and the Santa Claus state. If your resources and production do not permit us to satisfy all of our desires, then, instead of relying on our own initiative and the dint of hard unsparing effort, it is more pleasant and momentarily comforting to follow the lines of least resistance. No matter how degrading to self respect and how derogatory to independence, we indulge the fond thought and hope that there is a kind father in Washington to whom we can look for help in the mendicant role of a supplicant and not go away disappointed. It matters not that the father in Washington produces nothing, that the Government will have to pyramid tax upon tax, further devaluate the currency, increase inflation, and add to the crushing weight of an already appalling debt. These practices are so soothing that their adverse effects are not immediately apparent. They lull us into a state of sonambulism.

It is the caressing simplicity of the line of thinking, or total lack of it, that regards Government spending as a cure-all that makes it so dangerous. They tell us that we need not worry about unbalanced budgets, recurring deficits, a stupendous national debt and and increasing taxation, because the rising national income will take care of that. That is becoming the comforting but dangerous and fallacious dogma of the modern age. It is nothing but a convenient doctrine for refusing to face our inescapable responsibilities. It is whistling in the dark as we pass by the proverbial graveyard.

It was not through the application of such a doctrine that we have succeeded in the past in achieving an increase of national production at the average rate of 4 percent per year. The well-known research agency, the National Bureau of Economic Research, in a study of manufacturing productivity, has shown that by the end of the fourth decade of this century manufacturing output in the United States was four times that achieved at the turn of the century. This increase was accomplished with only one-third as many man-hours of factory labor per unit of output as was the case 40 years earlier. New industries that were created gave employment to our increasing manpower and at the same time these industries turned out products which increased the standard of living for the average man.

Why change from such a system or even contaminate it with the virus of socialism which has brought despair to the people and bankruptcy to every nation which has embraced it?

Our economic strength and progress was not the result of seeking salvation through the gospel of social security at the hands of a paternalistic government. Nor can we associate our economic growth with the idea of Government spending. Our growth and our greatness are the direct and undeniable result of risk taking, investment, and the freedom of the businessman to take chances with his resources because he knew he could own and use a fair proportion of the fruits of his genius and labor. Risk and uncertainty, which were feared by the static societies of the past, were met head on and face to face by the dynamic forces of the free enterprise system. The businessman was the initiator of change and progress and the willing bearer of risks under the natural laws of a free economy. The profit-and-loss statement was the barometer of the forces of competition. Paternalistic socialism upsets the barometer by destroying profit. Without profit the risk of venture and investment is gone, initiative is destroyed, production recedes and unemployment rises, with want and penury stalking in the wake.

The handout state with its philosophy of spending aims at providing bread and

circuses after the Roman fashion. Under the socialistic system the Roman Empire, shorn of all of its glory, power, and prestige, found its last resting place on the scrapheap of oblivion.

We follow the same road when each group, hat in hand, turns to the benevolence of a paternalistic state in a competitive grab for favors in the name of the general welfare.

The philosophy extent in the land that the state must guarantee a minimum of security to every individual against all sorts and kinds of hazards not only weakens the moral fiber of the people but is productive of economic stagnation. It not only makes more and more taxes inevitable but it renders necessary, as a consequence, more and more controls over the economy, reaching down to the grass-root level of the entire society in abridgment of the liberties of all of the people. High and confiscatory levies upon individual and corporate income and inheritance dry up savings necessary for the formation of capital and rob state and local government of the sources of revenue necessary to the performance of their essential functions.

The key to our economic progress has been the fact that the savings of the people have been directed to the manufacture of the instruments and the expansion of production. In the Socialist state the government absorbs the savings of the people. Technological changes, many of them of a revolutionary character, have been brought to fruition and use by innovators—men of imagination, daring, incentive and initiative—who carved their own way of invention, discovery, and success. This spirit of adventure, the creature of freedom of enterprise, is fast giving way to the psychology of dependence upon a paternalistic state.

The fundamental question which we must answer now—and the hour is late—is whether we are more likely to promote economic welfare and individual freedom through governmental measures designed to redistribute income and level all classes and conditions of men or our destiny is to continue to be forged through a competitive system unhampered by bureaucratic controls and free to increase national production.

Proponents of the philosophy of spending maintain that they are the champions of a free competitive economic system. Their actions not only cast suspicion on the professions of their faith but flatly contradict every concept of the free-enterprise system.

It may be that many of these persons are sincere, but misguided through ignorance of the workings of the free, competitive market. They seek to foist controls on the economy the inevitable result of which is to cripple or destroy the system.

There are others, of course, who are less innocent and really know better. They are legion, and are the disciples of the Marxian theory, and Socialists at heart. They are the planners who advocate our following a master plan. They are the integrators and the coordinators who strive for unification of our multifarious economic activities according to a neatly formulated plan worked out by a centralized, self-perpetuating Government bureau or department. They soft-pedal statism, the welfare state, and Government ownership. Like so many of their Socialist confederates of pinkish hue they call it the planned economy. Adroitly, they realize that the idea of nationalization does not strike a responsive chord in the minds of the American people. Planning is a much more attractive term since millions of persons from the housewife to the businessman are engaged in daily planning of their activities. The snare is that it seems to be a very rational procedure to base one's conduct upon a careful weighing of all alternatives and to have a clear understanding of your goal. It seems to be the scientific way of doing things. You clearly formulate your objectives, and then you seek for the best means to accomplish. It is all very simple. They ask the question, if the individual is wise in following this procedure why cannot the Nation follow a similar pattern through Government planning and controls?

Unfortunately, collectivist planners substitute pseudo-science for the genuine article. One characteristic of the scientific attitude is to respect the medium with which the scientist is dealing. In matters pertaining to society the medium that must be respected consists of human beings and the cultural environment in which they function.

During a century and one-half we have developed a constitutional form of government, democratic political machinery, giving voice to the wishes of its citizens, and an industrial system which registers the desires of every family through their daily expenditures on a wide variety of goods and services. Political democracy and the free market have gone hand in hand. One has been the concomitant of the other. We cannot ignore the fact that the nineteenth century, which made the greatest strides in establishing universal suffrage, freedom of speech, of assembly, and of the press, was also an age in which free enterprise and the principle of self-help prevailed in economic affairs. It is also significant that in recent decades those countries where a highly centralized government controls production and distribution, initiative is dead, the people verge on robots, thought is muzzled and the labor prison camp is the destination of the political dissenter. The collectivist-minded should ponder these historical developments. Those bent on driving this country into the slough of socialism might consider the desperate plight of our British cousins.

If the pseudo-science of the planners results in ignoring historical facts about our culture, it also does violence to the facts of human nature. The atmosphere created by Government controls and regulations does not encourage the undertaking of risks, of venturing into untried territory. Ask yourself whether centralized planners would have selected a young Virginia farm boy to mechanize agriculture. Yet that is what Cyrus H. McCormick did. Would a centralized planning bureau have picked an ex-newsboy and railroad telegraph operator by the name of Thomas A. Edison to invent the electric light, the phonograph, and the motion-picture industry? Would they have chosen a mechanic by the name of Henry Ford, who brought about the revolutionary changes associated with the automobile? These are only a few names in the glorious history of modern technology. Innovation, which was responsible for our great material progress, could only flourish in an environment devoid of the authoritarian principle.

The interventionist denies that he is a Socialist and that socialism is the last step before communism. When faced with the facts of history he denies that he is aiming at centralized planning. He claims that he wishes to eliminate the weak spots in the competitive market. He does not desire to interfere with the price system, but hopes rather to stabilize our economy through fiscal and monetary policies. Actually, what we find him doing is attempting to perpetuate price controls, propounding fly-by-night schemes for allocation of materials and rationing, and granting more and more subsidies for a rapidly increasing list of welfare services.

The more forthright among the planners, such as William H. Beveridge in his book, Full Employment in a Free Society, have pointed out that deficit spending will not of itself accomplish the objective of attaining economic stability. It will, in addition, necessitate centralized government controls over prices, production, wages, transfer of workers against their will from one job to another, the location of industry and the selection of private investment.

As I see it, such nebulous schemes can only result in the loss of our liberties. Substituted for your freedom of choice will be the caprice of government officials in deciding what is good for us all. To have the fate of the economy depend upon the ability of a central government agency to forecast economic changes is a deplorably dangerous matter. Errors of judgment, when we are dealing with the over-all economy, must lead to the imposition of further controls and restrictions and to the state taking over the ownership of the key industries.

There is no half-way stopping point between a free market, where the price system regulates production and distribution, and a collectivist economy. The two will not blend. They are irreconcilable. Those who assert that they are for a mixed economy, a combination of private enterprise and governmentally regulated or sponsored industries, can only produce a situation that is very much mixed indeed and where the term economy would surely be a misnomer.

The recent elections in New Zealand, Australia, and Great Britain indicate that their people have called a halt to authoritarian controls. They have had the opportunity of sampling the ways of those who have extolled the glories of socialism and have found that the realities were far less attractive than the utopian promises.

History is full of the tragedies of well-intentioned, zealous advocates who brought down upon their people injury and misery not anticipated in the visionary schemes originally propounded. We know that there are shortcomings in our economy. We must control the growth of monopolies; we must learn to avoid reckless speculative behavior that results in business depressions, and we must render assistance to the needy and afflicted. But in correcting abuses and inadequacies we must not rush to embrace a system of controls that can only lead to the collectivist economy and the authoritarian state.

Americans have a strong idealistic bend in their national character, but it has been tempered by an ever stronger sense of the practicalities of life.

We are not given to rushing in "where angels fear to tread." We wish to know the means by which our ends are to be achieved. While we may welcome change, we desire to see whether or not the programs advanced by the enthusiast or brain-truster may not bring about evils that were not expected or may force us to give up things which we have long cherished and which we continue to regard as essential to the American way of life.

No matter what storm may descend upon us, let us gird our loins with truth and justice, and protected by the shield of an unwavering faith in God give our all in the preservation of the fundamental verities upon which this Nation was founded, upon which she has steadily and soundly grown to her present position of eminence and power and upon which she must endure.

Proposed Sale of Westchester Apartments in Washington, D. C.

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, in the April 19, 1950, issue of the Evening Star, Washington, D. C., there appeared an

article outlining a plan which is being developed by the Randall H. Hagner Co., a Washington real estate firm, for the sale of the 553-unit Westchester Apartments, which is the largest elevator apartment development in Washington.

The article pointed out that among the tenants are the Nation's top housing official, Housing and Home Finance Administrator Raymond M. Foley; Secretary of the Interior Mr. Chapman; Secretary of Agriculture Mr. Brannan; and seven Senators; five generals; three admirals; six judges; and many other civilian and military officials.

Here is just one more instance of the current trend of private corporations to transfer their operations from that of a private corporation to a cooperative for the purpose of obtaining tax exemption under a law which was originally intended to benefit farmers only.

This is another glaring example of how it is possible under our existing tax laws to obtain tax exemption in the name of the American farmer, and unless Congress takes action to correct this trend soon, we are going to have no one left in private industry to pay taxes.

I ask unanimous consent to have inserted in the Appendix of the RECORD this article in its entirety.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAGNER PLANS CO-OP SALE OF WESTCHESTER—553-UNIT APARTMENT BUILDING MAY BE OFFERED THIS SUMMER

(By Robert J. Lewis)

A plan is being developed by the Randall H. Hagner Co., Washington real-estate firm, for the cooperative sale of the 553-unit Westchester Apartments, largest elevator apartment development in the Washington area, it was learned today from George N. Ray, president of the Hagner firm. Mr. Ray said details have not been worked out.

Samuel R. Walker of New York, vice president of the City Investing Co., which controls the Realest Corp., owner of the development since 1947, said the company would consider selling the apartments.

"There is no written agreement involved, but we have been informed that a plan is being developed in Washington, and if it is good then we will discuss it," he said.

LAW CURBS EVICTIONS

"We are very happy with ownership of the property and whether there is any sale is a matter for the future to determine."

Under the District Rent Control Act, consent of 65 percent of the tenants to a cooperative sale would be needed before any evictions could be undertaken, though Mr. Ray said there was no intention to evict any families.

The rent law expires, however, on June 30. After that date, unless the 65 percent requirement is reenacted, cooperative sales could be made without other than normal restraints against evictions.

Mr. Ray said he understood about 60 tenants already had expressed willingness to purchase apartments. He added that he hoped to discuss details of the sales program with a tenants committee.

FOLEY IS AMONG TENANTS

The Hagner Co. president added, "we will have a very fair plan and there will be no effort to force people out."

He said he expected completion of the cooperative sale during the summer.

The Westchester's 553 apartments have a total of 2,171 rooms, plus 686 bathrooms. The apartments are in four buildings on a 27½ acre site at 4000 Cathedral Avenue NW. The development was purchased from Dutch interests by the Realest Corp.

Among tenants are the Nation's top housing official, Housing and Home Finance Administrator Raymond M. Foley; Secretary of the Interior Chapman, and Secretary of Agriculture Brannan; seven Senators, five generals, three admirals, six judges and many other civilian and military officials.

The Kerr Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Tulsa Tribune of April 22, 1950, regarding the natural-gas bill recently passed by the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY SUCH FUROR OVER KERR BILL WHICH WOULDN'T CHANGE ANYTHING?

(Rowley on oil)

For a time, I wrote politics on a newspaper back in Pittsburgh. I thought I knew most of the tricks of the game—devising propaganda and selling the public a bill of goods. But I take off my hat to the master mind behind the opposition to the Kerr natural gas bill.

I may be entirely wrong, but I have a strong hunch that Leland Olds, former chairman of the Federal Power Commission, has been patting himself on the back since President Truman vetoed the bill last Saturday. Olds was appointed by President Truman to another term on the Commission, but the Senate refused confirmation. Writings of Olds, presented to Senators at the time, made many believe Olds was communistic in his views about the United States and its institutions and traditions.

Seldom in recent history has so much agitation developed about any measure as that over the Kerr bill. This furor was not confined to Congress. Farm groups, labor organizations, the mayors of 18 large cities, and other civic and political bodies throughout the Nation bombarded Congress to defeat the bill and then put pressure on President Truman to veto it.

All, including radio commentators, had one argument. They said passage of the bill would increase the prices of natural gas to consumers by $100,000,000 a year or more.

According to records I have, Olds was the first person to make the claim that exempting independent natural-gas producers (those who do not own or have any interest in natural gas pipe lines) from jurisdiction of the Federal Power Commission in the matter of arm's length sales of natural gas (sales to purchasers at the well), would increase the price of gas to consumers. He told a congressional committee in April 1949 the raise would be $80,000,000 or so a year.

I am told Olds supplied memoranda relating to the Kerr bill to radio commentators. If I had been active enough in efforts to defeat the bill to get up memoranda for radio commentators, I would have supplied the data, also, to mayors of large natural-gas consuming cities and other consumers of gas.

What was not brought out by radio commentators or others was the fact the Kerr bill did not seek to change any condition or situation which has existed for years.

The Kerr bill did not seek to take from jurisdiction of the FPC independent gas producers for the FPC had never exercised jurisdiction over them. Hence, so much agitation over a bill which would not change anything naturally makes one suspicious.

The Kerr bill was designed solely to maintain the same condition and situation which has existed for years. It simply clarified the Natural Gas Act of 1938 by specifically exempting independent natural-gas producers from jurisdiction of the FPC in the matter of arm's-length sales of gas. That exemption was intended by Congress when it passed the Natural Gas Act of 1938, and the FPC had abided by the exemption.

Olds himself admitted such was the intent of Congress and joined with other members of the FPC in so stating in an order issued by the Commission on August 7, 1947. That order, or rule, stated:

"It seems appropriate and desirable at this juncture for the Commission to adopt and promulgate the rule contained herein, which is designed to relieve any existing uncertainty regarding the Commission's position that it will not seek to assert jurisdiction over the sale of natural gas to interstate pipe lines by independent producers or gatherers.

"The Federal Power Commission is of the opinion that it was the intent of the Congress that the control of production or gathering of natural gas should remain a function of the States and that the Natural Gas Act should not provide for regulation of those subjects.

"For the purpose of administering the Natural Gas Act, the Commission will construe the exemption contained in section 1 (b) to the effect that the provisions of the act shall not apply to the 'production and gathering' of natural gas, as including arm's-length sales of natural gas by independent producers and gatherers, made during the course or completion of production and gathering.

"The Commission, consistent with this construction, will not assert jurisdiction over such producers and gatherers who might be subject to jurisdiction solely because of such sales."

Despite this rule by the FPC and its admission as to the intent of Congress to exempt independent natural-gas producers, the Commission, following a United States Supreme Court decision in a gas case involving a producer who owned a natural-gas pipe line, decided it had authority to regulate prices of natural gas sold by independents and that it intended to assert that authority or jurisdiction. Hence the reason for the necessity of the Kerr bill to clarify the matter, and to maintain conditions which have existed for years.

The utter fallacy of claims of opponents of the Kerr bill that its passage would increase gas prices to consumers is so easily proven I can't understand why radio commentators and others fell for such misrepresentation of facts.

Up to this time, independent producers of natural gas have not been under jurisdiction of the FPC. The Kerr bill would have simply continued that situation. Instead of natural gas prices being raised because there was no jurisdiction over independent producers by the FPC, prices, both at the well and for consumers, have been reduced.

Prices of natural gas at the well head declined from an average of 11 cents a thousand cubic feet in 1922 to about 4 cents in 1940. They have increased since 1940, due to increases in costs of operations, but right now are lower than they were in 1922.

Also, Government figures show that, due to larger pipe lines and larger volumes of

natural gas sales, the average price of gas to the consumer in the United States has actually declined during the past 10 years. Yet, during that same period, when gas prices were being reduced, prices of all commodities and labor increased approximately 80 percent.

That is the actual record of natural gas prices over the past years when independent natural gas producers were exempt from jurisdiction of the FPC. So, how in the name of all that is holy can opponents of the Kerr bill claim that unless this exemption were removed these same natural gas producers would increase prices to consumers by $100,000,000 a year or more?

Personally, we can only figure they either did not seek or want facts and that they were influenced by the statements made by Olds that the Kerr bill would result in the big increase in price to consumers.

As to Olds, Congressman JOHN E. LYLE, of Texas, in a statement to the subcommittee of the Committee on Interstate and Foreign Commerce of the Senate, which was considering Olds' reappointment as Commissioner to the FPC, said he had checked Olds' writings in publications now deemed as favoring communism. He said in those published articles Leland Olds:

"Urges comrades to enroll in Communist training courses so as to equip themselves for greater usefulness in the movement;

"Advocates the elimination of private property in productive enterprise;

"Hails the decay of the church as a religious institution and its transformation into a handmaiden of the capitalistic system;

"Sneers at the Fourth of July as the day set apart by the world's greatest exploiters to glorify their rise to power;

"Reveals his fundamental opposition to the American system of private enterprise;

"Foresees the elimination of competitive private capitalism;

"Extols the virtues of the Russian system as contrasted with conditions of the United States; and

"Praises the Russian system as the coming world order and as a model for the United States."

We feel false information was supplied radio commentators and others about the Kerr bill, and that most of us who knew the facts, including this columnist, were extremely derelict in seeing that they obtained accurate information.

One well-known Tulsan said yesterday: "Many operators fear the application of jurisdictional authority of the FPC to fix the price of natural gas at the well is no red herring but is a part of a shrewdly planned communistic effort to develop lack of confidence in the consuming public of the ability of gas, steel, oil, automotive, and other American industries to regulate prices of their products."

Passage of Rivers and Harbors Bill

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a very interesting article on the subject of the recent passage by the Senate of the bill authorizing rivers and harbors and flood-control projects, written by Mr. C. F. Byrns, published under date of April 27, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFF THE RECORD
(By C. F. Byrns)

Newspaper and radio commentators have had a Roman holiday over the recent passage by the Senate of the bill authorizing rivers and harbors and flood-control projects all over America. With almost unanimous voice, they have cried "pork." They have bemoaned the fact that men in the Senate who have been insistent upon economy in Government spending supported the waterways authorization bill and beat down every amendment designed to cut its total.

The $1,600,000,000 total estimated cost of the projects this bill would authorize is matched up with the expected $5,500,000,000 deficit for the present fiscal year, and the impression is created that the waterways bill adds to the current deficit.

Most of the criticism of the waterways bill comes from people who have had little if any personal experience with the resource development projects which are involved in this measure. It's easy to apply the "pork" epithet and to ridicule men who try to trim down the high expenses of government and at the same time, support programs for control and development of rivers and the improvement of harbors. It's especially easy if the critic doesn't know much about the matter he is discussing.

It happens that I have had rather intimate contact with river-development programs for the last 30 years. Anyone who has spent a fraction of the effort I have spent in river development will be slow to charge that any project is sheer waste of the public funds unless he knows the facts about it. And if he knows the facts, he will usually find that "pork" is a word that doesn't fit.

There may be some projects in the authorization bill which are not economically justified. I don't know about all of them and neither do the other commentators. But I do know out of long experience how these projects get into the authorization bills. I know how tough are the tests which the Corps of Engineers applies to every proposal for river control and development.

I know how these projects are born, because I have been in at the birth of some of them. I know that there must be an economic need before they are even considered by the Corps of Engineers. I know about the minute investigations of the engineering problems, the cost estimates, and the economic benefits which are made and have to be made before any project wins approval by the district office. Then I know it has to go through all the channels of the Corps of Engineers and win approval first from the division engineer, then by the Board of Engineers for Rivers and Harbors, then by the Chief of Engineers, before it can even go to Congress. I know about that because I have been through it repeatedly in the Arkansas Basin program.

Flood-control reservoirs, for example, are recommended by the Corps of Engineers only if the benefits over a 40-year period are greater than the cost of construction, amortized over that 40-year period, plus maintenance and operation. If a proposed reservoir won't pay for itself in that time, then it's out, and Congress never sees it. A similar rigorous test is put to power and navigation projects.

Control of rivers to stop their destruction and harnessing of rivers to make them useful for power, for irrigation, for navigation is wise use of natural resources. What is spent for projects that are economically sound is not expense but investment—investment that must pay out in less than the life of the works or else the project never gets to Congress.

The authorization bill is not appropriation. It is the basis for future appropriation when the Corps of Engineers and the Budget Bureau and the committee and Members of the two Houses of Congress and the President of the United States approve such appropriations. This bill doesn't add a dime to the present deficit. It's merely the foundation for future resource development.

"Pork" has a plausible sound. The loose application of the word to every authorization or appropriation for waterways is a popular pastime. It may please a lot of people who like to see somebody denounced for something. But it doesn't ring the bell with people who have been through the long grind of work and worry that is necessary to develop a river-development program.

Tribute to Admiral Thomas C. Kinkaid

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3 (legislative day of Wednesday, March 29), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the RECORD a very fine editorial written by Mr. Harry H. Schlacht, which appeared in all of the Hearst newspapers, and which is a just tribute to Admiral Thomas C. Kinkaid on the occasion of his retirement from the Navy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADMIRAL THOMAS C. KINKAID, NAVAL WARRIOR OF THE PACIFIC
(By Harry H. Schlacht)

Today America honors Admiral Thomas C. Kinkaid upon his retirement from the Navy. Today, America makes grateful acknowledgment of duty well done.

We honor ourselves when we honor this great admiral.

We honor our country when we honor him.

None of the glorious tributes we tender him can add one star to his crown of glory, can add one leaf to his laurel wreath.

The glory of his achievements is an epic.

The story of his gallantry will go down in history.

The historians of the future who will record the events of our day will linger in reverent admiration over the majestic career of this great admiral.

Every American should know the glory and the story of this valorous man.

He was the naval warrior of the Pacific.

He was the hero of Leyte Gulf which assured the reconquest of the Philippines, which destroyed the Japanese maritime power, which guaranteed our Pacific triumph.

It was he who supplied the transport and protection which made possible General MacArthur's return to the Philippines. It was he who planned and directed the naval war phases which made possible the liberation of those islands.

Admiral Kinkaid showed a bravery and an inspiration which raised him to the immortal peerage of naval heroism.

His victories in the Pacific will take their place side by side with the naval victories in world history.

In victory he gave glory to God.

The hero of the Pacific is as proud of his gallant officers and men as they are proud of his dauntless leadership.

Those who seek the noblest attributes in man will receive their inspiration from his life and achievements.

Admiral Kinkaid will ever be a symbol of the highest traditions of the Navy. He is a modest gentleman. He is a Christian gentleman. He is a great American.

His glorious record made in the fight for our treasured ideals will ever be the precious heritage to our posterity. His name will ever live in our history with the names of Farragut and Dewey.

As long as men love liberty, as long as men love daring, as long as the battles of the Coral Sea, Midway, the Solomon Islands, Guadalcanal and others claim memory in our history, so long will the name of Admiral Kinkaid be revered.

Beyond the seas where men enjoy liberty, beyond the ages wherein men will live as free men, there will descend upon Admiral Kinkaid the benedictions of their heartfelt prayers.

May God give him health and happiness in the years of his retirement.

His place in history is secured.

Niagara Redevelopment Act of 1950

EXTENSION OF REMARKS

OF

HON. F. D. ROOSEVELT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill and analysis:

A bill to preserve the scenic beauty of the Niagara Falls and River and to authorize the construction of certain public works on that river for power and other purposes, and for other purposes

Be it enacted, etc., That, in order to fulfill the obligation of the United States to preserve and enhance the scenic beauty of the Niagara Falls and River and to provide for the most beneficial use of the waters of that river for development of power, navigation, and the control of floods, it is hereby declared to be the policy of the United States that the share of those waters available to the United States for power purposes upon ratification of the treaty between the United States of America and Canada, dated February 27, 1950, shall be used to develop power in the public interest by a public agency as hereinafter provided.

SEC. 2. To implement that policy, there are hereby adopted and authorized to be prosecuted, subject to ratification of said treaty, under the direction of the Secretary of the Army and the supervision of the Chief of Engineers, works of improvement for redevelopment of the Niagara River in substantial accordance with the project plans outlined in the report of the Bureau of Power of the Federal Power Commission, dated September 28, 1949, entitled "Possibilities for Redevelopment of Niagara Falls for Power—Niagara River—New York," subject to such modifications not inconsistent with this act as may be found advisable by the Secretary of the Army upon investigation and recommendation by the Chief of Engineers and the Federal Power Commission, and after consultation with the Governors of New York and other interested States and with other interested Federal agencies: *Provided*, That the necessary plans, specifications, and preliminary work shall be prosecuted as soon as funds shall be available from appropriations hereinafter authorized, in order to provide for rapid inauguration of a construction program. Such works of improvement are hereinafter referred to as the "project."

SEC. 3. (a) The President is hereby authorized and directed to transfer the power facilities of the project to such public agency of the State of New York as its government may designate and properly authorize for that purpose: *Provided*, That all three of the following conditions are satisfied in full before power is available from any generating unit of the project:

(i) An agreement between the United States of America and the State of New York shall have been negotiated by the President or his designated agent with such agent of the State of New York as its government may designate and authorize for that purpose, and such agreement shall have been approved by the Legislature of the State of New York and the Congress of the United States of America. The President is hereby authorized and directed to initiate negotiations for such agreement as soon as any funds for the project are made available under appropriations hereinafter authorized.

(ii) Such agreement shall include, but not be limited to, provisions for ultimate repayment of all costs properly allocable to power as determined by the Federal Power Commission after consultation with such agency of the State of New York as its government may designate and authorize for that purpose, and provisions for maintenance and operation of the project in the public interest, including especially the interests of the State of New York and other States within economic-transmission distance, which provision shall assure, among other things, that:

(A) No part of the United States' share of the waters of the Niagara River made available for power purposes to the designated agency of the State of New York shall be diverted by it to any person or private company; nor shall the use of any part of said waters or the rights pertaining thereto be sold, leased, or otherwise alienated by such agency to any person or private company for the generation of hydroelectric power; nor shall the power facilities be sold, leased, pledged, mortgaged, or otherwise alienated to any person or private company: *Provided*, That nothing in this act shall be construed as affecting any valid existing rights under license heretofore issued pursuant to the provisions of the Federal Power Act (49 Stat. 838), as amended or as now or hereafter affecting the applicability of the provisions of that act in the case of waters of the Niagara River presently authorized to be diverted for power purposes under license heretofore issued under that act.

(B) Full recognition shall be given to the interests of national security.

(C) In contracting for the disposition of project power, (1) preference shall be given to States, counties, and municipalities, including agencies or instrumentalities of any of them, and to cooperative or other organizations not organized or administered for profit but primarily for the purpose of supplying electric energy to their members as nearly as possible at cost, and (2) arrangements shall be made sufficiently flexible that the foregoing recipients of preference, now or hereafter authorized by law to engage in the distribution of electric energy, may secure a reasonable share of the project power.

(D) Such transmission lines and related facilities shall be constructed, or acquired by purchase or other agreement, as may be necessary in order to make project power available in wholesale quantities for sale on fair and reasonable terms and conditions to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies.

(E) Project power shall be sold and distributed primarily for the benefit of the people as consumers, and particularly for the benefit of domestic and rural consumers, to whom it shall be made available at the lowest possible rates and in such manner as to encourage the widest possible use.

(F) In the event project power is sold to any purchaser for resale, contracts for such sale shall include adequate provisions for establishing resale rates which shall be fixed by the seller and which shall not only provide for passing on to the consumer savings in costs of generation, but shall also be promotional in character and designed so far as practicable to result in periodic rate reductions. Such contracts shall be for a period of time not exceeding 20 years, including renewals.

(G) If and when a northeastern power pool or other agency for the coordinated operation of power facilities in the Northeastern States shall be created or provided for by legislation hereafter enacted by the Congress or pursuant to a compact adopted by the States concerned and approved by the Congress, arrangements shall be made for coordinated operation of the power facilities of the project with those of such pool or other agency.

(H) In contracting for the disposition of project power, commitments shall be so made as to provide and allow for a determination of disputes as to apportionment of project power among States within economic transmission distance whereby the governor of any State, believing that his State is or may be denied its fair share, may make complaint to the Federal Power Commission, which, after due notice to all States which may have an interest in the availability of project power and opportunity to them for hearing under the Commission's Rules of Practice and Procedure, shall determine reasonable and practicable arrangements whereby and the extent to which project power shall be made available in the public interest to purchasers in States within economic transmission distance of the project: *Provided*, That such determination shall be final and binding in the operation of the project except as it may be thereafter revised in further proceedings before the Federal Power Commission as herein provided.

(iii) The public agency designated and authorized by the government of the State of New York to accept transfer of the power facilities of the project shall have made proper application for, and shall have accepted, a license under the provisions of the Federal Power Act (49 Stat. 833), as amended, which license the Federal Power Commission is hereby authorized and directed to issue after consummation of the agreement referred to in conditions (i) and (ii) above: *Provided*, That to the extent of any conflict, the provisions of this act and of said agreement shall supersede the provisions of the Federal Power Act and of the license so far as the project herein authorized is concerned.

(b) Eighteen months after the beginning of construction of the project the President is directed to transmit a report to the Congress on the status of negotiations for an agreement as provided for in subsection (a) hereof.

(c) When power is available from any generating unit of the project, if transfer of the power facilities of the project shall not have been consummated in accordance with the provisions of subsection (a) hereof, the project shall be maintained and operated, and project power disposed of, by such agency of the Government of the United States as may be hereafter created for such purpose: *Provided*, That, if such agency shall not have been created when construction of the project is complete, it shall be maintained and operated under the direction of the Secretary of the Army and supervision of the Chief of Engineers, and project power shall be delivered and disposed of in accordance with the provisions of section 5 of the Flood Control Act of 1944 (58 Stat. 890).

SEC. 4. There are hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated, such sums as may be required to carry out the purposes of this act.

SEC. 5. This act may be cited as the "Niagara Redevelopment Act of 1950."

ANALYSIS OF NIAGARA DEVELOPMENT ACT OF 1950

(Bill introduced by Senator HERBERT H. LEHMAN in the Senate and in the House by Representative FRANKLIN D. ROOSEVELT, JR.)

PURPOSE

To provide for a public development of water power made available to the United States under the terms of the Canadian-United States Niagara Treaty and to insure at the same time the preservation of the scenic beauties of the Niagara Falls.

WHAT THE BILL DOES

1. Authorizes the United States Corps of Engineers to plan and construct the necessary project works.

2. Authorizes and directs the President of the United States to turn over the project works to whatever agency the State of New York may designate by law for this purpose, provided that certain conditions protecting the interests of the people of the State of New York and the interests of the people of the adjacent States and the Federal Government are met.

3. Provides for the repayment by the State of New York to the Federal Government of such construction costs as are properly allocable to the power development. Costs for works designed solely to preserve the scenic beauty of the falls are to be borne by the United States Government.

4. Provides that amount and terms of repayment as well as other pertinent conditions shall be covered in an agreement to be negotiated between the United States Government and the State of New York, subject to approval by the Legislature of New York and the Congress.

5. Provides that if the State of New York does not choose to acquire and operate the project, or if no agreement is reached by the time the project is ready to deliver power, the power is to be distributed by the United States Government either through an agency authorized by Congress for the purpose or by the Federal agencies authorized to develop and distribute power under the terms of the Flood Control Act of 1944.

ANALYSIS OF BILLS BY SECTIONS

Section 1: Statement of national policy and of purpose of the act.

Section 2:

A. Authorizes construction of the works in accordance with project plans outlined in report of the Bureau of Power of the Federal Power Commission (September 28, 1949) subject to modification not inconsistent with the act and found advisable by the Chief of Engineers and the Federal Power Commission after consultation with the Governors of New York and of other interested States and with other interested Federal agencies.

B. Provides for start of construction as soon as funds are appropriated.

Section 3:

A. Authorizes and directs the President to transfer the project facilities to an agency of New York State, when such an agency shall have been authorized to accept and operate these works by the State of New York and when three major conditions will have been met:

1. An agreement shall be negotiated between the United States Government and the government of the State of New York and such agreement shall have been approved both by the Legislature of New York and the United States Congress.

2. (a) The agreement shall include provisions for—

(1) Repayment of costs allocable to power; and

(2) For the maintenance and operation of the project in the public interest—including especially the interests of the State of New York and of other States withing economic transmission distance.

(b) Agreement shall prohibit the alienation of any of the waters to any private person or company other than waters over which private persons or corporations already have existing rights.

(c) Agreement shall give full recognition to the interests of national security.

(d) The agreement shall provide for the granting of preference to local government units or their instrumentalities and to cooperatives and other nonprofit organizations.

(e) The agreement shall provide for the construction or acquisition of necessary transmission lines in order to make power available in wholesale quantities to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies.

(f) Agreement shall provide that project power shall be sold primarily for the benefit of the consumers of electric power at the lowest possible rates (and in such a manner as to encourage the widest possible use).

(g) Agreement shall provide that contracts for resale of project power shall include provision for establishing resale rates to be fixed by the seller (State of New York) so as to pass on the savings to the consumers.

(h) Agreement shall provide that if and when a northeastern power pool or some other agency for the coordinated operation of power facilities in the Northeast shall be created, either by future Federal legislation or by compacts between the States, arrangements shall be made by the State of New York for the coordinated operation of the Niagara power facilities with those of the pool.

(i) Agreement shall provide that other States within economic transmission distance may obtain needed power from Niagara by contract with New York State; if any State is denied what it believes to be its fair share, the Federal Power Commission, after full and open hearings, shall have the power to determine the arrangements whereby the power shall be sold to these States within economic transmission distance.

3. (a) New York State will apply to the Federal Power Commission for a license for operation of the project; the Federal Power Commission is thereupon directed to issue the license, provided that all the conditions referred to above have been satisfied.

(b) In case of any conflict between the licensing provision of the Federal Power Act and the provisions of this act, the provisions of this act shall pertain.

B. Eighteen months after the beginning of construction the President is directed to send a report to Congress on the state of negotiations with the State of New York.

C. If transfer of the power facilities to the State of New York has not been completely accomplished in accordance with the above provisions by the time power is available from any generating unit of the project, the project shall be maintained and power disposed of by any agency which Congress may have meanwhile created for the purpose; if no such agency has been created, the project shall be maintained and operated by the Chief of Engineers and the power shall be disposed of in accordance with the Flood Control Act of 1944 (by the Secretary of Interior).

NOTE.—In this analysis, section 2, A and B correspond to section 2 in the bill; section 3, A corresponds to section 3 (a) in the bill; section 3, (A) (1) corresponds to section 3 (a) (i) in the bill, etc.

Morality as a Basis for Political Action

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the Cleveland Plain Dealer on Tuesday, April 4, 1950, posed a very important question. It was: "Can a government behave in an immoral manner toward its own people? Can it deceive them, rob them, cheat them, plunder their resources, and infringe on their liberties?" Under leave to extend my remarks, I am including the editorial in question, which is a very interesting one:

QUESTIONS OF MORALITY

Can a government behave in an immoral manner toward its own people? Can it deceive them, rob them, cheat them, plunder their resources, and infringe on their liberties?

We know how a community would condemn a man who ran up charge accounts, went on a binge every Saturday night and didn't pay his bills.

What would the neighbors say about a housewife who carted home large quantities of food from the grocery and butcher shop every day and then, instead of preparing it for her family, let it spoil?

How long could a respected citizen borrow money from his friends and, when the time came to pay it back, require them to settle on the basis of 60 cents to the dollar?

How lenient would the community be with a door-to-door salesman who insisted at the point of a gun that every householder buy his products? Or with a smooth-talking promoter who tried to force his neighbors to turn over a large percentage of their incomes to him on the promise that he would take care of their insurance, their medical and hospital bills and send their children to college?

Surely any community would frown on a person who indulged in these practices and at least call for the police or the men in the white coats with the strait-jacket to come and get him.

But when a government does these things, is its conduct any less immoral?

The United States Government is on a big spending binge. It is living beyond its income, not accidentally or because of misfortune, but deliberately.

The United States Government has arranged to have more food delivered to the markets than the people can consume and the surplus is either spoiling or is in storage, which merely delays the process of spoilage. This didn't happen accidentally, either, but was done deliberately.

The United States Government has borrowed money from its citizens, promising to pay $100 after 10 years for every $75 that was loaned through the purchase of savings bonds. But when the time comes to repay, the lender get back only $60 in actual purchasing value, in terms of the value of the original $75 loan. Then, to add insult to injury, the Government requires him to pay a tax on the fictitious $25 profit he has collected.

The United States Government forces its citizens to buy things they don't need or don't want or can't afford, at the point of the tax collector's gun. Every subsidy paid out by the Government to some special interest or pressure group is a forced purchase by all the citizens of the products or services of that interest or group. Since the citizens do not or will not of their own volition

buy the products or services of the favored interests or groups, the Government takes the money away from the citizens anyhow in taxes and makes the purchases.

The United States Government has already taken away a large percentage of its citizens' incomes in the form of taxes, thus depriving them of the freedom of spending their own money, and is demanding a larger share, for the purpose of looking after more and more of their affairs.

It is not surprising that a large number of people have lost confidence in the Government, for the Government is conducting itself in a manner which, if an individual so conducted himself, would be condemned as profligate and immoral.

Nor is it any excuse to point out that some Government administrators and policy-makers who commit these offenses may be well-intentioned and may sincerely believe they are acting in the best interests of the people. Others, we fear, and this goes for the practical politicians, are not always well-intentioned. Their promises, their deceit and their loose handling of other people's money are deliberate, for the purpose of maintaining themselves in power.

But they will not remain in power, we believe, if the people insist that their Government adhere to the same standards of morality which apply to individuals.

Past and Future

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of May 1, 1950:

PAST AND FUTURE

This newspaper has occasionally drawn fire from critics by turning back to look at some of the blunders that have been made in the conduct of United States foreign policy. The attitude of these critics is that what's done is past and that nothing is served by raking over that past.

Some of the same sort of criticism, we notice, has been aimed at former President Hoover for reminding the country that a great deal of the world's present troubles stem from the mistakes of 1941–45. In those years, you will recall, the brave new world was to be erected on the foundation of Russian cooperation for peace.

The attitude of these critics—who are usually those who either participated or acquiesced in that foolish course—is, Why bring that up now? What's that to do with the present problem?

We think it has a great deal to do with it. Knowledge of past mistakes, of course, is not going to guarantee rightness in the future. But until past errors are identified and the cause of failure analyzed there can be no wisdom from experience. Diagnosis must precede the treatment.

Thus we share Mr. Hoover's belief that "the American people ought to take a cold and objective look at this experience before we go any further."

Well, a superficial look shows us that our foreign leaders misjudged the Russians badly. This error is not excusable on the grounds that "everybody did it" because it is a fact that not everybody did. Winston Churchill, as Mr. Royster remarks in an adjacent column, did not misjudge them; he was simply drowned by the wave of pro-Russianism.

But there is more to be learned from the past than how to judge Communists. Anyway, that error has been corrected; we no longer operate by that illusion.

What is more important, it seems to us, is the illusion behind the illusion. Those people who misjudged Communists were not ignorant of the power juggling that followed all previous wars nor of the historical ambitions of Russia. They were simply under the impression that they could ignore history, that with good intentions, hard work, and rhetoric they could make the world different from what it is.

That illusion seems not yet dead. Currently it takes the form of a belief that with enough good intentions behind them dollars can do almost anything; a belief that a great and strong United States can take on any burdens and defy the ills of extravagance that have ravaged other great and strong nations in the past.

Experience, says the illusion, can be set aside. We are different; it can't happen here.

The illusion that harsh realities can be ignored led us back to a Second World War to once more save the world for democracy, and now it threatens a third war to save it thrice. If we do not look back at the past we are likely to find it is in the future.

Lattimore and His Far-Eastern Policy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, so that Members of Congress and the people of the United States may appraise Mr. Lattimore's position in far-eastern matters, I am including a copy of a draft of his report to the State Department which appeared in the New York Times on April 4, 1950:

TEXT OF LATTIMORE'S MEMORANDUM ON UNITED STATES FAR EASTERN POLICY

(WASHINGTON, April 3.—Following is the text of Owen Lattimore's memorandum on United States policy in the Far East, drafted for a State Department advisory committee last August and made public today by Mr. Lattimore:)

In clearing the way for a fresh approach to the problems of United States policy in the Far East, several negative statements can usefully be made.

1. The type of policy represented by support for Chiang Kai-shek does more harm than good to the interests of the United States, and no modification of this policy seems promising. Chiang Kai-shek was a unique figure in Asia. He is now fading into a kind of eclipse that is regrettably damaging to the prestige of the United States, because the United States supported him. His eclipse does not even leave behind the moral prestige of a good but losing fight in defense of a weak cause.

On the contrary, he put up the worst possible fight in defense of a cause that was originally strong and should have won. The kind of policy that failed in support of so great a figure as Chiang Kai-shek cannot possibly succeed if it is applied to a scattering of "little Chiang Kai-sheks" in China or elsewhere in Asia.

2. China cannot be economically coerced by such measures as cutting off trade. Nothing could be more dangerous for the American interest than to underestimate the ability of the Chinese Communists to achieve the minimum level of economic stability that will make their regime politically secure. Sound policy should allow for a cautious overestimate of the ability of the Chinese Communists in this respect, and avoid a rash underestimate.

TWO ALTERNATIVES IN JAPAN

3. It is not possible to make Japan a satisfactory instrument of American policy. There are two alternatives in Japan. The first alternative is to keep Japan alive by means of American "blood transfusions" of raw materials and credits. Under this alternative, Japan can be made to put on the surface appearance of a strong ally; but the reality will be an overcommitment of American resources to a distant and vulnerable region.

Under the second alternative, Japan can keep itself alive by coming to terms, economically and politically, with its neighbors in Asia, principally China. Under this alternative, Japan cannot serve as a trusted American ally. Its own interests will compel it to balance and bargain between what it can get out of Asia and what it can get out of America.

4. South Korea is more of a liability than an asset to the interests and policy of the United States. It is doubtful how long the present regime in South Korea can be kept alive, and mere effort to keep it alive is a bad advertisement, which continually draws attention to a band of little-and-inferior-Chiang Kai-sheks who are the scorn of the Communists and have lost the respect of democratic and would-be democratic groups and movements throughout Asia.

5. The colonial and quasi-colonial countries of Southeast Asia cannot be forced to grant priorities to the economic and military recovery of Europe, at the expense of their own economic and political interests. In this region as a whole there is a rapid development of combined political and military resistance to coercion which can be indefinitely sustained by local resources. On the other hand, attempts at reconquest by European countries are so expensive that they defeat their own ultimate purpose, which is the strengthening of the country attempting the reconquest.

JOINT BENEFITS SEEN NEEDED

The situation can now be handled only by convincing the nationalist leaders in those countries that any sacrifices they are asked to make are matched by sacrifices made by their former or titular rulers, and are not designed to give priority to the interests of these rulers, but to bring joint benefits both to the ruling countries and to the colonial country, on terms that satisfy the colonial aspiration to equality.

6. The United States cannot assume that Russia will move in to take over direct control in China, and will thus be subjected to heavy strategic and economic strains. It is dangerous to assume that there will be a diversion and commitment of Russian resources in Asia which will limit Russian ability to maneuver in Europe. Recent developments in the Far East have been favorable to Russia, but not in a way that lessens the resources that Russia can deploy toward Europe.

Policy toward Russia and policy toward the Far East meet at the point where such a move as the imposition of an economic cordon sanitaire around China is considered. Such a move would increase Chinese dependence on Russia; but it would probably not make it necessary for Russia to undertake a large-scale program in China. The Russians would get credit in Asia, multiplied by propaganda, for any grants they might make to China, but would probably not have to make grants large enough to distort or strain their own resources.

It would be possible, therefore, if the mistake is made of waiting for the Chinese Communists to come hat in hand to ask for American terms, for United States policy to encounter another set-back in Asia, without even the compensating advantage of hampering Russia's ability to apply pressure in Europe.

POSITIVE OBJECTIVES DEFINED

The foregoing statement defines negative aspects of the situation in Asia, limiting the freedom of maneuver of United States policy. Within these limitations, it seems advisable that a number of positive objectives should be defined.

1. Policy in the Far East and policy toward Russia have a bearing on each other. It certainly cannot yet be said, however, that armed warfare against communism in the Far East, on a scale involving a major commitment of American resources, has become either unavoidable or positively desirable. Nor can it be said with any assurance that, in the event of an armed conflict, undertaken for the purpose of forcing Russia back from Europe, the Far East would be an optimum field of operation.

There are still two alternatives before us—a relatively long peace, or a rapid approach toward war. If there is to be war, it can only be won by defeating Russia—not Northern Korea, or Viet Nam, or even China. Sound policy should therefore avoid premature or excessive strategic deployment in the Far East.

If there is to be a long peace, the primary factor in making peace possible will be a stabilization of relations between the United States and Russia. Sound policy should therefore maintain a maximum flexibility. If and when negotiated and mutually acceptable agreements with Russia become possible, American policy in the Far East should be in a position to contribute to Russo-American negotiations. It should not be so mired down in local situations that direct American-Russian negotiations are actually hampered.

2. Any new departures in United States policy in the Far East must be able to fend off any accusation of appeasement of local or Russian communism. In view of the effectiveness of the Russian issue as a weapon in in-fighting in American party politics, it would seem that the advice of experts on domestic politics should be coordinated with the opinions of those who are consulted on foreign policy.

The dilemma is simple, but not easy to solve; but unless it can be solved no successful United States policy in the Far East is possible. Any United States policy that is interpreted in various countries in the Far East as pressure applied for the purpose of creating a league against Russia will merely increase the ability of those countries to bargain with both the United States and Russia.

It will also increase the identification, in those countries, between local nationalism and local communism. On the other hand, any proposed United States policy in the Far East that is attacked in America itself as a bid for better relations with Russia runs the danger of being defeated.

3. The success of United States policy in the Far East will be measured largely by the contribution that it makes to the recovery of economic relations between the Far East and Europe. This recovery will be possible only if the assent and good will of the far eastern countries are won.

Assent and real cooperation, in turn, can only be won if the representatives of the far eastern countries, including those that are still technically the subjects of European countries, are convinced that they have as direct access to the highest American authorities as do the European representatives, and if they are convinced that their economic needs and political standards are not being given a second priority, lower than that of the European countries involved in the same negotiations.

The two test cases in southeast Asia, on which the leaders of various nationalist movements will rate the difference between what can be attained through friendly association with representatives of the United States and what can be attained through outright defiance of a European country which has strong economic support from the United States are Indonesia and the Viet Nam regime under Ho Chi Minh.

If the negotiations between Dutch and Indonesians, brought about largely through benevolent United States pressure, eventuate in a settlement which seems, in Indonesia, to contain too much of hope deferred, while the resistance in Indochina under Ho Chi Minh achieves more and more of hope fulfilled, the results throughout southeast Asia will be adverse to the United States interest.

INDONESIAN OPINION PUT FIRST

Heavy and primary United States commitments in western Europe make it difficult to bear constantly in mind that when the Dutch-Indonesian negotiations are consummated, the satisfaction or dissatisfaction of popular opinion in Indonesia will have wider repercussions than the satisfaction or dissatisfaction of Dutch public opinion.

It is a fact, nevertheless, that Indonesian opinion is more difficult to satisfy than Dutch opinion, and it is also a fact that the repercussions will be more serious if Indosenian opinion is not satisfied than if Dutch opinion is not satisfied. These facts mark an important difference between prewar and postwar colonial Asia. They are facts that American public opinion has by no means fully accepted; but they are also facts that are critical for the formulation of an over-all United States policy in Asia.

4. The foregoing considerations indicate that the major aim of United States policy in the Far East should be to convince the countries of the Far East that they can get along well with the United States and with the countries of western Europe. They must be persuaded that they can get along well because of the mutual benefits to themselves, to the United States, and to western Europe.

They must not be made to suspect that the real aim of the United States is an ulterior aim of using them against Russia. To put it in another way, the aim of the United States policy should be to enable the countries of the Far East to do without Russia to the maximum extent. This is a much more modest aim than an insistence on and organization of hostility to Russia; but it is an attainable aim, and the other is not.

A few suggestions for implementation are appended.

1. Conferences with the independent governments of the Far East, on the basis of helping them to build their own economies, to revive their trade with Europe, and to expand their trade with us. Emphasis on positive steps that can be taken. No negative conditions, such as prohibitions of trade with Russia or Communist China; no conditions that could be interpreted as American regulation of their political parties.

2. Working relations, and a refusal to be bound by a protocol, with legitimate Nationalist leaders in countries whose full political aspirations have not been met by their European rulers.

3. The United States should not allow any European country, in its relations with any country in the Far East, to state openly or to imply by propaganda that its policy is "backed by the United States." European representatives, in negotiating with the representatives of countries in Asia, should be discouraged from stating or implying that they are authoritative interpreters of United States policy, or intermediaries without whom the United States cannot be approached.

4. It should be made clear that if there is delay or difficulty in establishing relations between the United States and Communist-controlled countries, such as China, the trouble comes from the Communist side and not from the United States side.

FORMAL RECOGNITIONS URGED

5. It should be made clear that friendly and beneficial relations with the United States depend essentially on the inherent friendliness or unfriendliness of the nation concerned, and not on the formalities of diplomatic recognition. In order to facilitate the contrast between countries which are on friendly terms with the United States and countries which are not, the number of countries formally recognized by the United States should be increased.

As a first step, the United States should accept the list of countries recommended for admission to the United Nations by Mr. Trygve Lie, Secretary General of the United Nations. In the first place, it would at this time be a good move for the United States to accept with good will an initiative from the Secretariat of the United Nations. In the second place, the list is on balance more favorable to the United States than to the Soviet Union. In the third place, and with particular reference to the Far East, the move would bring within the scope of United States diplomatic activity the Mongolian People's Republic (Outer Mongolia), an increasingly important potential listening-post country in the heart of Asia.

6. The United States should disembarrass itself as quickly as possible of its entanglements in South Korea.

United States Financial Aid to Foreign Metal Development

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. HILL. Mr. Speaker, on March 29, I called the attention of Congress to the financial aid which is being given to foreign metal producers while we deny similar aid to American miners who are being deprived of jobs because of large imports of metals from subsidized foreign competition.

As further evidence of my contention, I desire to insert in the CONGRESSIONAL RECORD a release of the Economic Cooperation Administration, dated May 2, 1950, in which is shown that millions of dollars are being sent to countries like Algeria to develop the mineral production of that country while we in the United States are denied the same benefits.

The release follows:

WASHINGTON, May 2.—A new search for copper, manganese, lead and zinc now is being conducted in the desert and mountains of Algeria with the aid of Marshall-plan dollars.

The Economic Cooperation Administration said discovery of the metals would give Algeria a quick opportunity to earn badly-needed foreign currencies.

Thus far, French geological crews, working under the supervision of the Algerian Min-

eral Research Bureau, have been furnished about $1,140,000 worth of American equipment. The bulk of the equipment consists of mobile compressors, miscellaneous geophysical apparatus and drilling machinery. The crews are at work in the Sahara Desert and the Atlas Mountains. French officials estimate that only about 10 percent of Algeria—a country four times the size of France—has been prospected to any great extent.

In addition, about $3,604,000 worth of Marshall-plan equipment is helping to modernize existing Algerian mines. Algeria's major lead mine is being converted from an under-ground system of mining to an open-pit operation, and the Ouenza open-pit iron mine, Algeria's largest ore producer, is being modernized to boost production from a current 2,000,000 tons annually to 2,500,000 tons.

Other mining programs, including electrification and road building, are being financed with the equivalent of $2,625,000 in counterpart funds—francs deposited by the French Government to match ECA direct dollar aid.

Conferring the Cross of the Eloy Alfaro International Foundation on the Honorable Karl Stefan, of Nebraska

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. CLEVENGER. Mr. Speaker, on April 30, the Cross of the Eloy Alfaro International Foundation was conferred upon our colleague the Honorable KARL STEFAN, of Nebraska, to whom I know the membership of this House joins me in extending our congratulations. The ceremony conferring this degree upon our colleague also included a radio program containing statements by the Honorable Eloy Alfaro, former Ambassador from Ecuador, and the Honorable KARL STEFAN, of Nebraska. By leave granted me, I include the transcript of this ceremony as part of my remarks:

ANNOUNCER. We have met here in the shadow of the Capitol to witness the ceremony attendant on the conferring of the Cross of the Eloy Alfaro International Foundation upon the Honorable KARL STEFAN, Representative of the Third Congressional District of Nebraska and dean of the Nebraska Delegation to the United States Congress.

Congressman STEFAN has received many honors—from American institutions and from foreign governments. The National University of Washington, D. C., has conferred upon the Nebraska legislator the honorary degree of Doctor of Laws because of his tireless efforts in the interest of good government in this country. The late President Osmena of the Republic of the Philippines bestowed the Medal of Military Merit on Representative STEFAN for his broadcasts to the Philippines during World War II. It was said of Congressman STEFAN's broadcasts at that time that "they saved thousands of lives—the lives of Filipinos and of American fighting men."

The next voice you hear will be that of the Honorable Eloy Alfaro, son of the martyred President of Ecuador, former Ambassador from Ecuador to the United States, and director general of the Alfaro International Foundation.

The Honorable Eloy Alfaro.

Senor ALFARO. Congressman STEFAN, and my other friends of the spiritually united Americas:

It is the avowed purpose of the Eloy Alfaro International Foundation, which I represent at this ceremony, "to give honor and to promote knowledge of the life of General Eloy Alfaro as a statesman and liberator."

The great ideal for which my distinguished father lived and died was the establishment of the eternal solidarity of the peoples and the republics of the Americas.

Although I am a citizen of another nation, the traditions and the gallant history of the United States of America are as familitary to me as are the traditions and the gallant history of my own country. My three sons, my brother, and myself have been cadets of your own United States Military Academy at West Point.

The people of the United States are devoted to freedom. They give their sincere admiration—a gift not given lightly—to the great liberators of other countries, other centuries. Gen. Eloy Alfaro has received, is receiving this sincere admiration.

During his lifetime the forces of freedom were expanding. He furthered this expansion. Now, in the years of our lives, the forces of freedom have been ebbing. Only in the Americas has freedom made a fiercely determined stand. For the enduring good of the peoples of our sister continents, that stand must be maintained and strengthened. That is why it is more important than ever before to perpetuate the memory, the ideals, the accomplishments of Gen. Eloy Alfaro.

Among the means by which the organization which I have the honor to represent has chosen to accomplish this truly American aim, has been that of the bestowal of the Cross of the Eloy Alfaro International Foundation—a decoration which was created to honor any outstanding services toward the memory of Gen. Eloy Alfaro and the noble causes and ideals which he propagated as a reformer of the Republic of Ecuador, and as one of the statesmen and liberators of America.

Congressman STEFAN, it is my pleasure and my honor as the spokesman for my organization and on behalf of its President—the Honorable Doctor Emeterio Santovena—to bestow this decoration upon you. During your nearly two decades of service as the Representative of the Third Congressional District of Nebraska in the House of Representatives you have earned this accolade. You have helped to make your constituents in the State of Nebraska form ties of friendship and understanding with the peoples of the American republics. You have been a foe of tyranny wherever tyranny existed. You have been a friend of freedom wherever freedom flourished. You have carried the cause of American solidarity into the deliberations of congressional committees and onto the floor of the House of Representatives.

Congressman STEFAN, the Cross of the Eloy Alfaro International Foundation is yours. By bestowing it upon you we publicly honor an honorable man. We bestow it upon a fighting friend of the Americas. We bestow it upon a courageous advocate of the people. We bestow it upon a patriotic citizen of the United States.

Congressman STEFAN. Senor Alfaro, officers and members of the Eloy Alfaro International Foundation, and my friends of the Americas—whether those friends live in Ecuador, Cuba, Chile, or in my home State of Nebraska, I accept the Cross of the Eloy Alfaro International Foundation which has just been conferred upon me.

Mine are mixed feelings. I am both proud and humble. I am proud because what I have said and what I have done has been recognized by men whom I know to be lovers of liberty. I am humble because there is so much more I could have said, so much more I could have done, had the awareness of the vital importance of hemispheric solidarity come to me before it actually did.

At this very moment of my receiving the Cross of the Eloy Alfaro International Foundation, it is a matter of great satisfaction to me to know that a statue of the brave soldier-statesman has a position of honor in the State capitol of Nebraska at Lincoln. The location of this statue in Lincoln is, indeed, poetic justice since Gen. Eloy Alfaro was the Lincoln of the other American republics.

We citizens of the United States learn best through the study of the example of others. We could learn of Gen. Eloy Alfaro through studying his victories on the land and on the sea. We could learn of him by studying his writings—lasting documents written on the hearts of men in letters of liberty. We could learn of him by studying his technique as a peacemaker between nations. We could learn of him by studying his numerous biographies, the accounts of his tribulations and his triumphs.

What I have learned about this distinguished American comes from studying his example in the development of his own country.

It is obvious, from such a study, that General Alfaro had determined from the outset of his career to make his country strong. He wanted the people of his country to be informed, to be healthy in body and mind, to be productive in industry, arts, commerce, and the sciences. He wanted the means of communication and transportation to be modernized so that they might strengthen his nation. He wanted his country to be strong in its defenses against potential aggressors from within and from without. But—above all—he wanted his country to be strong so that it might take an equal place with other strong American republics around the international conference table.

His concern with national strength parallels the enlightened reasoning which is gaining support in the United States in 1950. Today—in the twentieth contury—we who advocate the internal development of the United States believe sincerely that we are the rightful heirs-in-spirit of the powerful principles in which General Alfaro believed in the nineteenth century. I am thoroughly convinced that the Alfaro way—the internal development of each American republic—is more than just a way to peace; it is the only positive way.

The best way for the people of the United States to demonstrate their faith in the Alfaro example is to put that example into practical operation.

That can be done.

Democracy, like charity, begins at home. What would the Alfaro example mean to my home State of Nebraska?

Literally hundreds of new commercial uses have been discovered for agricultural crops, other than food. Through the establishment, expansion, and growth of nonfood agricultural industries Nebraska could well take a prominent place in the ranks of our industrial States. Through an intelligent national and international program what actual food-crop surpluses we have could be exported to our friends of the other American Republics who have need of such food. With the advent of growing industry in Nebraska, other developments would ensue. We would need more and better farm-to-market roads. We would need added production in other fields to cope with the increase in population.

In other words, Nebraska, by observing the Alfaro example, would be made strong. Our State would be in a better position to meet on an equal basis, on a national scale, with the other strong States of the United States. Since we citizens of the United States learn by example, it is certain that

the Alfaro way would soon meet with almost universal acceptance.

Senor Alfaro, I am grateful to you and to your associates for this signal honor of receiving the Cross of the Eloy Alfaro International Foundation. But greater even than my gratitude to you is my heartfelt gratitude to God that He, in His infinite wisdom, gave us Gen. Eloy Alfaro to bring into being this solidarity between peoples, this solidarity between republics, this solidarity between the peoples and the Republics of the Americas.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the ninth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Iosif Vissarionovich Dzugashvili, the czar of all the Russias, stood up before the Moscow crowd a couple of days ago and watched his eldest son's plane roar overhead.

He is an old man now, and also being a very experienced one, he knows that the world's principal interest in him revolves around the question, "Who will be next?"

Deep inside the stone and concrete beneath his feet as he watched lay the body of the man whose death had given Dzugashvili his own day of glory.

At his back were the pink-white walls of a fort that has in one form or other ruled Moscow for more than 600 years. It is called Kremlin, and within the fort are three palaces, three cathedrals, a monastery, a convent, and a dozen more churches, halls, and offices.

All of them are very, very old, a rich mixture of all the architectures of the eastern end of the world, and the very heart of their spirit is a door.

It is a door so low and small that to pass through you must go down on your knees, and that is why the door is built that way, for it is the door to a room in which the czars once received their noble subjects and the ambassadors of nations beyond the steppes.

Whoever would see the czar first had to go down on his knees and approach, meek in body as well as mind.

It was an ideal approach to the czar of those days, and it remains the ideal of today.

The "science of Marxism," through which the very old man, Dzugashvili, rules all the Russians and would seek to rule the rest of the world as well, provides an elaborate apology for the low door. More importantly, it provides the iron discipline that makes the door work.

Iosif Vissarionovich Dzugashvili, above mentioned, is better known by his alias, Josef Stalin, adopted half a century ago when he was train robber and gang leader in the Russian back lands.

The dead man at his feet was christened Vladimir Ilyich Ulyanov, and he, too, had an alias.

He called himself Lenin. The word Stalin is Russian for "steel." Some say that Ulyanov took the name Lenin because it was used as an alias by his brother before him, but at any rate, it does not mean anything.

Lenin's corpse has lain in that mausoleum beneath Stalin's feet since 1924.

As a firm and faithful believer in "scientific Marxism," Lenin lived by the faith that he was born of nothing but biological accident, came from nowhere, and would be going nowhere when he died.

Maybe it means something that the old man who still lives had Lenin's body mummified and displayed in that mausoleum as a preserved symbol of that faith in "dialectical materialism," the Marxists' jargon for plain language meaning "we are animals and no more."

At any rate, Lenin lies there, and every day the long lines of Russians are herded past his casket to gaze on the small, round face, bald head and beard of the man who put them where they are today.

They are required to do that as an act of faith.

Stalin, like Lenin dead in the tomb, must also die one day. Who will succeed him in power? Will it be Vyacheslave, born Scriabin, who now calls himself Molotov, meaning "hammer"?

Or will it be that aviator son of Stalin at the head of the Russian air power, suddenly commanding all Russia to come to him through that low door in the Kremlin, by virtue of the atom bombs stolen with the help of traitors here?

It is a matter of importance, and in doubt. And it is just one of many things unaccounted for in the works and thoughts of Lenin, so long gone to find out whether man begins and ends like a dog, as he contended.

Before you make your own guess as to who will be the next czar of all the Russias, let us run through some of the trials and errors of Lenin's career.

He was the first real practitioner of "scientific Marxism," which holds that the world must be conquered by socialism through force and violence so that, in the sweet bye and bye, all will be heaven on earth and even government itself will voluntarily wither away.

Lenin was born April 22, 1870, at Simbirsk, far down the Volga River near the Black Sea. Simbirsk is today one of six towns and one mountain named in Lenin's honor.

But Stalin has nine cities, plus mountains. What is more, Leninsk, formerly Simbirsk, is just an obscure whistle stop nearby the major city at Stalingrad, which is already a sacred place of worship for Communists.

For the master practitioners of "scientific Marxism" though they have been actual rulers of men for now less than 40 years, and have been hideously inept at the job, still have discovered that men insist on having religion of some sort.

So they are now busy in attempting to fix a mythology and system of hero worship on the Russian people and all others they would rule.

They are using Stalin as No. 1. It is not according to plan, as Lenin laid it out.

Potato Shortage

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. POTTER. Mr. Speaker, the Department of Agriculture's administration of the potato program has been inexcusably mishandled. Delta County in the Upper Peninsula of Michigan is a great potato growing section. Last year they had an unusually high production of potatoes. At the present time, Escanaba, the county seat of Delta County, is out of potatoes.

I wish to insert at this point a news article and an editorial which appeared recently in the Escanaba Press:

[From the Escanaba (Mich.) Press of April 27, 1950]

SPUD SHORTAGE HITS ESCANABA—GROWERS' EXCHANGE SCRAPING BOTTOM

While the Federal Government has been burning thousands of bushels of potatoes to keep prices up, Upper Peninsula and Wisconsin housewives are facing a serious potato shortage.

The local warehouse of the Michigan Potato Growers' Association probably will be completely cleaned out by Monday unless more potatoes are located, Manager Ivens said today.

A national chain store, with a local outlet, called Ivens today and said if it could not obtain a supply of potatoes immediately some of its stores would be out by nightfall.

"We have been delivering short all week and I don't know of a single bushel of No. 1 grade potatoes in the county," said Ivens. "St. Nicholas growers are at the bottom of their bins."

Ivens reported a critical shortage of potatoes in Chicago, Milwaukee, and other midwest areas.

[From the Escanaba (Mich.) Press of April 29, 1950]

POTATO SHORTAGE IS STARTLING DEVELOPMENT

If a threatened potato shortage in this area becomes acute, which seems possible, it will be the result of the most ridiculous mismanagement of a record potato crop.

Potato dealers report that the supply of potatoes in Delta County is virtually exhausted and that a critical shortage of spuds has already developed in the Chicago, Milwaukee, and midwestern markets.

This would be understandable perhaps if the 1949 potato crop had been a small one, but it was not. It was, in fact, the largest crop of potatoes in the Nation's history. The crop was so large that the Government spent many millions of dollars to buy up the surplus, which was either destroyed or sold back to farmers at a ridiculously low price for livestock feed.

The incredible mismanagement of the potato situation is bound to increase the anger of consumers, who have already paid heavily for a governmental program that failed to make much sense at any time. They have paid through high support prices for potatoes they purchased at the store and in taxes that were used to buy the surplus to maintain the high prices.

And now consumers are told that there is a shortage of potatoes because too many bushels of the 1949 crop were burned or fed to livestock. If that development does not force a revision in the Government's potato price support program, it can only mean that common sense and reason are completely lost at the national level.

Address of Hon. Peter W. Rodino, Jr., of New Jersey

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the brilliant

keynote speech delivered by my able colleague, the Honorable PETER W. RODINO, JR., at the New Jersey State Democratic Convention at Trenton on Thursday, April 27, 1950. Those who were privileged to hear this eloquent address were stirred by Mr. RODINO's able exposition of the great issues, both foreign and domestic, that confront America today. I take pleasure in inserting the speech below, and I commend its reading to thoughtful citizens everywhere:

Members of the convention, I am grateful for the privilege of presiding as temporary chairman of this convention. I feel that, in granting me this honor, you are also honoring all the members of the Democratic delegation in Congress, those already in office and those whom you will help to elect in November.

Even as we meet here in this convention, the frontier of freedom is under continuing attack.

That frontier runs from the Baltic through the heart of Berlin, along the borders of Czechoslovakia, Hungary, Rumania, Albania, the northern border of Afghanistan, Pakistan, India, Burma, and Indochina. It separates the iron curtain from the rest of the free world.

There is another frontier inside the countries on our side—the free side—of the iron curtain. This second frontier of democracy is stronger now than it was 4 years ago. It is stronger now than it was 2 years ago when our Nation, under the leadership of President Truman and with bipartisan support, moved to the counterattack.

The first frontier is holding because the second frontier is stronger.

The second frontier is stronger because of the implementation of the Truman plan in Greece and Turkey and the Marshall plan in the rest of Europe and in southeast Asia.

With the munitions and know-how of defense we have helped to strengthen the first frontier.

With the instruments and know-how of peace we have helped to strengthen the second frontier.

Except in China, where the hope of freedom has been pawned for the promise of food, and the will to fight weakened by corruption, the double frontier of freedom has been held. New frontiers have been established in southeast Asia that with statesmanship and with material aid will be stronger than was the fluid front in China.

And as these two frontiers hold and strengthen around the world, a new third frontier will develop on the other side of the iron curtain, inside the enslaved countries of eastern Europe, inside China, inside Russia itself. Behind the iron curtain are outposts of freedom, pockets of resistance to totalitarian slavery enforced by terror. While men live, the idea of freedom does not die. There are ears to listen and to hear the voice of America, the voice of freedom. We are pledged to battle any form of totalitarianism both here and abroad. We recognize that the Communist aim of Soviet Russia is, first to undermine, and then to destroy, the democratic principles upon which this country has been built.

Steady nerves are needed in this cold war between the idea of freedom and the idea of slavery. They are needed now more than ever before. Last week the Russians shot down an unarmed American plane and murdered 10 American fliers. In that one cynical act of violence, they have taken the cold war out of the ice box and placed it nearer the stove.

But no matter what the provocation, we must step cautiously. It should be remembered that the cost of winning a cold war is infinitely less in men and money than the cost of a shooting war.

The danger is, not that we shall spend too much in winning it, but that we might be too late with too little. That mistake might cost us a contest that we can certainly win if we go at it in terms of rolling out the implements of peace as we went at the job of rolling out the munitions of war 9 years ago.

To date, we have spent less than nine billions in Marshall-plan aid, and that over the protests of the Tabers, Tafts, and the Gabrielsons. We propose to spend a little more than $3,000,000,000 in the coming year, again over their protests.

Since the war, we have spent in all forms of aid to other nations not more than $30,000,000,000. Much of it will pay—and is already paying—dividends in economic health and security for our allies and ourselves.

These figures sound like big sums. But we must think in terms of survival. What is survival worth? What is freedom worth? What are allies worth? What is it worth to keep war and mass invasion from our Jersey beaches?

The out-of-pocket cost of the last war ran as high as $7,000,000,000 a month.

The estimated final cost of that war—not counting priceless lives lost or maimed—will be $1,300,000,000,000—one trillion three hundred billion dollars. For the 44 months of fighting, that means a final cost of $29,500,000,000 a month, $985,000,000 a day, or $41,000,000 an hour.

Since VJ-day, 1945, we have spent to win the peace less than the cost of 33 days of war.

Does anyone think the next war, if it comes, will be cheaper than the last one?

If the last war was worth winning, then how much is it worth to win the peace?

What price survival?

What price tag shall be put on freedom—freedom for ourselves and for our allies?

It's not a long answer. Only three words: Whatever it takes. That is the answer I think this convention must give, the answer it will want to give to the leader of our party and our President, Harry S. Truman.

Whatever it takes to win.

We are moving into a new phase in the cold war. I think we are facing up to the fact that we are in this war for the duration, that it is being fought for keeps, and that, if we step up our efforts, our production, our practice of the democracy at home that we preach abroad, we are bound to win.

As we enter that new phase, this convention and the Democratic Party in the coming campaign have an important function to perform.

We can and we must dedicate ourselves and our party to an all-out program for the continuous full employment of all our human and material resources.

We must show that free men cannot only out-think, out-produce, and out-fight others in war, but that they can also out-think and out-produce others in peace. Against the propaganda and the promises of the Kremlin—promises that are as deceptive as a string of baited fish hooks—we can and we must dramatize the daily facts of life in a free world.

Facts will always beat propaganda—if the facts meet men's needs and their aspirations for freedom.

What are the facts?

1. We have supported—and will continue to support— development of the United Nations into an effective international organization to outlaw aggression and secure international peace.

2. We have endorsed and will continue to endorse the North Atlantic Pact and the ECA program which has reduced so materially the threat of Communist expansion in western Europe.

3. We urge international control of atomic weapons and other forces of mass destruction through adequate safeguards and inspection.

4. Without putting exclusive reliance on armed strength and turning ourselves into a permanent garrison state in which democratic rights would be suspended, we have kept our Nation militarily strong.

5. Simultaneously—there is no "either" "or"—we must continue to step up our aid to other nations less developed economically and industrially than ours, whenever possible through the United Nations.

6. By lowering international trade barriers, we have helped raise standards of living and freedom everywhere, so that the products of free labor will not face the unfair competition of goods produced by coerced, exploited and sweated labor elsewhere.

7. We have advocated continued assistance to, and encouragement of, the new State of Israel.

Such actions constitute, I believe, the implementation of our total diplomacy that has been asked for by our President and his Secretary of State, Dean Acheson.

But these are not purely partisan objectives. To avoid a war that might disintegrate mankind, we must resort first to all the available instruments of peace. We should avail ourselves also of the advice and counsel of the wisest minds in the Congress as well as in the State Department. At the same time we recognize that the Communist cause is helped no little by head-line hunting Republicans in Congress. We believe in uprooting subversive elements at every level of government. But this should be done through proper channels and with a proper respect for reputations—not by a wholesale smearing of innocent public officials.

In the words of our President: "We are not going to turn the United States into a right-wing totalitarian country in order to deal with a left-wing totalitarian threat."

But this technique of irresponsible attacks against our State Department is not the only weapon which the Republican Party has used to undermine our program. Time and again, they have formed an unholy coalition to block the necessary implementation of our foreign policy and commitments.

Again and again, this coalition of special privilege, fear, and prejudice has commanded a majority in the Eightieth and Eighty-first Congresses to keep vital domestic parts of President Truman's Fair Deal program on the shelf.

Measures in line with the Employment Act of 1946, needed to expand production, maintain purchasing power, and insure continued full employment have been rejected. This coalition seems willing to risk chronic mass unemployment here at a time when the world situation calls for every ounce of productive strength we can bring to bear. It persistently ignores the fact that a depression here is Stalin's fondest hope, the secret weapon he believes will go off in our own hands to bring about our own defeat.

This convention and the Democratic Party in New Jersey in the coming months can do something about that. We can strengthen the hands of President Truman and his Fair Deal administration. We can see to it that the issues—particularly domestic issues as they relate to the winning of the cold war—are brought to the voters of our State. If this is done, if the importance of this 1950 election is made plain, we can be sure that the people of New Jersey will reelect those who have supported the Fair Deal program down the line in both its foreign and domestic parts.

On domestic issues, we have fought for repeal of the iniquitous Taft-Hartley law. And we have sought to reinstate the Wagner National Labor Relations Act, with amendments, to insure full protection for employer

and employee, and to prevent Communist domination of labor organizations.

With the help of our votes, the Eighty-first Congress has enacted a program of slum clearance and housing for low-income groups. We favor additional Federal aid for middle-income housing.

We reaffirm our support of a strong civil-rights program as adopted by the National Democratic Convention of 1948.

We favor an expanded system of social security, Federal aid for education and a progressive, scientific national health program which will avoid socialization, and which, we hope, will attract the cooperation of the medical profession.

I ask the convention to urge repeal or substantial reduction of wartime excise taxes. This should go hand in hand with a general revision of our entire income-tax structure, designed to distribute the tax burden more equitably among those able to pay.

But the goal of sensible economy in Government must not jeopardize our national security. Nor must it cripple our efforts to prevent future wars. And it cannot sacrifice these essential functions of government which provide for the welfare of the people.

We pledge to continue our efforts for the preservation of veterans' rights and benefits, including proper medical care and hospitalization for the disabled veteran.

We advocate continuation of a reasonable farm price support program to insure a stable agriculture economy. We recognize that a collapse of our agriculture economy inevitably will result in a breakdown of our national economic structure.

We also recognize the important position of small business in the scale of a sound American economy. We must protect the small businessman from unfair competition and monopolistic practices. He must be given an equal opportunity with competing enterprises to expand his capital structure. We recognize the need for adequate merchant marine as a principal auxiliary to our national defense program. And we pledge further to work for a plan that will insure that our merchant marine will be kept in first-class condition through adequate appropriations.

On the vital question of housing, the Republican State legislature has shown that it cannot agree on an adequate State rent-control program. Therefore, we recommend that controls be continued at the Federal level until such time as the housing shortage is remedied.

We demand that rent control be continued to protect our low and middle income groups. The failure of the Republican legislature to enact this and other necessary measures for the public welfare places it in a class with the "do nothing" Eightieth Congress. And I don't have to tell you what happened to the Eightieth Congress.

When you draw your platform, I ask you not to ignore the mistakes and errors of the Republican legislature. The rent control fiasco represents only a fraction of the sins committed in the name of the Republican caucus.

They have failed to raise your unemployment and cash sickness benefits to meet the rising cost of living.

They have given you a major scandal in the administration of workers' funds. And they have failed to enact legislation to prevent such scandals in the future.

They have surrendered the legislative powers of government and have given you government by authority rather than by law.

They have made a patronage grab for Sandy Hook, which is supposed to be a State park for the benefit of all the people of New Jersey.

In the name of economy, they have eliminated the State board of tenement house supervision. This would subject supervision of tenements to local political pressure and place unnecessary burdens on the cities of our State.

Yet they have failed to achieve the economy they promised through reorganization of State executive departments. Where now are the million dollar savings which were supposed to have been realized through this reorganization?

Yes, they preach economy. But what happened when they were offered a real chance to economize by getting rid of New Jersey's nineteenth century motor vehicle agency system? They didn't do anything about it, because the agencies were a source of Republican patronage. So you stand in line now to buy your license plates, instead of mailing your application as they do in other States.

In the Congress, we Democrats voluntarily undertook to liberalize our procedure for the introduction and consideration of bills. Not so the Republican caucus. The only way to rid yourselves of this evil is to rid yourselves of Republicans and elect a Democratic legislature. That you can—and will do—next year.

In the meantime, we have a duty to perform this year. We must elect—and re-elect—a Democratic delegation to represent New Jersey in Congress.

The program we have laid out calls for more competition and less monopoly, for more opportunity for really free enterprise, for more practice of genuine democracy in the economic and political fields, for more income, wages and insurance and lower expenditures for doles and relief.

The election of President Truman and a nominal Democratic majority in Congress was a great victory. But it was not a thorough defeat for the enemies of the New Deal and the Fair Deal. In electing Harry S. Truman we escaped Dewey and disaster.

What did we win? We made important gains. We won time. We won time to carry on the foreign-aid program, to initiate the arms-aid program, to renew the reciprocal trade program, without cheese paring and outright sabotage by powerful leaders of reaction in the Republican Party.

We won time to strengthen and consolidate liberal forces in the country so that, this year, we have good reason to believe the usual apathy of off-year elections can be overcome and Fair Deal strength increased in the November elections.

If we do our job in this convention and in the coming campaign, all the people of New Jersey will know who blocked major parts of the Fair Deal program, and why.

The people of New Jersey will know the importance of the entire Fair Deal program to the winning of the peace.

We have based our platform upon the Democratic platform of 1948, on the Fair Deal program proposed by our President, Harry S. Truman, on the program for which the American people voted in 1948.

Let us have our own voice of America tell the truth to the people of New Jersey as President Truman has proposed to tell the truth to the people of the world.

If we do that, and if our party does the work of promoting registration and getting out the Democratic vote and the independent vote, New Jersey will send a strengthening fair deal Democratic delegation to the Eighty-second Congress. And we will have done our part in putting the Fair Deal, the whole Fair Deal, to work in time to prevent depression and, let us hope, in time to win the peace.

Full production, full employment, more democracy, prosperity and international cooperation.

By these facts, as we make them facts, shall we win a lasting peace among free men. This is our platform. This is our faith. So help us God!

Dollars and Arms

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Washington Post of May 3, 1950:

DOLLARS AND ARMS

The major tools of a foreign policy which seeks to dovetail strategy and statesmanship in the right proportions needed for the successful conduct of the cold war are simple to define. They are leadership and brains. This priority we have not yet acknowledged. The priorities have so far been given to dollars and arms, and on balance both have done as much harm as good.

When, for instance, we shoveled dollars into the Philippines, in lieu of the materials we could not wholly deliver as promised for the repair of war damage, we insured the fiscal spree at Manila which has put our former ward on its back, and by the same token given a great boost to the Communist-led Huks. Our dollars are fastening on the Asiatics the worst of all curses, i. e., inflation. Inflation helps to enthrone the money lender and the speculator in keeping the Asiatic enslaved. As for arms, these we put into the hands of the tatterdemalion troops of Chiang Kai-shek, and we thus helped to insure Chiang Kai-shek's collapse, because those arms were regarded merely as counters in a game of panicky and fear-struck surrender. Thus we ended up by, in effect, arming Communist China. No better work has been done by Congress than to deny an arms-crazy administration the authority to send our lethal weapons anywhere it wished.

In Europe, where there is more sense of responsibility than in Asia, dollars so far have done more good than harm. So have the arms—in priming national self-respect and domestic and the general security. But the usefulness of both is beginning to intoxicate the policymakers and arouse the Oliver Twist instincts of the recipients to such an extent that huge levies are looming ahead on our exchequer and our arsenal. The tendency is to say if x dollars and x arms have been useful, then xx dollars and xx arms will be even more useful. That doesn't necessarily follow. Think of the small number of Germans that were required to overrun the Maginot line and the French Army. It is time to think less in terms of dollars and arms and more in terms of policy and the nonmilitary needs of the Atlantic community. The serried might of Russia should not be our preoccupation. Our preoccupation should be the listlessness in Europe. In Europe the questioner is reminded that the United States is in danger of building up the military machines and the self-sufficient state systems that on two occasions have been Europe's undoing.

Humpty Dumpty simply cannot be put back again. The fact is that neither the east nor the west can be returned to the Old World system. In the east the age of imperialism is dead, and American support for any reestablishment of the old colonial system—as in Indochina for the French—is foredoomed to failure. As for Europe, the peoples are community-minded and nonmilitarist, and their contribution to defense will be nil if they are called upon merely to save their antiquated national state systems. If, therefore, policy making must start with

the realities, here they are, and we ought to be taking a new look at the requirements of realizing such concepts as will fulfill the people's aspirations. People only defend wholeheartedly what they believe in.

Ferrero, the great Italian historian, concluded a study of foreign policy in the last century with this observation:

"One of the gravest mistakes committed by human indolence is the belief that order is best preserved by keeping it as it stands. It can only be preserved by continually reconstructing it. The only real guardians are those who reconstruct it. * * * Nothing is so rare as a great constructive mind."

Nothing is so rare as a great constructive mind! The truth of Ferrero's observation is borne out by postwar history. Our recital is the proof. If in war the first principle is to impose your will on the enemy, the first principle of peace is to discover a unifying idea, and pursue it.

A unifying idea in the world of today would be a comprehensive emigration-immigration policy of relieving Europe's population pressure and of resettling surpluses in such open spaces, as, say, Australia, Oceania, and Brazil. Here is something new, something that could capture men's imagination, something that would unify, something in which a host of nations east and west have a common interest, something that would create a diversion from the present descent into war. All there needs to be is a favorable climate for brains and the assertion of the statesmanship requisite for their mobilization. Any fool can throw dollars and arms around.

Prompt Adoption of ITO Charter Essential to Success of American Foreign Economic Policy

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Christian Science Monitor of April 24, 1950, stressing the importance of adoption of the ITO Charter to the success of American foreign economic policy:

THE ITO IN TOTAL DIPLOMACY

Congress could do much, if it would, to strengthen American leadership in the world, to aid the economic unification of Europe, and to assure western prosperity by heeding Secretary of State Acheson's plea for the ITO.

ITO is the short name for the International Trade Organization, the blueprints for which were completed in a United Nations conference in Habana in 1948.

This was an American-sponsored project. Its central philosophy is 99.44 percent pure American. It aims to serve free enterprise as against state controls over trade. It asserts American faith in an expanding instead of a contracting world economy.

Its thesis was accepted with varying degrees of enthusiasm, some not far above freezing, among the governments represented at Habana. But after months of efforts the basic ideas were preserved in a world trade charter. The approval of this charter for the United States now rests with Congress.

Secretary Acheson urges adoption of the ITO project by Congress soon. We second the motion. There is nothing to be gained by delay.

The ITO charter may be likened to a set of traffic rules for world trade. Today so many countries engage in protective devices, like tariffs (which are not the worst of them), and import quotas, and money controls, that it would be impossible for individual traders to reach agreements for increasing world trade. The individual's interest is often thwarted not only by reasonable regulations but by a conflict among the aims which governments pursue.

If this is understood, it will be seen that the ITO, so far from being "socialism," as is sometimes charged, is really an effort to curb socialistic controls which arise at the national level. The best attack on these now is through international agreement.

Americans in particular—but all other peoples with a stake in the ITO, too—should never miscontrue the charter as a body of rules designed to add new controls over trade. It is designed to reduce those now in existence. Where they cannot be reduced in the foreseeable future, the charter purposes to harmonize them. It would thus prevent the destructive effects of national controls which clash with each other, often unnecessarily.

Yes, to be sure, Congress has other matters pressing upon it these days. But it always has. It should recognize that the ITO can play a big part in the "total diplomacy" now needed to unify the West against communism. For that reason ITO deserves priority.

Adoption of this program by the United States will go far to reassure other nations about the purposes of American economic policy. This should not be a policy of drastic global deflation, in which those peoples hardest hit by war would be expected to add sacrifice to sacrifice interminably by cutting down living standards and reducing imports in order to keep world trade in balance. It should help to balance world trade at a high level which will support maximum employment both at home and abroad.

A reliable sign that this is indeed American policy would do much to offset the appeals of communism in Europe. It would help to heal the distrust which the working masses there sometimes show America.

But even without this important recommendation, the ITO program justifies itself as a realistic adjustment between present trade realities and world hopes for more orderly trade practices and their benefits to workers and employers, producers and consumers alike.

American Legion and the Hoover Commission Relative to Reorganization of the Veterans' Administration

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. POULSON. Mr. Speaker, Mr. Charles R. Tyson, legislative chairman of Los Feliz Post, No. 527, American Legion, Los Angeles, has prepared a very comprehensive report on the subject of the Hoover Commission Report relative to the reorganization of the Veterans' Administration. Because of the prohibitive cost of extending this complete report in the RECORD, I have made a condensation of his summary in which he states that not all of the veterans are opposed to the reorganization of the Veterans' Administration.

The condensation follows:

As you all know, I have served the Legion and the Disabled American Veterans constantly during the past 30 years. I have witnessed the growth of the Veterans' Administration from its inception and have battled it successfully in behalf of the veteran and his dependents. I was in the forefront of the most bitter battle during the Economy Act of 1933. At that time I was service officer at the Veterans' Administration Hospital in Tucson, Ariz., acting in behalf of the DAV and the Legion. I saw the havoc created by that infamous act. We had many deaths in Arizona brought on by despair, worry, and loss of income, which was too much for seriously ill veterans to cope with. At that time, during the spring of 1933, at my own expense, I went to Washington, carrying with me a suitcase full of claims and cases. I appeared, personally, before the appeal group in behalf of these claims and within 30 days had nearly all adjudicated favorably.

Serving and believing in the cause of the war veteran I have come to the conclusion that something must be done to straighten out the affairs of the Veterans' Administration. If experience is any indication of what we are to expect, then my 30 years experience tells me that we haven't seen anything yet, of the trials and tribulations of the VA and and veterans as a whole. It was 10 years and more, after the first World War until the peak load of disabled was arrived at. In my mind's eye, I can picture what we can expect as to the possible peak load when 10 years have passed from the date of the Second World War.

All veteran organization units are crying for more money, more men, and more space to carry the load of service. Year by year we are asked to contribute more and more and still it is never enough. The time has come when we must weigh the ultimate cost to ourselves and the country. We know now that the VA is not doing the right job. We also know that the Legion and other organizations are understaffed to maintain proper service. Because of these things the veteran is not getting a square deal, and many worthy cases are denied compensation and/or service connection because of these deficiencies.

If the Hoover Commission's recommendations are even partly right, then we should see to it that those parts are carried out. It is up to all of us, individually and collectively, to write our Representatives in Congress how we feel on the matter and not let hysteria sway our judgment. Finally, let me say that this is not a political issue. Our only ex-President, Herbert Hoover, was called to do this job by the President and Congress and he should not be maligned and held up to ridicule. He was only one of 12 outstanding men, evenly divided politically, and had the advice and help of 300 experts.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I

include a statement in support of the St. Lawrence seaway and power project made by Mr. J. Howard Marshall, president of the Ashland, Ky., Oil & Refining Co., and chairman of the board of the Ohio Valley Improvement Association. The OVIA is an organization of businessmen in the Ohio Valley, including citizens of Pennsylvania, West Virginia, Ohio, and Kentucky. At their fifty-fourth annual convention in Pittsburgh on March 31 this organization for the first time went on record in favor of the St. Lawrence seaway. Mr. Marshall's statement, printed in the association's monthly news bulletin, gives the reasons for their position:

ST. LAWRENCE SEAWAY NECESSITY, MARSHALL HOLDS

The system of water facilities as provided by the Great Lakes and inland waterways which gave the great steel industry of the Midwest and other areas, as well, low-cost transportation for bulk commodities such as ore, sets the pattern by which the treasured "red dirt" of Labrador and Venezuela will be made available for the blast furnaces of mid-America in the future.

This is the studied opinion of J. Howard Marshall, president of the Ashland Oil & Refining Co., at Ashland, Ky., and a chairman of the board of the Ohio Valley Improvement Association, Inc.

Marshall announced recently that the OVIA is definitely supporting the proposed creation of a St. Lawrence seaway as the primary means of bringing the Labrador-Quebec ore to the blast furnaces of the Midwest.

With Mesabi ore resources diminishing and beneficiation of 30 percent taconite the only apparent alternative in Minnesota, the building of the seaway appears to be essential toward the protection of the vast steelmaking investments in this part of the continent, Marshall asserts.

As a shipper of petroleum products, Marshall has seen the consistent growth in use of the Ohio-Mississippi River system, as well as other inland waterways for the transportation of not only bulky raw materials but distribution of finished goods as well.

As a result he sees in the proposed St. Lawrence project the most reasonable method of bringing to the already existing docks and other facilities of the Great Lakes the Labrador-Quebec ore for distribution to the mills of Cleveland, Pittsburgh, Youngstown, Wheeling, Warren, Sharon, Canton, Hamilton, Middletown and various other production areas.

Various military men have pointed to the importance of the inland locations of the Nation's large makers of steel, so vital in time of war, and have emphasized the importance of inland waterways to maintenance of these locations.

In some other respects these present locations are advantageous, also, because most of the iron and steel producers are close to sources of most of the raw materials they need, including coal and fluxing stone.

For nearly 100 years the Lake Superior region has produced most of the iron ore used in the United States. In this area are several large iron ore ranges, the biggest being the Mesabi, which has produced more than a billion and a half tons of ore.

Most of this ore has been taken from huge open pits by mechanical shovels and shipped largely on Great Lakes ore boats. The average analysis of this ore is now 51 percent, the figure having dropped down through the years.

Much of the high-grade ore has been used during the last century during which the Nation fought two major wars. If the country should continue to consume or at the war rate, some writers estimate, the Lake Superior region may have sufficient high-grade ore for only 20 to 25 years.

For this reason, Marshall holds, the St. Lawrence seaway seems to be a necessity.

Hoover UN Proposal Prompts Protests

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Mary Hornaday, which appeared in a recent issue of the Christian Science Monitor:

HOOVER UN PROPOSAL PROMPTS PROTEST

(By Mary Hornaday)

NEW YORK.—Herbert Hoover's plea for reorganization of the United Nations without the Communist nations has brought a vigorous joint protest from the American Association for the United Nations and United World Federalists, Inc.

While John Foster Dulles, Mrs. Franklin D. Roosevelt, and others were blasting Mr. Hoover for his April 28 proposal to newspaper publishers that the western world withdraw into its own strong shell, Clark M. Eichelberger, AAUN director, and Alan Cranston, UWF president, announced that they would mobilize their approximately 100,000 members throughout the United States to fight Mr. Hoover's suggestion.

While praising Mr. Hoover's integrity, Mr. Eichelberger said his proposal to "polarize" the UN, forcing countries like India and Indonesia to choose between eastern and western ideologies was "brutal" and indicative of "smug self-righteousness."

HANDS JOINED FOR FIRST TIME

In denouncing Mr. Hoover's proposal, which they said might be a "trial balloon" for isolationism, the AAUN and United World Federalists joined hands for the first time.

Mr. Cranston said his organization, which heretofore has put major emphasis on a program for expanding the UN into a world government, is now turning its attention more to keeping the UN from going under entirely.

The AAUN and the UWF in the past have been considered rivals for the support of American internationalists, but Mr. Hoover's attack, described by the two men as the most serious yet made on the UN, brought the two leaders together at a press conference.

Mr. Eichelberger said it was a "cruel thing for Mr. Hoover to believe that we can force the world to choose sides." He added: "If we can give the world the leadership it needs, we stand a much better chance of holding the moral leadership of the world."

He said further that he "did not like Russia's tactics any more than anyone else."

INCREASED WAR PERIL SEEN

Mr. Cranston ventured the forecast that if Russia "is driven out of the UN by the method Mr. Hoover suggests, it will increase the danger of war in the world."

Mr. Hoover said in his speech to the American Newspaper Publishers Association that his plan for a Russialess UN was "not a proposed extension of a military alliance" but a "proposal to redeem the concept of the United Nations to the high purpose for which it was created. It is a proposal for moral and spiritual cooperation of God-fearing free nations."

At the present time the UN is functioning to a large extent without Russia because of its dissatisfaction with the continued refusal of the majority to seat the delegation from Communist China.

Mr. Cranston pointed out that Russia's recent note in the UN changing its position on the internationalization of Jerusalem showed it was still participating and Mr. Eichelberger made the wild prediction that the Chinese delegation situation would be straightened out this summer and Russia would participate in next fall's General Assembly.

MORATORIUM SOUGHT

Both men said it was their personal view, not yet backed by their boards, that the UN should seat the Chinese Communists if and when their government became stable.

A plea for a moratorium on all the rough talk between the east and the west during UN Secretary Trygve Lie's trip to Europe and contemplated visit to Moscow was made by Mr. Eichelberger.

Instead of following Mr. Hoover's advice, he said, he would like to see the world turn to "total diplomacy based not on a cold war but on building up the United Nations.

"If it had not been for the United Nations, the world today would have disintegrated beyond repair. We must somehow hold our forces together in conversation with the faith that agreement can be reached."

Canada Wants St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. BLATNIK. Mr. Speaker, the House Public Works Committee is now holding hearings on the St. Lawrence seaway and power project—House Joint Resolution 271—and I can say without qualification that the overwhelming majority of the American people are in support of this important project. The facts also indicate that the people of Canada are just as strongly in favor of its construction. In this connection, the March 1950 edition of the London Times Survey of Canada and World Trade carries an article by Canadian Minister of Transport, the Honorable Lionel Chevrier, K. C., which points out the importance of the seaway to Canada's future. Under leave to extend my remarks in the Appendix of the RECORD, I include this article from the London Times entitled "St. Lawrence Seaway Plans":

ST. LAWRENCE SEAWAY PLANS

(By the Honorable Lionel Chevrier, K. C.)

The Gulf of St. Lawrence, the St. Lawrence River, and the Great Lakes provided the route for the early explorers of North America in their search for a passage to the western sea and the riches of the Far East. When, instead of this, they found the vast western plains extending for 1,200 miles to the foothills of the Rockies, little did they realize that the waters they had traversed would someday become the busiest inland waterway in the world, serving an area that would surpass in wealth the lands which they were seeking, and that the vast prairies beyond would within a few centuries be called the granary of the world.

MOVEMENT WESTWARD

The improvement of this inland route, which included the surmounting of the

natural barriers to free navigation, was accompanied by the steady movement of population westward, and the idea of a seaway to bring the benefits of water transportation into the very center of the continent stirred the imagination of men of vision many years before confederation of the Canadian provinces. The history of the enlargement of the canals and the deepening of the navigation channels is a history of the industrial growth in Ontario and Quebec, and without a doubt this growth, both in Canada and in the Northern States south of the boundary, and the agricultural development of the West have been made possible only by the existence of this waterway.

The improvement of the waterway has been carried on continuously until at the present time a 35-foot channel is available throughout the 1,100 miles of the Gulf and lower St. Lawrence up to Montreal, a 14-foot canal system overcomes the obstructions to navigation in the 115 miles of river from Montreal to Prescott, and a 27-foot depth of channel is available in the remaining 67 miles of river from Prescott to Lake Ontario. The barrier to navigation between Lakes Ontario and Erie presented by the Falls and rapids of the Niagara River is overcome by the Welland ship canal of 25-foot depth completed by Canada in 1932 to replace a 14-foot canal. Above Lake Erie the United States has deepened the rivers connecting the upper lakes so that at the present time a depth of 21 feet is available in up-bound channels and 25 feet in down-bound channels.

LIFE LINE OF THE ALLIES

The importance of these channels to the economic life of both Canada and the United States is obvious when it is realized that the annual tonnage carried between the upper lakes has been over 110,000 during each of the last 2 years and exceeded 120,000 in 1942. The larger part of this traffic is iron ore eastbound from the head of Lake Superior and coal westbound. These channels were very aptly called the life line of the allies during the last war, as the production of the weapons of war in Canada and the United States depended to a large degree on the maintenance of navigation throughout their length.

EARLY VISIONS

The early visions of a seaway did not include the development of hydroelectric power, but the growth of the industrial centers adjacent to the Great Lakes on both sides of the International Boundary and the advent of the age of electricity drew attention to the enormous power potentialities of the Niagara and St. Lawrence Rivers. Just as the improvement of navigation facilities has been a gradual process, so it was with the power resources in the Great Lakes-St. Lawrence Basin. At the present time the total installed capacity on the Canadian side at Niagara totals 1,230,500 horsepower. On the St. Lawrence River an installation of approximately 1,100,000 horsepower is now available, of which about 1,010,000 is in Canada.

The present plan for a seaway may be said to date from 1920, when the Governments of Canada and the United States asked the International Joint Commission, a body set up under the terms of the Boundary Waters Treaty of 1909, to recommend to the two Governments a plan that will secure from the waters of the upper St. Lawrence their maximum efficiency in navigation and power. The international commission reported in 1921 and recommended the construction of what has since become known as the St. Lawrence seaway.

Since 1921 extensive engineering studies have been carried out and the plans proposed for navigation improvement and power development has been changed many times. This has been necessary in order to keep pace with the continual change in the physical conditions along the waterway and the growth in the demand for power.

AGREEMENT WITH UNITED STATES

In 1932 representatives of Canada and the United States signed a treaty providing for the construction of the seaway. Although this treaty received a majority vote for ratification in the United States Senate, it failed to obtain the necessary two-thirds majority. In 1941 an agreement between the two nations was signed providing for the completion of the seaway from Montreal to the head of the Great Lakes and the development of the total power resources in the International Rapids Section of the St. Lawrence River—that section of the river which forms part of the boundary between the two countries. A bill is now before the United States Congress which, if passed, will provide for the ratification of this agreement and the commencement of construction of a project which will, without a doubt, have far-reaching effect on the economy of our country.

The project proposed contains provision for "navigation requiring a controlling channel depth of 27 feet with a depth of 30 feet over all lock sills, from the head of the Great Lakes to Montreal Harbor." The locks will conform with those of the existing Welland Ship Canal with chambers 859 feet in length and 80 feet in width. The depth on all lock sills and over all permanent structures will be 30 feet, which means that deepening in the future to that depth will entail dredging only.

On completion of the proposed improvements the total length of canal navigation along the 1,200 miles from Montreal to the head of Lake Superior will be limited to about 48 miles and the number of locks will be reduced from 30, as at present, to only 15.

The project for the improvement of the International Rapids Section of the St. Lawrence River is a combined navigation and power project which will result in a total power installation of 2,200,000 horsepower at one site. This will be equally divided between Caanda and the United States and will furnish approximately 10,000,000 kilowatt-hours of energy a year—more than that available from any single power development in the world.

ADDITIONAL POWER

In addition to the power to be developed in the international section a further 3,200,000 horsepower is available in the Canadian section of the St. Lawrence. Approximately 1,000 horsepower of this is already developed.

On the completion of the seaway the Great Lakes will become directly connected to the open seas which constitute the world's commercial highways. Deep-draft lake freighters will carry unbroken cargoes from the upper lakes for transshipment at Montreal and other tidewater ports, while ocean vessels will be brought directly to the centers of production and distribution for a very large part of Canada's foreign trade. The Great Lakes will become the Mediterranean of North America.

The importance to British-Canadian trade of the present Great Lakes water route as a feeder to the St. Lawrence route to the British Isles has long been established. The extension of this route for another 1,200 miles inland—one-third of the distance across Canada—must result in reducing transportation costs on commodities such as grain, flour, and coal, which now move between the two countries.

COMMONWEALTH VIEW

The world-wide units of the British Commonwealth are joined together by the oceans which have made possible the development of the various member nations by providing facilities for easy and cheap transportation. The external trade of these member nations can move only by the seaways of the world. It must therefore be readily appreciated how important it is to the promotion of international trade that deep-water access be provided to the great producing and consuming areas of central Canada.

The British Commonwealth of Nations being so dependent on deep-water transportation, it is obvious that the further development of the St. Lawrence seaway in the territory of a leading member nation, with a consequent reduction in transportation costs, is of great importance to a group of nations founded on and bounded by the seven seas.

The supply of a large block of relatively low-cost hydroelectric power in the center of the industrial area of Canada will insure low production costs in the industries competing with similar industries throughout the world and will at least retain for Canada her envied position in the international trade world.

Today's World Must Be Christian

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. MITCHELL. Mr. Speaker, with her customary logic based on a sound fundamental knowledge, our distinguished colleague, the Honorable CHASE GOING WOODHOUSE, of Connecticut, has made an outstanding contribution to contemporary social thought in an article, Today's World Must Be Christian, published in the April 1950, issue of the Church Woman.

Mr. Speaker, under leave to extend my remarks, I include the article by Mrs. WOODHOUSE in the RECORD.

TODAY'S WORLD MUST BE CHRISTIAN

(By Congresswoman CHASE GOING WOODHOUSE, Connecticut)

The hydrogen bomb is only the latest step in the series of almost miraculous scientific developments which, in the last half century, have so radically changed the physical face of the Western World and raised our standard of living. These material results of the industrial revolution engendered by the work of the natural scientists are very evident. We recognize them, accept their advantages, but to too large a degree we utterly fail to recognize or accept their social implications.

These implications may be summed up very briefly in one sentence. Science has forced us to face a decision; either we really accept the Christian ethic and base our behavior as individuals and as nations upon it, or we face the destruction of civilization. That is a hard fact and one we cannot dodge. There is no argument in saying we are already Christians. We are, but too much in form only. Today the outward form and ceremonial is not enough. Sect, doctrine, dogma, theology, hierarchy—all these I am not discussing. I am discussing the full acceptance of the Sermon on the Mount, the brotherhood of man, the philosophy of brotherly love and of tolerance—in brief, the Christian ethic.

Why is the full acceptance of basic ethic more important today than in previous decades or previous centuries? It is because the scientists while unlocking great potentialities for richer living have also made us highly interdependent. No one individual, no one nation is a free agent. No one individual, no one nation can live in isolation. We are all joined together in what must be a great cooperative enterprise if any of us are to have the security of peace and plenty.

If we do not so join together, the results may be economic disaster and eventually war.

Let us look first at the domestic scene. Not so many years ago the great majority of the families of this country lived on farms. Each family was more or less independent. Each grew and preserved its own food, spun its own wool, wove its own cloth, made its own clothes. There were very few commodities which the farm family had to buy from outside. Each family more or less controlled its own welfare. The hard-working, thrifty family got on; the shiftless did not. In each case the results sprang from the family's own attitude and effort or lack of effort.

Today the situation is very different. The majority of families are supported by one or more wage earners. The wage earner is dependent on his job. The job is available only when economic conditions are good which means when other factories than the one in which he works are running, when other people have jobs and have money to purchase the many different commodities and services offered on the market.

Even the farmer is no longer independent. He must sell his wheat, his milk, his eggs, his chickens, his beef, his cotton, or whatever he grows, on the market. Only when the urban wage earner has a job at good wages can the farmer sell at a good price.

It takes only a most cursory view of our economic life to see to what a great extent we are all interrelated, to see how the well being of all determines the well being of each.

There is no long-term cleavage of interest between labor and capital. Unless labor is fully employed at good wages the products of capital cannot be sold at a profit. On the other hand, unless capital makes a profit there will not be plant expansion and there will not be jobs for the on-coming youth.

There is no sense to labor-management conflict. Each side gains from working with the other. Only together can they move forward to real prosperity.

Good wages, social security, provision for old age, decent housing, adequate health care, school lunches—all the programs which make for healthy, vigorous happy workers aid not only the workers, but through larger and more efficient production, they aid management and the entire community.

In our highly mechanized urban industrial society, where each worker is a specialist, we must work together in brotherly cooperation or else we fail. Economic depression, booms and busts are not necessary. They bring misery to some, insecurity to all. Cooperation can bring stable prosperity and adequate security to farmers, industrial workers, manager and owners.

The same situation occurs in the international field. Two World Wars in the past four decades should have taught us that nations too are interdependent. The United States had no desire to be embroiled in war, and yet twice against our will in the lifetime of our adult population we have been drawn into conflicts.

President Truman's point 4 program recognizes this brotherhood of nations. No country can be backward, its people hungry, sick, ill-clothed, ignorant without effect on us. Our only insurance against a fatal war with communistic totalitarianism is a program which will result in having the great majority of the nations of the world with sufficient economic development so that these people will have a decent standard of living and will be in a position to appreciate the advantages of democratic government.

It will not be enough to send food for European recovery, to send technical experts under point 4 program to the Near East and other areas. We must understand that a free flow of goods from country to country is essential to sound economic development and economic stability. We will have to continue our reciprocal trade agreements policy. Foreign trade cannot be conditioned on a one-way street. We must permit goods to come in as well as to encourage our own exports.

The nations of the world are working together in a way never before known. We can be proud that it is our country which has taken the lead in this movement for world cooperation. We have backed the United Nations. We have shared our economic wealth with other freedom- and peace-loving nations, and many of us feel we must go even further. In the Congress of the United States there are many Members and Senators who are working for an Atlantic union and, eventually, for a world federation. Those of us in this group know that only by such close cooperation can the world have peace.

Peace is the major concern of the world today. The alternatives are peace or destruction, and peace can be achieved only through good will, only through a real understanding of the basic principle of the Christian ethic, only through making a day-by-day reality of the brotherhood of man, in our dealings at home between farmer and urban dweller, between labor and management, and in our dealings abroad with other nations. Today we must be practicing Christians or we must face the peril of destruction.

A Taxi Driver Believes in Peace

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Joseph C. Harsch, which appeared in the Christian Science Monitor of April 25. Mr. Harsch is chief of the Washington news bureau of the Christian Science Monitor.

The article follows:

STATE OF THE NATION—A TAXI DRIVER BELIEVES IN PEACE

(By Joseph C. Harsch)

WASHINGTON.—Joseph Polowsky is a taxi driver in Chicago. He earns a living, but not exactly a princely one. Few taxi drivers do. He is like thousands of other young taxi drivers around the country in most respects, but he differs from most others in one respect. He takes what little money he can spare and does a curious thing with it. He pays for having an idea of his printed on paper, and he pays for mailing these sheets, on which his idea is printed, around the country to newspaper offices, and finally he comes down to Washington and spends his last penny trying to get newspapermen and Congressmen to do something about his idea on this day, April 25.

He wants Congress and the United Nations to pass resolutions that on April 25 appropriate ceremonies be held to commemorate the fact that on this day 5 years ago two things happened. One was the opening of the San Francisco Conference of the United Nations. The other was the first meeting on the Elbe of Russian and American troops.

When Mr. Polowsky comes into your office trying to persuade you to do something to help him get this day commemorated, you feel a bit embarrassed. He is so earnest. Yet, of course, he is unrealistic. Why bother to commemorate a day which so soon has become tarnished and almost forgotten? Who wants to try to remember that 5 years ago Russian and American soldiers met each others as friends; met each other joyfully, and thought that in their meeting might be born a new and happier world.

These soldiers even took an oath on the Elbe. Let Joe Polowsky tell the circumstances in his words:

"The greetings took place in the midst of some 200 corpses of old men, women, and children. After the preliminary greetings, the Americans and Russians looked down at the bodies and fragments of bodies—especially the body of a child with blue eyes and long brown hair clutching crayons in one hand and a doll in the other. At this historic moment * * * the soldiers present—Americans and Russians—swore that they would do everything in their power to prevent such things from ever happening again, swore that the nations would and must live at peace."

Joe Polowsky was just a private in that army. He was interpreter to Lt. Elbart L. Kotzebue. The lieutenant was the first man across. Private Polowsky was only the second. And perhaps his memory has overdramatized the event. History does not record that the soldiers did anything as serious as taking an oath to try to prevent future wars. Private soldiers aren't supposed to bother with serious matters like that. And what good would it do, anyway?

Since that day, everything has gone wrong with the hopes that did flicker at the time. Of course soldiers do sometimes think of an end to wars.

There have been young idealists with illusions in every war. There was a League of Nations after 1918. Great hopes were placed in the League of Nations. They came to nothing, and then there was another war. After it illusions did not run quite so high. The memory of the old disillusionment was still strong. And this time the hopes have dwindled even faster than they did after 1918.

Joe Polowsky is one person trying to walk up a hill while everyone else is going down it. He talks about commemorating the oath at the Elbe.

The Russians aren't thinking of anything as forgotten and out of step with the times as that. They are trying to digest China, and planning ways of breaking Tito, and pinning medals on their fighter pilots who shot down an unarmed American plane over the Baltic Sea.

The French are spending as much as we give them in Marshall aid trying to hold their colony in Indochina.

The British are striving with us to keep the military power of the west abreast of the military power of Russia. Nothing could be more incongruous than to ask people to commemorate a few soldiers meeting at a river 5 years ago. I myself should be writing about matters of timely and serious import. I never should have let Joe Polowsky take up my time with his probably highly romanticized memories of the day he met the Russians on the Elbe.

Or should I?

Old Stone House

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith two editorials regarding the Old Stone House in Georgetown. I have introduced H. R. 7722 to provide for the acquisition and maintenance of this historic structure by the Federal Government.

The editorials follow:

[From the Washington Post of April 1, 1950]

OLD STONE HOUSE

This is such a young country that any house as much as a century old has historic prestige. Even Washington, which many brash sightseers regard as an ancient city, has few remaining pre-Revolutionary buildings. That is one reason why the Old Stone House at 3051 M Street NW. has such a strong hold on the affections of those familiar with it. Bills have now been introduced in House and Senate to have the Secretary of the Interior acquire this landmark as part of the National Capital parks system. It would then be preserved as an example of the eighteenth century architecture and as a museum for relics and records pertaining to the early history of Georgetown and the city of Washington.

Built in 1764 by Christopher Lehman (or Layman), this quaint story and a half dwelling dates back to the days when Georgetown was a busy seaport and when Bridge (now M) Street was a bustling commercial thoroughfare. Many legends have grown up about it—that it was the headquarters for Pierre L'Enfant, as well as for Washington, while the Federal city was being planned, also the headquarters for the Commissioners who developed L'Enfant's plans, that it was the model for Washington's town house in Alexandria, that it was General Braddock's headquarters. Historians discredit this last legend, argue about some of the others. But there is widespread belief that the Old Stone House was the structural birthplace of our great Federal city, that within its low-ceilinged rooms with their narrow sash windows the blueprint midwifery took place that produced what Tom Moore in 1804 called—

"This embryo Capital where fancy sees
Squares in morasses, obelisks in trees."

If this belief be true, then not only the Capital but the entire Nation has a vested sentiment in the Old Stone House that transcends even its architectural significance.

[From the Washington Evening Star of April 19, 1950]

A RELIC WORTH SAVING

The little old house at 3051 M Street NW. may not have been George Washington's headquarters while he was planning the Federal city which was to bear his name. Somehow, it seems too small, too diminutive in its proportions, to have contained so great a man even for a few days. The same observation applies to the legend that the place once sheltered Maj. Pierre L'Enfant while he was working on his drawings for the future Capital. Conceivably it might have been an office for the first commissioners of the new city, but even this story fails of attraction.

Much more probably the structure was raised for and used by quite humble people. Such houses were common in the second half of the eighteenth century. Its design was standard among carpenter architects. Grace Dunlop Ecker, in her "Portrait of Old Georgetown" says the edifice in question was built in 1767 and was owned by Cassandra Chew. She cites a newspaper advertisement describing it as "the house where Mrs. Annie Smith lately dwelt, containing three rooms and a passage on the lower and three rooms on the upper floor, a large cellar and garret, a kitchen detached from the house, and a good garden."

No verification of the suggestion that General Braddock stopped at 3051 has been found. He died as the result of wounds received in battle in western Pennsylvania in 1755 and thus antedated the little stone cottage by at least a dozen years. Other romantic legends appear to be as inconsequential. But the house still is worth saving. It has been judged by the National Capital Parks authorities to be a relic worthy of renovation, stabilization, maintenance, and preservation. Under the proper auspices it might be a museum of a sort, reflecting the common life of the period to which it belongs.

How Many Friends Do We Have?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Detroit News of Saturday, April 29, 1950:

HOW MANY FRIENDS DO WE HAVE?

Relations with Russia may well reach such a pass, perhaps soon, that the total break between "two worlds" urged by former President Hoover in his New York speech will have become inevitable.

The fact that President Truman impulsively phoned Mr. Hoover, presumably to congratulate him on his address, must be taken as significant.

Russia's boycott of the United Nations over the question of admitting Communist China already has created a situation in which the further utility of that once hopefully regarded organization is open to doubt. It was this perhaps that suggested to Mr. Hoover his proposal of a reorganized UN from which the Soviets would be excluded.

That situation itself, however, includes elements showing why the course Mr. Hoover proposes needs to be examined with considerable caution.

The democratic world is not a unit with us in our policy toward Communist China. India and Great Britain have recognized the Mao Tse-tung regime. India and Britain are important, both militarily and politically, to our hopes of holding the Red tide in check.

If we are to initiate a total break with Russia before that step is made inevitable by events, it would be wise to discover first who would be with us.

Mr. Hoover would leave the discovery to be made after the step has been taken. In Western Europe, however, there is already a feeling that our policy toward Russia has progressed too far beyond firmness toward belligerence. Wrong as that feeling may be, it would seem wise to take account of it.

We have urgent need of the loyalty of our European allies. That loyalty cannot be purchased with dollars or guaranteed by our treaty of alliance. It will depend finally on the confidence of Europeans that our leadership, steel-hard though it must be in opposing Communist aggression, is nevertheless a leadership grounded on the desire for peace.

The News thinks, with all due respect to Mr. Hoover, that it had better be left to Russia to be first to blast the world's hopes that peace yet can be achieved on some acceptable basis.

Demonstrate Neighborliness

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. ROONEY. Mr. Speaker, Brooklyn, with its population of over 3,000,000 people of every race and creed, is just as neighborly as any small town in the United States.

Under the permission heretofore granted me by unanimous consent of the House, I am proud to include the following editorial concerning some neighbors of mine which was published in the Brooklyn Eagle of Monday, May 1, 1950:

DEMONSTRATE NEIGHBORLINESS

Brooklyn can be proud of the Bay Ridge Rockets, a neighborhood football team which has demonstrated that it knows the meaning of both neighborliness and teamwork.

Moved by the plight of an elderly Bay Ridge resident who has already had a score of transfusions and needs a great many more to withstand a major operation, the Bay Ridge Rockets arranged to donate their blood through the Brooklyn Red Cross Chapter.

They went further and enlisted the Cronin-Leesha Post of the Veterans of Foreign Wars, the local Knights of Columbus Council, and the Eighth Avenue Civic Association to join them in the mass donations.

It is not the first time the Rockets have come to the aid of a neighbor. In fact, friends of Joseph Winn, the Norwegian hospital patient needing help so badly, turned to the Rockets for aid because last year the team made a mass donation for a 2½-year-old leukemia victim about whom they had read in a newspaper story.

Hugh Hayden, captain of the Rockets, the whole team, and all the neighbors who have joined them in their voluntary mercy project deserve a lot of loud, long cheers from their fellow Brooklynites.

Effect of Imported Fuel Oil on the Coal Industry

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include letters from Mr. R. H. Smith, president of the Norfolk & Western Railway Co., Messrs. F. F. McIntosh, Jr., Bernard R. Hays, and R. U. Adams, the latter being persons prominent in the oil industry of my State.

NORFOLK & WESTERN RAILWAY CO.,
Roanoke, Va., April 26, 1950.

Hon. M. G. BURNSIDE,
House of Representatives,
Washington, D.C.

DEAR SIR: I wish to acknowledge receipt of your telegram of April 21 relative to imported fuel oil and its adverse effect on the coal industry.

American-produced coal is being displaced in large quantities by fuel oil, particularly along the eastern seaboard, and this situation arises principally as a result of imports of foreign oil now coming to this country at a tremendous and increasing rate. As a result coal mines are closing down, railroad traffic is falling off, and mining and transportation employees are out of work. The dislocations created by fuel-oil imports are weakening the fuel economy of the Nation which should remain powerful for security purposes.

It is gratifying to know of your efforts to bring about remedial legislation. We, too, are doing what we can.

Yours very truly,

R. H. SMITH, *President.*

McINTOSH & GRIMM,
Spencer, W. Va., April 29, 1950.

Hon. M. G. BURNSIDE,
House Office Building,
Washington, D. C.

DEAR MR. BURNSIDE: It has come to our attention that there is a movement in Congress to curtail or tax the importation of foreign oil. We, here in this section of West Virginia, approve such a measure.

Most people think of this State as coal producing throughout, but this is not the case. We aren't in the coal mining section and can't speak for those who are.

In this rugged part, we must rely on the production of oil and natural gas to supplement our livelihood and nearly every citizen is affected wholly or in part by its market and price.

Nearly all of our present operations are now conducted by small independent producers with little capital and meager reserves. Our wells are either strippers or small pumpers and the present price is about the dividing line between profit and loss. We can't hope to compete with cheap foreign oils and don't think we should be compelled to do so.

Our West Virginia production is both oil and gas and when drilling a test well we don't know whether to expect oil, gas, a little of both or, as it quite often happens, a dry hole. When the price of oil is such that a profit cannot be shown from our operations, and any figure below the present price would be in that catagory, we have lost most of our incentive to explore for natural gas. Therefore the price of crude oil has a great bearing on the production of natural gas as well as crude oil.

Oil and gas have not advanced with the other commodities during the past decade although drilling and producing expenses have doubled and tripled. Congress has seen fit to help other producers of natural resources and we appreciate that fact, but think the time is here now when we should get a lift too.

Sincerely yours,

F. F. McINTOSH, Jr.
BERNARD R. HAYS.

SISTERSVILLE, W. VA., *April 25, 1950.*

Hon. M. G. BURNSIDE,
Member of Congress,
Washington, D. C.

DEAR BURNIE: As you well know the entire county of Tyler is oil country. We produce the finest quality of Pennsylvania crude oil. With the cost of material as it is, any cut in the price of oil makes it extremely hard for us to operate.

The unlimited importation of foreign oil would work a great hardship if not ruin us. I call your attention to the fact that oil imports increased 23.6 percent in the last half of 1949 over the same period in 1948.

I urge you to support any measure that will materially increase the tariff on oil imports.

Sincerely yours,

R. U. ADAMS.

Arizona Admits Budget Opposes Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. ENGLE of California. Mr. Speaker, the Arizona papers are extremely candid. In an editorial in the Phoenix Gazette of April 28, 1950, regarding the Central Arizona project, it was plainly stated that the Bureau of the Budget is definitely unfavorable to the central Arizona project and, more significantly, that it was only by the intervention of Arizona's Senators at the White House that an adverse report was averted. The Arizona editorial further stated that the Bureau of the Budget had prepared an adverse message on the project but modified it at the President's request to generalities. The editorial in full is included for the RECORD and the attention of our colleagues is particularly directed to the third and fourth paragraphs. The editorial is as follows:

SET-BACK FOR THE PROJECT

The set-back which the Central Arizona project bill has received in the House could be serious. Delaying the vote of the Public Lands Committee until June 15 and possibly later means that the project will be up for consideration at a time when Congressmen are looking longingly toward home in an election year. The House calendar will be jammed and the pressure for adjournment will have started.

Moreover, the Public Lands vote is not the only step before the bill reaches the floor of the House. The measure must be approved and scheduled by the Rules Committee, which is dominated by economy-mindedness to an unusual degree at the present time and would thus be vulnerable to California propaganda about the cost of the project.

On top of these complications is the likelihood that the Bureau of the Budget will return a definitely unfavorable report on the project in answer to the resolution which California's Representative ENGLE maneuvered through the Public Lands Committee yesterday.

Only by the intervention of Arizona's Senators at the White House was such a report averted earlier this month. Washington sources say that the Budget Bureau had prepared an adverse message on the project but modified it at Mr. Truman's request into generalities which could be interpreted as favoring either side in the controversy. Representative ENGLE's resolution, confronting the Bureau with a number of specific questions, is obviously an attempt to force a report which will present the Bureau's original reaction to the project.

The Engle resolution was passed blindly by the Public Lands Committee. Not until after the vote had been taken was a request made that the full draft be read. It is impossible to say whether revelation of the extent of delay, contained in the last paragraph, might have altered the vote enough to kill the resolution.

There is no doubt, however, that California has struck a tricky and upsetting blow.

A Needed Move

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the New York Herald Tribune of March 24, 1950:

A NEEDED MOVE

Nothing can grow up more irrationally and with less conscious purpose than a tax system. As needs arise new fiscal devices are resorted to: one expedient is piled on top of another, until the whole structure can oppress and overwhelm a free people. By the same token, no complex of measures is so difficult to unravel and to reduce to lucid and manageable proportions. Representative FREDERIC R. COUDERT, JR., has announced that he will move in the House for a nonpartisan commission to study and recommend a plan of revision for the Federal tax structure. It is a project which deserves encouragement.

Mr. COUDERT is particularly concerned with the tendency of the Federal Government to monopolize the taxing power, turning back to the States sums which have been to a measurable degree eaten away in the process of handling. With the return to the States of their traditional taxing authority goes a return of the powers of Government which have been surrendered or usurped; and services, as he says, are then performed locally under the eyes of the citizen and the voter, and * * * are bound to be more efficiently administered." Unfortunately there are some who disagree with this eminently sound analysis and objective; yet within both parties there are surely men who will be ready to get back to tax fundamentals. Such a nonpartisan commission as Mr. COUDERT is proposing could form the basis of a fresh appreciation of what constitutes efficient and responsible Government in this country. We hope that he finds stanch allies in his work.

Business, Not Government, Kills Free Enterprise

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. KARST. Mr. Speaker, my attention has been called to an editorial in the Machinist of April 13, 1950, which I am extending below. It is too bad that every large- and small-business man in our country does not have the opportunity to read this article, which portrays the attempted movement of big business against small business to hinder free enterprise by attempting to place the blame on the functions of our Government.

The editorial follows:

BUSINESS, NOT GOVERNMENT, KILLS FREE ENTERPRISE

There are two ways to keep prices within reason. One is Government control; the other, free competition. We in America believe in free competition or free enterprise, as a lot of people call it. Back before the beginning of our century, Congress passed an anti-trust law to protect our free-enterprise system by preventing industry from falling into the hands of a few giant corporations. The anti-trust laws were supposed to protect small business and to give the maximum opportunity to new firms entering any industry.

Today, these anti-trust laws are dying. Big business—including most of the men who talk loudest about protecting our American way of life—are killing free enterprise. In the past 3 years, big business in the United States has made every possible effort to stifle price competition and to free itself from the antitrust laws.

This postwar drive by the big corporations began in the Eightieth Congress. When the

smoke cleared, two giant industries had won complete exemption—insurance and transportation. It is now legal for insurance companies and the railroads to agree among themselves to eliminate competitive practices.

In industries which are supposedly still covered by the anti-trust laws, violations are common. The Department of Justice does a good job with the tools it commands. However, the penalty is small for a business firm convicted for destroying competition (and our free-enterprise system). Price fixing agreement and illegal suppression of competition add millions to corporation profits. The fine, when the company is caught, amounts to only a few thousand dollars. Even here, in many cases, the fines are imposed, not on the officers of the company, but upon the corporation itself and are charged off as a business expense.

Notwithstanding, the big corporations are not content. This week they hope to jam through the Senate the O'Mahoney bill which if passed will virtually finish the job of freeing big business from the antimonopoly laws. This bill in substance wipes off the statute books a law intended to protect small business from price discrimination. Several hundred thousand small businessmen have fought this bill. Organized labor, including the IAM has backed their fight.

If the free-enterprise system is disappearing in this country, big business and its supporters in Congress, who are amending away the anti-trust laws, are responsible. It is the same old story of greedy men killing the goose that lays the golden eggs.

Cincinnati First in Fire Prevention

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. ELSTON. Mr. Speaker, the thirty-eighth annual meeting of the Chamber of Commerce of the United States, currently under way here in the Nation's Capital, included in its program today the conferring of a significant honor upon the people of Cincinnati. I know that the Members of this body will join with me in recognizing that honor as a singular achievement in civic Cincinnati's great history.

Of all of the cities in the United States participating in the fire prevention contest of the Chamber of Commerce of the United States, the record achieved by Cincinnati in 1949 was judged outstanding. At a general session of the annual meeting this morning the grand award in fire prevention was presented to representatives of the people who merited this honor. Last year, therefore, Cincinnati was No. 1 in fire prevention in the Nation.

Let me say that I consider it a great privilege to live in a community that has so ably demonstrated its awareness of a problem that grows with each passing year. Fire losses over the Nation are mounting and the annual toll in lives and property damage is staggering. An effective fire-prevention program is the one defense that can stop the havoc wrought by fire. Quite obviously the people of Cincinnati are aware of the problem and with expert leadership they have carried on the most skillful kind of fire prevention program.

Fire prevention in Cincinnati is a cooperative civic effort. Through the efforts of the city's fire prevention bureau and the Cincinnati Chamber of Commerce Fire Prevention Committee, clubs and organizations, schools and churches, and newspapers and radio stations, each and every resident is invited to participate in a program to reduce fire losses. The honor being given them today recognizes this achievement, and I am privileged to bring it to the attention of the Congress and the country.

Joint Committee on Fuel Policy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. VAN ZANDT. Mr. Speaker, continuing my efforts to assist the coal industry in regaining its lost markets, I have introduced this date the following House concurrent resolutions which are self-explanatory.

The Joint Congressional Committee on Fuel Policy to be created by this legislation is in no way related to President Truman's proposal for a congressional investigation of the coal industry, particularly its labor-management affairs.

My resolution is designed to provide a national policy on the use of all fuels including coal, oil, and natural gas, and at the same time to determine our national reserves of such fuels.

A study will also be made by the Joint Congressional Committee on Fuel Policy of the Government's policy of subsidizing fuel substitutes such as hydropower projects as well as the importation of foreign oil.

The resolutions are as follows:

House Concurrent Resolution —

Concurrent resolution to establish the Joint Committee on Fuel Policy

Resolved, etc., That there is hereby created a joint congressional committee to be known as the Joint Committee on Fuel Policy (herein referred to as the "committee") which shall be composed of the members of the Committee on Interior and Insular Affairs of the Senate and the members of the Committee on Public Lands of the House of Representatives. The committee shall select a chairman from among its members.

SEC. 2. The committee is authorized and directed (1) to make a full and complete investigation and study of the available fuel reserves of the United States and the present and probable future rates of consumption thereof; (2) to formulate a national fuel policy to meet the needs of the United States in times of peace and war, such policy to include the use of all fuels and energy resources except atomic energy; (3) to study and recommend methods of encouraging developments to assure the availability of fuels adequate for an expanding economy and the security of the United States; and (4) to report to the Senate and to the House at the earliest practicable date, not later than September 15, 1950, the results of its investigation and study together with its recommendations.

SEC. 3. For the purpose of carrying out the provisions of this resolution, the committee or any subcommittee thereof—

(1) is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether or not the Congress or either House thereof is in session, has adjourned, or has recessed, to hold such hearings, to require by subpena or otherwise the attendance of such witnesses and the production of such books, correspondence, memoranda, papers and documents, and to take such testimony, as it deems necessary; and subpenas shall be issued over the signature of the chairman of the committee or by any member designated by him, and may be served by any person designated by such chairman or member; and

(2) may utilize the services, information, facilities, and personnel of the various departments and agencies of the Government to the extent that such services, information, facilities, and personnel, in the opinion of such departments and agencies, can be furnished without undue interference with the performance of the work and duties of such departments and agencies.

House Concurrent Resolution —

Concurrent Resolution to provide for the expenses of carrying out House Concurrent Resolution —

Resolved, etc., That the expenses of carrying out the provisions of House Concurrent Resolution —, incurred by the Joint Committee on Fuel Policy, acting as a whole or by subcommittee, not to exceed $100,000, including expenditures for the employment of experts, assistants and other employees, and all expenses necessary for travel and subsistence incurred by members and employees while engaged in the activities of the committee or any subcommittee thereof, shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives on vouchers signed by the chairman of the committee. Disbursements shall be made by the Clerk of the House of Representatives out of the contingent fund of the House of Representatives, such contingent fund to be reimbursed from the contingent fund of the Senate in the amount of one-half of the disbursement so made.

Small Business Conventions—Big Business Often Masquerades as Small Business—Small Business Is Not Necessarily Independent Business—Small Business Concerns Often Dependent on One or Two Customers, or One or Two Suppliers—Decline in Number of Small Manufacturers—Article by Ernest H. Gaunt

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. PATMAN. Mr. Speaker, Washington has been witnessing recently a number of small business conventions. It might be indelicate for me to mention the names of the "small business" organizations which have sponsored these

conventions. The Select Committee on Small Business recently issued a study on small-business organizations indicating that often they are in the pay of big business—including at least one of the organizations which recently met in convention.

However, I would like to refer to an article published in 1938 entitled "How Independent Is Small Business?", written by Ernest H. Gaunt, a sincere friend of small business. With the change of a few words the article might have been written in April 1950. The article follows:

HOW INDEPENDENT IS SMALL BUSINESS?

(By Ernest H. Gaunt)

Very few of Secretary Roper's "700 Dwarfs" who met in Washington on February 2-3, seemed to lay much stress on the need for independence in their business. Many expressed the sentiment that all they needed was to "make a profit." Some asked to be "let alone" but almost in the same breath asked for Government loans or tariffs.

The result of the Washington conference was not "the voice of smaller business." Because there were many minds there were many voices—some the voice of big business speaking through minnows who wished to become pike, as in Jerome Davis' story. And those who went to Washington were not typical or representative of the 1,800,000 small businesses of the country. Retailers, who have the largest number of small establishments in the country, were not adequately represented. There are more retail establishments than all others combined—manufacturers, wholesalers, service establishments, places of amusement, hotels, and construction industry. Some people look upon retailers as the "real" small-business man. This view, while not strictly true, is worthy of consideration by those accustomed to think in terms of manufacturing or wholesaling or construction where business runs in big dollar volume, even in "small" business.

There are 10 times as many retailers as manufacturers, 10 times as many retailers as wholesalers. Although one-half of all retailers employ no other person or only part-time workers, their total employees are more than one-half the employees of manufacturing establishments and more than three times the employees of wholesalers.

Eighty-seven percent of retailers still remain independent, and these independents employ almost twice as many workers as the stores which are not independent—the chains, utility operated stores, direct selling, commissaries, and other types. The multi-unit independents have half the number of stores that chains have, and employ one third the number of persons.

The Washington gathering was not representative of geographical sections. Despite all of the above-mentioned lack of proportional, typical or geographical representation, the conference was of great significance in American economic history. It was the first political recognition in our history of small-business enterprisers as a separate class. It is now being followed by economic recognition, because small-business men are the majority in number of all businessmen in the United States. Ninety-seven percent of the business organizations in our country employ less than 250 people each. Sixty-eight percent of manufacturers employ less than 20 each. Forty-five percent of independent retailers employ 15 persons or less.

The big-business man and the "minnow" now say: "Then why all this disturbance and rabble-rousing?" The answer is that the 3 percent (in number) of businesses employing more than 250, have been dominating the American business system for 50 years with increasing control—making its customs, and making the Nation's laws affecting business, including taxation and banking and credit, and finally making the mess into which all of us were brought in 1929.

Will this 3-percent tail continue to wag the 97-percent dog? When the French small-business men of 1789 (the bourgeoisie) who were almost entirely retailers, bec me class-conscious and organized, the economic and political royalty and big business of that day took them into camp. But something yet remained seriously wrong in the French economic system. The French small-business men stopped their broader thinking when their own wants were temporarily satisfied, and they left the workers and consumers as the forgotten men. The French workers and consumers took the play away from the small-business men. Then followed the dictatorship.

This bit of history may not be repeated in the United States because the smaller-business men of the United States in 1938 are better educated than were the French smaller-business men of 1789. But on the other hand, even if farmers are counted as businessmen, and most certainly they should be, today probably as big or even a bigger percentage of all citizens in the United States are dependent upon a centrally controlled economic system, as were the French citizens of 1789 dependent upon a centrally controlled political system which messed up the economic system of that day.

Much depends upon the degree of independence of small business in the United States. Many small manufacturing concerns are so dependent upon some one or two large customers as practically to belong to those large customers. Seven thousand small manufacturing concerns are said to depend almost entirely on the Ford Motor Co. for orders. Many small manufacturing companies sell a large part of their product through agencies owned or controlled by their big competitors; other small manufacturing enterprises depend upon patents owned by their big competitors; some small manufacturing establishments must buy nearly all their raw materials or goods from one or two large suppliers; and many depend for credit or loans upon one source.

No accurate study has been made of the growth of dependency of small manufacturing companies. The United States census classifies as "independents" and "other independents," the retailers, wholesalers, service establishments, places of amusement, hotels, and construction industry. It does not so classify manufacturers. Possibly one result of the coming investigation of monopoly by the Senate Judiciary Committee will be to disclose this dependency. But this growth has been apparent, without statistics, within the past 50 years. One who has been in close touch with many manufacturers for 40 years, and who has studied this question for 25 years, believes that perhaps one-half of our manufacturing establishments are so greatly dependent upon big business for existence as virtually to be branches of big business.

No less than 45 years ago, when this country had a population of only 64,000,000, there were more than 355,000 separate manufacturing concerns in existence in the United States, and nearly all of them were independent. Today, with a population that has nearly doubled, there are less than 210,000 manufacturing establishments in this country, and perhaps one-half or more of these are not independent.

Moreover, although the bulk of small manufacturing establishments still employ less than 20 persons, there has been a great loss in recent years in the number of these smaller establishments employing less than 20, and a gain in proportion to the total of those employing more than 20. The United States Census formerly listed small hand and neighborhood industries. These are being revived in many parts of the country, with the use of modern, small, electric machinery, and are a household capital-goods industry which should have more attention—not only more attention, but possibly most attention, as a possible solution of our centralization mess. Many who have knowledge of what Mr. and Mrs. Ralph Borsodi have done in Suffern, N. Y., to develop and demonstrate the possibilities of the home and homestead as a productive and creative institution, believe they have the answer as to the contribution which decentralized self-sufficient living in the country may make to redress the economic and psychological insecurities of our industrialized civilization.

The startling and rapidly accelerating trend away from independence has been partly sensed, but not fully realized, by small-business men who do not want to become dependent. The Washington conference gave them an opportunity to express their emotion. In the next 18 months it is possible that this emotion will be translated into an intelligent, purposeful study and even a rebellion against economic dependence upon big, centralized, business and financial and credit control.

Big business, labor, agriculture, and even consumers, are already organized and have started research on their particular problems as well as action in the political field to advance their economic class interest.

Big business, though actually possessing very few votes, is closely organized for group action through its large corporations: Its 7,000 trade associations of which about 3,000 are State, interstate or national; its 4,000 chambers of commerce; its several thousand technical associations (credit, etc.); bureaus, commodity and stock exchanges; its colleges of business administration. Big business had a brain trust of lawyers, accountants, statisticians, economists, professors, researchers, and others dependent upon it for fees and salaries—long before the name was invented to describe a similar group, far less well paid, of the Government.

So it has been that big business has "earned" certain advantages over small business not only in the economic field but in the political field. And thus it has come about that there has been big business in government, making laws, taxes which helped big business over small business. Laws against monopoly have been emasculated in administration, so that during the past 50 years monopoly and chain stores have grown in economic power while independent small businesses were decreasing in number and economic power.

The small-business men, being rugged individualists, have been slow to join together and organize their economic power—and because many of them wanted to become big, they have not rebelled against many business customs which promoted bigness and penalized smallness, such as quantity and cumulative discounts, patent control, higher rates of interest for small loans, higher cost of floating small capital issues, higher cost for small buyers of various kinds of insurance, lower freight rates per mile for long hauls (thus killing local, neighborhood, independent, small businesses).

The whole business system, with the aid of small-business men themselves, has been rigged to strangle or starve independent small business. The business papers and newspapers and the magazines, being dependent upon advertising and especially national advertising—and themselves wishing to become big, have catered to big business and have not published articles or made studies to enlighten small business on how to stay small and independent and yet remain profitable. Certain big business groups are now set, in 1938, to fight even the investigation of monopoly by the Senate. It fears the facts and doesn't want the

"rabble" or small-business men to have those facts.

Small business has been trying to play a game under rules which favored large players. It has been infected with the bigger-equals-better complex, and ashamed to play its own game. Efficiency has not been the main factor, nor quality of product, nor benefit to worker or consumer.

But the Washington conference of small-business men and women started a new trend. Small business has in recent months organized 12 national groups, out of which will probably come one or two strong national groups. Many regional, State, and local groups of small business have sprung up since the Washington conference. These groups are beginning to see clearly those interests of small business which are not identical with those of big business. Soon small business may have a brain trust of its own, publications of its own, and schools and research devoted to its interest—if, and only if, small-business men discover the prime importance of remaining independent or regaining their independence. Small businesses dependent for their existence upon large companies and not wishing to remain dependent, will have no interest in nor need for any knowledge except that provided for them by their big providers. All that such small companies will need will be to do as they are told.

But mere organization will not accomplish this regaining of control by independent small business. It will need to know its own mind, in too many cases the minnow-to-pike mind, or one with a philosophy of centralization. Everything bigger was thought to be better. The story by Jerome Davis is that the slow-thinking minnows who lived in a pond with cannibalistic pike finally discovered that their number was rapidly being depleted by the quicker-thinking and quicker-acting pike. So the minnows organized, called a convention, and appointed a committee to call on the pike. The pike heard the committee and said: "All right. We'll make an agreement with you that we will allow one out of every thousand minnows to become a pike." The committee was overjoyed and so were all the other minnows. But the slow-thinking minnows again woke up to the fact that they were not pike. The story does not tell what the minnows finally did about it. In our human world, maybe organized small business will have an answer.

Those who want to be independent will be given moral and political support by workers and consumers who believe that big business, and too much dependence on it, has brought about our bitterly needless ugly civilization, our centralization of population and wealth with its resulting slums and recurrent boom and bust, our scarcity in the midst of easily potential plenty. The majority of workers and consumers, when face-to-face with the evils of concentration and loss of economic freedom, as now, will realize that economic independence goes hand in hand with economic freedom. The rapidly growing number of consumers' cooperatives in the United States are fully awake to this truth. The organized workers are studying economics as never before, and are partly awake to this truth.

The habit of political action and the pleasure of it as a game is strong among small-business men, and the groups now organizing have thought first of political action as an answer to their problems. But except for repeal of such laws as have placed artificial economic hobbles on independent small business—in taxes, credit, and encouragement of monopoly—the small-business man who wants to be really independent will not lean on Government nor upon big business.

The new associations of small business have a tendency at present to political, top-down, national action. But there are a number of thinking small-business men who believe that stable prosperity will be best promoted from the bottom, by demonstrating in the economic field in their own localities how small business may be kept or made independent, stable and prosperous. For example, if local banks are sending their funds to big cities where they are loaned to big business at low rates, while loans to local independent small businesses are not made on sound collateral, including character, or if made, are at much higher rates than to big business, often twice or three times as high—cannot local independent small-business men and their friends start a new local bank to serve local small business? Consumers and workers have shown the way to do this by starting their own credit unions. Big business could not continue its banks if it had only its own money in them. Big business uses other people's money, the deposits of small-business men, of consumers and workers.

Local groups of independent small business can also study why certain industries once existing in their locality, including wheat and corn growing and milling, butter and cheese making, have passed out. If the reason for the disappearance of these small neighborhood industries was an artificial one, a return to sound, natural conditions would bring the return of these local industries, more employment, and more local trade.

This return of employment to localities and small industries could solve the unemployment problem, and permanently. Big business, even if operated at 1928–29 capacity, could only scratch the surface of unemployment.

Such a study can best be made in a small locality, and the remedy is often to be found by local cooperative action of the independent individuals and businesses concerned. Too much looking to large groups or whole industries for facts and the cure is like "letting George do it," when it can best be done in small units, and by economic action rather than political action. If the action required is State-wide or national, or if political, then the best action for each locality is a common understanding in that locality as to what is best for small independent business in that locality, and an organization for economic purposes of these independents. A firm and unmistakable and organized pressure on the political representatives of that locality in State or national legislatures, to work for remedial legislation, requires a local organization of independent small business.

Congressional Subpena Upon the President

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. BOLLING. Mr. Speaker, in the March 1950 issue of the Journal of the Missouri Bar, there appears a very excellent article entitled "Congressional Subpena Upon the President." The author of this very important study of a fundamental principle in American government is the Honorable Rufus Burrus, a distinguished citizen of Independence, Mo., and the president of the Missouri bar.

Under the unanimous consent granted me I include the article herewith:

CONGRESSIONAL SUBPENA UPON THE PRESIDENT

(By Rufus Burrus, of Independence, president of the Missouri bar)

A school boy in America is first taught in study of his country's government, that the powers of government are separated and jealously guarded in the Constitution of the United States. They are termed legislative, judicial, and executive.

It would seem that the Senate of the United States would be the last to fail to recognize this fundamental principle. It should also be the first to guard against encroachment of one on the other, even if it be the legislative upon either one or the other.

Senator HOMER FERGUSON, of Michigan, however, proposed an amendment to a resolution pending before the Senate pertaining to investigations by one of the Senate committees, which is in clear violation of the independence of each of the three separate branches of the Government. The language is as follows:

"In the conduct of this study and investigation, the committee is directed to procure, by subpena, and examine the complete loyalty and employment files and records of all the Government employees in the Department of State and such other agencies against whom charges have been heard." (CONGRESSIONAL RECORD, Feb. 22, 1950, p. 2144, column 1; CONGRESSIONAL RECORD, Feb. 22, 1950, p. 2148, columns 2 and 3, and p. 2149, columns 1 and 2.)

"Is not that the committee should make a request, but that it is authorized to issue a subpena." (CONGRESSIONAL RECORD, p. 2145, column 2.)

Senator KNOWLAND had said just before that discussion that the Ferguson amendment was being pressed "so that we can find out whether the executive branch of the Government is going to comply with the subpena of the United States" (p. 2143, column 3).

If, said KNOWLAND, the executive branch does not comply with the subpena, "then the Congress of the United States, in the exercise of its responsibilities under the Constitution, may be forced to take such other steps as are necessary with the power it has under the Constitution."

There is abounding precedents in the actions of the highest authorities, beginning with President Washington, that the incumbent of the Presidency cannot be forced by the legislative through the means of a subpena, or otherwise. No President can obey his oath of office if he casts aside all precedents, obeys such a subpena as proposed by the Senate, in the face of an abundance of legal opinions to the contrary. Such opinions have been penned by the greatest of American lawyers and have been adhered to by the greatest of our Presidents. That such a subpena is unconstitutional is demonstrated by the following excerpts:

PRESIDENTS WHO ESTABLISHED THIS DOCTRINE IN THE FIRST CENTURY OF OUR NATIONAL EXISTENCE

1796: George Washington refused papers to the House (Richardson, Messages and Papers of the Presidents, vol. 1, pp. 194, 196—hereafter cited simply as Richardson).

1825: James Monroe refused papers to the House (Richardson, vol. 2, p. 273).

1833: Andrew Jackson refused papers to the Senate (Richardson, vol. 3, p. 36).

1835: Andrew Jackson refused papers to the Senate (Richardson, vol. 3, pp. 132 and 133).

1343: John Tyler refused papers to the House (Richardson, vol. 4, pp. 105–106, 221–223).

1886: Grover Cleveland supported his Attorney General's refusal to comply with Senate resolution calling for papers.

QUOTATIONS OF VIEWS EXPRESSED BY VARIOUS PRESIDENTS WHO SERVED PRIOR TO THE CURRENT PERIOD

George Washington: "The nature of foreign negotiations requires caution, and their success must often depend on secrecy; and even when brought to a conclusion a full disclosure of all the measures, demands, or eventual concessions which may have been proposed or contemplated, would be extremely impolitic; for this might have a pernicious influence on future negotiations, or produce immediate inconveniences, perhaps danger and mischief, in relation to other powers. * * * To admit, then, a right in the House of Representatives to demand and to have as a matter of course all the papers respecting a negotiation with a foreign power would establish a dangerous precedent. * * * As it is essential to the due administration of the Government that the boundaries fixed by the Constitution between the different departments should be preserved, a just regard to the Constitution and to the duty of my office * * * forbids a compliance with your request." (Richardson, vol. 1, pp. 193, 194, 195, 196, Mar. 30, 1796.)

George Washington, Farewell Address: "The habits of thinking in a free country should inspire caution in those intrusted with its administration to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a repeal despotism." (Richardson, vol. 1, p. 211.)

John Tyler: "A mass of vague, incoherent, and personal matter would be made public at a vast consumption of time, money, and trouble without accomplishing or tending in any manner to accomplish, as it appears to me, any useful object connected with a sound and constitutional administration of the Government in any of its branches.

"In my judgment a compliance with the resolution which has been transmitted to me would be a surrender of duties and powers which the Constitution has conferred exclusively on the Executive, and therefore such compliance cannot be made by me nor by the heads of departments by my direction." (Richardson, vol. 4, pp. 105–106.)

William Howard Taft (after his Presidency, and before his Chief Justiceship): "The President is required by the Constitution from time to time to give to Congress information on the State of the Union * * *. But this does not enable Congress or either House of Congress to elicit from him confidential information which he has acquired for the purpose of enabling him to discharge his constitutional duties, if he does not deem the disclosure of such information prudent or in the public interest." (The Chief Magistrate, published in 1916, p. 129.)

VIEWS OF A CONGRESSIONAL COMMITTEE

In 1879, the House Judiciary Committee reported to the House supporting the constitutional doctrine here under discussion, saying:

"The Executive is as independent, as either House of Congress is independent of him, and they cannot call for the records of his action or the action of his officers against his consent, any more than he can call for any of the journals and records of the House or Senate * * *.

"This mischief of the House calling for documents might easily be a very great one * * *. Somebody must judge upon this point. It clearly cannot be the House or its committee * * *. The head of the executive department * * * must be the judge * * *."

ATTORNEYS GENERAL HAVE CONSISTENTLY TAKEN THIS VIEW AND SO ADVISED HOUSES OF CONGRESS AND THE PRESIDENT

The following include distinguished holders of the chief legal position in the Government, including Republicans of stature, and two Democrats of conservative reputation, one of them (McReynolds, of Tennessee) subsequently a Justice of the Supreme Court, and the other (Gregory, of Texas) one of the greatest holders of that office throughout the Nation's history, particularly for his support of the Constitution and the American political system.

1904: Knox to the House (April 27).

1908: Bonaparte to the House (April 13).

1912: Wickersham to the House (March 18).

1914: McReynolds to the President (August 28).

1915: Gregory to the Senate (February 23).

1926: Sargent to the House Judiciary Committee (June 8).

(The above citations besides appearing in the CONGRESSIONAL RECORD and committee hearings appear in Opinions of the Attorney General, vol. 40, pp. 47–48.)

COURT DISCUSSION OF THE SEPARATION OF POWERS

1. United States Supreme Court in *Kilbourn* v. *Thompson* (103 U. S. 168, 190): "It is believed to be one of the chief merits of the American system of written constitutional law, that all the powers entrusted to government, whether State or national, are divided into the three grand departments, the executive, the legislative, and the judicial. That the functions appropriate 'to each of these branches of government shall be vested in a separate body of public servants, and that the perfection of the system required that the lines which separate and divide these departments shall be broadly and clearly defined. It is also essential to the successful working of this system that the persons entrusted with power in any of these branches shall not be permitted to encroach upon the powers confided to the others, but that each shall by the law of its creation be limited to the exercise of the powers appropriate to its own department and no other'."

2. State courts agree; e. g., Pennsylvania court in *Appeal of Hartranft* (85 Pa. 433, 445, reading: "* * * We had better at the outstart recognize the fact, that the executive department is a coordinate branch of the Government, with power to judge what should or should not be done, within its own department, and what of its own doings and communications should or should not be kept secret, and that with it, in the exercise of these constitutional powers, the courts have no more right to interfere, than has the executive, under like conditions, to interfere with the courts."

AMERICAN WRITERS ON CONSTITUTIONAL LAW WHO EXPLAIN AND APPROVE THE DOCTRINE

3. Willoughby, The Constitutional Law of the United States ((1929), p. 1488 et seq.) Mason, Congressional Demands upon the Executive for Information, 5 Papers of the American Historical Association ((1891), p. 33).

Eberling, Congressional Investigations ((1928), p. 282).

Finley and Sanderson, The American Executive and Executive Methods ((1908), pp. 199–200, 246–265).

Corwin, The President: Office and Powers ((1941), pp. 213–214, 281).

Rawle, A View of the Constitution of the United States of America ((1829), pp. 171–172).

Luce, Legislative Problems ((1935), pp. 466–467).

The following is quoted from American Executives and Executive Methods:

"The President has always exercised a discretion as to giving or withholding information upon the request of either House for it. Thus, President Washington declined to communicate to the House of Representatives the correspondence relating to the British treaty. President Jackson, in 1833, withheld certain pending matters relating to the Maine boundary dispute; President Tyler, in 1842, declined to lay before the House of Representatives the condition of the same affair. President Polk, in 1845, in like manner withheld information from the Senate as to the pending proceedings for the annexation of Texas, and in 1848, declined to lay before the House the instructions given as to the negotiations of the treaty with Mexico. President Fillmore declined to comply with a request of the Senate made in legislative session for information as to negotiations with the Sandwich Islands. President Buchanan declined to lay before the Senate the correspondence relating to the slave ship *Wanderer*, and President Lincoln, likewise, declined on March 26, 1861, to communicate Major Anderson's dispatches from Fort Sumter. These instances are referred to as examples of a general practice." The American Executive and Executive Methods. Finley ((1908), pp. 199, 200).

Also, chapter XVII, "The Civil Service" (pp. 246 to 265).

"Official communications made by a head of departments when made in the discharge of duties imposed upon him by law, are privileged on grounds of public policy * * *" (*Spalding* v. *Vilas* (162 U. S. 483 (1890))).

"Heads of departments, in the exercise of a sound discretion, may decline to furnish communications or papers in their custody in response to legal process; they would be justified in representing to the Court that upon public consideration they decline to furnish them. The administration of justice is only part of the conduct of the affairs of any State or nation, and is, with respect to the production or nonproduction of papers from the files of an executive department, subject to the general welfare of the community" (Devens, 15 Atty. Gen. Op. 415).

And Executive regulations prescribing rules as to the production or nonproduction of such documents have been sustained (*Booke* v. *Commingore* (177 U. S. 459 (1899))).

Page 264, American Executive and Executive Methods, Finley.

This action of the Ferguson-Knowland-McCarthy group in demanding all the files of the President and the State Department, pertaining to so-called loyalty investigations is especially a violation of the precedents above set out. Further it would seem that even without this authority the legislature should, for the sake of secrecy and international security reasons, refrain from opening up those files to anyone.

Would the Senators think of subpenaing the files of a field commander in command of an army, and ask to see his plans of battle or defense, or the records of training of his command, or the data concerning those in lesser commands?

While our country is not at war, in the sense we are in hot combat, the Senators as well as all others recognize we are in a cold war which is of necessity largely carried on by the State Department under the direction of the President.

The President should be at liberty to say what information will or will not be produced for an investigating committee, so as not to disclose those secrets that would have a pernicious influence on future negotiations, or create a situation of danger and mischief, in relation to other activities which are contemplated or being carried on.

Prospecting in 1950

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Harlan Trott, which appeared in a recent issue of the Christian Science Monitor.

PROSPECTING IN 1950
(By Harlan Trott)

WASHINGTON.—Lately there's been a lot of talk about the Nation's dwindling natural resources. We seem to be overtaxing our mineral wealth. Two costly World Wars have brought an ominous scraping sound on the bottoms of a number of different barrels.

Known oil and gas reserves are said to have shrunk to 20 or 30 years' remaining supply. The shining metropolis of Manhattan has taken to water rationing within the last year.

Again Uncle Sam's insatiable scoop is grating on the bottom boards. Right now it's iron.

The Celler committee's monopoly study is currently focused on testimony by major steel interests showing that there's only enough high-grade ore left in Minnesota's famous Mesabi Range for another 10 years at the present rate of depletion.

According to these steel experts, industry must develop other sources of iron ore before 1960 to keep steel output going.

Minnesota's failing supply of rich iron ore imposes some tremendous decisions on the steel industry, and on Congress, too. The big steel companies have acquired large tracts of excellent iron ore in Venezuela and Labrador. Proven deposits in Labrador amount to 400,000,000 tons. The Venezuelan deposits mount up to at least a billion tons. In both countries the ore is said to assay higher than 50 percent iron. But the transportation problem is terrific.

American steel interests want Congress to authorize the $400,000,000 St. Lawrence seaway project to provide the cheapest transportation link between these two iron ore regions and the iron and steel mills in the Great Lakes area.

The Venezuela deposits are 2,400 miles away; Labrador's are 800 miles nearer. Steel spokesmen say they must build a railroad in Labrador before the ore can be developed. It will take $200,000,000 and 5 years to build.

The problem does not stop there. Minnesotans are asking what about their taconite—the low-grade ore assaying about 35 percent iron—which is more abundant than the dwindling wealth of the Mesabi Range?

Concurrently in another House hearing room, a subcommittee on mines and mining was urged this week to enact a bill introduced by Representative FRED MARSHALL, Democrat, of Minnesota, providing a modest sum for research and development of peat. Fuel and power technologists testified that the peat bogs of Minnesota offer a practical source of fuel for local power plants.

Development of Minnesota's taconite depends on cheap electricity. Leopold Pisner, St. Paul power-plant builder, testified that taconite requires extensive grinding for proper separation, which means using enormous quantities of power.

He said it is not economically feasible to grind a low-grade ore with coal shipped to Minnesota from the eastern bituminous fields. The original mine cost of coal multiplies several times over, due to the long rail and water shipment and rehandling.

The feasibility of drying and processing peat for use under power-station boilers is tied in with the development of peat by-products. Dr. Derso Shybekay, a peat technologist, listed synthetic rubber, acetates for nylon, and hydrogen and newsprint among the latent chemical values of peat.

The ramifications brought out in these current congressional hearings are fascinating. They dramatize the technological challenge confronting us if we are to surmount the complex problems posed by our waning natural resources.

The big decisions facing industry and Congress demand big imaginations and the same kind of daring as that which lured the pioneers and prospectors into having a first look at the Nation's untapped natural resources a century ago.

The New England Economy—1950 Model

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Joseph A. Erickson, president, Federal Reserve Bank of Boston, at the New England congressional dinner of 1950, Washington, D. C., May 2, 1950:

THE NEW ENGLAND ECONOMY—1950 MODEL

I am going to give you tonight another chapter in the continued story of New England's economic progress. New England, like the Nation, reached its first postwar peak in 1948. We lost ground from the latter half of 1948 until the middle of last year, when recovery got under way in the nondurable goods industries which had been the first to slip down. Recovery began later in the durable goods industries.

At the bottom, we had gone a long way down in our manufacturing industries, but we have now recovered much of the ground that we lost last year. During the last 3 months, new orders received by manufacturers have increased, and especially in the durable goods industries. The pickup in new orders has been especially pronounced in television and other electronic apparatus.

Construction is booming—the value of contracts let in the 3 months ending in February was more than 75 percent higher than it was for the same 3 months last year, and contracts let last year amounted to 6 percent more than they did in 1948.

Department-store sales so far this year are at about the same level as they were last year, but because prices are lower this year, the volume of goods being moved must be above last year's level. New England department-store sales last year were better maintained in comparison with sales in 1948 than they were in the Nation, and this better performance has continued so far this year.

New England's shoe production has shown its heels to its national competition. Last year our production ran 2 percent ahead of that in 1948 compared with a loss of 1.5 percent in the Nation. So far this year, New England production is ahead of that for the same period last year and continues to gain at faster than the national rate.

Nonmanufacturing industries continue to hold up well, employing about as many as they did in 1948.

The growth of new manufacturing firms in New England during the past 5 years has been large. There were 5,000 more manufacturing firms in business in the spring of 1949 than in the spring of 1944, a gain of 23 percent.

Lest you be misled by the optimistic figures, however, let me hasten to point out that recovery is not complete. As of February of this year, New England manufacturing, while it had gained since the low point of July 1949, was short of the February 1948 peak by 14 percent, or about 220,000 jobs.

New England's position in manufacturing has worsened relative to the Nation; our position, 14 percent below the February 1948 level in employment, contrasts with a national figure which was lower by 8.7 percent.

The difficulties experienced by New England industry during last year's recession give new interest to a longer-range look at the prospects for New England's economy. If past trends indicate growth—and I think that they do—then we can proceed with greater confidence to the tasks we must undertake to bring about a continuing expanding regional economy.

A glance at past trends is indeed reassuring. New England's population has grown between 1920 and 1949 at an average rate of about 62,000 per year.

Another good measure of the trend of the whole economy is the amount of income received by all its people from all sources. When we express the total income of the region in dollars having the purchasing power that they had in the period 1935 through 1939 we find that the long-term trend of New England's income from 1920 through 1948 represents an average gain of $153,000,000 per year. Examinations of the trend in retail sales, of bank deposits, of workers gainfully employed, and other measures all point to this same conclusion: New England remains a growing economy with prospects for further growth. The events of last year, by showing up some obvious weaknesses in the New England economy, have had a most stimulating effect upon community and State groups throughout New England. There is a greater stirring to remedy our weaknesses and to seize our opportunites than we have had in many years.

In the State of Maine representatives of banks and other financial institutions have organized and set up for business a unique corporation designed to finance new businesses unable to obtain funds from conventional sources. This new corporation, the Maine Development Credit Corp., is financed by loans to it by member financial institutions to an amount expected to be approximately a million dollars, half of which is already committed. This institution with its limited lending power cannot be expected to revolutionize the economy of the State of Maine, but it nevertheless represents a genuine achievement by its financial institutions in attempting to provide within the State a lender of last resort to give careful review to new business projects. Its worth has already been shown by its placement of several loans with member institutions as well as by a half dozen direct advances just made.

In New Hampshire a special committee on industrial development appointed by the Governor has been hard at work appraising the State's past, its prospects, and what might be done to promote its industrial growth. A similar committee is at work in Connecticut.

In Rhode Island a State agency has been making similar studies, and in addition a special committee of representatives of financial institutions has recommended the establishment of an industrial building corporation to finance new plants in the area.

In Massachusetts a representative group of manufacturers has agreed to cooperate with a study being made by the special committee on taxation of the question whether the burden of taxation in Massachusetts in comparison with that in other competing States

puts Massachusetts manufacturers at a competitive disadvantage. According to a survey made by us, the proportion of manufacturers in Massachusetts who report that the State and local taxes put them at a disadvantage is larger than the proportion in any other New England State.

Vermont continues to push its program of management and engineering services to new or small manufacturers.

In numerous communities throughout New England groups of local businessmen and bankers have been meeting to seek means of obtaining new factory buildings and new industrial employment. Such groups are at work in so many cities and towns that I shall name only a few examples: Portland, Belfast, and Waldoboro in Maine; Berlin, Nashua, and Laconia in New Hampshire; Lawrence, Worcester, and Ware in Massachusetts; and Danbury and New London in Connecticut. These groups, by raising from the community a part of the capital required for a new factory building, may succeed in tapping other sources of funds which would not otherwise be available. These are encouraging signs indeed that New Englanders are facing up to their problems and are turning to methods of meeting them which are consistent with our traditional principle of self-reliance and local control.

New England's economic problems, however, like its economic opportunities, are not entirely of its own making. I have become convinced on the basis of the evidence that New England has a peculiar problem in its relation to the Federal Government. Whether we like it or not, the fact remains that the Federal Government is a far more important agency for determining our destiny now than it has ever been before in peacetime. I am impressed with the extent to which the Congress has the control of our future opportunity within its power. This being a problem relatively new to an area which has ordinarily taken pride in its self-reliance and secured appeals in its own interest to the Congress, what Senator SALTONSTALL said recently about the need for some form of unity in the New England congressional delegation deserves the most careful attention.

Senator SALTONSTALL said: "We have got something in New England. But we can't sit back and expect our industry to stay with us. We have got to fight to keep it and to get more. We have got to have unanimity to fight other sections of the country which are getting greater help from the Government than we are and who are getting our business away from us." However much some of us may deplore the state of affairs under which we must fight in the National Congress to retain our industry and to grow, I believe that those views are correct.

In view of this situation, may I as a novice suggest a nonpartisan economic platform for New England? It is a platform based upon what appear to be economic policies within the control of Congress which would be beneficial both to New England and to the Nation. There are five planks in this platform, each of which requires some explanation. First, let me give them to you in summary form.

1. New England's interest would be served by reducing Federal expenditures.

2. New England would be benefited perhaps more than other regions by revision of certain Federal tax laws on business, particularly those relating to depreciation and small business.

3. New England has suffered from the increased tendency of Congress to pass special interest legislation.

4. New England's ports suffer from discrimination in land and ocean freight rates subject to the control of national regulatory bodies.

5. New England's future economic progress depends greatly upon preserving our advantage in the importation of raw materials.

There are other planks that might be added to this platform but for the time being let us consider these 5 in more detail.

New England's interest would be served by reducing Federal expenditures not only because reduced expenditures would make possible reduced taxes, which in turn would stimulate economic expansion. New England's peculiar position with respect to Federal expenditures is that the areas of greatest increase in Federal expenditure are areas in which New England tends to be hurt more than she is helped. The enormous Federal expenditure for the benefit of agriculture costs us far more than we gain from it. Similarly, vast expenditures for power, navigation, flood control, and reclamation projects almost invariably are made in other parts of the country which then use the argument of cheap power as an inducement to attract our industry. Even national defense expenditures now seem to have turned strongly against our region. So long as we had a heavy naval expenditure we were in a position to get a considerable share of that expenditure in our region, but the shift to greater emphasis upon the Army and the Air Force has inevitably resulted in directing that type of spending away from New England.

These are but samples of the way in which growing Federal expenditures operate against New England's interest. The proof of the pudding is to be found in the relationship of Federal tax collections in New England to direct expenditures of the Federal Government in this area. Direct expenditures of the Federal Government which we can measure include all payments directly to individuals (salaries, interest on the public debt, pensions, unemployment insurance, crop support payments to farmers, etc.), all direct grants to State and local governments, and all payments on Government contracts of the type subject to the Walsh-Healey Act. On this basis New England received about as much as it paid in taxes in 1929, got back about $4 for every $3 it paid in 1940 (probably because of the defense program), and got back only $3 for every $5 it paid in 1948. We paid to the Federal Government a billion dollars more than we received in direct expenditures in 1948.

These figures understate the burden of Federal taxes because taxes collected elsewhere are passed on to us as part of our costs to a greater extent than taxes paid here are passed on to other areas. For example, the excise taxes on automobiles are paid largely from Michigan, but are passed on to us whenever we buy new automobiles. When we take account to the burden of taxes in this way, we find that in 1948 we had a burden of $2 in taxes for each $1 returned here. Obviously, these figures alone do not tell the whole story, but they do indicate that our financial relationship with the Federal Government has deteriorated badly in the postwar period.

To move on to the second plank in our economic program, it would be of interest to the whole economy and of special interest to New England to have liberalization of the rules relating to depreciation of new machinery and equipment. The machinery industry is a very heavy employer in our region. Its market depends upon the ability of its customers to pay for the products that it sells. Restriction of allowable depreciation to unrealistic levels which permit neither the recovery of replacement cost nor in many cases recovery of original cost within a reasonable period of time obviously must depress the market for our machinery producers. Liberalization of depreciation would increase the employment in our machinery manufacturing plants. Moreover, New England probably has a higher proportion of overage plant equipment than most areas; liberalized depreciation would give our manufacturers a special incentive to modernize.

New England also has a peculiar stake in tax relief for small corporations. A study of the sources of growth in our manufacturing industries in New England, for example, shows that we must rely very heavily upon the establishment of new, small firms within the region and upon their growth to larger size for expansion of our manufacturing activity. Although our present corporate income tax makes some special concession to small firms by imposing a lower rate on corporate net income below $50,000, there is need for further tax concessions to assist small businesses to grow.

Now to the third plank which deals with special-interest legislation. The price-support program for agriculture raises our food, feed, and industrial raw materials costs far more than it helps our potato and other farmers. New special-interest legislation may raise our fuel costs. It is well known that New England's fuel and power costs are higher than the national average of such costs. The shift in the source of the supply of oil to the Venezuelan and middle eastern oil fields has presented to us an opportunity to reduce our fuel and power costs. By virtue of our transportation advantage in importing this foreign oil, we have had an improvement in our fuel cost position. Domestic oil producers (and some others with a special interest in coal) are pressing for an increase to the tariff or the imposition of a quota on foreign oil, either of which would work materially to New England's disadvantage. And here again what is to the disadvantage of New England is clearly to the disadvantage of the country and to our whole foreign economic program.

I do not wish to give the impression that I believe the only way to reduce our power costs lies in the direction of securing cheaper fuel. We have, even on the minimum estimate, a sizable potential of undeveloped water power, and I believe that it is in New England's interest to encourage the development of as much of this potential as can be economically justified and as it can be utilized. We should not, however, sacrifice the bird in hand, which is reasonably priced foreign oil, for the bird in the bush, which is undeveloped hydroelectric power, which will take up some years to harness and which would probably not reduce our average costs nearly so much as a continued supply of reasonably priced foreign oil.

New England can also benefit from unrestricted imports of foreign copper to supply its brass industry. A tariff will be restored on copper after June 30 unless the legislation keeping it on the free list is renewed.

New England has long depended upon commerce for the livelihood of an important proportion of its people. Our fourth plank deals with the disadvantage which we suffer in our foreign commerce through conditions not of our own making. You are all familiar with the fact that foreign commerce at the New England ports is primarily a one-way traffic. For example, at the port of Boston, import tonnage is eight times the export tonnage. Lack of export tonnage discourages sailings from New England ports and the lack of sailings causes most of our export cargo to be shipped from other New England ports.

Examination of the history of ocean and rail freight rates discloses a major reason for the continued decline of our ports. Because New England's ports are nearer to all European and Mediterranean ports and to India than other competing ports, for a great many years ocean freight rates to those ports were lower from Boston than competing ports. To compensate for the geographic advantages enjoyed by Boston, the

railroads over the years reduced their export rail rates in favor of inland rail shipments to the ports of Baltimore and Philadelphia and later New Orleans and Montreal. However, after rail freight rates had been adjusted to equalize the advantages of other ports with those of New York and Boston, ocean freight rates came to be equalized. Presently, therefore, the New England ports are denied their geographic advantage by equalized ocean freight rates, whereas at the same time they remain penalized for that geographic advantage in the rail freight rates from interior points. We are now seeking to restore our geographic advantage in the case of grain. The history of this subject convinces me that New England's ports are discriminated against either by the commission of acts or the omission of acts by regulatory agencies of the Federal Government. On this matter as on others New England is not demanding preferential treatment but only recognition of its natural economic advantage.

It has become commonplace to say that New England is at the end of the transportation line. For many of our raw materials and for many of the finished products which we buy this is true. However, changes are in the making which may put more of New England's industries at the beginning of the transportation line to the advantage of the region. We see that now in the case of wool, jute, and oil, and we will see it in the case of iron ore.

"We have fought our last war from the Mesabi ranges of Minnesota," said the president of a large steel company recently. The Nation's iron ore supply is shifting radically to points around the Atlantic Basin. Enormous new discoveries of iron ore have been made in Labrador, in Venezuela, and in Liberia. Cheap, waterborne iron ore plus cheap scrap and a flourishing market for finished steel products open up to us the possibility of establishing an integrated steel mill in New England. The establishment of such a mill would give a strong stimulus to our metal fabricating industries, which have been the fastest growing industries in the region. This stimulus would be felt throughout New England, and is the best argument for regional unity in support of this project. Careful studies have shown that this possibility for New England is indeed a real one. Since New England began to study the possibilities of establishing an integrated steel mill, the iron ore discoveries in Labrador and Venezuela have become known and two of the major steel companies have announced plans for expansion on the east coast. Events have surely confirmed our supposition that in this direction there was opportunity for New England.

Unlike other regions, I do not think that we need to argue for special legislation which would help us to realize this great new opportunity. In this matter, as in so many others, the real threat to New England lies in legislation which would favor other regions at our expense. From time to time, I am sure the Congress will be presented with requests for appropriations to dredge rivers and harbors, to construct waterways, to authorize the lending of money—all in the interest of steel mills some place other than New England. In these matters, as in others, it is obviously not in the interest of New England to help provide the money to deny itself a new opportunity. I trust the New England delegation will keep a wary eye on proposals to use our taxpayers' money to help the steel industry to locate in some other part of the country.

Now to sum up in a few words:

1. New England has had more than its share of economic trouble in the last 18 months.

2. New Englanders are exerting themselves to remedy the causes of their economic ills so far as these causes lie within their control.

3. Many of New England's troubles are the direct or indirect result of Federal policies. We need, and we are going to make, a careful study of how those policies affect us.

4. We, the business people of New England, are willing to do our part to keep New England expanding and prosperous. We are confident that our delegation in the Congress can and will work together for that same objective.

Mother, Can You Spare a Dime?

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from the Chatham Courier of Chatham, N. Y.

Mr. Speaker, I think this editorial gives the American people plenty of food for thought. As a matter of fact, the result of yesterday's primary election in Florida proves to me that the American people already are caught up on the spending spree promoted by the present administration and those who have stood by the New Deal and Fair Deal policies. To me, the election of GEORGE SMATHERS in Florida is a forecast of what will happen in the general elections this fall. GEORGE SMATHERS is a fine, clean young American and won this primary election on what is practically a Republican platform.

A good many of us on the Republican side have supported the European aid program from the beginning. As time goes on and we learn more about the tactics the British are using in their international trade policies, one begins to wonder if it is not about time to call a halt or else have an understanding which will protect some of our own leading industries.

MOTHER, CAN YOU SPARE A DIME?

Two very interesting sets of financial figures have recently been released.

As of July 1, the United States of America will show a Treasury deficit of approximately $6,000,000,000 with likelihood that in 1951 this will rise to seven billions. In other words, the expenditures of the National Government will be that much greater than it is able to receive from all sources.

The other was the announcement that Great Britain would, at the end of its fiscal year, be able to meet its expenses and balance its budget.

Yet the Congress has before it a request from England that this country provide her (or in other words, give her) $687,000,000 for the ensuing year, under the Marshall plan.

Of course, we imagine Great Britain can use this money and Clement Attlee and Stafford Cripps can probably find means to spend it for further socialistic schemes, but what about the American taxpayers who have to put up the cash?

As Senator ROBERT A. TAFT said this week: "The time has now come to cut these Marshall-plan funds and if we do not do this, we can hardly hope to reduce our domestic expenditures."

To those who can only see unlimited amounts flowing from this country to all parts of the world, this may sound like rank heresy and a desire to let down what they like to term the "Mother Country." But we are commencing to wonder if, when the child is apparently broke, if it wouldn't be nice for Britannia to begin handing over a few millions of those billions we let her have when she was much worse off than she apparently is now.

Low-Rent Housing for Portland

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. MITCHELL. Mr. Speaker, on May 19, Portland, Oreg., voters will decide whether or not the city is to enjoy the benefits of the Public Housing and Slum Clearance Act passed by the Eighty-first Congress. The Honorable Phil Dreyer, a member of the Oregon State Legislature and a candidate for the United States Congress from Multnomah County urges Portland citizens to approve the proposed agreement between the city of Portland and the Portland Housing Authority. The agreement provides for the city to furnish civic services in return for payments in lieu of taxes.

Phil Dreyer is president of the Portland Housing and Planning Association. He knows Portland problems. He ably represented his legislative district during his term of office in the Oregon State Legislature and I am certain his training and experience would assure equally effective representation in the National Congress, should he be elected.

Following is a speech titled "Public Housing for Portland" delivered by the Honorable Phil Dreyer before the Guild's Lake Community Club of Portland on April 12, 1950:

PUBLIC HOUSING FOR PORTLAND

LET'S VOTE "YES" FOR PUBLIC HOUSING

On May 19, Portland voters will decide whether this city will have 2,000 new low-rent homes.

The United States Government is putting up the money, but the people must vote "yes" to approve the agreement between the city and the Portland Housing Authority.

WE NEED THE HOMES

Oregon is the fastest growing State in America. But we do not have the place to house the half-million people who have come here. They are living in trailers, in shacks, and in temporary houses.

To house the war workers who flocked to Portland, the Government built 18,500 units of temporary housing. But most of these units have been torn down. Thousands were destroyed by the Vanport flood. Only 6,500 remain, and these must be torn down by 1951.

Shall we ignore the plight of the flood victims, or shall we welcome low-rent housing for 2,000 families which the United States Government has offered to provide?

YES, PORTLAND DOES HAVE SLUMS

You do not have to go to Chicago or New York to find slums. Go out Williams Avenue, or look up the river from the Ross Island

Bridge. You will see shacks and eyesores that are the shame of our city—decrepit structures not even fit for cattle. There is nothing more un-American than a slum.

And the number is greater than you think—23,000 Portland families live in dwellings which menace their health and safety. That is the official report of the 1949 Portland housing survey. Nearly 100,000 people of our city are crowded into dangerous, substandard clapboard tenements.

SLUMS ARE COSTLY TO YOU

Portland slums are social cesspools. They breed crime, disease, and delinquency. Tuberculosis in slums is almost twice as prevalent as in public housing, and it costs Oregon taxpayers $3,000 a year to care for each TB patient in our State hospital.

Remember the headlines: "Seven perish in slum fire"? Slum homes are firetraps. And fire protection costs four times as much for slum areas as for public housing. And the risk to Portland firemen is correspondingly greater.

SLUMS ARE TAX EATERS

Shacks and shanties pay very little in taxes. They are depreciated eyesores that bring in very few dollars. A study of 24 American cities shows that city services to slum areas cost three to eight times as much as the tax revenues those areas pay.

Portland is asked to vote "yes" to provide city services to the 2,000-unit public-housing project. In return, the city will receive specific "payments in lieu of taxes."

NO HIGHER TAXES

Public housing will not raise taxes. It will merely replace slums which pay little taxes and absorb much of our city treasury. Postwar studies of the entire country show that slum districts take 45 percent of the cost of city service, but provide only 6 percent of tax revenues.

Payments in lieu of taxes will range up to 10 percent of rental charges. These payments will be four to eight times as much as the taxes now paid on undeveloped property.

PUBLIC HOUSING CREATES JOBS

Two thousand new homes will mean business and jobs for a large number of Portland people. It will take up the slack in employment and help many of the 96,000 men whom the Governor's committee reported jobless in February.

George Brown, of the CIO, estimates it will take 320,000 man-hours to produce lumber alone, to build 2,000 homes.

AFL leaders point out 2,000 new homes will provide employment for carpenters, painters, electricians, plasterers, and other skilled mechanics.

PROPERTY VALUES INCREASE

Two thousand units of public housing will build up property values. For every unit of public housing built, one slum dwelling will be destroyed or repaired within 5 years.

Public housing will provide homes for steady workers and attract even more industry to Portland. Industrial planners always ask: "Is there housing for labor?" And this influx of employed people will provide a market for new home building. Renters become home owners; that is the history of Oregon development.

BEWARE THE PROPAGANDA BLITZ

Why should the voters turn down the United States Government's appropriation to build decent housing that will replace the fire traps and health traps that blight our city? Only short-sighted and selfish groups which profit from slum misery oppose this humanitarian program.

But the selfish interests have money to launch a scare campaign to tell you public housing will raise taxes, that it is socialistic, etc. Their full-page ads deceived the people of Seattle. Let's not fall for their propaganda.

PUBLIC HOUSING HAS PROVED ITSELF

Public housing is not new to Portland. Columbia Villa and Dekum Court provide examples of the 2,000 permanent low-rent housing, this program will bring.

New low-rent housing must be found for the fastest-growing city in this part of the country. Otherwise Portland will slip back into its old lethargy. We can build a great community of clean, decent homes, where every child will have a chance to grow to maturity in a fine American environment.

Let us stamp out slums in Portland—and the crime and poverty and disease they breed. Let us vote "yes" on May 19 for the 2,000 low-rent public-housing units.

Address of Hon. Robert L. Doughton, of North Carolina, on Boone-Barkley Day, at Salisbury, N. C.

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1950

Mr. COOLEY. Mr. Speaker, on Monday afternoon, May 1, under clear Carolina skies and before a magnificent audience, our distinguished and beloved colleague, Hon. ROBERT L. DOUGHTON, in appropriate fashion and with becoming dignity presented a great American to the people of Rowan and adjoining counties in the district which our colleague has so well and ably represented for more than three decades. The occasion was known and dedicated as Boone-Barkley Day in honor of Daniel Boone, of historic fame, and ALBEN W. BARKLEY, the greatest of all of our Vice Presidents.

The city of Salisbury in Rowan County was selected as an appropriate place for this great meeting because it was in this part of my native State that the Boones and the Barkleys and forebears of our present Vice President settled in the early days of this Republic and made their great contributions to the cause of freedom. The Vice President, therefore, was received with a warm and cordial welcome, not as a stranger or an alien, but rather as one who had returned to the home of his ancestors and to the household from which he sprang.

Neither in all of the Vice President's long line of noble ancestry nor in the ancestry of any of those who today direct the affairs of this great Nation has there been a greater champion of the cause of the common man and of the freedoms which he has a God-given right to enjoy.

Mr. Speaker, it is with great pleasure that I present for the record the introductory speech of that great American, the greatest living North Carolinian, our beloved friend and colleague, BOB DOUGHTON.

Mr. Chairman, Mr. Vice President, distinguished guests, ladies and gentlemen, since entering public life I have had many pleasant duties to perform but none that I could possibly appreciate more than the high distinction of participating in this Barkley-Boone celebration—a most momentous and historic occasion.

Today we honor and pay tribute to two great Americans—one a famous frontiersman, pioneer, and adventurer of almost two centuries ago, Daniel Boone, and the other an outstanding American statesman of our own day, ALBEN W. BARKLEY.

In a way my assignment is a dual one. I am to present our speaker to this large gathering and to this community, and also to present Rowan County and this community to him.

Mr. Vice President, Salisbury, Rowan, and Yadkin are names rich in history and tradition—and much of the history and tradition is associated with your people, your State, and yourself. I bring to your attention a fact with which, of course, you are familiar—that three of your ancestors, Henry Barkley, Alexander Cathey, and William Stevenson, all settled here in Rowan County. Many of their descendants, your forebears, are buried at Thyatira Church and in the cemeteries of Rowan County. So, in a manner, we welcome you, Mr. Vice President, home.

Our distinguished speaker does not come to us as a stranger. The ancestors of many of the early settlers of Kentucky were North Carolinians. Some of them, like some of you, were veterans—young veterans of the Revolutionary War, who, at its close, turned their faces from Kings Mountain and Guilford Courthouse and, following Boone, sought new homes farther West.

Ever since that era the people of North Carolina and Kentucky have been linked by blood and by a common heritage of beliefs and faith. We have generally the same aspirations and objectives, the same passion for liberty and for justice.

Kentucky has, through the years, enriched the Nation with the services of many great men and has played an important part in national and world affairs from the beginning. It is significant that President Abraham Lincoln, and the President of the Confederate States, Jefferson Davis, two adversaries in the great crisis of our country, were both born in Kentucky.

Kentucky has been famous in the Congress of the United States in the person of such renowned men as Henry Clay, who served intermittently in Congress and who, in different Congresses, served as Speaker of the House of Representatives and was also Secretary of State to John Quincy Adams.

Another celebrated Kentuckian was John G. Carlisle, Speaker of the House of Representatives in three Congresses—the Forty-eighth, Forty-ninth, and Fiftieth—and later Secretary of the Treasury in the Cleveland administration.

Ollie M. James, also of Kentucky, and predecessor of our distinguished Vice President in the House of Representatives, was a confidant and adviser of President Wilson.

I am pleased also to mention the splendid services being rendered by the Honorable NOBLE GREGORY, a present member of the Committee on Ways and Means, who represents the great First District of Kentucky.

In more recent years Kentucky has made a greater contribution to the highest Court of the land, the Supreme Court, than any other State in the Union; having today as its Chief Justice the Honorable Fred M. Vinson, an eminent jurist, an outstanding legislator, my friend and colleague on the Committee on Ways and Means for many years—also Mr. Justice Stanley Reed, and Mr. Justice Louis Brandeis, and the late Mr. Justice Wiley Rutledge, and Mr. Justice James Clark McReynolds—all distinguished Kentuckians who have served on this high Court.

One might recite the deeds of Kentuckians for a long and indefinite period, but none of the renown which has accrued to Kentucky as a result of the services and contribution of those who have been mentioned or those who could be mentioned can excel the illustrious record of ALBEN W. BARKLEY.

From humble beginning in Graves County, Ky., through his ambition, courage, and indomitable determination he fought his way in early life in obtaining an education and in early life became interested in public affairs. He was first elected county attorney, conducting his campaign, it is said, on muleback or horseback in the raw and bitter weather of February and March. He was later elevated to the county judgeship, which position he filled so satisfactorily as to attract the attention of the First Congressional District of Kentucky and was elected a Member of the House of Representatives in 1912, succeeding the Honorable Ollie M. James, who was advancing to the United States Senate.

The services of our distinguished guest in the House of Representatives were outstanding, holding membership in that body for 14 years. He served on the Committee on Interstate and Foreign Commerce and other important committees and was regarded as one of the ablest men in the House. He was elected to the United States Senate in 1926, serving in that body 22 years, and has grown more conspicuous, more popular, and more powerful with the passing years. He served with distinction as a member of the Committee on Finance and as both majority and minority leader in the Senate. He has become the perennial keynoter for Democratic conventions, serving in this capacity in 1936, 1940, and 1948.

His selection by his party and election by the people to the Vice Presidency was a just reward for his service to his party and his country. His life of public service has been one of not only duration but of donation. His time and extraordinary talents have been given freely to the service of his fellow man. Through the years, from the Atlantic to the Pacific—from Canada to the Gulf of Mexico—no man has fought so effectively and valiantly the battles of the Democratic Party as our distinguished speaker of today. Neither a radical nor a reactionary, but an orthodox, Jeffersonian statesman—a wise, robust, powerful champion of the people. In the rough and tumble of debate he has no equal. In all my 39 years as Representative in Congress I have known only one man whom I consider his peer as a debater. That was our own great and beloved Claude Kitchin, of North Carolina.

Taken as a whole, covering so long a period of time, no one has fashioned a record of public service more useful, more brilliant, more outstanding, and I might truthfully say, judging by his recent triumph in the matrimonial field, more romantic, than our distinguished guest and speaker.

A great Kentuckian, a great statesman, a great Democrat, a great Vice President, who has breathed the breath of new life into that high office, a great American, one concerning whom it can truthfully be said, the simple truth is the highest encomium.

Ladies and gentlemen, it is a pleasure, an honor, and a high privilege to present to this large gathering my friend for 37 years and a true friend and faithful servant of all the people, the Vice President of the United States, the Honorable ALBEN W. BARKLEY.

Adequate Funds for Veterans' Administration

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. LANE. Mr Speaker, under leave to extend my remarks, I wish to include the following resolution of the Disabled American Veterans, Department of Massachusetts:

Whereas Past National Executive Committeeman and Past Department Commander Anthony D. Tieso has requested the executive committee of the Disabled American Veterans, Department of Massachusetts, in meeting assembled, to give serious consideration to the loss of service and benefits to veterans and their beneficiaries because of the recent reductions in personnel in the Veterans' Administration; and

Whereas this committee, in executive session assembled, wishes to go on record as commending the Administrator of Veterans' Affairs, Carl R. Gray, for the wisdom and sound administrative judgment which he has displayed in his recent decision as announced by the Associated Press, April 6, 1950, to defer, temporarily, at least, all reductions in force, insofar as the medical personnel of the Veterans' Administration are concerned; and

Whereas it is the best judgment of the executive committee of this department, after a careful study of the situation presented by the recent over-all reductions in force in the Massachusetts regional office and the subdistrict and suboffices coming under its jurisdiction as well as in the hospitals located in Massachusetts that service to the veterans and their beneficiaries, who are required to come to these installations in the Veterans' Administration for the various services and benefits to which they are entitled by Congress, will be irreparably impaired and such veterans and their beneficiaries subjected to great hardship and serious loss of rights and benefits; and

Whereas the Veterans' Administration, under its present organization, is a cohesive whole, the loss of personnel in any important division such as the Contact Division, the Adjudication Division, the Rehabilitation Division, the Finance Division, and the various auxiliary and subordinate divisions, will subject the veteran to delays, possible injustices, misinformation, and lack of the efficient service which is now being rendered; and

Whereas the contact division in the Massachusetts regional office, located at Boston, has recently been subjected to a loss of contact representatives which, in our opinion, will result in a loss of service to the veteran throughout Massachusetts to the extent that the most liberal provisions of existing legislation relating to veterans and their dependents, which has been enacted by a grateful and benevolent Congress, may not be properly enforced or administered; and

Whereas the various divisions, both major and minor, which comprise the organizational set-up of the Veterans' Administration, may be compared to a chain which is no stronger than its weakest link; and

Whereas it is inconsistent to discriminate in favor of one division, such as the Medical Division, over other equally important divisions, all of which were created to serve the veteran; and

Whereas to reduce personnel in any of the divisions of the Veterans' Administration where such personnel are imperatively required to render the vital services to the veteran in response to the mandates of Congress and the various laws which have been enacted by the various Congresses, is insufficient; and

Whereas it has been said that the United States has enacted more liberal and beneficial laws for veterans than any government in the history of the world; and

Whereas unless the Veterans' Administration is furnished with sufficient personnel to properly administer and enforce the liberal laws enacted by Congress, the provisions of such laws will be violated and ignored, resulting in great hardship and sacrifice on the part of the veteran population which a grateful Republic intended to reward; and

Whereas it is a solemn obligation of this organization to do all in its power to see that our comrades who are disabled and their dependents are adequately cared for and likewise to see that the promises and pledges which were made by the people of this Nation, before, during, and after the last war, which pledges have been enacted into legislation, are kept; and

Whereas, unless the Veterans' Administration is permitted to retain adequate personnel to enforce the liberal legislation which Congress has enacted, the results will be a mockery, savoring of tinkling cymbals and sounding brass: Therefore be it

Resolved, That the Executive Committee of the Disabled American Veterans, Department of Massachusetts, in conference assembled, does hereby resolve that the reductions in the divisions other than the Medical in the Veterans' Administration, Boston regional office and its subsidiaries, and in the hospitals throughout Massachusetts coming under the Veterans' Administration should be deplored and that immediate steps should be taken by the Congress of the United States to appropriate supplementarily sufficient funds to provide for the retention of all employees necessary to accomplish the present high type of service to the veteran in Massachusetts; and be it further

Resolved, That sufficient funds be appropriated by Congress to provide for retaining the present number of personnel on duty in the Boston regional office and its affiliates and in the Veterans' Administration hospitals in Massachusetts for the fiscal year of 1950–51; and be it further

Resolved, That the number of such personnel required, shall be submitted by the manager of the various installations in Massachusetts of the Veterans' Administration to the Administrator for final approval; and be it further

Resolved, That a copy of this resolution be filed with all of the Massachusetts senatorial and congressional representatives for prompt and appropriate action by that body and that a copy of this resolution also be sent to the Administrator of Veterans' Affairs in Washington, D. C.

Adopted by the Department of Massachusetts, Disabled American Veterans Executive Committee on Saturday, April 15, 1950, while in session at the Chelsea Soldiers Home, Chelsea, Mass.

CHARLES H. LITTLEFIELD,
Department Commander.
THOMAS J. KEATING,
Department Adjutant.

Tariff Rate on Rubber Footwear

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

NAUGATUCK CHAMBER OF COMMERCE,
Naugatuck, Conn., May 1, 1950.
Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR MR. PATTERSON: The purpose of this letter is to convey to you the attitude of the retail division of the Naugatuck Chamber of Commerce regarding any change in the present tariff rate on rubber footwear. The members of the retail division at their April 18 meeting voted unanimously to oppose any

reduction or change in the method of computing the import duty on rubber or canvas footwear.

Not only are we deeply concerned because of the disastrous consequences such a change would have upon our community, but it is our conviction that the entire national economy would be threatened by any reduction in the present tariff duty.

We urge you, therefore, to exert all possible effort to maintain the present rate of duty on all rubber and canvas footwear.

Yours very truly,

CLARENCE FREEDMAN,
Chairman, Retail Division.

Whereas a bill is pending in Congress entitled "A bill to revise administrative procedures of the Bureau of Customs," which would eliminate what is known as the American selling-price principle, specifically as it applies to canvas and waterproof rubber footwear; and

Whereas the State Department has under consideration negotiations which would result in reciprocal trade agreements lowering present tariffs on canvas and waterproof rubber footwear imported from foreign countries; and

Whereas any further reduction in the tariff rates applying to imports of canvas and waterproof rubber footwear would constitute a serious threat to the major industry of our community and to other local business firms and would result in the loss of jobs, widespread distress, increase of relief rolls and increase of the tax burden of our citizens: Therefore be it

Resolved, That the Watertown Knights of Columbus, Council No. 155, at its business meeting held on April 10, 1950, does hereby memorialize and petition the President of the United States, Harry S. Truman; United States Senators and United States Congressmen in New England to take necessary action to prevent any reduction in the tariff on imports of canvas and waterproof rubber footwear whether it be by legislative enactment abrogating the American selling-price principle, by negotiation under the general agreement on tariffs and trade, or otherwise; and be it further

Resolved, That copies of these resolutions be sent to the President of the United States, Harry S. Truman and all the New England Congressmen, and that these resolutions be spread on the records of the Knights of Columbus Council No. 155 in Watertown, Mass.

FRANCIS A. MORRELL,
Grand Knight.

I, Giles A. Laughrea, Jr., recorder of the Knights of Columbus, Council No. 155, of Watertown, Mass., hereby certify that the foregoing is a true copy of resolution adopted at the business meeting, duly called and held on April 10, 1950.

GILES A. LAUGHREA, Jr.,
Recorder.

Hon. Albert Engel

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. PLUMLEY. Mr. Speaker, nobody is better qualified to talk about the Honorable ALBERT ENGEL than those of us who have served with him on the Appropriations Committee and sat at his feet during his membership there. "AL" as he is affectionately called is an indefatigable worker with a memory for facts, figures, and what has gone on and at Committee which gift of God is not only remarkable but a capacity and a quality that few if any possess to the extent that does he. We have called him "the one-man legislative budget bureau," "Mr. National Defense" and a lot of other things, all intended to be complimentary.

That it will be impossible to fill his place is no idle statement—nor flattery. Too well all of us know it is too true.

Without regard to partisanship all of us on the Appropriations Committee and many others hope he will realize his ambition to be governor of the State of Michigan. Its gain will be our loss but Michigan will never have had a more energetic, better qualified, more loyal, and faithful American as its chief executive. Bon voyage and safe landings, ALBERT!

A Glimpse of Life Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein a letter sent from Hungary by secret messenger through France.

The writer is a member of the lesser nobility and consequently the family has been marked for particularly humiliating experiences by the Russians. The writer is highly educated, well grounded in political science, so the comments are not likely to be exaggerated.

This letter gives a glimpse of what life is like behind the iron curtain. This is the kind of life some people in this country want to substitute for our Government of freedom, incredible as that may seem.

The letter follows:

BUDAPEST, *January 4, 1950.*

MY DEAR ———: I am sure you are wondering why I am so silent since such a very long time. I am sending this letter by the French courier post, so I can write without trembling every moment, that they will come for me afterward and take me to the political police, which is very much worse than death. The truth is, that we are simply terrorized. At every office, each first of the month, there come scores of letters, and those who receive them can go away at many instances without a cent more. Men with two or three children, just put on the street, because they are not politically reliable. And those who are sent away cannot get any other position. They live from hand to mouth, selling their last belongings, eating from the charity kitchens of the different churches. This would surely happen if these devils knew of my letters. This is one of the causes why I did not write. The other is that I hate sad letters, and do what I will, it is impossible to write a gay one.

We are suffocating here in this land. Everyone, workers, peasants, not to speak of middle-class people. We have to cry, "Long live Stalin." We have to decorate our homes for each Communist occasion. Some of their spies come every time there is something happening in the world and ask our sincere opinion, and we lie, lie, lie. If we do not, out we go and can hunger away with all our family.

They wanted me to make a speech at one of their innumerable meetings in which I would have had to describe the sins of America. I begged off with being nervous of the crowd, not knowing enough of their ideas yet to be able to talk, etc. They gave me 2 months. Either I shall talk, or I shall be marked for the next blacklist. Each of these little instances is a bitter drop, and our glass is overfilled already. And I can manage being silent, but I am sure it will be impossible for me to talk the way they like it.

I have made quite a propaganda with the views you sent. (Note: The views were a set of View-Master pictures of United States in Kodachrome.) After having sent it to your other correspondent, and his having looked at them I gave it to everyone who is reliable at the office. Now they are again at the other owners, for he wants to show them to the nuns at the hospital. The hospital where he is, is a home for incurable sick, and it is the only place where there are still nuns, no one wanting their hopeless and troublesome work.

We are all putting our hope in you Americans. I wonder whether there will be enough intelligent people there to discover all those who, under different names and different creeds, are helping this communism to win its way. They are the worst enemy anyone can have, for they do not know what fair play means and that is why I am terribly afraid that they will succeed in blinding you long enough to become so strong, that it will be impossible to hold them at bay. And if your government does not do something quickly I am afraid you will learn to know soon all the horrors of this slave life that we are leading now since five years.

It is very much harder than the siege was. There are very few people who would not begin the whole horror of war again if they could get rid of this vermin, that is making life hell upon earth for millions of people.

They are spoiling the children and the young people so that it will be very difficult to repair the wrong they have done. They are taught that there is no God. They are made to betray unwittingly, their own parents. They are taught to adore Stalin like a divinity. A vanquished face from which one exacts admiration and love towards the vanquishers. I could run on for some time in this manner but it is night already. Of course I did not dare write this at the office.

Thinking of you very often with the old gratefulness and friendship, I wish you a very happy New Year.

Yours,

———.

The Strategy of American Defense

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1950

Mr. KENNEDY. Mr. Speaker, for some months, a group made up in the main of members of the Massachusetts Institute of Technology and Harvard faculties have been holding regular meetings to discuss urgent problems of American security. The group includes

scientists, economists, historians, and political scientists; and many of its members, as a glance at the list of names will show, have had recent experience in the public service.

The attached document sets forth certain conclusions reached by the Harvard-Massachusetts Institute of Technology group relative to the question of the strategy of national defense. The main point is that our present overwhelming commitment to atomic weapons and strategic bombardment may leave us no alternative in case of war except the initiation of an atomic war to which, in the long run, we may ourselves be more vulnerable; and that therefore steps should be taken immediately to correct the present deficiencies in our ground forces, tactical air wing and other forms of conventional armanents. I believe that this statement raises issues of the utmost importance, particularly in view of General Bradley's recent statement that the United States might perhaps have to scrap the theory of balanced military forces; and I earnestly commend it to your attention.

THE STRATEGY OF AMERICAN DEFENSE

This statement is the product of a deep apprehension over the present strategic position of the United States. It is addressed to questions of military strategy and to these alone. We emphasize that we do not regard military defense as the only, or even the first, source of security of the United States. That security we regard, first of all, as depending on the economic strength and political cooperation of the free world. These latter are the first tasks of American policy. We are concerned here with military policy, not as a means of preparing for war, but as a means of gaining time during which economic and political efforts may help create the situations out of which lasting peace may emerge.

We believe that our present strategic position is founded on a misplaced faith in atomic weapons and strategic bombing. This system of defense seems to us, for reasons we shall set forth below, to impair the moral and political strength of the United States in the present period and to evade the true requirements of national security. We believe that the United States must move beyond its present central reliance on atomic warfare and must accept the costs in money and inconvenience involved in such a policy. These costs are to be measured against the loss of the American moral position in the free world, the invitation to limited aggression inherent in the present strategy, and the possibly catastrophic dangers to ourselves and civilization in an atomic war.

We believe that the civilian may properly speak to questions of national defense. While the plans for defense cannot be the property of all citizens, an important distinction is to be drawn between essentials and details. It is the details that must remain secret. The fundamental problems are the proper concern of all; and it is to such fundamentals that this statement is applied.

THE PRESENT STRATEGY

The power which forces the United States to adopt a posture of defense is the Soviet Union. We make no estimate as to the immediacy of the Soviet threat to the security of the United States and western Europe. For present purposes we assume the danger, and the corresponding need for western military strength sufficient to deter Soviet aggression. The difference between a deterrent force and one that accords absolute security in the event of actual aggression must be emphasized. In case of actual war, the Nation can have only the single objective of overwhelming superiority; but the prevention of war is a different undertaking, and there is room for argument as to the size and nature of the effort required.

The present defensive position of the United States depends heavily on its possession of atomic weapons coupled with faith in strategic bombardment. This has been made evident in the recent controversies over the roles of the several services and in the allocation of defense appropriations. It is implicit in the size and distribution of our ground forces—the fact that at present the United States has about 10 divisions, few of which are fully manned and equipped—and in the subordinate role assigned to tactical air power.

This defense plan, with its emphasis on atomic weapons and strategic air power, has been misleadingly attractive to the American people and Congress. It has promised us all great economies in financial outlay, in manpower, and in political inconvenience. We believe that this plan has been shaped less by a dispassionate view of the United States in the world than by political factors, including the ebb and flow of interservice rivalry. However, it is less important to allocate responsibility for present strategy than to assess its consequences. These, we believe, raise questions which go to the roots of the position of the United States in the world.

1. United States strategy today is not well equipped to deal with problems of limited aggression. We accept the view that the essential deterrent to all-out Soviet attack is the conviction that such attack would provoke a general war with the United States. But there are degrees of Soviet pressure short of open military aggression; and to this form of limited aggression—such as satellite guerrilla warfare or "revolution" instigated from outside—the United States may have no effective response except an atomic war. This condition may invite the extension of techniques of guerrilla warfare and internal revolt in marginal areas in the confidence that such local activity would incur only local risks.

2. The predominant reliance by the United States on atomic warfare may weaken the morale and confidence of our European allies. Unless we have substantial ground, naval, and tactical air forces available to supply immediate help in the event of Soviet aggression, our allies may be the less disposed to make the necessary efforts and sacrifices to prepare for such an ordeal. Yet their present strength and their will-to-resist are important elements among the factors which can deter Russian aggression and avert war. Anything that weakens the will to resist of our allies therefore jeopardizes the peace we are striving to maintain.

3. The present reliance by the United States on the threat of the bomb is continuing indication to the world that American military strategy accepts the principle of mass destruction of human life. This can only lead to a damaging misconstruction of American motives and character and to resentment of American power. It has already contributed to the conviction that the United States is a dangerous ally and has strengthened the search for neutrality or some other form of immunity as between the United States and Russia.

4. To the extent that the United States has placed extensive reliance on the bomb, it has become more difficult for the United States to accept agreement restricting the use of atomic weapons. Such an agreement today would, in effect, constitute unilateral disarmament. To the degree that it has liberated its own defense strategy from its present central commitment to atomic weapons, the United States will be the more free to press for international control of atomic energy as part of a general system of disarmament. In the meantime, if control of atomic energy, with genuine inspection and safeguards, is impossible, the United States has no alternative but to continue to build up its atomic strength; for the certainty of retaliation is probably the major deterrent to atomic warfare.

5. The peacetime defects of our present strategy are matched by equally serious defects in time of war. There may be the hope, however faint, that in case of war both sides may hesitate to initiate the use of atomic weapons, through fear of the inevitable retaliation. But there is not the slightest ground for hope that mutual fear may thus spare the world if either side is dependent on atomic weapons as its main instrument of war.

Atomic war has no clear limits. If the battle should be joined in western Europe, the Red Army could be subjected to direct atomic attack only at the expense of blotting out the people and the cultural heritage which the North Atlantic Pact has committed us to defend. The employment of the bomb on Russian soil, whatever its immediate military advantages, would complicate vastly any postwar rehabilitation of the Russian nation. And, now that the bomb is no longer a United States monopoly, Americans must recognize their own exceptional vulnerability to this weapon. Our population and our industry are highly concentrated: our main cities are easily accessible by air and water; we are dependent on intricate and fragile systems of communication and transport; and as a people, we are not accustomed to the shock of military catastrophe. Moreover, where our vulnerability is relatively great, that of Britain is virtually total. An atomic war would almost certainly result in the obliteration of our closest ally. It is one of the tragic contradictions of our time that American strategy has organized the science and technology of the nation around weapons, which, when imitated abroad, are potentially most dangerous to itself and its friends.

From the standpoint of its desire to achieve moral leadership in world affairs, the United States can ill afford a strategy which commits it in advance to warfare of mass slaughter on both sides—which might doom it to the fearful choice between world-wide mass destruction, on the one hand, and outright military defeat, on the other.

THE ALTERNATIVES

The emphasis on the weakness of the present strategy is justified if only to stimulate the search for alternatives. We assume that responsible members of our Military Establishment have this problem constantly in mind; but, inasmuch as military decisions must be circumscribed by political considerations, we believe that the problem will benefit from public discussion. It seems clear that important alternatives have so far been set aside, not on their merits, but because of the strategic commitment to and the popular faith in atomic weapons. The danger of exclusive or even predominant reliance on the atomic alternative must now be clear.

The question of the kind of conventional military force which would supplement the bomb as a deterrent is one the American people must now face. The development of an adequate ground army, the strengthening of our tactical air wing, the supply and logistic components, including the provision for air transport, the development of antisubmarine and other specialized naval forces, the use of the draft—all these problems pose questions not easily answered. But these questions, we believe, must be answered if United States policy is to be liberated from its present overwhelming dependence upon atomic warfare. We call upon our political and mili-

tary leaders to explore these issues with the American people.

Address of Senator Russell B. Long, Democrat, of Louisiana, Before National Rivers and Harbors Congress, Washington, D. C., on March 24, 1950

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an address by Senator RUSSELL B. LONG, Democrat, of Louisiana, before the National Rivers and Harbors Congress, in Washington, D. C., on March 24, 1950, as follows:

ADDRESS OF SENATOR RUSSELL B. LONG, DEMOCRAT, LOUISIANA, BEFORE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MARCH 24, 1950

Mr. Chairman, members of the National Rivers and Harbors Congress, and distinguished guests:

When your president invited me to speak on this occasion he assigned me the subject of Conservation and Development of Our Natural Resources. It later occurred to me that I had taken upon myself a rather large order, particularly in talking to you who have spent so many years in studying resource development in all its complexities.

Obviously, these few minutes here are all too brief for a discussion of all the broad phases of our natural resource development. Almost any one phase of it would in itself require much more time for a proper discussion. Already you have heard about our great reclamation program, and, just preceding me, you have heard Secretary Hutchinson elaborate on those of our resources which are under the guardianship of the Department of Agriculture. The list, no doubt, will be added to before you end your deliberations—power, minerals, forests, soils—all are a part of the richness and the greatness which are the blessing of America.

I am going to take a bit of liberty with my assigned subject and talk to you about some things we have accomplished in resource development and then talk awhile about what could happen if we fail to keep alert. Put another way, I want to talk about flood control and navigation on the one hand and the Hoover Commission on the other.

Federal activity in flood control has just come of age. In 1928, Congress first recognized a Federal responsibility in protecting the lives and property of our people from flood when in that year it authorized projects on the lower Mississippi and Sacramento Rivers. Some 8 years later—in 1936—Congress took the next step and initiated a Nation-wide flood-protection program.

On the other hand, the Army engineers have been at work on navigation improvements for more than a century. Robert E. Lee spent his early army years improving harbors on the Atlantic coast and attempting to tame the Mississippi River at St. Louis. The fine city of Shreveport in my own State of Louisiana took the name of Captain Shreve who came to Red River more than a century ago to open it to navigation.

Here we have two principal programs—one a lusty infant and the other a virile old graybeard. It is time to take stock of both of them to determine what they have cost on the debit side and what they have reaped on the credit side.

The flood-control program on a national scale has only just begun. Construction, because of the war, was interrupted and as a consequence, is just now in its sixth year. None of the great dams in the Missouri Basin has been completed. The works proposed in the basins of the Arkansas and the Red are hardly beyond the planning stage. California, the Pacific Northwest, the Ohio Basin, New England—all of them have yet to see completed much more than local segments of comprehensive protection plans. We in the lower Mississippi Valley—because we started first—are somewhat ahead of the rest, for which we are very thankful—at least once every year. Our project is 60 percent complete and even though many vital portions of it remain unfinished and hundreds of square miles of fertile lands are subject to inundation almost annually.

Thus far, in our general flood-control program, we have completed or have in operation 250 projects in which we have a Federal investment of $600,000,000. In the brief time they have been in operation—for the most part less than a decade—they have prevented flood damages of more than $700,000,000. There obviously can be no monetary assessment on the protection of human life, the alleviation of misery and suffering, and the uninterrupted economic progress which has resulted. Last month, after visiting the flood-stricken Red River backwater area in my own State, I was convinced that these "byproducts" are more meaningful, in many cases, than the mere dollars we use as an economic criteria.

Now to recapitulate, out of a total expenditure thus far of approximately $600,000,000 in flood control, general, we find that the benefits in the short period of time through June 30, 1948, approximately $700,000,000, or, in other words, we already have our investment back and have many, many years of useful life left in the various projects.

The control of floods on the lower Mississippi is a much older activity, as I pointed out a moment ago. The tremendous volume of water—the drainage of 41 percent of continental United States—which it must carry and the hazard to life and property which is a corollary, have made it the Nation's No. 1 flood problem. The length of time which the partially completed works have restrained large potential damage reveal that its worth to the Nation is tremendous. The Army engineers a few days ago gave me figures which indicate that the benefits thus far accruing from the works on the lower Mississippi total approximately $5,000,000,000, or roughly seven times more than the $700,000,000 which has been invested in construction.

Altogether on a grand total investment of approximately $1,300,000,000, direct flood damages of $5,600,000,000 has been prevented, or more than a 4 to 1 ratio. Certainly, these are convincing arguments that the program of flood control has demonstrated its economic worth without taking into consideration the very valuable other benefits which have resulted.

I would like to turn briefly to the picture as it affects our river and harbor projects. At the present time, there are over 700 navigation projects completed and in operation and they have cost us approximately $1,400,000,000. From this investment, we are reaping, day in and day out, tremendous returns. Maritime commerce using our coastal harbors has increased from 232,000,000 tons in 1929 to a record 333,000,000 tons in 1948. Traffic on the Great Lakes was 97,000,000,000 ton miles in 1929 and by 1948, had increased to 118,000,000,000 ton miles and had averaged over a 20-year period 84,800,000,000 ton-miles per year.

The increase in our inland waterway traffic has been even more phenomenal. In 1929, our inland waterways—including the Intracoastal Waterway—carried 8,600,000,000 ton-miles of commerce, while in 1948, that amount had more than quadrupled to 40,600,000,000 ton-miles. Over the same 20-year period, inland waterway traffic averaged 20,100,000,000 ton miles per year.

Here again, it is somewhat difficult to set the real worth of what has been done. Obviously, we can multiply the tonnage by the savings as between water transportation and other forms of transportation and come up with a very good figure, but that figure will not reflect the growth of industries which might otherwise have languished without cheap transportation. Nor will that figure show that these same waterways kept factories going and homes heated and airplanes flying during the late war when the Nazi submarines had driven our tankers from the seas, our railroads were already overloaded, and the only means of transporting vital petroleum products to the north and east in many cases was by barge.

For those who would term this entire program a pork-barrel proposition that needs the fat fried from it, I am going to make some concessions in arriving at the benefits which have accrued from our navigation projects. I am going to lump together all of the funds which have been expended by the Army engineers, not only for construction, but for maintenance and for operation of all river and harbor improvements, which the latest annual report of the Chief of Engineers shows as being $2,445,000,000. When we remember that that figure goes back to our early beginning as a nation, it is not a staggering one. As a further concession, I propose to accept as savings to the public only those which have accrued during the 20-year period 1929–48, and by multiplying the ton-mileage, which I have outlined above, by the difference between 9.3 mills per mile—which the Interstate Commerce Commission says was the expense of all class I railroads in the United States for the year 1948 for freight service—and the 4 mills per ton-mile which represent the Federal construction and maintenance cost plus the carriers cost for maintenance and operation of service, we arrive at a dollar saving of $5,478,000,000.

Stated another way on this very liberal basis upon which I have placed these figures, the Federal navigation improvements have returned to the Nation about $2.20 for every dollar expended by the Federal Government.

It is my view that in these two items, the worth of the projects has certainly been proved. Obviously, we might take some few of the projects and, by using them as horrible examples, attempt to tear down the whole program. It is my insistence, on the other hand, that when we take all of the improvements together—both flood control and navigation—and balance them on the scales of social and economic progress, we get a return which should make all of us proud of what has been accomplished.

We now come to the next and final proposition about which I desire to speak. It has to do with a subject which is familiar to all of you.

A little more than a year ago, the Congress had presented to it a series of recommendations. They were portrayed as devices which could be put into being either by the executive or the legislative branches of our Government and result in tremendous economic savings and at the same time give us a streamlined and efficient Government organization.

In general, taken as a whole, I would be the last to quarrel with the report of the Hoover Commission. Many of the recommendations are eminently sound and no doubt will result in greater efficiency and perhaps bring some economy. On the other hand, there are some recommendations of the Commission that seem to be based on prejudice or propaganda, or, to say the least, on something besides fact, and which simply will not stand the penetrating searchlight of careful analysis.

This one further statement should be made with reference to the Hoover Commission report. It has been the subject of the greatest pressure drive that I have seen since becoming a Member of the United States Senate. There have perhaps been more misrepresentations made about it than any other public question before us at the moment. Every time I pick up a newspaper or hear someone discuss it, the millions of dollars we are going to save each year always is increased. I believe the last figure I saw approached $6,000,000,000; whereas, I recall the original propaganda figure was $3,000,000,000. Just what the monthly rate of increase is, I have not discovered, but nevertheless, it is substantial.

Fairness dictates that I point out that the Hoover Commission itself very specifically avoided putting any dollar estimate on the amount of savings that would be forthcoming if their recommendations are placed into effect. When former President Hoover appeared before the Expenditures Committee in the Senate when I had the honor to serve on that committee, I pointedly asked him the question as to how much would be saved and, in substance, he replied that he felt there would be considerable savings, but that the most important thing was the increased efficiency that could be obtained by putting the Commission's recommendations into our governmental structure.

I propose now, as briefly as I can, to discuss just one of the recommendations of the Hoover Commission. Certainly, the Hoover Commission made no greater error than when it recommended that we divest the Army engineers of its civil-works activities.

In the first place, Commissioners Atcheson, Pollock, and Rowe didn't like anything about the manner in which the rest of the Hoover Commission considered the public works and natural-resource programs, and submitted a separate report recommending a department of natural resources.

Then, the late Secretary Forrestal, because of his relationship to the Corps of Engineers as the Secretary of Defense, abstained from participating in the discussion and formulation on this particular recommendation. Then I am sure most of you are familiar with the fact that Senator MCCLELLAN, your president, and Representative Carter Manasco, filed a very vigorous minority report in which they opposed the recommendation which would transfer flood control and river and harbor improvements from the Department of the Army to the Department of the Interior. So, in effect, we have before us a recommendation which represents the thinking insofar as we can tell, of only 6 of the 12 able men who made up the Hoover Commission. I don't believe that you as a citizen or that I as the representative in the Senate of a sovereign State should be asked to buy blindly and without question any recommendation which comes from a group so badly split as the Hoover Commission was on this issue. This state of facts alone should give a thoughtful person pause and should call for the exercise of individual judgment if wise action is followed.

But let us go just a step or two further. Who headed the so-called task forces whose reports served as the basis of the Commission's recommendations and—more important—what fitted them to become the great emancipators?

Well, the principal figure seems to be an individual named Moses whose chief claim to fame is as a playground and parkway planner in New York City. In his contribution to the Commission effort, he had a lot to say about the military significance of the proposed change, but I can find no record of any military experience he has had, unless we count the verbal warfare he carried on with former Interior Secretary Ickes in years gone by. He proposes to set up an engineering and construction agency for the Federal Government, but he isn't an engineer and the only construction he seems to have engaged in is the building of playgrounds and hot-air castles. In short, there is nothing anywhere in Mr. Moses' background or experience which in any way qualified him for the task he undertook.

Then, the second individual who proposes to tell us how we should run things, is the former Governor of Wyoming, Mr. Miller. I don't know Mr. Miller, but I am sure he is an estimable gentleman to have been so signally honored by the electorate of one of our great sovereign States. Again, however, I am unable to find anything in his background or experience which fits him for his self-appointed task of organizing the conservation development program of our Federal Government. From what I have seen in the magazines, he is a prolific writer, bu we already have too many press agents in the Federal establishment and certainly can deny ourselves his services in that respect. The only things I can discover that he ever built are political fences. Speaking personally, I would welcome any advice and counsel he can furnish me in that regard between now and July, but in the meantime, I, for one, wish he would confine himself to that which he knows and quit riding around the country astride his great white charger, Hells Canyon, telling the country a lot of half-truths. He's about broken the old nag down and if he isn't careful, the poor, tired, old horse will be left at the starter's gate when the big race is run.

Time will not permit me to go into a detailed analysis of the Commission's recommendation. I have satisfied myself that the reasons advanced for the proposed change are not reasons at all, but the prejudices of those who, unable to control, would tear down and destroy. It may well be that some change is needed. Improvements always are to be desired. Change should not be resisted just because it is change, but a program which has proved its value and which has been so well and faithfully administered through the years, should not be tinkered with just to satisfy the whims of professional planners and political has-beens.

I, perhaps, could forgive a lot of the mistakes which the Commission made, but I do not believe I could ever reconcile their proposal that all these functions—and there are others—be placed in the Department of the Interior. There is no more politicalized department of our Government than is Interior. Its officials have done excellent work in some fields, but their success too often have been overshadowed by their lust for power, their scheming and intrigue and by their disdain for Congress as representatives of the people. I don't want the lives and property and the social and economic progress of my people in Louisiana played with as political pawns in the hands of power-mad Washington bureaucrats.

In the final analysis, this business of reorganization is up to you as citizens. I have tremendous faith in the people of America. I believe they recognize truth and will accept it if it is pointed out to them. It is your job to see that the truth is ferreted out from the propaganda and that the facts are made known to the people. If that is done, we have nothing to fear. If you fail—well, it will serve you right.

Correspondence Between Economic Cooperation Administration and Bates Manufacturing Co., of Lewiston, Maine

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to insert in the RECORD the exchange of correspondence between the Economic Cooperation Administration and the Bates Manufacturing Co., of Lewiston, Maine. This exchange of correspondence reflects some of the effects that the ECA is having on Maine industries.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

ECONOMIC COOPERATION ADMINISTRATION,
Washington, D. C., April 17, 1950.

Mr. H. D. RUHM, Jr.,
President, Bates Manufacturing Co.,
Lewiston, Maine.

DEAR MR. RUHM: We are writing to ask your cooperation in helping this administration work out a program under the Marshall plan to assist one of the European Marshall-plan countries in developing plant productivity in the cotton-textile industry. This program is being carried out by the Economic Cooperation Administration as part of the over-all effort to establish sound European economy as an essential aid to world recovery.

It is the desire to bring to this country a few small groups over a period of time. It is also our desire not to ask any one company to accept more than one small group for a visit to observe plant operations in addition to seminars where information can be exchanged. We are certain they will obtain many ideas on materials handling, utilization of manpower, and methods and procedures which can be applied to their plants and bring greater productivity. We would also appreciate any advice, guidance, and assistance you would give us in working out the program for one of these groups.

In making this request, may we point out that there has been only one textile team visit America, where other industries have had many teams from the different countries. Reports coming back to America on our over-all effort show that from their observation of operations and their discussions with management and workers many techniques and procedures were obtained which they will use to a great advantage. It can also be said that we received some good advice from them.

No date has been set for these visits and the schedule will not be developed until we are assured of sufficient industry acceptance.

We shall appreciate hearing from you and again assure you that your cooperation and assistance will be most deeply appreciated.

Sincerely yours,

STEPHEN R. MACRAE,
Project Manager, Arrangements Branch,
Technical Assistance Division.

BATES MANUFACTURING CO.,
Lewiston, Maine, April 20, 1950.

MR. STEPHEN R. MACRAE,
Project Manager, Arrangements Branch,
Technical Assistance Division, Economic Cooperation Administration,
Washington, D. C.

DEAR MR. MACRAE: To reply in polite language to your letter of April 17, requesting

our cooperation in imparting manufacturing know-how to foreign competition is extremely difficult.

Textile exports are constantly being curtailed by quotas, embargoes, tariffs, and exchange. Japanese goods are already beginning to come into the United States at prices about one-third of ours. A festival for reducing American textile tariffs still further is planned for England this summer.

On top of all this, to help some fellow employing labor at wages anywhere from 50 to 90 percent less than we pay to become more efficient appears to us to be indiscreet, to say the least.

Everyone in ECA and other parts of Washington appears to believe that we must import more if we are going to export more, and that a major portion of the imports must be textile. Your letter requesting cooperation in bringing about our own funeral is the first opportunity our company has had to say anything or do anything about our own textile fate. Our answer is a most emphatic "No."

We have built the American textile industry into one of the most efficient in the country. Our per man production is far ahead of any foreign country in my knowledge. You can rest assured that the textile industry will fight for its life; will fight to keep its employees' wages from being forced to foreign levels; will fight to turn out ever better products; will fight to expand its own markets, and to expand and improve its own plant. To furnish our foreign competitors ammunition with which to hurt us more and faster is hardly the common sense used by our hardier forefathers who put this country together.

Sincerely yours,

H. D. RUHM, Jr.,
President, Bates Manufacturing Co.

Threat to American Industry and Labor by Importations of Cheaply Made Commodities

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article by George Sokolsky which appeared in the Washington Times Herald of May 4, 1950, together with my remarks in reference thereto. I feel that this article vividly focuses attention upon a serious situation which the executive branch of the Government has failed or neglected to comprehend. The importation of commodities and merchandise from foreign countries, where cheap labor exists, is and has been a real threat to American labor and American industry. Now here is evidence of the importation of merchandise manufactured in the Soviet Union by slave labor.

Mr. Sokolsky very properly suggests that American industry organize a management labor committee representing the best minds of management and the labor unions to study this problem as it affects each individual industry. I heartily endorse this suggestion and feel it would be wise for that group to take this problem directly to the American people rather than waste time with some of the departments whose responsibilities it should be to follow this but have failed to do so. I know that labor already has groups working on this subject. I might also suggest that it would be well for the State Department to be giving serious consideration to this important question rather than entertaining at cocktail parties for Members of Congress and their staffs by which they subtly attempt to influence the legislative branch of the Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 4, 1950]

THESE DAYS

(By George Sokolsky)

I hold in my hand some linen napkins. On a yellow paper label, so made that it can readily be removed from the napkin, appears small, badly printed lettering, the words "Soviet Union." The words, under our laws, should be "Made in the Soviet Union."

These napkins were picked up in a chain store in Miami, Fla. They can be purchased anywhere in the United States. They sell at three for $1. Identical napkins made in the United States sell at $1 or $1.25 apiece.

The Soviet napkins are made by slave labor. The Russian Government can dump them into this country at any price. Our labor cannot compete with slave labor. If Americans buy this Russian-made goods, they are putting American workers out of work and closing down American factories.

The best way is not to buy anything made in Soviet Russia or in any of the satellites. The retailer, jobber or wholesaler who sells goods made outside the United States which is not properly labeled, breaks the law. He should be reported to your chamber of commerce and to the labor union of the particular industry. Also, write to me.

In the case of these napkins, they were labeled and therefore I am not citing the name of the seller. However, if you do not buy this stuff, he will not offer it.

The 1948 revision of the tariff has hit American manufacturers of linen goods hard. Producers of flax towels, tablecloths, napkins, and such products are worried about the conference that is to be held at Torquay, England, beginning September 28. They fear that they will be put out of business.

They fear that the new generosity will be used to close down American factories just to show how good natured and self-sacrificing we can be. A linen manufacturer writes me about the Torquay conference: "Under the Tariff Act of 1930, any lowered tariffs that these sterling negotiators work out to favor certain good neighbor countries will give the same rate to that group of countries that is giving our particular industry one of its biggest fights for existence, namely the Union of Soviet Socialist Republics and its satellites, Czechoslovakia, Poland, and now China."

This is something that needs immediate attention. May I recommend that each American industry organize a management-labor committee, representing the best minds of management and the labor unions, to study this problem as it affects each individual industry? Certainly Americans need protection when the State Department is off on an internationalist binge.

The same writer says:

"We here in the United States have no conception of the wide wage differences paid to workers in foreign countries. The countries affecting our industry most are the United Kingdom, with whom public opinion is certainly favorable; Belgium, of mixed feelings; Japan, now a practical ward of the United States; and the group of countries controlled both economically and politically by the U. S. S. R. In every instance, the wage levels of those countries are drastically below what has become known as the American standard of living."

The greatest danger is that we shall all discover too late that our industries have been ruined by unfair competition; that our workers are living on relief because they could not compete with slave labor. Then we shall all have to be taxed heavily to solve the problem.

The other day a woolens man came to see me about this problem. Wool has to a large extent to be imported. So the American manufacturer and worker are squeezed two ways: First, by governmental price fixing aimed to make America pay heavily in dollars for whatever raw materials it imports, and then by sending into this country competing finished goods at a price cheaper than the American manufacturer can charge because of his labor and tax costs.

It is a squeeze play that can only produce wholesale bankruptcies and eventually a lower wage scale in this country. Wages can be lowered in two ways: (1) The wage is actually cut; (2) the value of the dollar is reduced. Either way it means bringing down the standard of living of the American people.

There is still time to fight this, but it can only be done by joint management-labor action with wide public support.

The Kerr Natural-Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials relating to the so-called Kerr natural-gas bill. The first editorial is from the McAlester (Okla.) News-Capital of April 12, 1950, and is entitled "Kerr Bill in the White House," and the other is from the Frederick (Okla.) Leader of April 17, 1950, entitled "Adverse to Oklahoma's Welfare."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the McAlester (Okla.) News-Capital of April 12, 1950]

KERR BILL IN THE WHITE HOUSE

The natives of the Great Southwest have never been accused of being panty waists when it comes to sticking up for their rights.

We have a pretty good reputation up and down the country for being able to take care of ourselves.

That state of affairs is jeopardized at the moment by shenanigans afoot in connection with President Truman's action on Senator BOB KERR's amendments to the Natural Gas Act bill.

The legislation—which guarantees a free market price for the natural gas produced in Texas, Oklahoma, Louisiana, and elsewhere—still must have the President's signature before it becomes law.

Seldom has the Nation seen such a cleverly organized propaganda campaign against a bill in Congress. What does the Kerr bill do? It guarantees the producer of natural gas the right to sell his product in free and open competition, at whatever price it will bring.

This is the same freedom the citrus growers in Florida enjoy; the distillers in Senator DOUGLAS' home State of Illinois; the shoe manufacturers in Senator DONNELL'S St. Louis; the dairy people in Wisconsin.

But through some unexplainable reasoning, the have-not States of the populous industrial North and East would like to have a bureau in Washington tell us just how much we can get for natural gas.

Mind you, they wouldn't for the world favor an across-the-board arrangement like that. Suggest for a minute that an FPC (Federal Pizen Commission) tell the distillers in Senator DOUGLAS' home State of Illinois just how much they could charge for all the "hooch" trucked down to dry Oklahoma.

Put the natural resources of all the 48 States in a Federal strait-jacket and listen to the foes of the Kerr bill come out squealing like a pig under a gate.

It's high time Oklahomans took pen in hand or trotted down to the telegraph office to let Harry S. Truman hear both sides in this affair.

It's not Kerr-McGee, Phillips Petroleum Co., or the others, who have pioneered in petroleum development in the Southwest who stand to suffer single-handed by unfair Federal Power Commission regulation.

The folks back North and East have been spoon-fed so much Drew Pearson propaganda they probably believe two or three oil companies own this part of the country, lock, stock, and barrel.

They wouldn't believe it if they saw a grizzled Oklahoma farmer tracking red clay into the lobby of the first national bank to deposit a royalty check.

That would be his one-eighth of the proceeds from sale of natural gas which didn't make a blue flame until it warmed the bottom side of a pot of borsch in an East Side Manhattan flat whose inhabitants still believe everything west of the Alleghenies is wigwams and wildcats.

The little guy is affected by the Kerr bill at this end of the line, too, Mr. President. It deserves your signature.

[From the Frederick (Okla.) Leader of April 17, 1950]

ADVERSE TO OKLAHOMA'S WELFARE

President Truman's veto of the bill sponsored by Senator ROBERT S. KERR to exempt independent natural gas producers from Federal regulation came as a sharp setback to Oklahoma and Texas—major areas supplying the fuel affected. The action leaves with the Federal Power Commission the right to fix rates and make other arbitrary rulings governing natural gas as it flows thrcugh pipe lines in interstate commerce.

Even here in Oklahoma the superb effort of Senator KERR to secure passage of the measure that bears his name, has been grossly misunderstood in some quarters and roundly misquoted in others. It is complimentary to the State's junior Member of the upper House that Senator ELMER THOMAS joined the author in his fight for the bill.

The application of the rule involved is simple. Natural gas, as a heating and industrial fuel, has long been sought after in the North and East. It is produced principally in the Southwest, and has been carried to the more populous industrial centers through vast networks of pipe lines. In this way, producers and owners in this area have been sharing one of the finest fuels ever known to mankind.

Natural gas, as a mineral resource, is one of the chief industrial products of the State of Oklahoma. Aside from the yield of its soil, fuel ranks high in the dollar volume of income, insofar as enriching the economy of the Sooner State is concerned.

Now that it is being shared as a product, and now that the convenience, flexibility and utility of gas have been taken across State lines and into other areas, the Federal Power Commission claims—and has—the right to set its price and to issue other arbitrary orders regulating its flow into commercial channels. It was this adverse status that Senator KERR'S bill sought to correct for Oklahoma, and other major gas-producing States.

Competitively with other fuels, the price of natural gas always has been extremely economical—particularly when the utility of its service is considered. This same competition will continue to govern its price without Federal interference. In the same vein, with regulatory barriers, the development of gas resources may become too risky a venture in capital investment and adverse rulings could choke off the enlargement of sources of supply.

No Federal agency has the power to regulate the prices of cars, implements, refrigerators, radios and other manufactured goods coming out of the industrial North and East. Conversely, it is contrary to the interest and well-being of Oklahoma and her sister gas-producing States to leave with a Federal agency the power to regulate about the only major segment of interstate industry that we have.

Knowing BOB KERR as we do, and with a consciousness of his varied abilities, it is safe to say that the battle in behalf of the independent producers of natural gas is not yet over. And up to now, it is an issue on which the powerful northern and eastern interests have outmaneuvered the people who own and produce natural gas for a great part of the Nation.

The matter deserves more thoughtful attention than the people of Oklahoma have given it. And when it again becomes an issue before Congress it will be a matter that should be given forceful backing in behalf of a measure that is important to this State and its citizens.

Effect of Rent Decontrol in Dallas, Tex.

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, Dorothea Lyle, housing editor of the Dallas Morning News, has recently written about what has happened in Dallas, Tex., since rents were decontrolled, some 11 months ago. Her report appeared in the Kansas City Star of April 30, 1950 and I ask unanimous consent that it be printed in the Appendix of the RECORD, together with a brief article in the same newspaper which points out that rents are lower in Wichita, Kans., since that city was decontrolled. Both Dallas and Wichita are larger cities and the benefits which have come to them from the decontrol of rents can, I believe, be expected in similar American communities if the prevailing Federal rent-control law is permitted to expire on June 30, 1950, as the law provides.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of April 30, 1950]

DALLAS, TEX., UNDERGOES THE TEST OF DECONTROL OF RENTS—SINCE CITY FIRST TOOK ACTION LAST JUNE, ABOUT 300 COMPLAINTS OF UNFAIR INCREASES WERE RECEIVED FROM ESTIMATED 60,000 TENANT-OCCUPIED UNITS

Interest in rental unit decontrol over the Nation has grown in the last several months. Congress now is faced with a drop of controls June 30. The National Association of Home Builders foresees a compromise on rent-control legislation. Tighe Woods, Housing Expediter, says 8,375,000 rental units occupied by 29,000,000 persons would be subject to intolerable rent rises if controls are dropped. Realtors, home builders, and apartment owners reply "Nonsense." At the present, there is little pressure in Kansas City for decontrol. The city council deferred any action on the subject following a report last October 17 by the city research and budget department, inferring a still critical situation here. One major city—Dallas, Tex.,— has tried decontrol, however. The following is a report of what has happened in Dallas since decontrol, written by Dorothea Lyle, housing editor of the Dallas Morning News:

"DALLAS, TEX., April 29.—Eleven months ago, this city of 500,000 persons was loosed abruptly from 6½ years of Federal rent control. Some 60,000 rental dwelling units went free on the market to command their own prices.

" 'The spotlight of publicity will be on us,' Mayor Wallace H. Savage told a tense crowd one June day last year in the city council chamber. 'If you don't make rent decontrol work here, then people won't get it elsewhere.'

"Seconds before, the eight city councilmen had scrapped rent ceilings in Dallas by unanimous vote. Dallas was the first major city in the Nation to take this action after Congress left decontrol powers in the hands of city governments, subject to State approval.

"What happened to rents of the 60,000 dwellings.

"Mayor Savage maintains firmly that the majority of landlords kept faith with the city council by not raising rents unreasonably, and by not bringing about an unusual number of evictions.

"HEARD ABOUT 300 COMPLAINTS

"Russell Stephens, former Dallas regional housing expediter, whose office administered the rent-control program, says:

" 'After decontrol, our complaints from tenants about high rents totaled about 300. The complaints came by telephone, letters, and personal visits from tenants.

" 'Admittedly, that isn't many. They indicate that general increases for older units run all the way from 5 to 50 percent.'

"The CIO, which bitterly opposed decontrol, claimed that rents for inferior accommodations soared in some cases up to 400 percent.

"That is how organized labor's spokesman, Don Ellinger, president of the Texas CIO council, feels about it:

" 'Only the lack of organization among tenants, especially Negroes, who have been hit hardest, has prevented more effective protest.

" 'The landlords have used freely their unlimited power to evict under Texas law to stifle objections and silence opposition.'

"D. A. Frank, veteran attorney who led the decontrol fight, declared he had contacted literally scores of landlords and found that they had not raised rents unreasonably.

"A LANDLORD PLEDGE

"Frank is chairman-emeritus of the Dallas Apartment House Owners Association, which pledged its 500 members not to raise rents without consulting tenants. The idea was to inform tenants of raises necessary for repairs and proper maintenance of rental property.

"'If I had been chairman of the renters instead of the other side,' said Frank, 'I would have to say in all fairness that I am more than delighted with the way decontrol is working out.'

"The Bureau of Labor Statistics sampled rents in 800 units 6 months after decontrol and came up with the statement that rents had gone up an average of 35.4 percent. The BLS index was much higher than a newspaper spot check on selected blocks. It showed an average 11 percent over-all increase.

"The majority of increases, said BLS, came in $30-and-under apartments. Seventy-five percent of these units went up an average of $10.95 a month, or 55 percent.

"In the $30 to $49.99 range, BLS said, 59 percent of the units were raised an average of $14.09 a month, or 36 percent. Increases of $17.14, or 26 percent, affected 66 percent of the units in the $50-and-over group.

"In the 6 weeks after rent curbs went off, Dallas justice of the peace courts booked 301 eviction suits. Three of the courts said their filings were normal. The fourth reported filings had doubled.

"Mayor Savage, pointing to the figures, declared 'that the 300 evictions, when compared to the 60,000 units freed from controls, doesn't sound like any mass wave of evictions.'

"PENALTY IN 'WILLFUL' CASES

"When the city council took off controls, Savage recalled an old World War I anti-profiteering ordinance which he said would be used to prosecute willful violators who raised rents excessively. Maximum penalty was a $200 fine. He named a three-man rent committee to keep an eye on the situation.

"Organized labor complained bitterly because the committee had only landlord representatives on it. CIO and A. F. of L. leaders formed a tenants rent committee and advertised through newspapers for tenants to bring their complaints to the tenants committee.

"Two weeks later, the first list of 54 complaints went to Mayor Savage with the request he investigate the situation. These were some of the examples quoted by tenants:

"Rent on a two-bedroom apartment jumped from $46.50 to $95 a month; a three-room duplex went from $35 to $45; a four-room partly furnished apartment from $55 to $80; a one-bedroom apartment from $46.50 to $59.50; a three-room unfurnished apartment in an old part of town from $25.20 to $65.

"Highest raise on the list was for a three-room apartment which jumped from $52 to $123 a month. The smallest was a 45-cent-a-month raise on an unfurnished, one-bedroom apartment that had rented for $59.55.

"The tenants committee list said an eviction suit was filed against one tenant who had four children, the youngest 8 weeks old. Another was filed against a blind Negro.

"CHECK OF COMPLAINTS

"Savage turned the list over to Frank's landlord committee that had agreed to bring about decontrol in an orderly manner. This was the result of their investigation in the 54 complaints:

"In 24 cases, the raises were obviously reasonable. Nineteen failed to list either the tenant's or the landlord's name, and it was impossible to get both sides of the story.

"Four apartments, raised from $25.20 to $65, were owned by a woman who had moved from Florida to Dallas, and who 'probably was used to very high rentals.' The committee said three of her apartments stood vacant.

"The biggest raise (from $52 to $123) was 'a mere gesture by a man who sold his apartment house 1 month after decontrol,' the investigators said. They reported no complaints about the new landlord. In many cases, the tenants had moved to other buildings and some had bought new houses.

"The committee recommended action in one case, that of an aged widow whose rent went from $41.20 to $60 for a run-down, three-room-and-bath apartment. The report suggested that the mayor's committee contact the landlord and persuade him to ease up on the rent. But the tenant reports today she still is paying $60.

"On the brighter side, hundreds of landlords dug into their pockets and started repainting and redecorating apartments that had had little maintenance since rent controls were first begun. C. A. Farrell, building inspector, said in July and August, his office set new records for building-repair permits issued.

"Also, newer apartments that were not under rent control have begun to seek a lower level. Owners of five large projects have dropped rents substantially, some as much as $10 a month. One builder lowered rents twice, so that new one-bedroom apartments which were renting unfurnished for $85 now are on the market for $67.50."

RENTS DOWN IN WICHITA—CHAMBER THERE REPORTS DECLINE SINCE DECONTROL

WICHITA, April 29.—Rents are lower since decontrol in this Midwest city of 215,000 (metropolitan area), the Wichita Chamber of Commerce says.

In its weekly Wichita Magazine, the chamber of commerce said its own recent survey shows that one-bedroom apartments ceilinged at $54 a month under rent control now rent for $47 to $49 a month.

Two-bedroom units at a $70-a-month ceiling now rent for $62.50 and $65 a month, it added.

Congratulations to the St. Louis Star-Times

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. KARSTEN. Mr. Speaker, I have just received the announcement of the decision of the University of Missouri to present to the St. Louis Star-Times its honor award for distinguished service in journalism.

In selecting the Star-Times for its highest journalistic award to an American newspaper, I believe the University of Missouri, long noted for the excellence of its school of journalism, is paying a deserved tribute to an institution that exemplifies the best traditions of the independent and free American press.

Under leave to extend my remarks, I wish to include the text of the citation to be presented to Elzey Roberts, publisher of the Star-Times, for his newspaper at special ceremonies climaxing Journalism Week at Columbia, Mo., Friday afternoon, May 5:

The citation reads:

To the St. Louis Star-Times in recognition of its editorial incisiveness, independence, and thoughtfulness; its alert news service, intelligently designed to serve the people of its city and region; and its outstanding record of enterprise in the production of a modern newspaper.

In announcing the award, Dean Frank Luther Mott pointed out that it is based upon records of performance over many years.

I wish also to congratulate the four individuals chosen for special honors and the Nieuwe Rotterdamse Courant, chosen as the foreign newspaper to receive a similar honor.

The individual awards will be received by Mrs. Oveta Culp Hobby, executive vice president of the Houston Post; Joe Alex Morris, former editor of Collier's and now a contributor to the Saturday Evening Post; Arthur Hays Sulzberger, publisher of the New York Times; and James Todd, publisher of the Moberly (Mo.) Monitor-Index.

Abrogation of American Treaty Rights in Morocco, and Morocco's Embargo on United States Products

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a statement of recent date by the committee on foreign commerce of the Chamber of Commerce of the State of New York concerning the abrogation of American treaty rights in Morocco, and also the text of a press release of the Textile Export Association of the United States, dated March 30, 1950, concerning the approval by the United States Department of State of Morocco's embargo on many United States products.

There being no objection, the statement and press release were ordered to be printed in the RECORD, as follows:

ABROGATION OF AMERICAN TREATY RIGHTS IN MOROCCO

NEW YORK, *January 25, 1950.*

To the Chamber of Commerce:

The Committee on Foreign Commerce offers the following:

Assent by the United States Department of State to a French decree establishing embargoes and restrictions on the importation of American goods to Morocco, in contravention of long-standing treaty rights and privileges, presents a grave threat to the future of American foreign commerce and business enterprise on which so large a part of the well-being of our Nation, and the world, depends.

THE BACKGROUND OF THE CASE

Since 1836 the United States has had a treaty with Morocco according Americans trading privileges equal to those of any other Christian nation.

The principles of this treaty were reaffirmed in 1880 and 1906, when France and Spain also became signatories to the pacts of Madrid and Algeciras. All the terms of the 1836 treaty were recognized by the signatories in 1906.

In 1912, France, under the terms of an agreement with the Sultan, assumed a protectorate over Morocco, and undertook to provide certain administrative services and to exercise certain of the Sultan's powers. Almost immediately thereafter, France began to press the United States to recognize the protectorate and also to give up American treaty privileges in Morocco, which had been granted in 1836, and reaffirmed in 1880 and 1906.

The United States recognized the French protectorate of Morocco in 1917. However, it is plain from the various communications of American Secretaries of State that recognition of the French protectorate did not abrogate, in any sense, the various interests and rights accorded to Americans by the treaties of 1836, 1880, and 1906. In the subsequent years, and particularly in the post World War II period, a small group of American businessmen settled in Morocco to engage in a thriving, useful, and profitable trade between the United States and that country.

At the outbreak of the war, in 1939, certain exchange restrictions were imposed in Morocco. The United States protested these until 1944, when under the pressure of the war emergency, and primarily to discourage the possibility of any flow of funds between Allied and Axis territories, we consented to their imposition. They are still in effect.

On March 20, 1948, however, a decree of the French protectorate of Morocco provided that all goods, including American goods, could enter Morocco freely, under the terms of the historic treaties, where there was no requirement for the allocation of official exchange by the government.

The United States maintained, and Morocco agreed, that these restrictions could not prevent imports by United States citizens when no government foreign exchange was required.

This partial lifting of trade restrictions was short lived, however. On December 30, 1948, a decree was issued by the French protectorate which embargoed most United States products and restricted those not under embargo. There is no doubt that the purpose of the decree was to free from American competition those French cartels and other interests which seeks to extend an economic monopoly over several lines of trade in Morocco.

At that time the American State Department protested the decree, and our protest was fruitful in that, in May 1949, the onerous restrictions were lifted.

Almost immediately, however, the restrictions were reimposed, and this time the United States Department of State accepted the restrictions for a 3-month period. Subsequently, the temporary acceptance was extended four times. Finally, on December 31, 1949, our Department of State accepted, for an indefinite period, the restrictions imposed by the French protectorate.

A public hearing, of sorts, was held by the State Department on September 27, 1949, for the announced purpose of determining whether to accept or reject the decree. Although grievances of American businessmen in Morocco were presented at the hearing, they were ruled to be outside the scope of the subject under discussion, and these complaints have received no official action on the part of the State Department.

It is interesting to observe that Morocco's dollar position actually improved during the period of relaxed restrictions and free competition, while there was a deterioration in 1949 when the new embargoes were enforced. The Department of State had claimed that the restrictions to which it finally assented would improve Morocco's dollar balance.

An examination of the list of products under embargo and of those that may enter Morocco freely indicates that reasons other than those of economic necessity prompted the choices.

As a result, some 40 Americans, many of them veterans of World War II, who have settled in Morocco to engage in trade with the United States, find that they are being denied the protection of the treaty between the two Nations, which is still in effect, and they are being forced to quit business and come home while their French competitors remain to take over the field.

It is particularly irksome to these American businessmen, inasmuch as France, which is thus acquiring an economic monopoly in Morocco, is receiving considerable aid from the United States under the Marshall plan.

THE BROADER ISSUE

But the issue goes far beyond what may happen to twoscore American businessmen in Morocco.

It goes right to the matter of the sanctity of treaties, and to the constitutional requirement that any change in existing treaties between the United States and a foreign nation is a matter requiring action by the United States Senate.

In that sense, what is happening to the American treaty with Morocco has a meaning that could profoundly alter our foreign commerce, programs for investment abroad, and the whole scope of our international relations and commitments. For if American businessmen have reason to believe that our treaties can be abrogated by a foreign nation without any effective protest, and even with the acquiescence of our State Department, then an insuperable obstacle will be placed in the way of our foreign commerce and of our developing programs for increased investment abroad.

And profoundly disturbing is the suggestion that the State Department, without the consent of the Senate, can alter fundamentally our treaty relations with foreign powers.

FIRM ACTION NEEDED

In this situation we urge the State Department to recall its acceptance of December 31, 1949, of the restrictions imposed by the French protectorate of Morocco; and to proceed without delay to enforce the rights of American businessmen in Morocco, as guaranteed by the terms of the treaties that exist between the two countries.

We urge, further, that the Committee on Foreign Commerce of the United States Senate undertake an investigation of this infringement both of the rights of American businessmen in Morocco, and of the constitutional prerogatives of the Senate. Safeguards must be provided to prevent a repetition of this kind of situation which seriously damages the influence and prestige of the United States, and impedes greatly progress toward the goal of a better world through economic development and freer trade between nations.

Respectfully submitted.

SAUL F. DRIBBEN, *Chairman,*
WILLIAM H. BALDWIN,
VICTOR BOWMAN,
DAVID M. KEISER,
FERGUS F. WALLACE,
Of the Committee on Foreign Commerce.

TEXTILE EXPORT ASSOCIATION
OF THE UNITED STATES,
New York, N. Y., March 27, 1950.

The Textile Export Association of the United States has complained to the Secretary of State against the Department's approval of Morocco's embargo on many United States products, including textiles, according to Mr. John H. Judge, president of the association. Mr. Judge said that the association has questioned the exclusion of United States goods from Morocco and the State Department's abrogation of an existing treaty which assured an open door to our trade there. He added that they have not actively protested heretofore because the Secretary of State has insisted that the measures were necessary to conserve Moroccan dollars.

Mr. Judge points out, however, that since the embargo began United States total exports to Morocco have increased 33 percent and that on January 1, 1950, Morocco freed imports, including cigars of all categories, cigarettes, soft-drink ingredients, and radio sets while still banning more essential United States products, among them textiles. These facts, he asserts, indicate that the embargo is for some other reason than economic necessity.

(American traders in Morocco have repeatedly maintained that the embargo affects goods formerly sold in free competition by independent Americans, while most of the free list consists of products which French concerns control by exclusive agencies or otherwise.)

Mr. Judge said that in 1948 when free competition prevailed in Morocco, the United States sold over $3,000,000 worth of cotton goods to that country and that sales were $600,000 in the month of January 1949 but became negligible thereafter when the embargo was applied. The potential market is estimated at more than 6,000,000 yards. Much of this business, which formerly went to the United States, has been given to Poland and Czechoslovakia whose bilateral trade agreements with France are observed while our treaties, of longer standing, are set aside.

Smear Attack on Alfred Kohlberg

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. GWINN. Mr. Speaker, the smear attack against one of my constituents, Alfred Kohlberg, by fanatical friends of the State Department needs exposing. Kohlberg is a private citizen concerned over the security of our Nation.

There is only one issue in the current charges against our foreign-policy advisers. That issue is: Is there a danger to American security from enemies within our Government?

The State Department has taken the curious position that its duty is to defend itself instead of ridding itself of Communists. Never mind the grave danger to the Nation if only our officeholders can rid themselves of bothersome criticism.

So they smear attack Senator McCARTHY. Just so they have systematically attacked those private citizens who have tried for years to bring light into the dark places in our State Department. I refer especially to the rash of carefully timed attacks in the press on one of my constituents, Alfred Kohlberg, and on the American China Policy Association.

THE AMERICAN CHINA POLICY ASSOCIATION

The American China Policy Association is a private organization which has for years been warning the American people of Communist sabotage of our

foreign policy. Its directors are responsible citizens whose names and connections I shall list at the end of this statement. Its president, William Loeb, is the son of the secretary of President Theodore Roosevelt.

The program of the association is support of the open-door policy in China. The open-door policy was announced by Secretary of State John Hay in 1899. It said that the United States was opposed to the conquest of China by any foreign power, even if China was as weak internally as it then was, just before the Boxer Rebellion. Our open-door policy made possible the establishment of the Republic of China under Sun Yat Sen.

The open-door policy is merely the extension to Asia of the Monroe Doctrine, enunciated by President Monroe in 1823. Then Russia was trying to seize our Pacific coast along what is now Washington and Oregon. The Monroe Doctrine says that the United States is opposed to the conquest of any nation, especially a weak one, by rapacious stronger powers. The Communists and their dupes in our foreign-policy making have sold us a new foreign policy. Our old and great policy has not failed. It had succeeded too well. It stood as our promise to the people of Asia that we would not tolerate any new imperialism in the twentieth century.

John B. Powell and Alfred Kohlberg were the founders of the American China Policy Association. Their offense consisted of their firm belief in the American policy of justice to undeveloped nations threatened by the Great Powers. For that they were secretly denounced by those who wanted to sell out our country, and buried China on the wormeaten timbers of the united front in place of the sturdy beams of the open door.

MR. KOHLBERG AND THE INSTITUTE OF PACIFIC RELATIONS

Mr. Kohlberg is accused of having waged an unsuccessful fight against the Institute of Pacific Relations. It is true that the open meeting of the Institute voted down his demand or investigation—after the Institute staff had refused to let Mr. Kohlberg send his information to the members. But why did the Institute board suddenly clean house, right after Mr. Kohlberg's charges were voted down? Why did E. C. Carter leave the Institute? Why did they fire Frederick Vanderbilt Field? Why did the Institute show a marked, though not complete, change of policy away from paralleling the Communist line just after Mr. Kohlberg's charges were "disproved"?

Mr. Kohlberg's critics complain that the Institute is highly respectable. It has a distinguished board of directors, and a well-established reputation for scholarly work. But where would the Communists want to put their hidden propaganda? In the columns of the Daily Worker? Where would they find anything better than a scholarly, sedate, technical journal which had previously been devoted to fact-finding, and which could be quoted by Communist writers for years before the public would know it had been pentrated?

Mr. Kohlberg is charged with criticizing the Institute's acceptance of funds from Frederick Vanderbilt Field and from Communist fronts, whereas they really got most of their money from the Rockefeller and Carnegie Foundations. But what, may we ask, was the bias of the Carnegie Foundation when they were under the direction of Alger Hiss or the board members who picked Alger Hiss for their director? And why have both Carnegie and Rockefeller Foundations now canceled their subscriptions?

Senator MCCARTHY is accused of having parroted the charges of Mr. Kohlberg. Apart from the smear word, is there any good reason why Senator MCCARTHY should not want to see such charges aired?

Mr. Kohlberg is also accused of having started the journal Plain Talk. For years it has been one of the very few publications in this country in which it was possible to tell such truths about the danger to American internal security. Their first issue described how the Justice Department muffed the prosecution of Communist stooges in the Amerasia case. The recent article on the strikes in Hawaii shows Communist dress rehearsals in the capture of an island—like Manhattan for instance.

SIX LONG YEARS

Mr. Kohlberg is accused of having made his charges as early as 1944. That, Mr. Speaker, is the most shocking thing of all. Six years ago, Mr. Kohlberg was spending his own time and money trying to warn American officials. He warned of the existence of cells of the NKVD or the Russian General Staff within our policy-making Government agencies. Was there something wrong with Mr. Kohlberg because he kept on fighting treason? But what shall we say, Mr. Speaker, of the State Department and the Presidential advisers who for 6 years could not hear the charges? They did not think they were important. They saw it as their duty to protect officeholders like Hiss rather than to protect our country.

His critics say Mr. Kohlberg's charges were not believed by a succession of Secretaries of State. But have we ever in our history had so fantastic a collection of Secretaries of State? Mr. Hull, who had the confidence of the country, was bypassed for Sumner Welles, about whom we shall say no more. Harry Hopkins was virtually Secretary of State in wartime. Secretary Byrnes was summarily removed when he began to see through the veil and questioned some of the information his assistants gave him. General Marshall was a prisoner of the Communist cell in the Department who knew exactly how to feed him the right information and keep any doubters far from him. Acheson has been Under Secretary or Secretary almost continuously since 1941. His regime coincides almost exactly with the most shameful humiliation and the most disastrous retreat in all American history. It would seem that a man might be honored to disagree with such a succession of Secretaries of State.

WHO IS PLANNING THIS CAMPAIGN?

The attacks on Senator MCCARTHY and Mr. Kohlberg are obviously well-organized and well-planned. All the charges and twisted lines of reasoning have been neatly assembled by someone for distribution to those who will help to fool the public.

I wonder, Mr. Speaker, whether by chance any of the paid employees of Government, the so-called public information specialists, have been helpful in disseminating any of this smear material. We know that Government employees in high place, who are accused of collusion with a foreign power have the services of Government lawyers and publicists, while private citizens, patriotically working for their country's safety, have to pay the cost of their investigations out of their own pockets.

Minor Government underlings, charged with petty theft, are immediately suspended. They do not have high-paid Government lawyers working for them, and publicity men trying to win a favorable popular verdict.

THE INDIVIDUAL AGAINST THE GOVERNMENT

There was a time in this country when an individual could disagree with a Government official as man to man. Today our administration officials have their retinues of lawyers, economists, public-relations experts, and the rest, clustered about them like the court followers of a petty noble. A plain citizen cannot disagree with the Government without hiring a lawyer and three publicity men to protect him.

It is time we restored the balance in this country between plain citizens and officials who are supposed to serve them. It is time we gave the advantage to the plain citizens—including Senators—who must pay for their own investigating and hire their own lawyers, and took away the advantages of accused public officials and advisers, who have a corps of lawyers and public-relations experts paid for at public expense.

It is Mr. Kohlberg who is the true public servant, not his detractors. We cannot in a free country permit such men to be smeared by the clever propagandists of the executive power. Congress is the defender of the plain citizens of the Nation, against executive arrogance. We must make it clear beyond any misunderstanding that any executive department which comes to the aid of men accused of near treason can expect no part of the public funds.

Arming of Arab Nations

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. HERTER. Mr. Speaker, in the light of the continuing reports that Great Britain is supplying arms to the Arab nations, the following news story, published in the New York Herald Tribune of Wednesday, May 3, 1950, is of particular interest:

UNITED STATES WILL REFUSE ISRAEL'S PLEA TO PURCHASE ARMS—STATE AND DEFENSE DEPARTMENTS HELD AGREED THAT ARABS ARE NOT PLANNING A WAR

(By Homer Bigart)

WASHINGTON, May 2.—The State and Defense Departments have come to the conclusion that Israel is in no immediate danger of aggression from the Arab states and that the Israeli request for assistance in purchase of modern arms should not be granted at this time.

This decision will not be revealed publicly. Instead, the State Department will continue to say that the request by Israel for the granting of export licenses for up-to-date weapons is still "under consideration."

At the same time, the Defense Establishment is defending the action of Great Britain in sending modern tanks, jet-propelled military planes, and other equipment to Egypt. The Pentagon view is that the flow of arms from Britain to the Arab states is "in the strategic interest of the United States." This view, it was learned today, has considerable support in the State Department.

The Pentagon argument is that renewal of Arab-Jewish warfare is unlikely now. It is stressed that this prediction is based on the Defense Establishment's own intelligence sources and not on British intelligence. The Pentagon also insists that United Nations observers in Palestine are reporting that neither the Arabs nor the Israelis are in position to renew fighting and that there has recently been a lessening of tension.

The military feels that Israel is stronger than any combination of Arab states and is perfectly able to defend itself with the arms in its possession. Moreover, the Pentagon says it is not fully informed on the total military strength of Israel because of reluctance on the part of Israel to divulge figures.

Claims that Israel enjoys military superiority over the Arab states were labeled "absolutely fantastic" this afternoon by a spokesman of the Israeli Embassy.

"The records show," he said, "that the Arabs have been getting modern equipment during the last few months and that they are in a far better position militarily than they were when hostilities began in May 1948."

He said no request for details on present Israeli military strength had ever been made officially of the embassy here.

Roberto Rossellini—Correspondence Between Senator Johnson of Colorado and Gustavo Garzia

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of letters between Gustavo Garzia, of Italy, and myself, which may have some possible interest.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ROME, *March 29, 1950.*

Senator EDWIN JOHNSON,
United States Senate,
Washington.

MR. SENATOR: He who writes to you is a Partisan officer, tortured by the German SS of Via Tasso, whence he escaped. A reward of 1,500,000 lire was offered for his capture and he was condemned to death in absentia, by a Nazi tribunal. Therefore, he has the right to write to you * * *.

Not an hour ago I read in the journal, Paese Sera No. 75 of March 29, 1950, your false words to the detriment of an honest and honorable man of the Italian cinematography * * *. Everybody in Italy knows Rossellini, his hard life of work and his moral uprightness, which distinguishes him from you, and he is appreciated and esteemed by all gentlemen, by honest people.

* * * I have known Roberto Rossellini for many years, his honest life as a worker, his moral rectitude (which you lack); his

pure and calm life is an example, a spur to many.

I am a journalist and live by my work. I have no interest in defending Roberto Rossellini. I defend him as a Partisan officer, because I know I am right and you are wrong * * *.

I await your reply:

GUSTAVO GARZIA,
Partisan Officer, Viale della Pineta 96, Lido di Roma, Italy.

MAY 3, 1950.

Senor GUSTAVO GARZIA,
Partisan Officer,
Viale della Pineta 96,
Lido di Roma, Italy.

DEAR SENOR GARZIA: You have indeed had a tragic war experience. I rejoice that you escaped from your Nazi persecutors, and I rejoice, too, that you had the courage and patriotism to undergo these terrible hardships for your beloved Italy. For inviting these dangers and making these sacrifices you have won my great respect and admiration.

While you, in constant danger of losing your life, were waging this almost hopeless underground battle against great odds, another of your countrymen was enoying the comforts and political security available to those who collaborated with the enemy. Roberto Rossellini joined the Fascists in 1942 and became a close friend of the Nazi gangster who directed the Nazi operations in Italy. Rossellini's mistress was a German actress named Roswitha Schmidt, with whom he lived as late as January 1943.

Roberto Rossellini has been incarcerated in a mental institution in Naples at least twice. Furthermore, he was investigated respecting narcotics in New York City on January 17, 1949. Early in that same year he transported another of his women across State lines in the United States. In this country it is a violation of the Mann Act, commonly known as the "White Slave" Act, to transport a woman or cause her to be transported across State lines for immoral purposes. The punishment for this crime is a long penitentiary sentence.

I shall be glad to furnish you further information about Roberto Rossellini should you desire it. However, if this promiscuous male is your ideal, then any further exchange of notes would be a waste of time.

Sincerely,

EDWIN C. JOHNSON,
Chairman, Senate Committee on Interstate and Foreign Commerce.

Production of Secret State Department Papers for Examination

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I attempted earlier in the day to have placed in the RECORD an article by Bert Andrews in the New York Herald Tribune of today entitled "State Department To Let Service See Secret Papers Senate Couldn't." This is a most interesting article. I would have liked to read it into the RECORD at this point, but in view of the fact that it is somewhat late, I ask unanimous consent that it be inserted in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT TO LET SERVICE SEE SECRET PAPERS SENATE COULDN'T—WILL DECLASSIFY SOME DOCUMENTS TO HELP HIM PREPARE DEFENSE FOR DELAYED LOYALTY HEARING

(By Bert Andrews)

WASHINGTON, May 3.—The State Department is declassifying certain restricted and confidential documents to make them available to counsel preparing the defense of John Stewart Service, who will soon appear before a Department loyalty board.

This is being done despite the fact that the Senate Foreign Relations Subcommittee, although authorized by unanimous Senate action to subpena the files in the Service and other cases, has been denied access to any and all information about the cases.

These facts were learned today from senatorial sources and were confirmed by Charles E. Rhetts, of counsel for Mr. Service.

Mr. Rhetts commented on a story in today's New York Herald Tribune which pointed out that the State Department hearing in the Service case had been postponed indefinitely at the request of Mr. Service's counsel, although Mr. Service returned to the United States from the Far East 5 weeks ago yesterday. Mr. Rhetts assured this reporter there was nothing mysterious in asking the delay.

Mr. Rhetts said he had advised Mr. Service to prepare as complete documentation and as comprehensive a statement as possible "so that these charges can be cleared up once and for all." He said this necessitated the gathering of documents from many places and about many things.

One of the things included the Amerasia case of 1945. Mr. Service was one of six arrested on charges of conspiring to violate the Federal espionage statutes through the theft of highly confidential documents. He was not indicted and was reinstated "for important work in connection with far-eastern affairs."

Mr. Rhetts said that some of the delay in gathering documentation resulted from slowness within the State Department. He explained that some State Department documents needed by Mr. Service's counsel had to be declassified by the Department. This is a term used to describe the process by which high State Department officials, presumably after close scrutiny, cross out designations ranging from top secret down to confidential so they can be circulated freely without violating security rules.

Mr. Rhetts was not sure just when the State Department hearing of Mr. Service would be held. The case will be considered first by a panel of three State Department employees. It will then be subject to review by the Loyalty Review Board of the Civil Service Commission, which is the top board.

FBI FILES NOT INCLUDED

Mr. Rhetts did not describe just what documents were being received from the State Department. It was clear, however, that they were not the loyalty or personnel files, which are gathered by the FBI and other investigating agencies. Presumably they were copies of reports sent in by Mr. Service and about him by diplomats under whom he has served. However, the blanket rejection of the Senate subpena prevented the Senate subcommittee from gaining access to even that kind of information about any of the cases.

Senator JOSEPH R. MCCARTHY, Republican, of Wisconsin, said he had heard that Mr. Service's attorney was being supplied with documents from the State Department.

"I think it is a pretty shocking thing," he said, "considering the fact that the State Department, by President Truman's order, refuses to let the Senate Investigating Committee see anything in the files. It is additional evidence of what President Truman meant when he said on February 23 that he would cooperate in every way possible to disprove 'false charges.' It is clear the Truman administration is not interested in trying to get at the truth."

Senator BOURKE B. HICKENLOOPER, Republican, of Iowa, echoed Senator MCCARTHY's statement. "It is absolutely appalling," he said, "to think that documents are being declassified to aid Mr. Service when the Senate subcommittee can't even find out whether there are any documents in the files which might prove the truth of Senator MCCARTHY's charges. I am going to ask the committee to investigate."

Tension in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. MULTER. Mr. Speaker, public opinion in this country is growing more restless by the day over the situation in the Middle East which continues to remain tense because of the shipment of arms to the Arab states by Great Britain, while arms are being refused to the State of Israel. The United States Government has had under consideration for the past several months a request from Israel to purchase certain arms in this country for purposes of security in the event of an Arab attack, but to this day no decision has been reached. By such action, which is actually procrastination, our State Department is condoning the action of Britain in supplying arms to the Arab states and keeping the Middle East in a constant state of turmoil.

I believe that all of my colleagues will be interested in reading a brief editorial, The Arabs and Israel, which appeared in one of the leading newspapers in this country the New York World-Telegram and Sun, on Wednesday, May 3, 1950. It is as follows:

THE ARABS AND ISRAEL

Britain's full recognition of the State of Israel and of the union between the kingdom of Jordan and those parts of Arab Palestine under Jordan control should relieve some of the tensions in the troubled Middle East.

But the British policy of furnishing arms to the Arab states, while they remain in a technical state of war with Israel, is subject to serious question.

Specifically, Winston Churchill has asked the Labor government whether it feels that 110 jet planes allegedly sold to Egypt are being acquired by that country solely for defense purposes.

The United States Government is concerned in this situation, both because we are furnishing arms to Britain and because Israel has asked for licenses to purchase arms in this country. Until now these licenses have not been granted.

Spokesmen for the Israeli Government say they would prefer to spend their money for tractors and other peacetime equipment. But, they add, if Egypt, Jordan, Iraq, and Syria are permitted to buy arms from Britain, Israel should be allowed to obtain similar equipment here. Under the stated circum-

stances, we do not see how our Government can deny Israel licenses to do so.

It would be even better, of course, if the United States and Britain would try to convince the Arab States that they should use their money for the economic improvement of their respective territories.

Since all of these Governments are looking to us for assistance under the projected point 4 program, we should be in a position to give them some advice.

What Price an Expanding Economy?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, May 4 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, agreeable to the permission granted me by the Senate, I am inserting in the RECORD herewith a stenotypist's report of an extemporaneous address which I delivered before the national meeting of the American Retail Federation, which was held in the Shoreham Hotel on April 4 of this year. This address was my contribution to a panel discussing "What Price an Expanding Economy?" in which the preceding speaker was the senior Senator from Wyoming [Mr. O'MAHONEY].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. JONES. The next speaker on our program this morning is a man who has been known to me for many years, a man who has already, I think, made a very definite place for himself and his State in the Senate of the United States.

Senator KARL E. MUNDT was born 49 years ago in Humboldt, S. Dak. He was graduated from Carleton College, Northfield, Minn., and from Columbia University in New York.

He has been a school teacher, a superintendent of schools. He has taught in the speech department of teachers' colleges in the State of South Dakota where he made a great reputation.

He was elected to Congress, first to the House of Representatives in 1938, and served in that capacity for 10 years, being elected to the Senate for the full 6-year term in 1948.

Senator MUNDT is one of the best known conservationists in this country. He has been national vice president of Izaak Walton League and a member of the executive board of that group.

He has been widely read as editorial writer for Outdoor America.

He has pioneered in Congress for some years for pollution-control legislation.

He was district governor of Kiwanis International in the Minnesota district of Kiwanis and he served as chairman of international committees of Kiwanis for some time.

His hobbies are many: Hunting, fishing, as you might know, writing and travel, and he is a polished and finished public speaker.

He has served on the following committees of the House of Representatives: Education, Irrigation and Reclamation, Indian Affairs, Foreign Affairs, the House Committee to Investigate Un-American Activities, of which he was acting chairman during the Alger Hiss espionage hearings resulting in the discovery of the so-called pumpkin papers. He is now a member of the Senate Committee on Executive Expenditures and the Rules Committee of the Senate.

The articles by Mr. MUNDT have had wide distribution in many types of publications.

In 1945 he made an extensive trip to 20 countries of Europe and spent some time in Russia studying the situation there.

Mr. MUNDT has made many trips to Europe which have broadened his outlook until today I am sure that you will find him a polished and a well-rounded public servant in the Senate of the United States.

I value him as an old friend of mine and my family, and it is with particular pride that I introduce to you today Senator KARL E. MUNDT, of South Dakota. [Applause.]

Senator MUNDT. Mr. Chairman, Rolly, thank you for that friendly introduction.

Rolly and I stop to talk and pat each other on the back every opportunity we get, and I am certainly not going to be derelict by failing to state that I recognize Rolly as one of the great advocates of free enterprise and one of the splendid constructive representatives of business here in the city of Washington.

He has been here a long time, and he came to the position of business representative, which is the $4 word that we call lobbyist down in Washington—he came to that position honestly by running a private enterprise of his own up in the city of Gettysburg, S. Dak., a drug store which still exists, which still operates in the black, and which demonstrates that he knows how to keep a balanced budget insofar as his personal business affairs are concerned.

I always enjoy the opportunity of addressing a group of businessmen because I am one of those who believe that the future of this country depends primarily upon what businessmen such as you do, or fail to do, within the next 5 years.

I don't think we have forever in which to solve our problems, and I don't believe that we are going to get the problems solved through the machinations of politicians like me operating down here on the wrong side of the Potomac River.

I think you can pick up any daily balance of the United States Treasury and recognize that until and unless folks like you do something somehow different from what folks like you have been doing in the past 5 years, until you do something different in the next 5 years I am afraid that we too are going to suffer this socialization of enterprise and this nationalization of industry which has come to plague and perplex most of the rest of the civilized world. You are visiting in a community which, as you know, is comprised of very, very important people. Everybody in Washington is either a mighty important person or else thinks he is, and it amounts to about the same thing. [Laughter.]

You can hop in a taxicab, to come up and visit us on the Hill, and ask the taxicab driver any kind of profound question, and he will give you a ready answer before he gets you up to the Capitol.

Our Washington cab drivers are authorities on every conceivable subject, and they speak with great authenticity and no skepticism at all.

Every Member of the House of Representatives is an important fellow and is a candidate for the Senate.

Every Member of the United States Senate and every member of the President's Cabinet is an important fellow who is a candidate for President.

And these days every President somehow seems to think he is entitled to a lifetime lease on the White House. [Laughter.]

So, you understand, we are a city of important people.

But, important as we are or as we think we are, I am one of those, I say, who believes that you are the important segment of the body politic; and if we are going to do anything about this expanding economy, which we recognize is essential and which I salute you as having adopted as the theme for our discussion this morning, I think it is going to have to be brought about primarily by what you do rather than by what we do, because we are going to do in large part those things that you would make it possible for us to do, or that you prod us into doing, because left alone and judging the future by the past—and I know of no other criterion to follow—leaving us alone, we are going to continue to take from you your money and your power and your rights of decision and your freedoms of operations because, strangely enough, we in the political profession have concluded we are able to spend your money more wisely than you are and that we can exercise your free decisions more judiciously than you can and that we are men of purer motives than the business colony of America.

I don't believe in that philosophy myself, but it is generally and widely and affirmatively expressed here in Washington, and I am woefully in the minority in feeling somehow that the men of my profession lack this Olympian judgment which so many of my colleagues somehow feel they have.

So I am going to suggest to you some things this morning that I think perhaps as business people you should do—and, after all, while I did teach school out in South Dakota in the colleges of that State for some 12 years, I was in business all the time I taught schools—in the investment business and in the insurance business; and during the interim between the time I taught school and the time the people of South Dakota exercised the rare good judgment to send me down to Washington, I was exclusively a businessman.

I know something of the problems you confront, something of how you feel when you run into competition with Government, because I was in competition with Uncle Sam for several years in the business of loaning money to farmers with which to improve their farms, in the business of loaning money to householders, to those who wanted to construct homes for themselves and their families, and I even was bold enough to be in competition with Uncle Sam for a while in the insurance business. So I discovered even before I got to Washington that as a competitor with Uncle Sam I was a complete failure.

I didn't have resources enough. I couldn't compensate for my bad judgment, and my losses, by taxing the people of the community to replenish the reservoirs of finances with which I dealt; and so I was having difficulties backing my own judgment and having to pay for my mistakes when I was also having to pay for my share of Uncle Sam's mistakes as he went into competition with me.

I certainly agree with Senator O'MAHONEY when he said a few minutes ago on this panel that facts produce movements. But I think there is also a corollary to that statement. I think it can be demonstrated with equal validity that movements produce facts; and I want to take that side of the discussion for a while this morning, because down here, you see, we have discovered that nobody can make a pancake so thin but that it has two sides, and that pancake has two sides, too, because movements have produced a strange series of startling facts all over this world today, facts which in my opinion primarily are involved in curtailing our economy rather than helping it to expand.

I think if we are going to discuss how to expand our economy we must first of all analyze those things which are tending to curtail it or to constrict it or to hold it down because certainly we don't want to have the experience that Great Britain is now having.

I heard Senator O'MAHONEY say, and I agree with him, that a big reason why nationalization has come to bring almost economic ruin to Great Britain was the financial condition of its treasury. The greatest

nation of private tradesmen that the world has yet produced; who because of their uncanny business ability were able to parlay a little group of islands into a mighty world empire, a nation which in the hour of its perils triumphed over the forces of tyranny and fought back the Huns, after having stood up against the blitzkrieg, after having demonstrated that their tight, strained little island could defend itself against the forces of nazism, after having been joined with us as partners in a mighty successful war, at that hour of purple triumph, the British discarded the formula of private enterprise, discarded the formula of individual initiative which made it an empire and adopted instead the formula of failure that brought Hitler to his knees, because national socialism, stripped of all its phony language, is exactly the same formula that Hitler employed in bringing himself into authority in Germany.

We Americans forget so easily. Sometimes we don't recognize the fact that the word Nazi is simply a German contraction meaning national socialism and that what the British have produced is an imitation of the German national socialism devoid at the moment of the strong tyrannical leadership of somebody ruthlessly willing to crack down on every dissident factor in the economy.

Now history has been going on for a long time, and a lot of different people in a lot of different eras of history and a lot of different areas of the world have tried national socialism, always and inevitably with one of two outstanding results: Either they have found as we Americans discovered, for example, early in our history after the signing of the Mayflower Compact, up in that cold New England climate, that it would not work in a climate of freedom, when the voyagers on the Mayflower decided in order to meet the vicissitudes in a foreign life with Indians and blizzards and lack of conveniences, they should collectivize.

They adopted on American soil as the first government in this country after the Indians the theory that they should take from people according to their ability and give to people according to their needs, which is the essence of socialism, which is the essence of a planned economy, which is the essence of government running your businesses, and which is the essence of theoretical communism, fascism, and nazism.

So they said, "We will send everybody out into the woods to shoot the wild turkey, shoot the bear, and cut down the timber. They will bring it back into the common stockade and we who run the colony will parcel out the produce according to the needs of the people here who came over on the *Mayflower*."

And history records what happened. People starved to death that first winter.

Before we could commemorate the first bountiful Thanksgiving Day on American soil, we discarded the system that the British now adopt—national socialism—and started out with a theory of private enterprise which we have clung to tenaciously from that day until now and which has made us the envy of the world.

Now it has been said this morning, with considerable veracity, that one of the reasons why the British have discarded that success formula and adopted national socialism is because Federal spending through one cause or another has placed their fiscal situation in such a desperate condition that they had to collectivize the industries of Britain in order to try to meet that challenge.

I have said that and accept that as one of the reasons. I accept that as one of the reasons also why we are approaching national socialism in America today, because our Federal budget is out of balance much more seriously than was the British budget and is considerably more out of balance today than are the budgets either of Great Britain, France, Belgium, or Holland at this very moment; and the politicians there as the politicians here reasoned, with considerable merit, I think, that when you have such a terrific overload of Federal taxes and Federal spending and deficit financing, that if you can't exact from the taxpayer in prosperous times like these enough money to keep the budget in balance, that certainly you are never going to find the time in your national history when you can balance the budget, that a continuation forever of fiscal deficits means economic disaster, and so they adopted national socialism.

Unable to tax the coal industry sufficiently to balance the budget, unable to tax the transportation industry sufficiently to balance the budget, unable to tax the electrical industry sufficiently to balance the budget in Great Britain, they said, "We will nationalize the industry and use all of the profits therefrom to help support the financial structure of the country."

It has failed because putting politicians from various precincts of any country in positions of economic control does not provide the efficiency and the good managerial ability required to make an enterprise successful.

Immediately, employees of enterprises who have become employees of public property begin through lobbying techniques and power of collectivized voting a propaganda campaign to increase their take in the national production to the point that industry itself soon starts running into the red; and so socialism has to start reaching out for something else: It grabs the medical profession; it grabs, as it has in Britain today, eight different types of industrial enterprises; and, still running into the red, says "In order for us to succeed, in order for us to produce economically as business managers sufficient profits so that we can put the Government into the black, we must take over the steel industry," and that is the next thing which they propose to take over in Great Britain.

I think, however, it is only half the story to say that in Great Britain the condition of the Federal budget made it attractive to experiment with national socialism.

I think that ignores the side of the pancake which I described as the record that movements also produce facts as well as facts producing movements.

I think it ignores entirely the fact that a movement began in 1848 in Germany, launched by Karl Marx and Dr. Engels, called communism, which, in just a century, just 100 years, has come to influence the lives of as many people in the world today as Christianity has come to influence in 20 centuries. I think that movement there has produced these facts.

I think in analyzing the situation in Great Britain simply on the basis of believing that the financial condition of the country precipitated Britain into national socialism and began to spell its doom, another fact is ignored, and that was that in 1883 on the shores of Britain itself there developed a movement called the Fabian Movement, which began preaching a philosophy of nationalization, which began a very skillful and bland and predetermined basis of working its way into the schools, into the labor unions, into the farm organizations, and into the Government itself of people who believed that only politicians are smart enough to run an enterprise, of people who believed that private enterprisers left alone are bare-teeth wolves, and that only politicians have the rectitude to do things always honestly.

Those Fabians developed such a powerful propaganda campaign, such a skillful technique of indoctrination and such a well-heeled political machine that their successors in line, the Labor Party—so-called, but the Socialist Party, in fact—the Fabian Socialists of Great Britain came into control in Great Britain today as a movement producing the fact of national socialism in that country.

Now I think that in considering an expanding economy in this country, consequently we have to recognize that we are threatened not only by facts but by movements—a movement in the form of communism which has become an international conspiracy, a movement in the form of communism which one of our great Americans, Gen. George Marshall, said yesterday, provides the greatest peril to freedom that this country has ever known.

And that movement is rather easily defined: Communism is not an economic theory. Communism is not a political party. Communism in no one of the 13 countries which it has conquered and in no area of the world which it today controls, operates in conformity with an economic theory such as is expressed in the theoretical writings of the early Communists.

Communists have discarded entirely the concept of taking from people according to their ability and giving to people according to their needs. They found it wouldn't work. So they have substituted a form of tyranny, one-man control or one-group control over every enterprise, over every movement, over every segment of the population.

I think the best proof that communism is not a political party is the fact that in none of the countries it now controls did it attain its authority by operating after the formula of a political party.

We know what a political party is. We know how it operates; it has a modus operandi. A political party has candidates and campaign funds and chairmen and committee work and platforms and conventions and campaigns. But primarily a political party achieves its objective at a voting booth, and unless a movement does achieve its objective in the voting places of the land, whatever else in the world it is, it is not a political party.

Neither in Russia, Latvia, Lithuania, Estonia, Albania, Rumania, Bulgaria, Hungary, Yugoslavia, Czechoslovakia, Poland, eastern Germany, or China, the countries that the Communists now run, has any Communist leader ever achieved his authority by a vote of the people; and in none of the countries has he ever continued to stay in authority, once he achieved it by a coup d'etat, by a vote of the people in which they were given a choice between two different sets of principles or two different sets of candidates. So they did not have an election because the word "elect" means that you can elect to take one choice or another. Under communism that is not the procedure.

I remember the last visit I had coming out of Moscow, leaving Russia in 1945.

After having spent about a month in 1945 studying conditions in Russia and behind the iron curtain, after having celebrated VJ-day on the Red Square of the Kremlin, we were flying out of Baku, down on the Caspian Sea, and our committee had been royally entertained by the mayor of Baku, a friendly little Asiatic who spoke a little English.

That particular morning for a send-off party he was giving us a typical Russian breakfast comprised primarily of vodka and caviar.

In South Dakota, where Jones and I came from, you don't get that kind of breakfast very often and our stomachs weren't just acclimated for it, and so I was trying to make a lot of big talk so I wouldn't have to partake very heartily. I proceeded:

"Mr. Mayor, you have been a very gracious host, taken us down to the oil field here in Baku, shown us how they extract caviar from sturgeon. You have shown us the old part of the city and the new part of the city and great statues erected to Stalin and Lenin, but, tell me—I want to ask you a personal

question: How did you get to be mayor of Baku?

"How? How? The people. The people elected me to be mayor of Baku."

I said, "That is wonderful. That is how I got to be a Congressman from South Dakota."

I said, "Tell me, did you have much opposition in the election, have much difficulty?"

He said, "I have no opposition at all."

Well, that was the answer to a Congressman's prayer. We gathered around like football players around the quarterback. We said, "Tell us—how did you do it? How did you work that out?"

And he said, "It is very simple. Very simple. In Russia, when the Politburo in Moscow nominated me I was the only candidate that they nominated, and then the people—the people they voted for me."

He thought it was democratic. He thought it was an election. He thought it was acting like a member of a political party. But it was acting like the finger of a great tyrannical machine.

What is this great movement that has produced a $20,000,000,000 fact — communism?

Communism is a way of life, a godless way of life, that holds that all of the economy of a country, the means of production, the farms, tractors, mills; the means of distribution, the railroads, the ship lines, the telegraph companies, the retail stores; and all of the flow of capital, building and loan associations, insurance companies, loaning agencies, the whole economic fabric, shall be controlled—it doesn't say owned, shall be controlled—in the capital city of the land by one group resisting all opposition and joining with others around the world in promoting and supporting a creed having as its goal the development of a world-wide dictatorship under the control of the Kremlin.

I don't think in America we are ever going to quite recapture freedom as we used to have it until we understand what communism is, what Fabian socialism is, and how the related ideologies and creeds and programs of that central ism affect our daily lives and our daily jobs.

Let me repeat this definition of communism which has been demonstrated to be 100 percent accurate in every single section of the world that the Communists control and by every single activity of those supporting communism here:

It is a godless way of life, denying God simply because the people in the country cannot serve two masters—a godless way of life which holds that the entire economic pattern of the country shall be controlled in the capital city of the land by a selected group permitting no opposition, and believing in the internationalization of the world under the dictatorial leadership of the Kremlin.

And every American Communist supports that kind of program, every French Communist supports it, it is supported by all Communists in every part of the world today.

Eighteen months ago when the Kremlin insisted that the people loyal to it speak out and declare themselves, Togliatti in Italy, Jacques Duclos and Maurice Thorez and the Communist leaders of France, Earl Browder and Gene Dennis, the leaders in America, and W. Z. Foster, speaking within a short span of 72 hours said, "In the event of a war, in the event of a war between communism and our respective countries, of course we are going to be fighting on the side of the Communists."

So only those who refuse to face the facts need have any skepticism about what the Communists propose in America, and they propose it with equal vigor whether it is a Communist like Gene Dennis operating in the open or a man like Alger Hiss working as assistant to the Assistant Secretary of State in the State Department and having more to say about the final determinations at Yalta, probably, than any other English-speaking citizen.

The Communists subscribe to this theory and operate on it whether they operate in the capacity of the 11 Communists convicted under the mighty fine judicial environment established by Judge Medina in New York or whether they operate like Carl Aldo Marzani now in the Federal penitentiary whose last position was in the State Department in the code room interpreting secret codes from our foreign embassies, or whether it is a Henry Julian Wadleigh who confessed that he had delivered hundreds of secret American documents to Russian agents in this country.

We are faced with a situation which is serious because most of us recognize it but fail to strike out against it.

That kind of movement left unchallenged and unexposed and not corrected in America can ruin any dream that any man here has about producing an expanding economy on our shores because it simply can't operate under communism.

Now I said something about communism and its related ideologies, its associated creeds, its fellow-workers and its fellow-wanderers, and its fellow-travelers who move in the direction in America of placing in the hands of men like me, in jobs like mine, increasingly the money which you silly people think belongs to you and would give to us with our supreme holy wisdom increasingly the power to exercise daily judgments that you can't be trusted to exercise in your own interests and in the public welfare.

That is the basis of the theory followed by many politicians who say they are going to solve the problems of America. On any other basis, certainly a man would be stupid indeed to say, "Create this regulatory body, enact this piece of legislation, impose this extra tax, nationalize this new industry."

You do or permit those things only because you must believe in the superior capacity of politicians and in the ignoble purposes of private citizens. At least, Communists believe in that. They demonstrate that in every area. Many non-Communists, too, have accepted this Communist doctrine that big government is the only solution to big problems.

And so every time we move increasingly in the direction of spending, we move in the direction of a totalitarian state.

You can read the CONGRESSIONAL RECORD if you will—most of you unhappily won't, and because most of you don't the things that I am about to report do occur in the CONGRESSIONAL RECORD. If most of you read it more regularly, you could take care of this problem at home, making sure that this kind of thing wouldn't happen among those representing you in Washington.

But if you will take the CONGRESSIONAL RECORD for any year of the last 10 and examine the roll-call votes on any issue in which there was a question of whether or not we should increase the power of politicians here in Washington, every Congressman that you suspect of having an affinity for communism will be recorded in that roll-call vote as voting "aye," put the power in Washington; give it to the politicians.

Does that mean that everybody who votes for a concentration of power in Washington is a Communist? Let me make it clear, it does not. But it does mean that everybody who has an affection for communism in every vote has always voted for concentration of power in Washington. There are no exceptions to that. You can check those whom you suspect the most. You will find it 100 percent an accurate prediction.

If you will check the roll-call votes, whenever there has been an issue down here in the last 10 years of whether we should break down the right of a State or the rights of an institution or the authorities of an individual, on every single roll-call vote, those associated with communism, those belonging to the greatest number of so-called front organizations, those who for want of a better term we call the "extreme leftists" in America, without exception have voted to break down the rights of States, have voted to cripple the function of an institution, have voted to decrease the authority of an individual. Why?

"No Communists are voting in the Congress of the United States of America today," you say, and I will agree.

But because since 1848 Communists have been studying the catechism of how to get control of a country, they know the first and essential step in a great commonwealth of States like ours is to put the power into one central place so that when at long last you can have a coup d'etat and a bloody or a bloodless revolution, once you have taken over the control spot, you have the entire country in an iron grip.

Communists understand that so much better than we do. We go along distressed and disturbed by world-wide problems and local conditions, a little bit here, a little bit there, depriving ourselves of the dignity of human beings and of our importance as individuals, of the sanctity of States' rights, and the validity of an institution, decreasing our functions and our importance and sending all this power and authority down to Washington for politicians, either elected or appointed, to exercise and operate for us. Thus we are the careless architects of our own destruction and distress.

Every time we do it, we move in the direction of the Communists. They comprise the one group that in a propitious moment of a depression or a war, steps in and takes control, and like the people of Czechoslovakia, we discover it too late.

Ever since we were school boys, you and I have studied in our economics and political science books about the great check-and-balance system of America, about the balance of powers in our Government.

Unfortunately, most books on economics were written by people who never have made very much of an economic success in life themselves, and most books on jurisprudence are written by theorists who don't know much about practical problems, and so they have talked almost exclusively about the checks and balances which exist between the judiciary, the legislative, and the executive branches of government.

I agree it is tremendously important to maintain that equilibrium. I think it has become lopsided today, but something has become much more lopsided than that in our check and balance system.

The check and balance system, which has contributed fully as much to our success as a country, in my opinion, as a balance of powers within our Government, is the check and balance system existing between the politician and the individual, between the Government and our economic system.

When individuals practicing this private economy have worked the people too hard or too long or have beaten them down too much, a law has been passed to keep the economy in balance and politicians have helped pull up the behavior of the individual entrepreneur and the individual industry.
